As you have heard many times by now, nearly 80 percent of the surveyed deposits of oil shale are on public lands. The past history of careless leasing of government lands rich in oil and minerals is all too tragic to allow any future leasing to be handled with less than the most prudent and circumspect regard for what is best for the American people. **Congress has a sacred duty to prevent another Teapot Dome.**

3) **We agree with the western Senators who would like to see oil shale developed soon.** As a previous witness from the UAW told the Senate Interior Committee earlier this year, **"a frozen asset is no asset at all."** If the royalties from oil shale are to be used for education, for outdoor recreational land acquisition for Social Security benefits, for rebuilding American cities—it will do no good to dilly-dally around for years tilting at legalistic windmills. We do not for a moment believe that oil shale royalties can pick up the tab for all of America's neglected social needs. *The sooner an equitable system of oil shale development can be agreed upon by all of the interested parties—including Congress—the sooner its revenues will be available to the American people.*

4) • **We favor a public corporation along TVA or Bonneville lines to act as a public yardstick to prod the private oil companies to develop their own oil shale deposits and to help keep them honest in pricing oil for the rest of the American people.** The history of TVA and Bonneville shows that electric power rates become steeper the further away they radiate from Grand Coulee and the Tennessee Valley. The wonderful thing about TVA and Bonneville is that private industry and even the privately-owned utilities have grown and prospered from the stimulus of these two public corporations.

We are not necessarily suggesting that a public corporation develop all publicly-owner oil shale deposits—perhaps only enough to spur and prod the private oil companies to respond with what they presently own.

And as a reward for good public behavior on their own land, these private oil companies conceivably could be granted leases on public land so long as an oil shale public corporation was there to protect consumers in pricing.

5) **We fear as other witnesses before this subcommittee have indicated that oil shale prospects may have been oversold as utopia.** Colorado, Wyoming, and Utah may be in for a rude shock to find that private oil companies would only sit on their leases and there would be no guarantee to the people of those states that any oil, any revenue, or any other public benefit would emerge if Congress and the Secretary of Interior did everything the private oil companies ask of them.

6) **We believe there are genuine, but not insurmountable questions of conservation which cannot be dismissed lightly.** Watersheds, the configuration of terrain, and wildlife would certainly be affected by extraction of oil shale at the present time. These are not questions of monopoly, but they deserve attention by all public-spirited citizens.

Oil shale—a yardstick to keep oil companies honest in pricing

7) **It is absolutely essential to the American people that the allocation of the Mineral Leasing Act of 1920 be changed to reflect contemporary needs.** As the subcommittee well knows, the present allocation calls for 52½ percent for reclamation, 37½ percent to the states, and only 10 percent to the Federal Government. This formula is totally unrealistic and before any accepted leasing system is approved by the Secretary of Interior, he should ask and the Congress should support a new allocation fair to the pressing needs of our times and to the American people whose assets these are.

STATEMENT OF PAT GREATHOUSE
VICE PRESIDENT

UNITED AUTOMOBILE,
AEROSPACE AND AGRICULTURAL
IMPLEMENT WORKERS OF AMERICA, AFL-CIO

BEFORE THE SENATE SUBCOMMITTEE
ON MONOPOLY AND ANTITRUST LEGISLATION
May 5, 1967

Facts on oil shale

Buried deep beneath the rugged terrain of Wyoming, Utah and Colorado—on lands still owned by the federal government—is the world's greatest untapped oil supply.

Locked solidly into layers of shale rock, the oil is worth $2.5 trillion—enough to give every single American family a check for $40,000.

The oil's there and it belongs to the taxpayers, but nobody's figured out how to get it out cheaply enough, yet. But the experts promise a technical breakthrough any day now.

The shale contains about two trillion barrels of oil—enough to triple the entire world's current reserves, and last the U.S. for hundreds of years.

If the government leases the land to private oil development companies, as it does with many publicly-owned natural resources, the taxpayers' cut—from royalties—would be $300 billion.

8) **The oil depletion allowance of 27½ percent should not go unscathed in any leasing arrangement permitted for oil shale.** Oil shale, we are led to understand, "is a known geological structure and has no costly discovery costs"—in the words of the former director of the Bureau of Land Management, Mr. Charles Stoddard. He asks the question: "Should the oil depletion allowance apply to oil shale development on public lands?' We think not and beseech Congress accordingly.

9) **Some kind of public advisory or watchdog committee with power to make binding recommendations should be created by Congress.** The American people cannot afford to have a trillion dollar asset turned over to the private oil companies with few questions asked and little voice in what happens once a government lease has been granted. There are many men in public life with no axes to grind, such as the Chairman of this subcommittee, Senator Philip A. Hart, who would be ideally suited to serve on such a public watchdog committee. **The great fear we have is that some obscure bureaucratic decision will be made and appear casually in the Federal Register which will turn over a trillion dollar asset to private oil companies—and that will be the end of it so far as the American people are concerned.**

Former Senator Paul Douglas, an eminently respected economist in his own right with a long-standing record of unimpeachable integrity, would be an ideal chairman for a public watchdog committee. The private oil companies should welcome such a move. **If their actions and their policies can stand the scrutiny of such men as Senator Philip Hart and former Senator Paul Douglas, they can stand before all the American people with a clear conscience—and our own fears as private citizens would be laid to rest.**

10) **This subcommittee should make sure that any government leasing by an oil company does not impede the extration of minerals needed for the production of aluminum, and any leasing by aluminum companies does not impede the extraction of oil.** Surely this is concern for the Senate Subcommittee on Anti-Trust and Monopoly Legislation. There is a clear duty to the Congress and to the people of this country on this point.

Let me reassert the UAW's conviction that we welcome the development of oil shale. **The American people want this treasure unlocked and used for the benefit of mankind as a source of energy, as a public yardstick to protect the pricing of oil, and as a way to finance many neglected needs of our times.**

Again we thank you, Mr. Chairman and your subcommittee and your staff, for scheduling these hearings so that American people can better understand what is at stake in the public lodestone of oil shale.

We especially thank you for assembling a broad spectrum of expert witnesses who have discussed this matter pro and con.

Only in this way can the Secretary of Interior and the Administration, the Congress and the American people, make the kind of equitable and publicly-acceptable decisions which must be made on oil shale.

"The value of this oil shale at present rates is enough to pay off our national debt and give a check of at least $11,000 to every person in this country."

—U.S. Senator Philip Hart

WEEKEND WRAPUP

The 90th Congress first sessions nearly reached the halfway mark, and what do we have to show for this more conservative, go-slow Congress? Not much. No major bills have become law and the school bill may be in trouble, as Democrats and Republicans spar on tactics. Last week **the tide against the Quie bill began to turn** as parochial schools and schools with a high percentage of poor families got the full import of Quie's GOP bait. Letters began to roll into Congress by the truck load—but the outcome was still touch and go. . . . Did you know the **federal government gives your tax money to irrigate big farms** in the West and these farms can take 40 years to pay it back, interest free? Some of the most reactionary congressmen in America never blink an eye over this huge gift of free water. . . . *Are You Mad at the President?*—asks a new COPE leaflet with some sharp change of pace. *"Aren't we Americans supposed to be?,"* it continues. *"Isn't it one of our favorite pastimes, being mad at Presidents? Who else is to blame if things aren't exactly as we think they should be?"* And then it says *"you're probably mad at President Johnson because —There are six million more people at work . . . The jobless rate has dropped . . . Three million older Americans have received hospital care . . . Passage of his Elementary and Secondary Education Act is now helping eight million disadvantaged children . . . Library books, text books and other educational materials have been provided for 49 million schools children . . . More than 135,000 needy college students are able to pursue their education through direct grants . . . More than four million Americans have moved above the poverty line . . . Eight million more workers are covered by minimum wage.—The President is trying to do something to clean up the poisoned air we breathe.—Sure, You're Mad at the President, Who Wouldn't Be?"* If you'd like a copy of the whole thing, write the UAW Washington Office and we'll send you one. It's a neat production. . . . Family farmers, the kind who belong to the Farmers Union and National Farmers Organization, are up in arms these days. Farm prices have collapsed while inflation bites at what farmers buy. Big farmers are rolling in money and pay their farm workers the lowest wages on record. Last year **agricultural wages** (weighted average of all farm wages on a per hour basis, according to 1967 Economic Report to the President) were only $1.07, while the average for manufacturing workers during the same time was $2.75 an hour. To make matters more unfair to farm workers, productivity for farm workers rose from 103 percent in 1958 to 155.8 percent in 1966, while non-farm productivity went up during the same time from 99.7 percent to only 125.3. That's why the American labor movement is asking Congress to give farm workers the same protection under the basic labor-management act which other workers now have—so farm workers can organize and bargain like everybody else. It'll help the family farmer, too—because today a farmer, his wife and children must compete on their farm with low wages paid by those giant "agri-businesses" . . . **UAW's General Counsel Steve Schlossberg** told an Equal Employment Commission hearing last week: UAW has 200,000 women members, over 800 women in UAW ranks have been elected to top positions in their local unions, thousands more serve as stewards, there are three women department heads including Board Member Olga Madar, and 16 UAW women are fulltime staff representatives. Schlossberg said so-called state protective laws for women are used *"to circumvent our collective bargaining contracts and to discriminate against women who are members of our union. . . . The contracts we negotiate with employers provide for equal pay, equal job opportunity, equal seniority, training, etc.—and I couldn't begin to estimate the number of grievances we have taken all the way to arbitration in an effort to enforce a contract only to be stymied by one or another of the so-called state 'protective laws.'"* . . . **Good Idea Department:** New York Cong. Resnick wants major TV networks to hold televised debates between congressional leaders on the education and poverty bills.

Nelson drug probe reveals huge profits excessive prices

Witnesses tell Senate small business committee that drug companies have been hoodwinking Americans with fancy brand names, charging astronomical prices for drugs which can be bought with "generic" or chemical names.

America gets richer, the rich get richer—and the rest of us don't seem to do so well.

Not so long ago, oil millionaires and their big fat tax loopholes made the papers—and wage earners—wince. It turned out that gimmicks like their depletion allowances and intangible drilling deductions cost the Treasury better than a billion dollars a year in lost revenue.

Next, Cong. Charles Vanik (D-Ohio) uncovered the car safety equipment scandal which bloated GM's already astronomical profits by an extra $100 million last year. He found that while GM was boasting a six dollar price cut on these lifesaving accessories, it was actually making a new profit of $25 on every car.

Things got worse as we moved into 1967. A former TV executive finally told the truth about commercial television. In return for the free gift of America's airways, we get a lot of crummy programs and the networks get a $2 billion a year business.

Then, just a few weeks ago, the Senate Antitrust subcommittee staggered U.S. drivers with the inside story of the auto insurance racket. The insurance companies get away with murder because they control all the state commissions that are supposed to regulate them and protect the public.

But apparently we're not out of the woods yet. Last week Senator Gaylord Nelson (D-Wis) sicked his Monopoly subcommittee on the high-riding American drug industry. He's already heard dozens of unbelievable stories about price gouging, price fixing and shady deals between doctors and pharmacies.

(Continued on page 2)

"The American public deserves to know how to get a better buy for its drug dollar. Our first week's hearings have pointed out the inconceivable differences between the prices various cities pay for the same drugs used in their public hospitals and health programs. In some cities taxpayers are paying as much as forty times more for drugs than taxpayers in other cities."

—U.S. Senator Gaylord Nelson, April 16, 1967

"The Monopoly subcommittee has heard testimony from a number of professionals who favor prescribing drugs by their generic names whenever possible, instead of by their higher priced brand names. Food and Drug Administration research shows beyond a doubt that the cheaper drugs are just as good, if not better, than the ones most doctors prescribe."

—Senator Gaylord Nelson, May, 1967

Drug companies say quality is better controlled with brand names, but Senate hearing showed that government makes rigid tests and government agencies save taxpayers money when making purchases for armed services.

(Continued from page 1)

Drugs are a five billion dollar a year business in this country and it's easy to see why. Recent surveys report that prices have sky-rocketed as much as fifty percent in the last ten years.

But price hikes aren't the real problem. Drugs are sold either by a brand name or by a chemical (generic) name. Salicylic acid is the generic name for aspirin, for example.

Drug manufacturers have made millions by using simple names instead of long, technical descriptions of the drug's contents. Most doctors play along with the name-game by prescribing medicine sold under these much more costly brand names.

Patients who want medicine to help control their weight usually get an Rx for dexedrine. And they pay through the nose—$40 per 1000—for buying it by its easy-to-remember brand name. If doctors prescribed dextroamphetamine sulfate instead, the same quantity would cost only $1.50.

Hard to believe? Impossible that an American business can get away with mark ups of 4000 percent? Most companies are satisfied—and make plenty of money—with mark up of fifty or sixty percent.

Here's another example—and it's only one of thousands—of how the drug industry robs sick and dying Americans of hundreds of millions of dollars a year.

Ask for peritrate if you have heart trouble and you'll pay about $40 per 1000. But if your doctor cares enough about your pocketbook, he'll prescribe exactly the same drug—even though it takes him a few more seconds to write out the longer chemical name.

It'll be worthwhile if he does, however, because the corner druggist will sell you a thousand for about four dollars.

(Continued on page 3)

What a difference a name makes

Brand name	*Cost/1000*	*Chemical name*	*Cost/1000*
Serpasil (blood pressure)	**$23.50**	**Reserpine**	**$ 1.10**
Meticorten (asthma)	**30.00**	**Prednisone**	**3.00**
Nembutal (sleep)	**16.00**	**Sodium pentobarbital**	**4.00**
Dexedrine (weight control)	**40.00**	**Dextroamphetamine**	**1.50**
Chlor-Trimeton (antihistamine)	**20.60**	**Chlorpheniramine maleate**	**2.00**
Peritrate (heart)	**20.00**	**Pentaerythminthiol**	**1.50**
Miltown (tranquilizer)	**80.00**	**Meprobromate**	**20.00**

Most doctors prescribe drugs by their brand names. In most cases the same medicine—exactly the same—can be bought under its much cheaper chemical name.

Nelson's investigation got national attention to excessive profiteering which major drug firms make at expense of hardpressed consumers, especially older people. Blue Carstenson of Farmers Union shows bottle to prove a point.

(Continued from page 2)

And generic name drugs are just as safe, just as thoroughly tested as brand name drugs. Bethesda Naval Hospital in Washington, D.C., has the awesome responsibility of caring for the health needs of our President.

President Johnson's surgery was performed there and most of our nation's leaders use Bethesda when they get sick in the Capital.

Bethesda uses nothing but generic name drugs. Buying them this cheaper way, the hospital's purchasing officers estimate they've saved taxpayers over eleven million dollars in the last six years.

Why don't our M.D.s give us a break when they write our prescriptions? Why should they make a family pay $1650 for penicillin during a child's long bout with rheumatic fever when a stroke of the pen would reduce the cost to $375?

You just can't win

This summer UAW collective bargaining committees will spend long hours hammering out new contracts. One problem will be to get the companies to contribute more money to our health care plans.

A lot of this extra money will be spent for doctors' fees and hospital bills. But a lot will be used to buy drugs and medicine for workers and their families.

And much of what our health plans spend on drugs will be wasted! There's no point in winning a better health care deal at the table if we let the drug manufacturers steal it as soon as we get it.

Let Wisconsin Senator Gaylord Nelson know you support his investigations into this profiteering industry. And be sure to write your own Congressman and Senators. Tell them you want a law—this year—that will stop doctors from pushing the high price pills and make public hospitals spend taxpayers' money to buy the best drugs—at the best price.

Last year Senator Philip Hart (D-Mich.) did some checking with his Antitrust subcommittee. He found a couple of very logical reasons why some doctors prefer the expensive drugs.

Some, he discovered, own all or part of a nearby pharmacy. Naturally, they steer patients there—and their druggist buddies soak them for brand name pills.

Another method for gypping us when we're too sick to care was reported in *Life* magazine last June. Physicians sometimes sell drugs directly to their patients from their own offices. One California M.D. was caught charging $16 per hundred for pills he got for $2.50.

Not all doctors are crooks, of course. Many of them say they prescribe the high cost drugs because they're safer, more reliable and more fully tested.

Sen. Nelson's hearings have exploded that myth already. Last week the Senator said, *"The Monopoly subcommittee has heard testimony from a number of professionals who favor prescribing drugs by their generic names whenever possible, instead of by their higher priced brand names.*

"Food and Drug Administration research shows beyond a doubt that th echeaper drugs are just as good, if not better, than the ones most doctors prescribe."

Other physicians have been taken in by the drug firms' story that research and testing costs are so high they have to push brand names—and use huge mark ups—to make any money.

But Nelson was ready—and eager—to shoot the drug makers down on this point, too. He stopped the show by producing the facts about thorazine—a tranquilizer widely used to treat mental patients.

It was developed entirely in France and a French firm paid for all the research and test costs. Yet Smith, Kline & French, the American company licensed to sell it here, wholesales them for $6.06 per hundred.

The drug people have so far been unable to explain to anyone's satisfaction why the exact same drug sells for only $1.08 in Paris and London.

The drug companies soak Americans two ways. As patients, most of us unknowingly buy the most costly brands on the market. And, as taxpayers, we subsidize the drug firms all over again.

This year, drugs bought with public funds for Medicare patients and under welfare programs will cost us more than $200 million. And there are some much-needed new proposals in the Congressional mill that may double that amount.

But unless Congress takes action to protect taxpayers by requiring public hospitals and health plans to buy generic drugs, most of our money will help swell drug makers' profits at our expense.

WEEKEND WRAPUP

The text for this week's sermon, brothers and sisters, is taken from **Charles Dickens:** *"It was the best of times, it was the worst of times, it was an age of wisdom, it was the age of foolishness, it was an epoch of belief, it was the epoch in incredulity, it was the season of Light, it was the season of Darkness, it was the spring of hope, it was the winter of despair, we had everything before us, we had nothing before us, we were all going direct to Heaven, we were all going direct the other way—in short, it was like the world we live in."* A major diplomat from a communist nation defects, the ravages of a bloody war rage on, Congress knifes hopes for better housing for America's poor, the times are booming for most Americans, bitterness erupts in violence in Texas at a Negro college, more Americans will take longer vacations at better pay than ever before in our history. You could call it a crazy, mixed-up world. There's plenty of doom for the doomsdayers. It takes a great optimist to remain cheerful—and such a man is Vice President Humphrey. Last week the Veep told Washington businessmen to work hard now to build playgrounds and provide jobs for youngsters from the slums or live to regret a long, hot summer: *"We need preventative medicine before we are struck down by the disease of violence. My blood is red hot for doing something constructive around here."* . . . Few people heard it and only faint glimpses of it got on television—but **last week's legislative battle over rent supplements for the poor** was a dangerous sample of the fix this country's in. Some Republicans honestly feel they are promoting positive alternatives—but while the debate waxes for weeks, the problems deepen. A liberal congressman wagged his finger at the Republican side of the aisle last week and said: *"The poor are not going to disappear. They're here right now and they're going to stay here until we do something."* The late Sen. Robert Taft was a bona fide conservative always impressed with facts. While he lived he accepted the necessity for doing something in housing, education, and medical care. Today's breed of GOP conservatives are too often willing to win a vote and forget the problem. Next time you see a rotting row of slum properties—remember last week's defeat of rent supplements in the House of Representatives. Some 35 courageous Republicans rose above partisanship to cast a vote for progress on model cities, but only 11 cast votes for rent supplements. Many conservative Democrats—who love government money for cotton subsidies and cheap government irrigation water—voted against their party's President, their party's platform, and against the hard facts of human misery and rotting cities. These 11 Republicans bucked the tide to vote for rent supplements: *Whalen, Mathias—Md., Reid, Kupferman, Halpern, Button, Horton, Brown—Mich., Morse, Gude, Mosher, Harvey.* . . . It's hard to get very excited about Republican schemes for tax-

Destruction Of Civilian Centers, U.S.A.

sharing when you look at the Republican record on rent supplements and model cities. Reason to mistrust any transfer of federal money back to states without strings is simple: cities have been starved and consistently neglected by backwoodsy types, witness last week's vote. Prevailing conservative mood in Congress among most Republicans and some Democrats shows a shortsighted anti-city frame of mind. . . . **Social Security's a bargain,** like we noted last week in this column—but not unless Congress does something to improve it this year. House Ways and Means Committee still mulls over pros and cons of suggested changes—and there's no clue yet what Chairman Wilbur Mills and his colleagues expect to do. Here's another way to figure what it can be if Congress acts: Suppose you become totally and permanently disabled when you're 30—and you're 22 now. You, your wife and your child will receive benefits that could add up to $230,000 based on normal life expectancy. It will have cost you only $3,858—that's quite a bargain and you could never buy insurance for that. . . . You want to fight the rightwing hate-peddlers who use the radio to attack your government? **Institute for American Democracy** has a $1 manual called "How to Combat Air Pollution" using the FCC's fairness doctrine. Write UAW Washington Office or IAD, 1330 Massachusetts Ave. NW, Washington, D. C. 20005. . . . South Dakota's **George McGovern** said soberly in his May newsletter to 100,000 residents of his state: *"It took more courage for me to speak out on the Senate floor recently than to fly any one of the bombing missions I flew as a pilot in World War II. It takes no courage to cheer from the sidelines and call on our soldiers to fight harder. It is the troops who will die, not the cheerleaders. I have observed that the noisest warhawks are often those who have never seen a young soldier die in battle."*

Inauguration Day—1965

U. S. Senator Birch Bayh has the answer for Americans who are tired of letting the nameless, faceless Electoral College decide who our Presidents will be. His plan to let the people decide for themselves is fast gathering support across the country—from the prestigious American Bar Association to the average citizen who values his vote.

90TH CONGRESS 1st Session — **S. J. RES. 2**

JOINT RESOLUTION

To amend the Constitution to provide for the direct election of the President and the Vice President of the United States.

By Mr. BAYH, Mr. BIBLE, Mr. BYRD of West Virginia, Mr. CHURCH, Mr. CLARK, Mr. HARTKE, Mr. HATFIELD, Mr. JAVITS, Mr. LAUSCHE, Mr. LONG of Missouri, Mr. MAGNUSON, Mr. MILLER, Mr. MORSE, Mr. NELSON, Mr. PROXMIRE, Mr. RANDOLPH, Mr. TYDINGS, Mr. YARBOROUGH, and Mr. YOUNG of Ohio

JANUARY 11, 1967

Read twice and referred to the Committee on the Judiciary

Your next Congressman could be the most powerful man in America

"The present system has in the past—and may in the future—result in the election of a President who has received fewer votes than his opponent. I cannot see how such a dangerous, antiquated and undemocratic system can be beneficial to the American people. I see, instead, only grave dangers which could divide this nation at a critical hour."

—U. S. SEN. BIRCH BAYH—MAY, 1967

Suppose your Congressman—all by himself—had the power to choose the next President of the United States. Would he select the man you'd want?

It's entirely possible that the Representative your Congressional district elects in 1968 will have the power to decide who lives in the White House for the four long years from January 20, 1969 to January 20, 1973.

The political outlook these days is for a close—and crowded—Presidential race. The normal competition between Democrats and Republicans will probably be complicated by the candidacy of Alabama's ex-Governor Wallace on the political right and a peace candidate on the left. A four-way race could easily splinter America's vote so badly that no one candidate would win a majority.

(Continued on page 2)

Steve Schapiro, Black Star

Gene Daniels, Black Star

"At present every vote does not count equally. Example: New York and Nevada. New York State citizens cast more than 50 times as many votes as are cast in Nevada, but they have only 15 times as many electoral votes. Thus, every time a voter in Nevada goes to the polls to vote for president, he casts in effect three votes for every New York voter's one.

—ROSCOE DRUMMOND

Percentages of votes, winning candidates

"Winning candidates percentages of popular and electoral votes," 1868–1964, Congress and the Nation 1945–1964, Congressional Quarterly Service (1965), p. 67.

Year	*Winning candidate*	*Percent of popular vote*	*Percent of electoral vote*
1868	Ulysses S. Grant	53	73
1872	Ulysses S. Grant	56	82
1876	Rutherford B. Hayes	48	50
1880	James A. Garfield	49	58
1884	Grover Cleveland	49	55
1888	Benjamin Harrison	48	58
1892	Grover Cleveland	46	62
1896	William McKinley	51	61
1900	William McKinley	52	65
1904	Theodore Roosevelt	56	71
1908	William Taft	52	66
1912	Woodrow Wilson	42	82
1916	Woodrow Wilson	49	52
1920	Warren G. Harding	60	76
1924	Calvin Coolidge	54	71
1928	Herbert C. Hoover	58	84
1932	Franklin D. Roosevelt	57	89
1936	Franklin D. Roosevelt	61	98
1940	Franklin D. Roosevelt	55	85
1944	Franklin D. Roosevelt	54	81
1948	Harry S Truman	50	57
1952	Dwight D. Eisenhower	55	83
1956	Dwight D. Eisenhower	57	86
1960	John F. Kennedy	50.08*	62
1964	Lyndon B. Johnson	61*	90

** Percentage of major party vote only.*

(Continued from page 1)

So there's a serious possibility that no candidate in 1968 will carry enough states to control the Electoral College. If that happens, the Constitution throws the final decision into the newly elected House of Representatives. There, each state's delegation would have one vote, with the Presidency going to the candidate who lines up twenty-six votes—a majority of the fifty possible state votes.

The troubles this sort of Congressional squabble would cause are obvious. In a closely divided House anything—including arm-twisting, shady deals and even fraud—would go. And the Presidency could go to the fastest and trickiest operator.

And after it's all over, Congress would probably have extracted enough promises from the new President to wipe out the Constitution's protection of the Executive branch's powers.

U. S. Senator Birch Bayh (D-Ind), chairman of the constitutional amendments subcommittee, has spent years studying the problem. He now recommends doing away with the out-dated, undemocratic Electoral College by changing our laws to allow direct, popular election of the President.

His bill, SJ Res 2, would give the American people—for the first time in our history—a chance to decide for themselves who their President will be.

The dynamic Hoosier lawmaker has powerful reasons for calling the College antiquated and dangerous. In a recent speech he said, "The College was created to meet 18th century problems that no longer exist in America.

"In 1787 there were no political parties and the founding fathers had to find a way to prevent the formation of hundreds of splinter parties. And since there was no mass communication, there was no way for the people at large to get to know the candidates or the issues well enough to make an enlightened choice."

Bayh also said that widespread illiteracy and widely varying voter qualifications discouraged the framers of our Constitution from approving popular Presidential voting.

"But all this has changed now," he said. **"In the last 180 years we have expanded the franchise to include people of all races and of both sexes; we have extended direct elections to include Senators, who once were appointed by the legislatures; all qualified citizens now are guaranteed the right to vote; and we have strengthened our system of education and developed mass communication to the point that every American now has the opportunity to know the issues and the positions of candidates in Presidential elections.**

"It seems to me there remains no persuasive argument for a system in which the people cannot choose their most powerful national officers directly, but must instead rely upon the judgment of electors whose names and qualifications are known only to a few.

"It seems to me," Bayh said, **that people should have the right to choose their President in the same way they choose a township trustee, a city councilman, a mayor, a state legislator, a Senator or a Governor."**

Under the present system a certain number of so-called electoral votes are allotted to each state. The popular vote winner in each state usually takes all its electoral votes, regardless of how close the race is. To become President in 1968, one candidate will have to control 269 of the College's 538 votes.

Birch Bayh photos by Paul Conklin

U. S. Senator Birch Bayh, Democrat from Indiana

Bayh's plan would award the Presidency to the man who receives the highest, nation-wide popular vote. It also requires a candidate to win a minimum of forty percent of the total vote cast.

If no candidate polls forty percent, Bayh recommends a national runoff election between the two high men.

His plan already has the backing of a blue ribbon commission of the American Bar Association and a recent Gallup poll shows that a large majority of the voters agree.

Another survey, conducted by U. S. Senator Quentin Burdick (D-N.Dak), reveals that sixty percent of our 2500 state legislators also favor this method of selecting a Chief Executive.

To become law, however, Bayh's bill requires an amendment to the Constitution and many observers fear he won't be able to push it through in time for the 1968 elections. So it's likely that we'll have to choose our next President according to the present rules.

This means that each voter will have a special—and heavy—responsibility in 1968. When he campaigns and votes for his Washington representative he'll probably be doing a lot more than just picking a man to represent his district. He may very well be campaigning and voting for a man who will select our next President.

"While there may be no perfect method of electing a President, we believe that direct, nationwide popular vote is the best of all possible methods. It offers the most direct and democratic way of electing a President and would more accurately reflect the will of the people than any other system."

—Statement by the American Bar Association's Commission on Electoral College Reform—January, 1967

WEEKEND WRAPUP

The auto companies are poor-mouthing again, but two congressional big guns won't buy it. **Sen. Warren Magnuson and Sen. Fritz Mondale** last week asked GM, Ford, Chrysler and American Motors to tell Congress exactly what they intend to do on next year's prices—and why. Mondale is a rising Senate star with a consumer watchdog reputation while he was Minnesota's attorney-general. Magnuson has plenty of clout—he's chairman of the Senate Commerce Committee. The UAW has always welcomed a full accounting of price and wage policies in the auto industry—the more the public knows, the more wages and prices will be calculated in the public interest. Mondale thinks auto companies are making safety equipment the scapegoat for slipping profits. Don't pull out your hankie yet. Auto profits slipped from 23 percent after taxes in 1965 to 18 percent in 1966. Says Mondale this profit is *"still one of the highest profit returns in American business."* Mondale reports UAW President Reuther said price of all 1966 cars could have been cut by $251 at wholesale *"and still earned the average rate of profits for all manufacturers."* Mondale thinks it *"most strange"* that an industry which can make expensive styling changes each year without increasing prices *"finds it necessary to 'substantially' increase prices to meet the modest safety standards being required this year."* Mondale's the bright, gutsy liberal Democrat who took Hubert Humphrey's seat in the United States Senate. Among his demands of the auto industry he asks: *"whether savings which accrue from implementation of safety standards (for example, elimination of dangerous or unnecessary ornamental metal) are being deducted from the cost attributed to safety; whether the cost of mandatory anti-smog devices is being included in the cost of complying with safety standards; and whether the cost of defect notification and recall campaigns is being included in the cost of complying with the new safety standards." . . . "Nothing will replace good old-fashioned collective bargaining and head-knocking. I don't think there's any piece of legislation—I don't care what it is—that will be a cure-all. We'll never get rid of deadline bargaining."* Who said this? Was it Walter Reuther? I. W. Abel? Roy Siemiller? No, it was **William S. Simkin**, director of the Federal Mediation and Conciliation Service, speaking recently to the Tennessee Valley Trades and Labor Council at its 30th anniversary meeting. Wise words, those. . . . Congress is in the throes of trying to untie the **campaign financing knot.** Almost everybody agrees the present system of paying for campaigns is a farce, dangerous, full of holes, and needs reform. But how do you reform—ah, that's the tricky one. Can Congress reform itself? Can the President? Can an ivory-towered group of professors? Can anybody? Here's one place the Supreme Court—bless their hearts—can't come to the rescue. Today liberals and conservatives in Congress are cut up in little pieces. Close ideological friends are miles apart on deciding how to reform our rules for campaign financing. The UAW's longstanding plan for a $5 tax credit still makes a lot of sense. Any time you gave $5 directly to a candidate or to COPE you could turn in a receipt to your own employer, and $5 more would be paid out in your next paycheck. A quick, fair, surefire way to raise campaign money. As the debate unfolds we'll report the action to you. Over $200 million was spent in 1964 at all levels of government—and that's more than $1 per citizen. Campaign costs keep zooming upward. Something's got to be done. Much of today's political money comes from folks with a vested interest or an axe to grind. Some people even play both sides of the street and give equal amounts of money to candidates running against each other—how's that for sheer cynicism? . . . Oil companies ought to be sitting ducks for higher taxes, instead of working people whose taxes are taken out of every paycheck. But as Jack Anderson observes: *"Of all the pressure people who operate behind the Washington scenes, the most elegant and elite are the oil lobbyists, who have been able to expand the oil tax loopholes until an estimated $6 billion slips away from the Treasury each year. . . . Governments may rise and fall; wars may shake the world. But the dividends keep pouring in, remarkably unaffected by international boundaries and politics.* Don't let your own congressman support a 6 percent surtax on you unless he supports a heavy cut in the **oil depletion allowance.** Millions of honest taxpaying Americans pay 20 to 30 percent of their income in taxes, while a select few oil millionaires don't pay any taxes whatsoever—not one red cent! . . .

PAUL ANTHONY
EXECUTIVE DIRECTOR

A Council to attain the ideals and practices of equal opportunity for all peoples in the South

MEMORANDUM

June 7, 1967

TO: State Council Directors

FROM: Ed Stanfield

An article by Robert Sherrill, titled "It Isn't True That Nobody Starves in America," in the New York Times Magazine, June 4, 1967, confirms and summarizes reports that we have been getting from many sources for many months that literally thousands of people in Mississippi, Alabama, southwestern Arkansas, eastern Tennessee, and other areas of the South are starving. It further confirms that in the very worst counties emergency distribution of food through Surplus Commodities or Food Stamps programs is inadequate or--for most intended recipients--non-existent. The Department of Agriculture has thus far been unwilling or unable (because of opposition from powerful southern congressmen) to make changes of administrative policy to cope with the situation.

That conditions constitute a dire emergency has been confirmed for us most recently by a delegation of medical doctors, including Robert Coles and Raymond Wheeler, who personally observed and report, from the point of view of medical men, quite intolerable malnutrition and susceptibility to disease because of starvation diets in the areas visited.

This is to urge you to read the Times Magazine article, if you can obtain a copy, and to request your members, through newsletters and appeals included in any talks you may be making and in any other way you can think of, to write to The Honorable Orville L. Freeman, Secretary of Agriculture, simply stating concern over these conditions and inquiring whether emergency procedures are possible to get surplus commodities or free food stamps to these people.

I recognize that this is precious little to do and (to those of us who are at all acquainted with USDA operations) probably futile in itself. However, such expressions of interest and concern will coincide with other efforts that are being mounted. We have hopes that the combined efforts will get some results.

Muddled Republican "thinking" on national debt threatens economic slowdown, roadblock to growth

A funny thing happened in Congress the other day. The conservatives decided our national debt is too high—so they got together and killed a House bill to raise the ceiling.

Being in debt isn't funny. But the way conservatives talk about it—out of both sides of their mouths at once—is. Or at least it would be if so many people weren't taken in by their nonsense.

Turn on the radio. Chances are you'll hear a bank advertisement in the first five minutes. Your local, friendly money-lender spends thousands of advertising dollars every year trying to coax you deeper into debt. He doesn't care what you buy —as long as you borrow to do it.

And he'll be the first to tell you that borrowing is the American way—that credit makes the world go around, faster and better.

America's economy needs a Republican-type balanced budget and an out-dated debt limit about as much as it needs a recession. And that's exactly what we had the last time voters gave the GOP an upper hand in Washington. U.S. families live better and our strongest companies continue to grow through wise use of borrowing power. The federal government's effective management of the public debt since 1960 has made our towering national prosperity possible.

"What some people forget is that the remarkable growth of our nation's economy has been made possible—in large part—by the government's wise borrowing and investment of public funds."

—Cong. Chet Holifield (D-Calif.), June 7, 1967

Why wait until you save enough to build that patio the wife wants so much, he asks. Why not borrow—today—against your future earning power and have the neighbors over for a cook-out tonight?

It all makes sense. A carefully handled family debt means better living today—not years from now when you're too old to enjoy it. As long as you keep an eye on the interest rate you're paying, it's really pretty cheap to have most of the things you need or want.

And everybody comes out ahead. The bank makes money because you pay interest. The guy you buy the bricks and cement from makes a profit on the sale and —if you hire somebody to help you build it—you've created a new job. Everybody's happy—even the wife. Right?

Right. Conservatives—like bankers, stock brokers and other coupon-clippers—never complain about personal debts or private borrowing. They can't afford to because U.S. consumers cough up twelve billion dollars a year in interest payments to them.

But when our government tries to do the same thing they want us to do—borrow against future income to buy the things America needs now—they have an ulcer.

Confused? Well, it gets trickier. Let's take a look at another segment of the conservative's world—business corporations. **Since the war, company borrowing has quintupled, jumping from $100 billion in 1945 to $530 billion in 1965.**

Ask the nearest executive to explain that whopping debt—it's nearly twice as large as our federal debt—and

(Continued on page 2)

What credit costs us

Interest on U.S. Public Debt $13 Billion

Interest on U.S. Consumer Debt $12 Billion

These illustrations, based on latest U.S. Commerce Department figures, underline a significant point about the cost of borrowing money. How much the credit costs depends on who is doing the borrowing.

The figures at left show that, during 1966, the U.S. Government paid $13 billion in interest on its $329 billion debt.

The figures at right show that, during the same period, U.S. consumers paid nearly as much, $12 billion, in interest on installment debts, charge accounts and other loans of only $95 billion.

John Gorman, a Commerce Department economist, has figured out that nearly a fourth of the average family's income in 1966 went to pay off debts and the interest on debts.

Worried about leaving her a big national debt? DON'T! Wise use of our federal borrowing power today is the best investment we can make in her future.

(Continued from page 1)

he'll tell you it's simple. Private corporations have to invest to grow.

So they borrow money, build a new plant, hire some more workers, make and sell more products, make payments on their loan and chalk up bigger profits than ever before. That's the way to run a business. It's good for the economy. But the government is a different kettle of fish, for some reason.

Ask why and he'll want to know how we're ever going to pay back a national debt of $320 billion. He'll weep for his grandchildren because they'll be the ones who suffer for our fiscal recklessness. In point of fact, if the only thing our grandchildren have to worry about is the national debt, they'll be a lot better off than we are

Do corporations ever pay off their loans? Most of them couldn't afford to and wouldn't if they could. As long as they want to keep growing, they'll keep on borrowing.

The truth is that it's better business to refinance corporate loans when they come due than to pay them off. It's the only way most companies can afford to keep expanding.

Yeah but, the worry-wart argues, there's a big difference between corporate and government borrowing because companies have assets to match their liabilities. When they build a new plant with borrowed money they have an investment that's worth at least as much as they owe. So if worst comes to worst, they can always sell it and pay off their loan.

But when the government borrows money to build an interstate highway, the conservative continues, it doesn't acquire any asset to balance off the debt. And anyway who'd want to buy a used, six-lane highway?

It's true that the government has nothing comparable to a company's assets. But assets are only worth something if they produce income. And the government has the most reliable source of income there is: the tax base of our country's economy.

Two kinds of people talk the loudest about paying off the national debt: politicians who think it's a good way to get elected and conservatives who want to cut spending at the expense of America's education and social needs.

The federal debt will probably never be paid back, just as most corporate debts will never be retired. Actually, the

(Continued on page 3)

Quiz Yourself

1. The second largest expense in the U. S. budget is interest on the national debt. TRUE ☐ FALSE ☐
2. U. S. corporations owe almost twice as much as the entire federal government does. TRUE ☐ FALSE ☐
3. The Federal Reserve Board has doubled the cost of government borrowing in the last fifteen years by raising interest rates from 2.5% to 4.7%. TRUE ☐ FALSE ☐
4. The best way to achieve steady economic growth is to stop all government borrowing and cut back heavily on federal spending. TRUE ☐ FALSE ☐
5. Most American families spend nearly 25% of their yearly income paying interest on loans and services charges on charge accounts. TRUE ☐ FALSE ☐

Answers: 1—T, 2—T, 3—T, 4—F, 5—T.

> **"If the government calculated its vast public resources the same way as private enterprise does, there would be no such thing as a national debt without an offsetting group of assets."**
> *—Cong. Chet Holifield (D-Cal), June 7, 1967*

(Continued from page 2)

federal debt will get larger as our economy expands to make room for our constantly growing population.

The worst thing we could do to our grandchildren would be to slow down our economic growth rate. And the fastest way to bring it to a dead stop would be to follow the empty-headed conservatives' advice.

The public debt is no more a serious problem for America than corporate debt is for business or family debt is for workers. As long as it's managed wisely, that is.

During the House debate on raising the ceiling, Cong. Wright Patman (D-Tex) raised an important point about our current handling of the national debt. He pointed out that because the Federal Reserve Board has raised interest rates so high, we're paying far too much for the privilege of government borrowing.

During the next twelve months interest on the national debt will cost taxpayers fourteen billion dollars. If we'd kept a lid on interest rates, however, we'd only have to pay about half that much.

During the Korean war in 1951, we financed our long-term federal borrowing at a rate of 2.5 percent. Today, we're paying 4.7 percent to finance Vietnam and the vital Great Society programs. Chopping interest rates down is an important step toward better management of the public debt.

There's another side to the federal debt question that many people overlook. It's an internal debt we owe ourselves, not an external debt we owe to a foreign country.

A large external debt would be a real burden on our national economy because we woud have to send valuable goods or services abroad to meet our interest payments. This explains why the British, for example, are much more concerned over their relatively small external debt to us than they are over their vastly greater internal public debt.

The interest on our national debt is paid by Americans to Americans. While this does cause an internal shifting of money from taxpayers to the holders of government IOU's, there is no real loss of wealth to our country as a whole.

Another important factor to understand is the way the government keeps its books. When it builds a new post office it charges off the whole cost immediately and not, as corporations do, over a period of years.

As Cong. Chet Holifield (D-Cal) put it in his floor defense of hiking the debt limit, **"The federal government does not set up a column of assets for the long-term investments of public money it makes in constructing public facilities. The average businessman by contrast shows his investment in a new plant as an asset and depreciates its cost over a period of several years.**

"If the government calculated its vast public investment the same way private enterprise does, there would be no such thing as a national debt."

By far the most important point about the whole business, though, is that the prosperity of our nation—and its individual citizens—is not determined by the dollar size of the national debt.

Our financial security is measured by what percentage the public debt is of our gross national product. A worker whose income increases from $7000 to $10,000 and whose debts increase from $3000 to $4000 at the same time is better off earning more and owing more. It's not the dollar amount of his debt that matters. It's what portion of his total earnings he owes that counts.

And percentagewise our public debt has been going steadily down. At the end of the second world war it was actually greater than the GNP, but by 1955 it had dropped to 72 percent. Last year our total accumulated debt—most of which has been borrowed to pay for past wars and current defense programs—represented only 45 percent of the dollar value of one year's national production.

The public debt will never cause us problems in the future if it's managed intelligently in the present. And intelligent management of the debt is the best way to finance America's march to greatness.

ebt rises slower than other debt

Source: 1967 report—President's Council of Economic Advisors, U.S. Statistical Abstract

WEEKEND WRAPUP

It was **Tom Dodd Week** in Washington and it wasn't pleasant to watch. The entire Senate was tied up for several days listening to Dodd defend himself and some Senate elders deliver a political death sentence against Dodd. As many as 80 Senators at a time listened as they mulled over Tom Dodd's fate. That's more than sat in their seats during civil rights cloture and test ban treaty. Why so many? Majority Whip Russell Long cajoled many, saying Senators had no right to vote on Dodd unless they heard debate in flesh. Sentimental thing called "the integrity of the Senate" was at stake—so all rest of Senate came to grinding halt for this gruesome business of digging a man's political grave. We couldn't help wondering what it would be like if Senate sat and listened for three or four days about misery of America's poor, uglification of America's landscape, yearning for world peace, anguished cry of hungry people for food. All that political power and talent sitting there in judgment over a wayward colleague—what a waste in time and energy. . . . **The Supreme Court** last week ruled a union—in this case UAW Local 248 (Allis-Chalmers)—could fine members who cross a picket line during a strike. The majority decision contains a good summing up of how Americans regard unions these days: "*Congress in the 1959 Landrum-Griffin amendments enacted a code of fairness to assure democratic conduct of union affairs by provisions guaranteeing free speech and assembly, equal rights to vote in elections, to attend meetings, and to participate in the deliberations and voting upon the business at the meetings. Integral to this federal labor policy has been the power in the chosen union to protect against erosion its status through reasonable discipline of members who violate rules and regulations governing membership. That power is particularly vital when the members engage in strikes. The economic strike against the employer is the ultimate weapon in labor's arsenal for achieving agreement upon its terms and the power to fine or expel strikebreakers is essential if the union is to be an effective bargaining agent.*" Thurgood Marshall was named to Supreme Court by President Johnson, and he's first Negro so honored. President's power to name Court and Court's power to decide on labor law is fresh reminder of power of Presidency. . . . It's hard for a lot of people to swallow—but **national debt** today is smaller percentage of our gross national product than two decades ago. In 1966 debt was only 45 percent of GNP, while it was 133 percent of GNP in 1946 right after World War II, and 55.3 percent of GNP in 1942. . . . The **Republican Party** has moderate and conservative wing, just like Democratic Party—and GOP moderates have been organized for some time in so-called "Wednesday group." Now GOP conservatives

want group of their own, fearful their party is moving too far to left. Estimated 26 members of Wednesday group are pressuring GOP leadership to more than merely be against Democratic programs. GOP Opportunity Crusade hopes to junk Office of Economic Opportunity—and it won't encourage Americans that Republicans care about wiping out poverty. Poor need a champion, and if GOP foes of OEO dismantle anti-poverty program—it'll be heavy blow to America's commitment to end human misery within ten years (by 1976, the 200th anniversary of the Declaration of Independence). . . . California's Chet Holifield is a durable liberal who's never gone high-hat as he accumulated seniority in the House of Representatives, and he summed up the railroad situation pretty well last week with these words: "*There are union men fighting in Vietnam. There are boys whose fathers are working on the railroads that are fighting in Vietnam. They are fighting there for the free processes of a democratic society, not for compulsion on one side and freedom from compulsion on the other. Now, Mr. Chairman, either we are at war or we are not at war. If we are at war, then let us follow the pattern of World War I and World War II in which seizure and compulsory arbitration of labor disputes were carried out.*" "It's been daily dose of legislative brinkmanship for railroad unions as both Senate and House tussled with ways to keep rails operating in wartime, while keeping free collective bargaining alive. . . . **Federal Communications Commission** showed some backbone recently in ruling "fairness doctrine" is more than fancy phrase. FCC says stations which carry cigarette advertising must give time to voices that tell about perils of nicotine. Not equal time—but time. And when rightwingers rant and rave, you have a right to have your voice heard over radio—so the voice of dissent won't be drowned out by dollar-bills. RCA and CBS did not invent radio and TV—they merely cashed in on licenses given by the American people.

A Fearless Voice of Sanity Leaves

ED MORGAN

For many years now, Edward P. Morgan's radio voice on the ABC network has been a fearless voice of sanity. Last week he shut up shop to work for public television under a Ford Foundation grant. Ed Morgan's radio voice will be greatly missed. His pungent comments on people and events were welcome in places in America where such voices were seldom heard. His last broadcast for the AFL-CIO is a meaty sample of why so many Americans will miss Ed Morgan's radio voice, and why we await the newly televised Ed Morgan:

I am deeply concerned about the conditions and moods now rampant in this, my native land. Amid the most incredible riches and the most terrifying power any nation has ever accumulated in the history of man, we are plunged into divisive turmoil. Instead of trying to solve our problems we organize hate groups to blame the other fellow. Or we flee to the beaches of frantic leisure only to be sunburned by the guilt of our wanton negligence.

There is no miracle drug or magic ointment to cure or quiet this situation. But there is an instrument of devastating effectiveness which we have only superficially, often hypocritically, employed. It is called the power of the press.

There is enough wrong in this republic to merit a full-scale exposé daily, if not every hour on the hour. But newspapers run prize contests to lure readers or keep the ones they have. Broadcasting is driving thoughtful citizens away in droves by fertilizing the wastelands of the airwaves with the manure of utter mediocrity.

Why? I think I know why. Nothing in life is free. But in our obeisance before the altar of profit and free enterprise we have let the lust for material things get the better of us. Nothing is so important as people. But instead of the sacred dignity of the individual human being, too many of us worship dividends and private property more.

It is not the policy of General Motors to kill or maim people. But that became its operating policy in order "to protect its investment," when instead of correcting flaws it knew its cars had, it set a gumshoe detective on the trail of Ralph Nader. And where were the Detroit reporters, incidentally, before Nader came along?

It is not the policy of the newspapers and broadcasting stations of Connecticut to suppress vital news. Yet where was the press of that state when the shocking revelations about Sen. Thomas Dodd were coming out? Has it occurred to an editor or broadcaster, in Connecticut or out, that the senator's tortured employes might not have passed the incriminating documents over the transom to Drew Pearson if they had believed the Connecticut press would have responded to any first friendly tips with the enterprising courage Pearson did? Where were the press and the rest of the power structure, including labor leaders, in the disgraced and bleeding city of Cincinnati before its black citizens exploded their frustration?

The nation's situation is not hopeless. It simply begs for responsible sustained attention. My most painful duty tonight is to take leave of a loyal, thoughtful listening audience. If I have been emboldened to speak out it is because I know I have not been talking to myself.

The honestly concerned citizens, right, left and center, are the nuclei, not of black power or white power but positive power, which can make representative government work. But their power has not been sufficiently turned on because the press has been too busy neuterizing the news to clear comfortable, non-controversial space for the full-page ad and the singing commercial.

Tax sharing to state is dangerous snare

Proposals that Uncle Sam turn back part of the federal income tax to the states, with little or no strings attached, have been pouring into this Congress.

However, such proposals drew sharp attacks from mayors at hearings held by a Senate subcommittee on intergovernmental relations.

Among them, Mayor John F. Collins of Boston declared that **"tax sharing is the most dangerous idea in America today."** He asserted that if federal taxes were given to the states with no limitations, **"the money would stop at the statehouses"** and would not reach the cities, which badly need help.

Collins instead backed the present system of federal grants-in-aid which are made for specific purposes and under federal standards.

Similar testimony was given by Mayor Harold Tollefson of Tacoma, Wash., who's president of the National League of Cities. **Speaking for the League, he declared that states "could not be trusted" to respond to the needs of cities.**

Sen. Edmund S. Muskie (D., Me.), chairman of the subcommittee, said he favored strengthening of the states, but added that they "need legislative and constitutional reform" before they can function effectively. Until such reforms occur, Muskie asserted, the federal government must continue "to fill the void and provide more direct assistance to local communities."

Meantime, in the Senate Frank E. Moss (D., Utah), warned that **"the tax-sharing plans are often ill conceived and show little promise of helping to solve the crucial domestic problems that we face.**

"The chief attraction of these plans is that they will help to shore up the shaky financial positions of many state governments. But often these state governments have not increased their state taxes to meet their responsibilities and

(Continued on page 3)

(Continued from page 2)

they could use the tax rebate merely to reduce state taxes further. I think there are higher priorities for federal tax monies than this."

Moss said the tax-sharing idea seems to have originated with Walter Heller, former chairman of the President's Council of Economic Advisors. However, this was before Congress enacted the big program to aid elementary and secondary schools, before Medicare was passed, "and before we really faced up to the truly herculean tasks of curbing air and water pollution through federal grants."

"When you assess the needs under these new programs," he continued, "it is apparent that far from a federal revenue surplus, we are faced with a real shortage of funds for state grants-in-aid programs.

"Federal grants-in-aid have made it possible to retain the advantages of performing essential civilian services through the state governments, while retaining national objectives of equalization and nationwide improvement through these programs."

Moreover, some of the proposed tax sharing plans, Moss said, would "allow the rich states, which are having the least difficult time providing services, to get a lion's share of the money." This "would accentuate a division of this country into the 'haves' and 'have-nots'," he said.

"Many serious students of state and local government, including some leading federal bureaucrats, believe the states have reached a critical point in their relations with the federal government. They believe the states must quickly modernize to exert more force and initiative if they are to deal with local problems and retain their independent identities.

". . . Many states are restricted by 19th century constitutions in their taxing and borrowing, and even in their ability to convene their legislatures to deal with modern programs and events.

. . . The result of this month's (November 1966) government reform referendums, indicate, however, that in many states the voters do not understand or are not prepared to accept proposals to modernize state governments to meet growing administrative and fiscal demands."

—Ben A. Franklin, New York Times, November 28, 1966

THE NEW YORK TIMES, MONDAY, NOVEMBER 28, 1966.

Studies Find Voters Rejected Most Major Plans for State and Local Government Reforms

By BEN A. FRANKLIN
Special to The New York Times

WASHINGTON, Nov. 27—State and local government reform suffered "a slap in the face" on Election Day, officials of the Council of State Governments said today.

Separate assessments of major statewide referendum results by the council, a cooperative group with headquarters in Chicago, and by the Advisory Commission on Intergovernmental Relations, a Federal agency, showed that more significant proposals for the streamlining of state and local governments were defeated last Nov. 8 than were passed.

In three states—Kentucky, Utah and West Virginia—every proposal on a list of reform recommendations was rejected, and in Nebraska voters may have denied it its state gov- growing administrative and fiscal demands.

The Government of Nebraska, for example, faces the prospect of a total loss of major tax revenues. Nebraska voters overwhelmingly rejected a state income tax, enacted by the 1965 Legislature. Pending the outcome of a statewide vote canvass, it appears from unofficial returns on another referendum question that Nebraskans also abolished the state property tax by a margin of about 1,000 votes.

In Kentucky, the voters overwhelmingly rejected a new constitution. Its proponents had argued it would modernize both the state and local units of government.

Opposition to the new constitution apparently was stirred by local government officials whose so-called constitutional offices would have been made appointive. The jobs of county sheriff and coroner, for example, are required under the state's 75-year-old constitution to be filled by election.

"You build your whole local government around elected officials who ought to be appointed and you usually don't get very good or effective local government," one official here said.

Utah Proposals Rejected

In Utah, the voters rejected proposals for a convention to revise the constitution and for an optional metropolitan government plan that would have allowed urban and suburban jurisdictions to begin planning to merge some services, subject to further voter approval.

Utah voters also rejected proposed constitutional amendments that would have provided for annual sessions of the Legislature, replacing biannual meetings, and that would have increased the salary of legislators to $1,000 a year. All the proposals had been passed and placed on the ballot by substantial margins in the Legislature.

In West Virginia, proposed amendments that would have established annual, 60-day legislative sessions, raised legislators' salaries to $2,500 and allowed the Governor to succeed himself for a second term were overwhelmingly defeated.

The modernization of constitutional limitations on the --length and frequency of legislative sessions and the compensations of legislators were treated differently by voters in different states.

In California, Kansas, New Hampshire, and Tennessee, antiquated constitutional restrictions on meetings of the legislatures were removed.

California and Louisiana voters also provided their legislatures with new power to overcome the Governor's veto by authorizing special follow-up sessions to reconsider bills vetoed after adjournment. Florida voters authorized the Legislature to hold an immediate, post-election organization session to fill committee and other posts well ahead of the working session.

Raise for California Legislators

California voters also approved salaries of $18,000 a year for their legislators, the highest in the country.

On issues affecting local units of government, the referendum results were generally negative, according to the two surveys.

Massachusetts voters approved a so-called residual powers provision that will bestow on local governments all powers not expressly reserved to the state. The effect will be to give local officials broad general powers in areas not denied them by state legislation.

But similar proposals were defeated in New Hampshire and Kentucky. In Missouri, voters rejected a special referendum proposal that would have allowed St. Louis to begin drafting a plan for a metropolitan government, merged with suburban jurisdictions. Another referendum on the "metro" plan would have been required to put it into effect.

Idaho, Massachusetts and Montana voters approved the enactment or continuation of sales taxes. Voters in Illinois decided to put a ceiling on the state income tax at present rates.

In New Mexico, voters approved an end of the justice of the peace system, thus abolishing, in effect, the lowest-level courts, usually staffed by untrained persons who received the fees they imposed on minor violators.

Officials here concerned about the slow pace of state and local government reform said the overall results of this year's referendum voting had "proved again the difficulty of getting important modernizations by the popular referendum route." But there is no other way, they said.

WEEKEND WRAPUP

Maybe Congress will get back to work—now that the Dodd business is done with. And what a strange line-up of votes it was, with odd combinations on both sides. But, oops, here comes the Fourth of July, and that means another recess and legislative lull. Meanwhile cities of America seethe with troubles. War on poverty boils with problems. Sen. Joe Clark, that valiant no-nonsense humanitarian, tells Sargent Shriver he's not buying any relaxation of the fight against human misery. Shriver told Republican foes of **Office of Economic Opportunity:** *"The poor are least articulate, the least influential, the least powerful of all our national minorities. They need an independent advocate, a strong, authoritative voice to speak on their behalf."* . . . Whopping **$70 billion defense budget** went whizzing through House of Representatives with scarcely a murmur of dissent. Nobody growled about waste. We all know there's incredible waste in any $70 billion gargantua like that. It's just bound to be. Congressional Record filled with war of words between friends and foes of OEO. Some Republicans like Rochester's GOP Cong. Frank Horton aren't buying this line—and we salute their independence. . . . Every House rollcall starts with **Abernathy of Mississippi**—and 99 percent of time he's lined up with hardcore Republican conservatives. Yet Abernathy gets his seniority from Democratic Party, is elected by mere handful of white voters in that benighted state. . . . The **90th Congress** like most congresses is blend of shifting coalitions of moderates and conservatives from both sides of the aisles. . . . With Middle East oil cut off from American consumers—there's opportunity for **oil shale** to fill petroleum gap—with new royalty allocation American people could be pocketing $1 billion a year—enough to pay for $400 million worth of parks Congress authorized but hasn't coughed up money for. . . . Down South many courthouses still fly Confederate flag above **Stars and Stripes**—but many states-rights southerners in Congress beat drums loudest for an anti-flag desecration law last week. Great game for super-patriots who show love of country by flag saluting—but show disrespect for principles of democratic government by defaming our courts, try to impeach Chief Justice, deny black people right to vote. . . . Reports from political dove-land (Wisconsin, South Dakota, Idaho, Arkansas, Oregon, and Alaska) indicate **Senate doves,** contrary to Washington press reports, in no great trouble because of their Vietnam attitudes. Wisconsin's owl-like Nelson personally popular for work on pollution, auto safety. Leading Republicans urge Nelson's strongest possible opponent, aging Warren Knowles, not to risk political oblivion by chancy Senate race. Keep Wisconsin state capital safely in Republican hands by running for governor again, they urge. . . . Rightwingers rallying round Tom Dodd come up with incredulous argument that political morality in Connecticut is different from political morality in some other states. *"What would not draw a second glance in Connecticut with respect to the spending of funds raised at testimonial dinners clearly and obviously shocks the morality of Senators from Rocky Mountain state."* Rightly say its high-time Congress sets down code of ethics. Betting odds are low right now for a better way to raise campaign funds for congressional candidates. Even most liberal Republican shies away from any government financing of campaigns. Republicans apparently never have trouble raising money. Democrats are divided—so there's only a slim chance for consensus on any campaign financing bill right now. . . . Roy Wilkins of NAACP was fighting for civil rights before young civil rights militants were born, and it bugs hell out of Wilkins to hear Stokely Carmichael call Lyndon Johnson a buffoon. Says Wilkins: *"Johnson came along and—I can't explain it, I just can't, I just don't know how—the things he's said and done for the Negro go beyond any President in history, and certainly beyond any southerner. In his first talk to the Congress, two days after Kennedy's funeral, he called for prompt enactment of two pieces of legislation: the tax bill and the civil-rights bill. It was a very moving speech. You can go from there all through his speeches, you won't find any parallel."* Yet Wilkins is old enough and wise enough to see some good things about the firebrands: *"I admire them in so many ways. They've brought so many kinds of things into the movement: an honesty, a daring boldness, a lack of fear that's refreshing—sometimes topped with rudeness and brashness, but there you are. There's room in civil rights for their brains, their impatience, their innovations, their energy. Especially their tremendous energy. Now if they could only harness it. I don't dismiss them. I don't sneer at them. It's just that I sometimes sneer at what they say."* . . . Newspapers love to write editorials denouncing the sins of Afghanistan, church people love to give money for foreign missions, and every American loves the Peace Corps—but why has the Teacher Corps had such tough sledding? Finally, compromise everybody can live with possibly saved **Teacher Corps** from oblivion. Not without heavy price of discouraged dropouts from Corps.

Have you written that letter?

Let your local paper or congressman know you think the rich should pay bigger share of war costs—no taxes on working people until tax loopholes such as oil depletion allowance are plugged.

Articles dealing with economics, research and education have been prepared in cooperation with the staffs of the Department of Research and the Department of Education.

Design for More Effective Schools 1

Ever since the 89th Congress committed the federal government to the goal of improving education at all levels, there has been an abundance of funds and programs. And yet the ghetto school stands almost unchanged. This article describes fresh approaches in the effort to provide better education for low-income and minority group children.
Walter G. Davis

The Obstacles to Fair Housing 5

In recent decades, many northern cities have shown a common pattern of change: the Negro population has grown within the central city while whites have moved into suburbs ringing the city. The major blame is put on the housing industry for facilitating this segregation. Fair housing laws are assessed and a firm public policy is urged to promote truly democratic communities.
Dr. Eugene Feingold & Robert J. Harris

Adventure in Learning with Mrs. Lyndon B. Johnson 9

Mrs. Johnson recently took a three-day trip to Appalachia to see how federal programs were helping to strengthen and enrich education for young and old alike. This is Mrs. Johnson's photo-story of her visit to West Virginia, North Carolina and Tennessee.
Mrs. Lyndon B. Johnson

Hope and Promise: Americans of Spanish Surname 13

One of the largest and yet least-known groups of poor people in America is made up of those with Spanish surnames. Concentrated in the Southwest, they are ill-educated, ill-housed and ill-fed. One of their numbers, a member of Congress, tells their story.
Rep. Henry B. Gonzalez

The Fight for Clean Air 17

The battle to control air pollution is entering a new stage. With President Johnson seeking national standards to limit pollution and most industry strongly opposed, it is apparent more support must be mobilized. The judgment at this point is that the people are losing the fight for clean air.
George Taylor

Design for More Effective Schools

by Walter G. Davis

The 89th Congress rightfully deserves recognition as the education Congress. Federal programs now in force add up to a significant commitment to share in the financial responsibility for education at all levels. However, a variety of studies and research projects over the last five years have all pointed to specific, hard-core problem areas where financial resources alone make little impact, although they are important.

This becomes apparent when we begin to examine the implementation of this nation's commitment to provide every child, regardless of his race or neighborhood, an equal opportunity to share in the cultural and economic wealth of the country.

For the youngster who has been subjected to a substandard school because of his race, programs are still grossly inadequate to meet the actual need in too many areas of the nation. Likewise, for the youngsters from families, white and non-white, who represent the perpetual cycles of ignorance identified with the poor, there is still a terrible lack of imaginative programs which already have shown promise.

Yet we are constantly reminded that in today's society it is imperative that one be prepared in order to enjoy some security in the world of work. This means that the acquisition of skills is more important today than ever before.

Even if the entire educational system was geared to meet the demands of industry and modern living, a significant number of young people could not meet the challenge because there would still remain the special problems of the poor and the minority group student for a long time to come.

There has been a meaningful beginning. Educators, government officials and concerned citizens now have before them a voluminous amount of data gathered in the last few years by competent scholars in the field of education.

Never before has there been the candid probing of the underlying causes of ignorance and educational

WALTER G. DAVIS is Director of the AFL-CIO Department of Education.

deprivation as was produced at the request of the Congress and the President since 1965.

Two significant studies sponsored by the federal government have produced the best existing profile of the public education system as it relates to the poor and to the ethnic minorities.

I refer to "Equality of Educational Opportunity" by James S. Coleman of Johns Hopkins University, a study published by the U. S. Department of Health, Education, and Welfare and "Racial Isolation in the Public Schools," a report of the U. S. Commission on Civil Rights.

The Coleman Report examined the characteristics of the schools, searching for the presence or lack of equality of educational opportunity. Together with his colleagues, Dr. Coleman probed for the tangible indicators of a quality school, i.e., laboratories, textbooks, libraries, etc., as well as the intangibles. On the latter, his survey covered such things as the characteristics of parents, students and teachers. Special attention was given to teachers with regard to their background, salary level, verbal abilities and attitude toward their jobs.

The socio-economic backgrounds of the students, the education of their parents and the attitudes the pupils have toward themselves and their ability to affect their own destinies, as well as their academic aspirations, also were assessed.

Great care has gone into the survey and the interpretation of its results. Whether the overwhelming majority of professionals in the field agree with the analysis of the data collected remains to be seen. In any event, we now have a frame of reference to make some judgments as we get on with the task of eliminating the dual standard and substandard schools of the nation.

The U. S. Civil Rights Commission report zeros in on the racial aspect of education. Particular emphasis was given to:

1. The extent of racial isolation in the public schools and the extent of the disparity in educational achievement between white and Negro schoolchildren.
2. Factors contributing to school segregation.
3. The relationship, impact and effects of racial isolation on the attitudes and interracial associations of Negroes and whites.
4. Current programs designed to remedy any educational disadvantage and relieve racial isolation.

Unlike the Coleman Report, the Commission has made recommendations calling on the Congress to take additional legislative steps on the basic problem.

The basic problem, of course, is to make sure that

Story-telling lesson in a More Effective School program. Cluster teacher will reinforce the experience in smaller groups later.

the young people caught in the web of poverty and race discrimination acquire the basic tools to enable them to participate in the education and training programs designed to prepare them to hold their own in the competition for good jobs.

However, the concern should not stop there. We also value the cultural development of all the people. If we are ever going to complete the task of nation-building, the ideal of raising the educational level of all citizens means we must overcome the problems of the ghetto dwellers of all races—especially the very young now entering school. School quality has less effect on achievement than the student's family background and the social environment of the student body, according to the latest studies.

The Commission report stated that "In the few years which separate their infancy from entry into school, children are exposed to profound formative influence. During those years, verbal skills and styles of speech and thought are shaped, a child's view of himself develops and his aspirations begin to form."

Few programs exist which reach pre-school children and effectively address themselves to this point. The ghetto child, therefore, enters school with all the negatives acquired from his environment. These negatives must be overcome by the time he reaches the starting line in the race for educational achievement if he is to avoid carrying this burden through school life.

By now, none of this can be characterized as new information never discussed by the scholars and social scientists of America. Yet it seems incredible that current programs are not receiving fuller public support and attention. Meanwhile, the child born in the ghetto, of parents who themselves have been subject to the influence of the ghetto, continues on a collision course with what he often considers a hostile society which aims to keep him down. What incentive to learn can be expected of these young people who, by best government estimates, number approximately 5 million?

The federal government also has taken some meaningful first steps to bring about a reorientation of school administrators. New functions have been thrust upon them as a result of new government commitments. Among these, two stand out in importance:

1. Remedial education for the children of illiterate parents and victims of deficient schools; and
2. Outreach programs designed to seek out the discouraged and undermotivated and to encourage them to participate in the available services.

Of the present organized efforts now under way with regard to these two objectives at the local level, the Teacher Corps and the More Effective School program are proving themselves and deserve full support.

President Johnson has asked Congress to expand the Teacher Corps to five times its present size by 1968. Not only does this attest to its value and potential, but in a few short years it will have developed

Pre-kindergarten children receive individual attention.

and trained teachers to take on the toughest job in the profession—trying to inspire children of the slums who now lack an incentive to learn.

Little known so far is the More Effective Schools program—popularly called MES. This program was first formulated by a committee of selected representatives from the American Federation of Teachers' Local 2 in New York City; the Council of Supervisory Associations and the office of the New York City Superintendent of Schools.

This group began on the premise that economically disadvantaged children, when properly challenged and given the means for growth and learning, can make remarkable academic and social progress. Accordingly, they felt a new design for education must be created.

From this point, they set out to design such a program for the elementary school levels—one which would be qualitatively different from that found in comparable schools. They established this format:

—Limit school registers (in New York City, 1,000 or less pupils).

—Set maximum class size at 22; kindergarten at 12 maximum.

—Each group of three classes is to have an additional teacher. The "cluster" teacher is to share equally in the responsibilities of the cluster.

—School secretaries are to be provided on the ratio of one per 250 children. This is to free the teacher from secretarial chores.

—School guidance counselors are to be provided on the ratio of one per 350 children.

—Each MES school should provide care for the seriously disturbed child.

—Additional teaching positions are to be filled to work with the regular classroom teacher. This would permit individual attention to be given a child or a small group of children.

—Provision is to be made for teacher aide time by

parents at the ratio of 1 hour per day per 20 children.

—Provision for a yearly special contingency fund at the ratio of $2.50 per pupil is to be used for special purposes as the needs of the school require.

—Additional special funds are to be budgeted for supplies above the rate established for regular schools. These funds represent a substantial increase over amounts allotted to regular schools.

—Each MES school is to have a full-time psychologist, social worker, attendance teacher, speech therapist and community coordinator assigned to it.

—At least one psychiatrist is allotted for each four MES schools. He serves as consultant to the regular school clinical team and to the teacher.

—A full-time health counselor is to be provided for each school.

—Additional medical and dental services are to be offered over the amount of services provided regular schools.

—Special funds are to be set aside for staff orientation programs before the opening of each school.

—Principals and assistant principals are to meet regularly with the staff for the purpose of evaluating practices and to exchange views.

These improvements may not appear dramatic but they are comprehensive in aiming at the basic problem of these special children. Most important is the simple proposition that the teacher be free to spend 100 percent of her time teaching and not acting the role of policeman.

At an early stage of the MES program, improved morale among staff, children and parents was clearly observable.

Program evaluators have stated categorically that the children in MES are achieving at a higher level than those in comparable schools not in MES programs. Also, they are making greater gains than many children in "normal" schools.

A keen interest in the program is developing among the regular, experienced teachers. Fewer than 20 out of 800 teachers left the program at the end of the first year, even though all had the privilege of leaving at the end of the year without prejudice.

The National Advisory Council on the Education of Disadvantaged Children stated in its January report to the President and Congress that "The attitudes of teachers are crucial in improving the education of disadvantaged children."

It cited summer schools aided by Title I of the Elementary and Secondary Education Act last summer, "the atmosphere of experimentation" and "fresh feelings of success with children" as instrumental in changing traditional teacher attitudes.

The AFT decided to expand the scope of this program and appointed Simon Beagle, a veteran teacher now beginning his 41st year in the New York City school system, to head a national program.

Beagle has so far encouraged interest in the program in a number of major cities. Using the experience gained in the 21 schools now operating in New York City, school boards in Baltimore, New Orleans and Denver have approved MES programs. The program is under consideration in the District of Columbia, Philadelphia, Pittsburgh, Cleveland, Chicago, Milwaukee, St. Louis, Phoenix, San Diego, Los Angeles and San Francisco.

Part of the problem is cost. Most school systems have already allocated their proposed budgets for fiscal year 1968. Any additional services required by the MES program would necessarily mean the resetting of priorities.

The job now is to somehow bring home to education and other public officials that not only is the increased cost an investment in human resources, but that at least part of the increase will be offset in a reduction in delinquency and other social ills plaguing America's cities. In-depth treatment of the problems of the ghetto youngster through vastly improved teaching techniques and services hopefully will lead to a clearer perspective of life for the youngster, thus making him more responsive to the opportunities now available to him.

This still leaves room for other programs. Office of Economic Opportunity projects such as Head Start can be coordinated with MES programs. Model city programs could eliminate the physical gloom of the ghetto and, through the construction of libraries and other facilities, truly create a new world and a decent start for today's disadvantaged children.

A significant area of present day discussion involves the serious question, "Shall the minority group community press for quality education in the existing systems or shall the main effort be directed toward integrated education?"

Among the pros and cons, there emerge two distinct trends. One argues it has been proven beyond a reasonable doubt that the only solution to the problem is to completely abolish the segregated school. The other argument says complete integration will not be achieved within the next decade and, therefore, we must not shortchange today's minority group youngsters any further; they must have quality education in the ghetto school now.

Fear of pursuing either course arises since it has not been made clear that both efforts can and must be vigorously pursued concurrently.

Before positions on this question become polarized, with little done in either direction, representatives of all positions should meet and try to agree to a common approach and with the single objective that the public schools are to provide the highest possible educational opportunity while moving ahead to end the segregated system as soon as possible.

The U. S. Office of Education appears to be the proper agency to give leadership on this vital question.

It would be tragic if differences over approach were allowed to contribute to any further delay in effectively working toward the common goal of providing quality education for all children in the United States.

The Obstacles to Fair Housing

by Dr. Eugene Feingold & Robert J. Harris

This century has seen a great Negro migration from the rural South to the urban North. At the beginning of the century, almost all Negroes lived in the South; today, more than half live in the North.

During the past 25 years, while the Negro migration into the cities was taking place, the housing industry—and when we refer to the "housing industry," we mean those who are concerned with the financing, building, sale and rental of housing—with the subsidy, support and, in some cases, the leadership of the federal government, has encouraged and facilitated the movement of middle-class whites to the suburbs.

This movement to the suburbs, however, has been generally denied to those Negroes who have managed to fight their way into the middle class through all the burdens our society places upon them. The result is that Negroes have been replacing whites in our large cities. We now have at least two cities with Negro majorities and they will soon be joined by others. At the same time, the suburbs are almost entirely white.

The first attempts to analyze this almost total segregation of housing found a very simple explanation—concerted action by the home building, financing and real estate industries, supported and sometimes led by federal, state and local governments. Underlying this was a solid core of popular support or at least acquiescence. The explanation, that is, was the discrimination in the sale, rental and financing of housing which was, and still is, general throughout the nation.

Racial discrimination is one of the basic rules of the American housing market. As the United States Civil Rights Commission has pointed out, housing is almost the only commodity on the open market not available on equal terms to all who can pay for it.

There is, first of all, the question of justice, fair treatment, equal opportunity for the Negro who wants the same freedom of choice in housing that whites have. It is not just his access to housing which is limited; so is his access to employment. He can't work where he can't live, or at least he can't work unless he can live within commuting distance of the job. The segregated Negro's educational opportunities are also limited. Concentration of Negroes in one area encourages discriminatory law enforcement. Housing segregation is one of the major elements in limiting contacts between whites and Negroes, which in turn stimulates prejudice. These inequities are not just the Negro's problem—they are problems for all of us who are concerned with what happens in and to our society.

Almost every urban problem is bound up with and further complicated by housing segregation. Under the constant pressure of the expanding Negro population, the area within which Negroes are traditionally permitted to live in each city has expanded. This expansion has never been enough to keep up with the increased population. The resulting overcrowding has been a major cause of deterioration in the cities.

The center cities have also deteriorated because they are older; because they are more poorly maintained than the rest of the metropolitan area; because the new residents, to the extent that they are migrants from the rural South, are not accustomed to city life;

DR. EUGENE FEINGOLD AND ROBERT J. HARRIS are at the University of Michigan. Feingold is a political scientist in the School of Public Health and Harris is a professor of law. Their study of the administration of fair housing laws is expected to be published next year. This report was made to a recent conference on fair housing.

and because some Negro residents take out their resentment and hostility toward whites in destructive behavior.

As the city has deteriorated, it has become a less pleasant place both for its residents and for those who no longer live there but who work there or may wish to occasionally go there to visit parents, to shop, to go to the theater, etc.

Today we have laws prohibiting discrimination in all or part of the private housing market in about a third of the states and in several dozen cities. In addition, President Kennedy promulgated an executive order prohibiting discrimination in housing built with federal funds or guarantees. These state and local laws and the federal executive order vary both in the kind of housing they cover and in the mechanism they offer for enforcement of the law. Although some have only been enacted within the past few months, others have been in effect for almost ten years.

Yet if we try to evaluate their effect in eliminating or reducing housing segregation in the United States, we can only conclude it has been minimal. If anything, the extent of segregation is increasing rather than decreasing. This seems to be as true for those states and cities that have fair housing laws as it is for those which do not.

This is not to say that these laws and regulations have not had some value. First of all, a number of persons who have filed complaints under the laws have, as a result, obtained the housing in which they were interested. Moreover, the settling of a single complaint may result in the landlord opening up more than just the one unit complained about; he may open up all the units under his control.

In addition, there are landlords who, as a result of the law, voluntarily open their housing to Negroes without any complaint being filed. Some of these landlords might have wanted to do this before the law was passed but were afraid to do so without legal support; the passage of the law thus increases the freedom of action of those who, though they do not want to discriminate, are afraid not to discriminate for one reason or another.

At the very least, the landlord who continues to discriminate will no longer rudely turn Negroes away, but will treat them courteously in order that they not realize that he is discriminating. Inasmuch as we are talking about human dignity, this, too, can be considered a gain of sorts.

Another positive effect of the laws is that Negroes are encouraged to try to rent or buy in white neighborhoods. Without the law to reassure them, they might not make the effort and, therefore, could well miss out on housing that might have been available to them in the absence of the law.

It is also clear that the dire results predicted by opponents of fair housing laws have not materialized: the states and cities with fair housing laws have not been inundated by an influx of Negroes; there has been no drop in construction that is attributable to the

law; and there has been no drop in housing values because of the laws.

Indeed, once they are in operation the laws are apparently accepted, or at least are not vigorously opposed, by their former opponents.

Campaigns to enact fair housing laws also have had a result significant apart from the law itself. That is, the efforts to enact such laws are educational in that they acquaint the community with the fact that discrimination exists. A related effect of the fight for a law is that it often brings into civil rights activity the clergy and other members of the community who have not previously been active. Because of this heightened consciousness, and perhaps because of the desire of the governing elite to stall off those who are pushing for the fair housing law, action is taken to alleviate some other civil rights problems.

Why, then, have the laws not been successful in alleviating housing segregation? First, they are not very widely used. One state, with more than 100,000 Negro residents, receives about 60 complaints a year. Other jurisdictions receive fewer complaints. The laws have not been widely used because most Negroes are not eager to be pioneers—to be the first of their race in a neighborhood.

Also, many Negroes do not know of the existence of a fair housing law in their area. Among those Negroes who do know of its existence, the reputations of the enforcement agencies are not very high—you have to travel downtown, or to the state capital, or somewhere else inconvenient, in order to file a complaint; after you file it, the commission takes its time investigating. If the matter gets to a hearing, the opposition's attorney will give you a rough going over; and in the end you won't get the apartment you want.

This poor reputation may not be wholly deserved, but in large part it is accurate. Specifically, it is true that enforcement proceedings take much longer than they should. A recalcitrant landlord will engage in all kinds of delaying devices in the hope that he will rent his apartment before the commission takes any action and he is very often successful. As a result,

some jurisdictions have tried to find ways to prevent rental or sale of the housing unit in question while the case is being processed.

Some fair housing laws provide for temporary restraining orders to prevent such rental or sale. This is an old legal device, but it has only recently been applied in fair housing cases. To the extent that its limited application in such cases can be evaluated, it appears that this and other devices to prevent disposition of the housing unit have not been used with any great frequency. In general, enforcement agencies have been hesitant about exercising all their powers.

The fair housing commissions have worked almost entirely to obtain for the individual complainant the housing unit which he desires or a comparable one. If these efforts are successful, they consider the case settled satisfactorily; if the housing unit is no longer available, the agency drops the case; and if the complainant has found another place to live, they drop the case. It is apparent that the law cannot have any substantial effect because of the way it is administered.

If we turn our attention from the state and local laws to the federal level, we find a similar picture, which is made worse by the fact that the executive order covers only about two percent of existing housing and can be expected to cover no more than a quarter of the housing to be built in the near future, about half of which will be covered by state and local laws anyway. The executive order is narrow in its application and is not self-implementing, but has to be implemented by the various departments and agencies of the federal government. The Federal Housing Administration, the principal agency affected by the executive order, has issued regulations exempting one- and two-family housing that has been occupied by the owner, thus effectively eliminating all second-hand sale housing from coverage by the order.

If we really want to use fair housing laws to end housing discrimination, the enforcement agencies will have to do more than service the complaints that come to them. The agencies might well concentrate their efforts on the big people of the housing industry—those who control a substantial number of housing units. In the past, attempts to persuade and educate these people have been largely failures. These efforts need more money and more prestige behind them.

Wherever we have studied housing discrimination, the industry has been recalcitrant and has vigorously opposed any efforts to change its current practices. At the same time, here and there, local real estate boards and individual builders have been won over.

But even if these laws were more effectively administered and did cover all of the housing market, they would still not be able to materially affect the extent of housing segregation in our society. The reason for this is a simple one—fair housing laws, the executive order and similar regulations focus on only one cause of housing segregation. They focus on discrimination by the person who is in a position to transfer property—the owner or his agent. They do not concern themselves with what are, in the long run, more important causes of housing segregation.

Of these, perhaps the most important is the simple fact that the average Negro's income is about half that of the average white. This, combined with the structure and operation of the housing market, effectively keeps Negroes and whites segregated on an economic basis, without raising the question of race.

Another important cause of segregation is the fact that many Negroes and many whites have become conditioned to the housing market as it exists today. For example, the whites may be afraid of the loss in social status or housing value that they feel accompanies the integration of a neighborhood; the Negroes may be afraid of hostility from white neighbors.

In other words, there is a circular effect. Not only does housing discrimination help limit the educational and employment opportunities of Negroes; not only does it, by promoting overcrowding, accelerate the depreciation of property; not only does it help to promote racial stereotypes by limiting contacts between people. Housing discrimination not only causes these things—it also results from them. That is, to the extent that limited education and limited job opportunities help to create poverty, Negroes are kept out of the middle-class housing market by their lack of income. To the extent that Negro neighborhoods are more rundown than white, whites leave these neighborhoods. To the extent that whites are familiar with the Negro only through stereotypes, whites don't want Negroes as neighbors.

Housing segregation and housing discrimination are different, although related, phenomena. The attempts that we have made to end housing discrimination have not been successful and, even if they were, they would not end housing segregation. The fair housing movement has in the past concentrated on the goal of an open housing market—the idea that a Negro who meets the other qualifications for a particular housing unit should not be turned away simply because of his race. In addition to this concern for equality of opportunity, some whites are disturbed

at the idea of living in a segregated neighborhood.

The principal effect of the fair housing movement that has emerged from these two concerns—justice for the Negro and the desire for integrated living—has been to make it easier for upper-class Negroes to move into some suburbs. But taking a token number of upper-class Negroes into the suburbs does not solve society's problem and does not really do justice to the great bulk of the Negro population.

We should take as our goals in this area those recommended by the Council of the recent White House Conference, "To Fulfill These Rights": "A decent home and a suitable living environment for every American family, freedom of choice in the selection of a home, racial and economic inclusiveness in all neighborhoods and the total absence of racial barriers."

The first of these, a decent home and a suitable living environment for every family, means that we need more and better housing for low-income and moderate-income people. The private housing market is simply economically unable to take care of these people today. This means we need subsidized housing for low-income people outside the slums. The slums should then be rehabilitated or cleared after they have left, not before.

The second goal, freedom of choice in the selection of a home, is one which, we would argue, will not be achieved simply on the basis of providing equal opportunity. The existing patterns of segregated housing have conditioned the public to accept segregation. These psychological pressures prevent real freedom of choice and a special effort must, therefore, be made to overcome them.

The third goal suggested by the White House Conference is racial and economic inclusiveness in all neighborhoods. Many who accept the idea of racial integration are unwilling to accept economic integration. But, given the pattern of distribution of income in the United States today, racial integration is impossible as long as we have economic segregation.

One way to alleviate this problem is to have a more effective anti-poverty program which would result in higher incomes for the poor. Once their incomes have been raised, they can choose housing from the market like everyone else. Until then, however, we need new ways of providing housing for low-income people. This includes small, scattered-site public housing—perhaps provided by government leasing of existing buildings, rather than massive super blocks which serve simply to ghettoize their residents.

The rent supplement program enacted last year by Congress is one illustration of an imaginative approach to this end. We need to expand the program and remove many of the restrictions added by Congress which will prevent it from being effective.

We need to provide new housing for low-income people on vacant land both within and outside the city. This housing should not be minimal public housing, but rather middle-income type housing, occupied by people of different income levels, with rents set at the level that individual tenants can afford.

We cannot carry on this kind of program on a community-by-community basis because the problems transcend community boundaries. For example, the center city cannot effectively desegregate its housing and put an end to deterioration so long as it is surrounded by suburbs that refuse to admit Negroes or low-income people. Yet, the suburbs have in the past shown themselves very reluctant to consider the broader interests of the entire metropolitan area.

How do we persuade them to change their view? The White House Conference had one approach: "Federal assistance to every local governmental unit should be conditioned on submission of a metropolitan-wide plan providing for the desegregation of housing and promotion of communities inclusive of all races and incomes. Zoning regulations, provision for low- and moderate-income housing, subdivision controls and the like must be applied to this end. Enforcement mechanisms by the local government should be a requirement. The plan should indicate an overall program of housing, community facilities and services, and transportation to and from employment centers which would result in the free flow of residents to housing throughout the area without regard to color."

The use of federal funds to encourage such metropolitan planning can be enhanced if such planning is made the condition not only for housing assistance but for any federal assistance, including highways, airports, water pollution, sewage systems, etc. We live today in a society which is undergirded by a system of federal subsidies. If the granting of such subsidies were meaningfully tied to the preparation and carrying out of metropolitan plans, this would at the very least greatly encourage such plans.

It was easy for fair-minded Americans to oppose the denial of the right to vote to Negroes. It was easy for them to oppose discrimination in public accommodations. All the federal civil rights legislation that has been enacted could easily be supported by the fair-minded northerner because this legislation was directed at practices which were common and overt in the South but not in the North.

Today the picture has changed and the more subtle northern racism is being challenged. As this has happened, northerners have begun to shrink from their previous positions. As a result, even the inadequate proposal of the Johnson Administration for a fair housing law was defeated.

In an article in Commentary magazine, Bayard Rustin says that white liberals are responsible for the growth of the black power concept because they have not used their power to see to it that civil rights laws are enforced. Black power, he says, "is a slogan directed primarily against liberals by those who once counted liberals among their closest friends. It is up to the liberal movement to prove that coalition and integration are better alternatives."

Adventure in Learning With Mrs. Lyndon B. Johnson

Appalachia was the setting for Mrs. Lyndon B. Johnson's "adventure in learning." The journey took her to West Virginia, North Carolina and Tennessee. Her purpose was to see how federal programs help strengthen education for everyone.

The trip began at the White House with a Head Start film titled "Pancho." The guest of honor was Frank "Pancho" Mansera himself, a 7-year old youngster from Guadalupe, California. At five, Pancho had the mental and physical growth of a 2-year old. A Head Start medical exam disclosed a glandular condition. After medical treatment, he grew over 5 inches in one year and changed from a listless child to a cheerful, active boy.

In West Virginia, Mrs. Johnson visited Charleston's Glenwood Elementary School, which offers an after-school enrichment program for parents and children. She also visited the popular Sunrise Cultural Center.

In North Carolina, Mrs. Johnson spoke at Lee Edwards High School in Asheville and praised an adult education class for its determination. At remote Canada Township, she saw the Teacher Corps in action. She also dedicated a new building at Western Carolina College.

In Nashville, Tennessee, Mrs. Johnson dedicated the new Columbia State Community College. She also took part in ceremonies marking the 200th birthday anniversary of Andrew Jackson at The Hermitage, famous home of the seventh president. She likened today's expansion of educational opportunity to the Jacksonian era, when the battle was fought and won for free, compulsory public education.

"The first stop on our Adventure in Learning was the Sunrise Cultural Center high on a hill overlooking the capital city of West Virginia — Charleston.

"Governor Hulett Smith, Secretary of Health, Education, and Welfare John Gardner and I ride with the students in buses up the winding highway to the gracious estate that has been turned into an exciting experiment in education. Under Title III of the Elementary and Secondary Education Act, federal funds make these field trips for school children to the Sunrise Cultural Center possible."

"First we slipped into that dark other world of the planetarium where we joined the students in marveling over the stars. Their nature and design were described to us, and we wondered if perhaps there might not be a future astronaut among us that day.

"Here Governor Smith, Secretary Gardner and I are listening with the students to a very stimulating lecture on the Center's Art Collection which inhabits the top floor of the lovely old home."

"The journey to Canada Township, North Carolina, was like discovering a precious gold nugget in the rocky hills.

"In this little enclave, cached 15 miles away from even the nearest telephone, life and the people are very real. One feels that a person to person relationship is the essence of their existence as they confront life at its kernel.

"We visited the home of a Canada Township family, the Eldon Mathises. Since young people are our most valuable possession, Mr. and Mrs. Mathis could point with pride to their six children, who are all in school with no truancy problems. They welcomed us with great dignity and graciousness to their small but tidy cottage, and told us of their struggles against the elements and the barren soil of the North Carolina hills."

"Just leaving the warm hospitality of the Mathis family, Secretary Gardner, Mrs. Gertie Moss, Principal of the Canada Township School and I walk up the rugged road, soon to be abloom with rhododendron and wild azaleas."

"Every great educational venture has a devoted, sensitive human being at its heart. Filled with the love of learning and, equally important, the love of people, Mrs. Gertie Moss, Principal of the Canada Township School, is one of those people. Here on the bus ride to her school, she is telling me of some of the challenges and frustrations of 'mothering' an entire community."

"We arrive at Canada Township School and are given a rousing welcome by the entire township."

"One of the joys of the Teacher Corps is to be a part of the life and share in the needs of the community. Since there is no barber in Canada Township, Teacher Corpsman Frantz Whitmire has elected to become the school barber. Once a week he shears his students who need his grooming talents. Little Bobby Owen was much happier about the operation than he appears in this picture."

"The wife of Governor Dan Moore and I watch as a little scholar responds to a question from her Teacher Corps instructor."

"Secretary Gardner and I listen intently, along with the students and a member of the Teacher Corps, to a lecture given on one of the innovational machines added to the school's equipment under the Elementary and Secondary Education Act. This machine makes it possible for some students to pursue one subject on their own while the teacher lectures on another."

"We interrupt our exciting classroom adventures to enjoy a hot lunch made available to the students under the school lunch program. This is usually the one hot meal of the day for the children of Canada Township."

"Into the life of Canada Township has come a new element — made possible by federal funds — four dedicated and well trained members of the Teacher Corps. They have doubled the number of teachers in the school and brought a lifeline of new methods and fresh ideas from the world beyond the hills."

HOPE AND PROMISE: Americans Of Spanish Surname

by Rep. Henry B. Gonzalez

If you are hungry, hope itself is a distant thing; and if you are defeated, promises of better things to come ring empty. If yours is a world of dirt floors and tin roofs, tomorrow holds no promises and your greatest ambition is to live through today. For 5 million Americans of Spanish surname, all too many live in such a world, far removed from the American dream.

Wherever there are people who are poor, there is tragic waste. The poor lead short lives and their hopes and dreams prove illusory. Society has never cared much about the poor because they have always been there, and there has never been much reason to believe that poverty could be or even should be eradicated. Somehow society decided, by and large, that a poor man is poor only because of his own failure and that he deserves his fate.

But in recent years there has been a happy change in this old attitude. We have realized that, in fact, the American dream is not open to everyone; we have been able to understand the terrible waste of poverty and that it can be ended. We have come to realize that some men are poor because society has denied them the chance to be anything else and that the poor should not and need not be despised and forgotten.

We have begun to try to find out why men are poor and what can be done about it. We have started to seek ways and means of giving poor men more in life besides a determination to survive against high odds.

One of the biggest and least known groups of poor people is concentrated in the Southwest. Only one-sixth of the population of this country lives in the five southwestern states, but one-fourth of America's poor live there. In Texas alone, there are 63 counties—a quarter of the state's total—where half the people live on incomes of less than $3,000 a year.

In Bexar County, which I represent in Congress, more than a fourth of the population is classified as poor; 115,000 people there live in substandard housing. The overwhelming number of these ill-housed, ill-clad, ill-fed people are of Spanish surname.

The official rate of unemployment in Bexar County is usually about 4 percent; but for the poor, for the Spanish-surnamed, it is twice that. The average educational attainment of the county population is 11 grades, but for the Spanish-surnamed it is half that.

In the poor areas of the city of San Antonio, where most of the Spanish-surnamed population lives, the Department of Labor estimates that half of the people who are employed earn less than $60 a week. Of those who work and who live in this poor part of the city, 20 percent work part-time only. The pattern in Bexar County is repeated again and again throughout the Southwest.

Seventy percent of the unemployed slumdwellers of San Antonio in November of 1966 did not have a high school education. Forty-eight percent of them did not even have an eighth grade education. And 6.5 percent of the unemployed in the slums never went to school at all.

These people know all too well what their handicaps are; they know that even when opportunity comes along they do not have the education or the skills to take advantage of it. They need help and they usually

REP. HENRY B. GONZALEZ (D-Tex.) was elected to Congress to fill an unexpired term in 1961 and has been reelected three times. He has consistently supported progressive legislation.

want it. They have not necessarily failed society; society may have failed them.

Despite our knowledge of all this, the schools are still turning out people who lack marketable skills or even a good education. All too often in the Southwest, children of Spanish surname emerge from school illiterate in English as well as Spanish, and whose time and talents have been squandered, whose ambitions have been blunted and shorn away and who see in the future only an unskilled job, a tiny paycheck if any at all, and blessed relief in the neighborhood tavern.

Wherein lies the fault? What must or what can be done to arouse hopes, to build dreams and to bring into the realm of possible achievement the ambitions for tomorrow. Moreover, how are we to attack this problem which, in fact, we can understand only dimly? What should society set as its goals and what goals should the poor set for themselves? What should be the dream of the American of Spanish surname who finds himself trapped by discrimination, by poor education and by a poverty so abject that tomorrow is made too far away to see?

The Spanish-surnamed American has a unique problem and it demands unique action.

In the first place, there is the problem of definition. There is not even a generally accepted name for this minority group. Americans of Spanish surname are called Mexicans, Mexicanos, Latins, Latinos, Latin Americans, Mexican Americans and Hispanic Americans; not one of these labels is accepted everywhere. A name accepted in one place is enough to produce violence elsewhere.

I prefer to think of the group as Americans of Spanish surname because, after all, they are Americans and they all have Spanish surnames. Any other label would be inadequate because this group has such diverse origins. Some were born here and some have immigrated only recently. Some come from families that have lived in the Southwest for more than 200 years and are of Spanish descent. Others have origins in Mexico or parentage ranging from Indian tribes to English gentry. There is no term, perhaps even one so tentlike as Spanish-surnamed American, that adequately describes a group so conglomerate as this.

This group of people is so scattered about the land and so disparate in its origins that it has problems defining itself, just as the government has problems in defining it. No matter what you call this vast number of people, there is no doubt about one thing: they have common problems.

We can understand what the problems are, at least vaguely, by reciting the tragic statistics of poverty, unemployment, sickness and illiteracy, but these are only the tangible aspects of the matter and give us no real understanding of the political and psychic problems of the Spanish-surnamed American.

The Spanish-surnamed American group has problems in setting forth cogent goals, just as it does in finding an all-inclusive label. The group possesses no single program, no national goals and has not so far been able to coalesce into a single, meaningful whole, capable of speaking with a united voice. There is no national organization of Spanish-surnamed Americans that could be considered comparable to the NAACP.

There are organizations that consider themselves national and which, indeed, have members in several states, but not one of these has a full-time paid executive or staff devoted to looking out for its interests, defining problems, setting goals and otherwise acting as an effective national spokesman. There is always the possibility that a truly national and effective organization will come about, but there is no such group now. There have been many attempts to create a national organization, but they have failed for one reason or another: the time has been wrong, the leadership ineffective or a combination of problems has barred the way, preventing effective political organization of this far-flung minority.

I think this situation is both cause and result. There is no national organization because there is no national goal; and there is no goal because there is no agreement on so elemental a thing as what this conglomeration of people should call itself. Lacking cohesiveness, the group cannot establish goals; and lacking goals, it cannot bind itself together.

The Spanish-surnamed American is unique from other minorities in still other ways. His is not a single origin. He has come from different places, at different times and for different reasons. He is different from other immigrant groups because his homeland, his mother country, is not across the sea. There is no ocean between his cultural home of Mexico and America; Mexico is but a short drive away.

There are everywhere Spanish language movies, television stations and radio stations and Spanish is spoken throughout the Southwest. Up until 1957, there was a Spanish language daily newspaper in San Antonio and even today the daily papers carry sections printed in Spanish. In the Southwest, even the dominant Anglo community strives to preserve the culture of Mexico and Spain because it gives the area a certain charm and a cosmopolitan air that cannot be found elsewhere.

The result is that we have in the Southwest a community that is distinctly foreign and yet American; we have a group that is cast aside and discriminated against because it is foreign and different; and yet it is a group whose culture the majority find powerfully attractive. It is a group that the dominant Anglos have taken from and whose culture they would preserve, but which they discriminate against because of its foreign nature.

Here is a minority drawn between the powerful forces of conflict, the one demanding a preservation of its art, music, culture, language, architecture and dress; and the other telling it to get Anglicized or lose out in the race of life.

For if a man stays within his cultural minority and retains its customs, he has little chance to succeed in a world which expects him to adopt its ways. He cannot get a job with only Spanish as a language and he cannot expect anything but animosity if he fails to adopt the ways of the majority. So, caught between the powerful forces demanding assimilation and a tightly-knit and kept-minority status, assailed by demands to Anglicize and appeals for staying "foreign," the Spanish-surnamed American is attempting to find a modus vivendi—a way to live somewhere between the intolerable extremes.

The most crucial issue confronting any minority group is whether it should attempt to preserve itself as a cohesive and well-defined culture, or whether it should disband and its members assimilate into the majority, losing their cultural identity. Either a minority lives together, speaks its own language, maintains its own way of life, or it must break up and be absorbed into the community at large. In the case of the Spanish-surnamed American minority, there has been no decision.

In Africa, there has been considerable experience in decision-making of this kind. When the Europeans colonized Africa, they expected the Africans to adopt European languages and customs. Sometimes force would be used to break up traditional ways of life. For instance, to establish a mining operation in Katanga, the Belgians had to get Africans to change from hunters and farmers into industrial workers, a change which meant moving from a primitive life into the discipline of a complicated industrial order.

Changes like these are jarring and did not come easily, and the process was repeated time and again. New values were imposed on Africa, new languages, new governments and new boundaries. All of this meant hard choices for those who had to abandon their culture and among the Basuto people there is this proverb:

"If a man does away with his traditional way of living and throws away his good customs, he had first better be certain that he has something of value to replace them."

This is the dilemma every minority must face. Eric Hoffer, writing in his work, "The True Believer," put the problem in these words:

"A minority is in a precarious position, however protected it be by law or force. The frustration engendered by the unavoidable sense of insecurity is less intense in a minority intent on preserving its identity than in one bent on assimilating with the majority. A minority which preserves its identity is inevitably a compact whole which shelters the individual, gives him a sense of belonging and immunizes him against frustration. On the other hand, in a minority bent on assimilation, the individual stands alone, pitted against prejudice and discrimination. He is also burdened with a sense of guilt, however vague, of a renegade."

If the man with a Spanish surname elects to stay

within his group, he can be sure that he has friends and he can be certain of having a place to go. But if he elects to compete with the majority on its own terms, then he must abandon all of this and he becomes an outsider both to his own group and to the majority. He has abandoned the one and is seeking to invade the other.

The choice facing the Spanish-surnamed American is not an easy one and it is only natural that he is seeking some middle way between maintaining a cultural entity that binds him to remaining outside the pale and rejecting everything in the hope of finding success in a hostile world. It is too much to expect that the group as a whole will make a decision on whether to take one part or the other, because the choices are so painful and radical that few men even care to contemplate them. The decisions must be made by individuals, alone and unaided, and it will take a long time to know the end result of their actions.

So the Spanish-surnamed minority, imbued with special circumstances, endowed with a rich and strong culture, and given a much to be desired and beautiful language, must decide, each and every one: is it best to keep what I have and love, and follow a way of life inherited from my father, or leave it all. It is a cruel choice and not one that many men will make willingly and most men will make no choice at all.

It is the responsibility of the majority to permit the minority to make its own decisions about what it will do. It is cruel and unthinkable to suppress or eradicate a culture in hopes of speedily eradicating the cruel dilemma of the Spanish-surnamed or other "alien" poor.

A culture is too precious a thing to destroy; it must be permitted to make its own contribution to society, especially one like ours. For Americans are many

things and that is the secret of our strength. It would be a mistake to think that the diversity which the Spanish-surnamed people offer is anything other than a potential gift to our already rich heritage.

Educators especially must be aware of the problems facing the Spanish-surnamed. For it is the schools which are the first front in the war on poverty. It is the schools which turn out men and women who are either equipped for life or are not.

In the case of the Spanish-surnamed, the schools have been failing. Instead of leaving school well-equipped to face life, the Spanish-surnamed have been leaving school in droves because it offers nothing to meet their needs and these children have been finding that the dubious choice of no education at all is better than one which is meaningless.

Educators, happily, are beginning to understand this and do something about it. They realize that the child who enters school the first day represents a promise and their responsibility as teachers is to turn that promising child into a successful adult.

Up until now, though, the sad fact is that the schools have been losing the promise of the Spanish-surnamed child somewhere between the first grade and high school graduation; and all too many do not stay around long enough to finish high school because of it.

I do not believe that it is the place of the schools to force a choice of cultures on children or suppress their native heritage. Great injury is done whenever this is attempted and we know this all too well. In our history, the schools have ignored the achievements of the Negro and have presented him as a problem and a blight on society while ignoring his considerable achievements and contributions. Belatedly, this is changing. It is a mistake which should not be repeated with the Spanish-surnamed American, for he also has his heroes and he also has played a part in our history that cannot be overlooked. He lives and he exists and he knows it and the textbooks must recognize this fact; nothing left out of the books will eliminate what is real.

I believe the schools must make an effort to capitalize on the special talents and attributes of the Spanish-surnamed American. This will make his education meaningful and will do more than anything else to help him realize his full potential. His special educational problems need to be solved and his assets refined. After all of this is done, he will be ready to decide which way to go and what life to lead.

I believe that, more than anything else, improved educational opportunity will help the Spanish-surnamed American find his place in society and make his best contribution to it. From this will flow hope, ambition and the skill to realize it. Without better education, hopes kindled by the war on poverty will be shortlived and the promises made can never be turned into realities.

Everyone who knows about the Spanish-surnamed community knows that its condition is one of poverty, even abject poverty. They ask why, in the midst of all this misery, is there not more restlessness, more revolt? The answers are at once simple and complex. Simple because poverty and misery do not necessarily breed revolt; complex because this group is complex.

If a man is so poor that he must struggle to earn his daily bread, he probably does not have much time to conjure up visions of better things. His concern is whether he can eat today, not whether he can eat next week. His consuming passion is whether he can scrape up enough to pay the rent next week or the school fees to keep his child enrolled or keep the gas from being cut off.

His horizon is limited by the necessity of staying alive and his dreams, if he has any, will be of a good meal and a new pair of shoes. His future is so far away that he dares not think of it; it may be too grim.

Hoffer has written, "where people toil from sunrise to sunset for a bare living, they nurse no grievances and dream no dreams" and how right he is.

On the other hand, if a man lives in what you might call a state of bearable misery, he is free to see a little longer into the future and he can begin to think about a better way of life.

When a man's condition is improved to the point that he can see the ideal life ahead, he becomes restless with what he has and strives for tomorrow. For him, the present is not a happy time because the future, if he can but grasp it, is what will bring happiness.

Alexis deTocqueville observed: "A grievance is most poignant just before it is redressed." The taste of better things is what breeds discontent and fires ambition.

The Spanish-surnamed community has, by and large, been so submerged in misery that hope has been too far away to fire many dreams. This may be changing. I believe the campaign against poverty will, in fact, give large numbers of people that essential taste of better things and lead to rising expectations.

I do not view the future as hopeless. It may be that the Spanish-surnamed community today is filled with poor and even some hopeless people but, after all, it was just such people who came to this country and filled it up and just such people who have given our land its strength and wealth. It was not successful people who came to these shores, but people who had failed elsewhere. They were driven here and they made this a mighty land. They had nothing to lose and everything to gain. This is still true. These poor people who today suffer innumerable and complicated problems and ills, and whose burdens we cannot imagine, will one day rise up and build for themselves a new world and, for all of us, a new Southwest.

In numberless southwestern shacks with tin roofs and dirt floors, along forgotten streets without water lines, in a world without comfort, is a people who have hope for tomorrow and one day they will claim it. Then ours will be a new and better world because these folk will have given their splendid best.

The Fight for Clean Air

by George Taylor

When the right circumstances conspire, air pollution can turn into a deadly mass killer.

In 1930, there were 60 people killed when a deadly smog settled in over the industrial Meuse Valley in Belgium.

In 1948, the steel and chemical town of Donora, Pennsylvania, was visited by a fog and a temperature inversion which left 20 dead.

In 1950, a tank of poisonous hydrogen sulfide was accidentally released to the atmosphere from an oil refinery in Mexico City. The toll: 22 dead and 320 hospitalized.

In 1952, a "black fog" hung like a shroud over London for four days and took 4,000 lives.

Ten years later, both London and New York City suffered through serious smogs.

And just last November—as if to publicize the National Conference on Air Pollution about to open in the nation's capital—the elements conspired to form a temperature inversion over New York City. Preliminary estimates put the number of deaths at 80, a toll expected to rise when the death rate is checked against mortality tables over a longer period.

These dramatic instances of smog disasters serve

GEORGE TAYLOR is an economist in the AFL-CIO Department of Research.

November 1966: Photo taken at 8:30 a.m. shows smog choking New York City as massive air inversion hit mid-Atlantic coast.

as periodic reminders that the city air we breathe is unclean. Air pollution is taking its toll of people's health every day in every city in the United States. It is a problem which most people are aware of by now and to which they seem to be adapting.

Unfortunately, it may take a major air pollution disaster to crystallize support for strong regulatory action.

President Johnson attempted to point up the critical urgency of the problem when he sent a special message on air pollution to Congress earlier this year. The President declared:

"We are not even controlling today's level of pollution. Ten years from now, when industrial production and waste disposal have increased and the number of automobiles on our streets and highways exceeds 110 million, we shall have lost the battle for clean air—unless we strengthen our regulatory and research efforts now."

The superficial aspects of air pollution are widely evident. People are aware of the offensive smell, the dirt deposited on clothing and curtains, the corrosion of metal and stone, the lack of visibility on roads and the damage to bathing areas.

But the dangers from air pollution are far broader and more insidious. The longterm effects of air pollution begin to work on the human organs from the day of birth. Increasing numbers of Americans are becoming afflicted with respiratory conditions—everything from the common cold to lung cancer—which are aggravated by breathing polluted air.

One of the fastest growing causes of death in the United States is emphysema, a progressive breakdown of air sacs in the lungs caused by chronic infection of the bronchial tubes. In 1962, over 12,000 persons died of emphysema. Each month, 1,000 or more workers are forced to retire prematurely because of this disease.

Other diseases of the lungs and air passages which are worsened by breathing polluted air include bronchial asthma, chronic restrictive ventilatory disease and even the common cold.

The death rate from lung cancer has been rising. Research points to a variety of causes. However, the incidence of cancer is twice as high in urban as in rural areas and appears to be related to population density as well. This is the basis for speculation that air pollution may be a contributing cause of lung cancer.

The first public concern over pollution involved the smoke nuisance in the 1940s. Public indignation focused on offenders responsible for dirtying the community. Anti-smoke ordinances were adopted in such large cities as St. Louis and Pittsburgh. The changeover from coal-burning to diesel locomotives and the increasing use of natural gas for home and office space heating helped to reduce much of the smoke nuisance in many urban areas.

Now the concern and danger is only partially with smoke. The newer industrial processes and many of the older ones are expelling a wide range of gases and minute particles. These pollutants often overload the ability of the atmosphere to disperse them and they produce effects which are sometimes unpleasant, sometimes unhealthy and, on occasion, disastrous.

The basic causes of the air pollution problem are well-known. They involve an increasing population which is becoming more and more concentrated in urban areas. The U.S. population will grow to an estimated 225 to 250 million by 1980. About 200 million people will be living in cities.

These urban area people will be driving more cars, consuming more electric power, buying more manufactured goods, creating more wastes. The overall result will be an ever-rising amount of air pollution.

The main trends are apparent.

In 1960, 60 million automobiles in the United States burned 40 million gallons of gasoline. By 1980, over 110 million automobiles are expected to be on the road, almost doubling the gasoline being burned and emitting most of the pollutants into urban areas.

More solid wastes are dumped each year, most of it combustible. In 1960, the per capita amount of combustible waste was 1,100 pounds. Even if the per

capita figure does not increase, which is unlikely, this nation will be producing 175 million tons of combustible waste by the year 2000, enough to bury a city the size of Pittsburgh or Boston or Washington, D. C. under a 30-foot mountain of trash.

By 1980, use of electric power may have increased threefold over present demand. Most of it will be generated by fossil fuels—coal and oil—although nuclear energy will be rapidly moving to the fore in the next decade. As of 1966, generation of electricity is one of the major sources of air pollution.

The growth of industrial production—iron and steel, non-ferrous metals, chemicals, petroleum, paper and allied products—is expected to double or triple over the next decade or so. These are the major industries which share responsibility for atmospheric pollution.

There is also the clear danger created by a constantly changing technology. By the end of the century, the annual expenditure by industry and government in industrial-oriented research may reach as high as $70-$80 billion. Increased research and development already has contributed to the introduction of dozens of new materials, many releasing airborne contamination to the environment, the effects of which are yet unknown.

The principal pollutants released to the air total about 125 million tons per year at present, according to a 1966 report by the National Academy of Sciences.

Automobiles, trucks and buses powered by internal combustion engines are the major emitters of carbon monoxide, oxides of nitrogen and hydrocarbons. Generation of electric power by burning coal and oil produce most of the oxides of sulfur. Industrial production is the chief contributor to the atmosphere of particulate matter and miscellaneous pollutants.

The data clearly show that moving sources of pollution spew six of every ten tons of pollutants into the air. Thus the nation's motor vehicles constitute the number one air pollution problem.

Industry, including electric power generation, is the next greatest offender, contributing nearly four of every ten tons of polluting materials emitted.

People do not die immediately from foul air, even though it may affect their health adversely when pollution of the air they breathe is chronic, which is true in nearly every large city.

But sometimes a smog disaster strikes. Such disasters occur when there is a prolonged temperature inversion and takes place in localities where there is a great volume of toxic materials being emitted into the atmosphere from industrial emitters, automobiles and homes and offices burning soft coal.

A "temperature inversion" is a meteorological situation that occurs when the normally cool upper layers of air become warmer than ground air. In a situation when the air mass is not moving on the back of a prevailing wind, or rain comes to the rescue, the cool upper air stays put and prevents the dirty air at ground level from circulating up and out. Los Angeles is the prime example of a metropolis with a chronic inversion situation. But they can take place anywhere. When they happen suddenly and remain for several days where there is a great deal of emission of pollutants, people who are well get sick, the sick get sicker and some of the sick and some of the older people die.

The burden of principal pollutants is expected to double by the year 2000. Over the great metropolitan areas of the West Coast, the Great Lakes and other regions, inversions are expected to become more and more lethal, together with the kind of "ordinary" air humans breathe between inversions, which merely takes longer to infect individuals with chronic respiratory diseases and possibly lung cancer, but produces few headlines.

In the long-range view of the situation, the steady increase in the release of pollutants to the atmosphere, in addition to what is already there from natural and man-made causes, can work what may very well become a permanent change of the world's climatic

cycles. It is a well-known phenomenon that temperatures in large metropolitan areas are consistently warmer than in the countryside and fogs are more frequent. This is an example of local modification.

The bulk of the air resource is in a relatively shallow envelope six miles in depth (the troposphere). There are global, regional and local air movements within the troposphere which make up nature's ventilation system, modified by topography, climate and latitude.

If the mass of air pollutants continues to build up, the global capacity of the wind systems to disperse pollutants may be seriously impaired.

Thus modern man in the United States and other industrialized nations has created a menace. It lurks in the very air he breathes and takes an increasing toll in lives, health and the economy. It is seriously disturbing the delicate balance that has existed in the environment, of which man is becoming a ruthlessly disrupting factor. He worships at the shrine of personal cleanliness, creature comforts and new techniques while surrounding himself with an environment of ugliness, filth and poison.

What has been done in recent years to clean up America's polluted air?

The federal government did not move into the picture until 1955, when legislation was enacted creating a federal program.

The Public Health Service of the U.S. Department of Health, Education, and Welfare was authorized to conduct research on the problem and provide technical assistance to state and local governments.

The 1960 amendments to the basic federal act provided for a special study of motor vehicle pollution. The federal program under this law brought more scientific knowledge to bear on causes and effects. The public attention was becoming more aware that polluted air was a national problem, was damaging to the public health and welfare, and that control of many of the larger sources of poison was feasible.

Although knowledge about the causes, effects, scope and control techniques was steadily advancing, there was little done by local, state or federal levels of government to clean up the air. The federal program was research-oriented. Outside of Los Angeles and the state of California, there were few local or state programs. Those in existence were basically ineffective.

The federal Clean Air Act of 1963, however, broadened the scope of the federal program. It authorized federal grants-in-aid directly to state and local air pollution control agencies to establish or improve their programs and empowered the federal government to take necessary action to abate interstate air pollution situations.

The Clean Air Act also expanded research, technical assistance and training activities of the U.S. Public Health Service. It directed the Service to do research and development on motor vehicle and sulfur oxide pollution from coal and oil burning in power generation and other industries, and to develop

MORE PEOPLE IN THE CITY... MORE AIR POLLUTION

Source: "Today and Tomorrow in Air Pollution," 1966 publication of Public Health Service, U.S. Department of Health, Education, and Welfare.

criteria on air pollution effects on human health and property.

The 1965 amendments to the Clean Air Act authorized the Secretary of HEW to establish standards to control emissions into the air from new motor vehicles and to investigate and develop methods of controlling new air pollution problems.

In 1966, further amendments enlarged the grants-in-aid program to states and localities to assist in maintaining control programs. The Congress also established a three-year authorization of $46 million for fiscal 1967 and $66 million and $74 million for fiscal years 1968 and 1969, respectively.

Between 1955-63, federal funds expended on air pollution control programs had risen slowly from $2 million to about $11 million a year. But in the 1963-66 period, the total rose to $35 million a year.

What Have the States Done?

Fifteen years ago, the first state law dealing with air pollution was passed. Until 1963, when the Clean Air Act was passed, only 13 more states had enacted such laws. Since then, 11 more states have acted, so there are now 25 out of the 50 states with anti-air pollution statutes on the books.

In 1961, the budgets for state air pollution control programs totaled only $2 million, of which California alone accounted for 57 percent. There were 148 full-time and 29 part-time personnel working in the control programs of all the states.

By 1966, the states were budgeting an aggregate $9.2 million, $2 million of which was in the form of federal grants-in-aid. There were 406 full-time and 81 part-time personnel working in these programs.

While there was an improvement of state resources applied to the problem, the situation is still far from satisfactory in this respect. Moreover, there is wide variation among the states in the kind of agency assigned program responsibility, in standards and regulations, in enforcement and compliance procedures

and punishment of wilful offenders by fines, jail or both.

While the Clean Air Act encourages the formation of interstate compacts to aid in the control of air pollution, very few states have acted. New York and New Jersey were inspired to act after last year's serious smog over the New York City metropolitan area. Illinois and Indiana are negotiating a compact and so are West Virginia and Ohio.

The New York-New Jersey compact, which is furthest along, seeks legislative authority to set air quality standards and to make and enforce regulations. An innovation in this proposed compact would provide for both local and federal representation.

What Have the Cities Done?

Since the late 1800s, there have been many local smoke abatement ordinances passed by hundreds of communities, dealing with this aspect of air pollution as a nuisance. Beginning with Los Angeles, recent years have seen a greater community effort to attack poisoned air, not merely smoke.

In November 1965, according to the U.S. Public Health Service, there were about 130 city, county and multi-jurisdictional air pollution regulatory agencies in operation and located in 35 states serving 63 million people.

MORE AUTOS MEAN MORE POLLUTION DESPITE CONTROLS

MORE STEAM POWER GENERATION... MORE AIR POLLUTION

Source: "Today and Tomorrow in Air Pollution," 1966 publication of Public Health Service, U.S. Department of Health, Education, and Welfare.

The total 1965 budget for all these local administrative areas was about $14.3 million, of which $3.6 million was in federal grants-in-aid. This represented a sizable rise over the $2.6 million budgeted in 1952.

The largest single local agency budget was that of Los Angeles County—$3.7 million. Control agencies in California made up 38 percent of total 1965 local air pollution control budgets in the nation. The seven largest agencies made up 58 percent of the total local air pollution control budget for the nation.

While the towns and cities are now doing more about the problem than a decade ago, much of the larger urban areas still lack programs. There are manpower problems, both in funds available to hire personnel at adequate salaries and trained manpower. The U.S. Public Health Service estimates that at least a fourfold expansion of programs is required to do a reasonably good job in terms of money and staff.

Moreover, there is a lack of definition of the full range of pollutants to be monitored and controlled. There is less than adequate support by local officials for a sustained all-out air cleanup effort. As with the states, regulations are too permissive, enforcement is weak or lacking and long-range planning is neglected.

Thus the federal government, the states and the cities are making a tentative beginning to face up to the air pollution crisis in the United States.

President Johnson's air pollution message of 1967 contained legislative recommendations for strengthening the federal air pollution control program by means of the Air Quality Act of 1967, which was introduced by Senator Edmund S. Muskie (D-Maine) and 20 co-sponsors of both parties.

This legislation would expand the federal air pollution control program to carry out the following:

1. Designate interstate industries which are nation-

ally significant contributors to air pollution and establish industry-wide emission levels, allowing the state to equal or exceed federal levels, but stepping in with a federal enforcement program where a state fails to do this.

2. Establish Regional Air Quality Commissions which cut across state lines and enforce pollution control in so-called regional air-sheds, where air characteristics and flow are generally consistent in pattern over a multi-state area.

The Secretary of HEW would not have to wait for states to move, but could designate interstate regions where control programs were needed and, after consultation with the states and localities involved, appoint a Commission composed of two persons from each state and a federal representative named by the Secretary.

The Commission would be responsible for setting safe air quality and emission levels and could enforce them by means of present statutory authority under the Clean Air Act.

3. State inspection of 1968 and later model vehicles with carburetor and exhaust control devices, by means of assistance from federal matching grants.

4. Improved enforcement procedures.

5. Mandatory registration of all fuel additives with the Secretary of HEW.

6. A broadened research program into emittants from motor vehicles, including diesel engines, alternative methods of motor vehicle propulsion, sulfur dioxide pollution and low-sulfur or sulfur-free substitutes. This program would raise authorized research funds from $12 million in fiscal 1967 to $18 million proposed for fiscal 1968. It proposes the program include direct activities by the federal government and contracts or grants-in-aid to private industry, universities and other groups.

7. The total financial resources proposed in the Muskie bill calls for an increase from the presently authorized $74 million in fiscal 1968 to $80 million for that year and such sums as may be determined by Congress for the following four fiscal years.

The AFL-CIO Executive Council last February called for stronger enforcement of the Clean Air Act. The AFL-CIO agreed with the President's proposal to establish federal air-shed commissions and empower the Secretary of HEW "to set air quality criteria over all sources of industrial pollutants released into the atmosphere, not merely those by automobile as provided by the present act."

By these means, it is possible to move in with federal, state and local programs to control poisoned air emitted from stationary sources, factories, power stations, oil refineries and the like.

The AFL-CIO policy statement had this to say on the problem of automobile combustion and air pollution:

"Expanded use of electric-powered vehicles would sharply reduce the largest and most rapidly-growing source of air pollution. Any federal program to develop an economically feasible electric-powered vehicle should provide public domain ownership of all federal patents and a searching assessment by a national commission, with labor representation, of the social and economic impact of a largescale changeover to the electric automobile."

In a recent statement to a special Senate joint committee considering legislation to authorize a federal research and development program for electric-powered vehicles, AFL-CIO Legislative Director Andrew J. Biemiller said:

". . . present control technology and that likely in the near future is not adequate to reduce the continually mounting load of contaminants emitted to the atmosphere from the automobile in its various forms. The sheer increase in numbers of cars, trucks and buses, even if equipped with all control devices required under the Clean Air Act, will inexorably add to the aggregate environmental burden of carbon monoxide, hydrocarbons and other harmful chemicals released into the air."

The electric car is not new. It was used years ago and some probably are operating in the form of commercial vehicles in most large cities.

The problem is to find an energy source, either a battery or fuel cell which operates on chemicals, which will enable faster pickup and higher speeds and allow the driver to cover 100 miles or more before recharging the battery at a station or exchanging it.

While industry is grudgingly accepting the disagreeable inevitability that there will be some kind of control over air pollution, it wants a major voice in setting the terms.

Industry wants federal activities restricted to research and development, and it seeks federal tax writeoffs as well as state and local financial incentives for air pollution control equipment. Such tax breaks and incentives are strongly opposed by organized labor.

Recently, the chairman of the board of Humble Oil Refining Company said to a meeting in Houston, Texas, that if industry did not voluntarily clean up its own mess ". . . in the near future our actions in this area will be spelled out by congressional legislation."

Uniform federal standards, equitably applied, would enable industries to become socially responsible and also to maintain their respective positions in the marketplace. This is what is provided for in the proposed Clean Air Act of 1967 now before Congress. Without such standards, industries would be enticed to relocate in a more lenient regulatory climate where, among other incentives, a relaxed attitude toward air pollution could be maintained by the state or local enforcement agency.

The battle lines are now being manned in the halls of Congress. But where the fight will be finally won or lost is in the cities, towns and villages of this nation, when the citizens have decided that they have had enough and, as President Johnson has said, ". . . through their elected representatives, demand the right to air that they and their children can breathe without fear."

SLOW-DOWN ON CAPITOL HILL

It's hard to be happy about the record of the 90th Congress—but hope springs eternal

By Richard McAlester

The first session of the 90th Congress arrived at its July 4 recess this year with little accomplished, less direction, and observers wondering if the remaining year and a half of its life would see any recollection of the Congressional glories of 1965 and 1966.

As the first half of its first session ended, the 90th was being called the "Cut-Back Congress." And there were those already convinced that it would be labeled as the most reactionary and least effective since the "Do-Nothing" Republican-controlled 80th. That was the one that managed to lose both the Presidency and the sympathy of the country for the GOP in the year when Thomas E. Dewey was a "sure thing" to beat Harry S Truman.

Visitors crane to observe the beauty of the Capitol Dome (opposite page).

There is still plenty of time for the political smog to lift from over Capitol Hill before the record of the 90th finally goes on display.

But, from the way it has started, it seems certain that the 90th Congress will be characterized by a grim determination of liberals to hang on to newly established social gains and by a happy romp of the re-established conservative Republican-Southern Democratic Congressional coalition.

The Congress convened on Jan. 11 with its members still largely in a state of shock from last November's elections. The Democrats were wondering what went wrong to cause them to lose a net of 47 seats in the House and three in the Senate. And the Republicans, while ecstatic at their emergence from the political wilderness, were far from united in their assessment of the causes of their victory.

The feeling generally seemed to be that change was in the air and that prudent politicians had better take heed.

In the House, at least, panic quickly took hold—and Adam Clayton Powell was its first victim. The Democratic caucus of the House already had stripped him of his chairmanship of its Education and Labor Committee when the House met to consider a recom-

PAGINATION INCORRECT

mendation that he be censured and suffer other penalties for what it considered were objectionable activities.

But, by lopsided votes, the House disregarded the appeals of both party leaderships and refused to seat Powell. Many House members said they were voting in response to constituent wishes made clear in a blizzard of mail. The votes on the issue revealed that House leadership was ineffective. And they also

Shirt-sleeved Rep. Don Edwards (D. Calif.) talks about legislative problems with an aide.

revealed that Southern Democrats and conservative Republicans were perfectly willing to step into the gap.

On the key vote, 123 Democrats voted to exclude Powell from the 90th Congress. They were joined by 125 Republicans, while 117 Democrats and 59 Republicans voted against exclusion.

The merits of the decision—and the legal can of worms it opened—are still matters of considerable debate. But the mood of rebelliousness it established is still the overriding one as the House attempts to get on with the business before it. The surprise felt by those who watched rank and file members kick over the traces of legislative discipline has been replaced by an acknowledgment that—for now—a large portion of the House would rather duck than fight.

And this has resulted in a considerable shift in the thinking of those who had hoped to consolidate the domestic policy victories of the 89th Congress. Leaders of both parties had publicly, at least, assessed the lesson of the November elections as requiring Congress to "take another look" at such things as Medicare, care of the aged, urban revitalization, War on Poverty programs, and federal assistance to education. Instead, the House chopped blindly away at the model cities and rent supplements programs.

Murmurings of discontent have arisen about the "ineffective" methods of House Speaker John W. McCormack as he has sought to exercise control of the Democratic majority. And the grip of President Johnson has been as loose.

It was felt that the President's first major test would come when the House considered the 1967 edition of the Elementary and Secondary Education Act. The Republicans served notice early that they were going to put their own stamp on the infant federal programs of assistance to elementary education. The significance of the battle was heightened because President Johnson publicly has said he is prouder of this program than of any other enacted during his tenure in the White House.

Under the leadership of Representative Albert H. Quie of Minnesota, the GOP advanced a program that would have made a shambles of the federal education effort by removing any effective federal control over how federal assistance funds would be used by the states.

When the smoke of battle cleared, President Johnson had lost, the Democratic leadership had lost, Quie and the Republican leadership had lost, and Representative Edith Green of Oregon had emerged as the best Congressional scholar of all those who tried to learn the temperament of the House.

The White House shot Quie down in flames by trumpeting charges that his bill would take money from Catholic schools and that it was a blow against civil rights. There was evidence the White House was energetically using every method of persuasion available to it.

The Republicans discovered they had misread the willingness of education experts and state officials to go for their program—when it meant they would lose money. The GOP also found itself once again in the embrace of the Southern Democrats and wasn't too happy about that.

The Democratic House leadership delayed a vote on the education bill until, it thought, the time was ripe for passage of the White House version.

Then, Mrs. Green, just about single-handedly, put together a new version of the bill on the House floor that was embraced by the conservatives and carried by substantial majorities. Her measure would

Senate party leaders: Sen. Mike Mansfield (D. Mont.) and Sen. Everett Dirksen (R. Ill.).

wipe out or radically alter the character of some features of federal aid to education that are among the most deeply cherished by liberals and the Administration.

The defeat gave substance to liberal complaints that President Johnson's efforts on behalf of domestic social welfare legislation lack the concentration of previous years. White House attention, it is claimed, is focused on foreign policy, and this has caused a slackening of lobbying effort on behalf of domestic issues.

There are reports that the White House lobbying staff misses the guidance and sense of strategy once given it by Postmaster General Lawrence F. O'Brien, now immersed in Post Office affairs. And several key members of a once crack Congressional affairs corps have moved on to other interests.

Meanwhile, the House Republicans find themselves in little better state. Republican Minority Leader Gerald R. Ford is still searching for a program that will unite liberal newcomers and conservative old-timers in his party. His difficulties are strikingly illustrated by his views on the advisability of accepting Southern Democratic support for Republican programs. He has said both that he welcomes everybody and that he doesn't want Southern help. Republican dissatisfaction has been expressed at both views.

So Mrs. Green has struck a note of independence that is highly welcome to dissatisfied members of both parties.

The Senate's basically liberal character was not affected as deeply by Republican election gains—but it is hardly "flaming" either.

Senate liberals tried at the opening of Congress to reopen the perennial battle to shut off filibusters. The ability to invoke cloture (end debate) is a key one, because the filibuster has been a traditional—and usually decisive—weapon in the hands of conservative Senators. In the 89th Congress, for all its liberalism, only one of seven attempts to end debate in the Senate was successful.

The present rule, adopted in 1959, calls for ending debate by a vote of two-thirds of the Senators present and voting. Liberals tried to change the rule this year so that three-fifths of those present and voting could end debate.

There were seven days of debate over the proposal to limit debate. In a complex set of parliamentary maneuvers, the liberals lost again. The key votes saw a total of 37 Senators for the proposed change.

Then the Senate, too, got entangled in a leadership dispute. The battle erupted over a proposal for federal financing of political campaigns. And it pitted Senate Majority Leader Mike Mansfield against his second in command, Majority Whip Russell B. Long. Senator Long fought a committee recommendation to suspend operation of a Long proposal that income tax money be made available for Presidential elections. Mansfield supported the committee.

In the end—which came after considerable debate—a "compromise" was worked out that defeated Long and effectively suspended the program. But not until an Administration-backed tax measure was put in serious jeopardy because it was the vehicle to which the election campaign measure was hitched.

Shirt-sleeved Rep. Roman C. Pucinski (D. Ill.) tries to keep up with a heavy correspondence.

Soon afterward, the Senate was caught up in the Dodd case, with Senator Long again a central figure. As Dodd's principal defender, Long helped tie up the Senate for more than a week when it met to consider a committee recommendation that Dodd be censured. And other Senate business had to wait despite the manifest impatience of other Senators.

The result of all of this in both House and Senate has been a considerable slow-down in the pace of Congressional business.

In the House, the increase in conservative strength

Business gets done at a quiet hearing in the House of Representatives Rayburn Office Building.

has resulted in abolishment of the 21-day rule. Adopted in 1965, this allowed the House to bypass the House Rules Committee, which frequently has bottled up progressive legislation.

Increased Republican strength in the House has added to Republican memberships on the committees that actually shape legislation. And Republican conservatives have found themselves even stronger because their new GOP brethren often replaced liberal Democrats defeated for reelection.

The difference in outlook this year can be dramatically seen in the fate of proposals to improve Social Security benefits.

President Johnson said in October of last year that these benefits should be increased by an average of at least 10 percent. On Jan. 23, he asked for an average increase of 20 percent in benefits. The Republicans too said early that they were for an increase in benefits.

And an authoritative observer of Congress said as Congress opened that sentiment had never been stronger for improvement of the Social Security structure.

As of this writing, Social Security measures still are grinding through committee and little is heard of them.

Civil rights measures have been just about written off.

And for the first time in living memory, the disunity in Congressional ranks is so great that the House rejected a proposal to raise the federal debt limit. Many consider the debt limit a purely symbolic figure in the light of modern governmental economics, but the shock that went through Washington made the defeat of that bill a significant addition to the difficulties facing the White House in Congress.

As July 4 approached, Republican leaders in the House were taking aim at the War on Poverty—and discovering anew their own problems. The thirst of the conservatives for the blood of the Office of Economic Opportunity drew the fire of some of the nation's most respected—and Republican—business leaders.

But it was expected that the Office would lose some of its programs. And OEO funds, as well as the financing of many new social progress programs were being trimmed both in the White House and the Congress below originally planned levels.

Even these relatively low levels face harsh treatment from Appropriations subcommittees on which conservatives have increased power.

All of these woes bulk large in assessments of Congressional actions to come.

But observers can point to some rays of hope and a victory or two in the continuing effort to uphold progressive programs and policies.

Long-time Senate conservative opposition to ratification of a consular treaty with the Soviet Union was overcome recently by a 66-28 roll call vote. Before the final vote, the Senate rejected six attempts to modify the ratification.

Efforts to keep alive the National Teacher Corps, a prime target of those who feel the federal government should ignore pressing educational needs in the country, seemed likely to be at least partially successful.

Republican efforts to impose a flat and regressive five percent cut on all government spending have been ineffective. At their first attempt, the Republicans lost a five percent proposal by a House vote of 168 to 217.

And in the field of labor relations, the House dramatically refused to accept a proposal that mandatory settlement of a railroad strike be imposed if negotiations fail.

Further afield, backers of progressive federal policies were heartened by the emergence in Congress of a new breed of liberal Republican. It is true that these are few and of little weight yet. But liberals hope the new GOP members can be encouraged to take over from the dinosaurs.

Also encouraging to liberals was President Johnson's decision to set up a commission to study the matter of guaranteed annual income. This decision, along with growing Congressional interest, is a significant breakthrough for a new and progressive social improvement program.

So, while a liberal Pollyanna would emphatically be out of place in Washington today, progressive observers feel the mood of official Washington is not a complete bar to progress.

On the practical side, they point out that every politician knows that public dissatisfaction is demonstrated at the polls—and the elections of 1968 are fast coming upon us.

A MODERN TALE OF TWO CITIES

By Sam Zagoria
Member, National Labor Relations Board

During the past fiscal year I have been doing a great deal of traveling. I have been struck by the similarity of problems among the various cities. As a result, I can appreciate fully the urgency of President Johnson's call "that we focus all the techniques and talents within our society on the crisis of the American city."

A long time ago Aristotle said, "Men come together

PAGINATION INCORRECT

Sam Zagoria

in cities in order to live. They remain together to live the good life." Is it still the good life for the people of our cities?

Most cities, it seems to me, have two different tales to tell.

The first is readily apparent the moment your plane sets down—a modern, busy, prosperous airport; a speedy freeway into town; a line of new low manufacturing plants, research laboratories and industrial parks strung alongside, and off in the distance the towering skyscrapers, shining in metal and glass, bordered by cultural and recreational centers that are triumphs of design and taste. That's the city featured in the advertisements and in the civic booster speeches. The tale of this city is indeed well told.

But cities are people, too. And the tale of this second city is less told. This is the city of the sweaty porches, dark hallways, refuse-strewn yards and gutters, all crowded with people, often with too much time on their hands and little prospect of a better time ahead.

These are the cities of which has been written: "Cities choked with traffic. Millions of substandard dwellings. Rising crime and delinquency rates. Widespread social unrest. An environment becoming steadily more polluted. Vast, deteriorating commercial areas." The quotation, incidentally, is from the United States Chamber of Commerce.

The exodus to the suburbs of city residents seeking the good life is well recognized. However, now a second exodus from the city to the suburbs is beginning to take shape with potentially serious consequences for the people of the city.

As a recent Labor Department study puts it, one of the big problems in matching workers with jobs "is the movement of new jobs into the suburbs and out of large central cities. It is in these cities that unemployment, underemployment and poverty are greatest."

The study cites data on building permits indicating "the concentration of new factory and commercial buildings in the ring of metropolitan areas rather than in the central city." At the same time, "a relatively large proportion of community buildings, such as schools and hospitals, have been constructed in the suburbs instead of the city. These buildings represent a large capital investment, leading to substantial increases in suburban employment, especially in industry, retail and wholesale trade, and business, professional and technical services. Many of the jobs created are within the capabilities of the people who need employment opportunities, but most of the new jobs are too distant and difficult to reach."

This situation is leading to a curious traffic pattern in the morning rush hours—a criss-cross—as the white suburbanites (and they are mostly that) forsake their grass and trees and come to work in the tall, gleaming office buildings and retail emporiums, and as the downtown city residents travel the arduous route of car-pools and buses to do housework in suburban homes, and to man suburban shopping centers, warehouses and production plants. At evening, the criss-cross is reversed.

The results in the job market are becoming apparent.

Unemployment rates for Negro teen-age boys and girls, the ones just entering the world of work, range up to 25 and 30 percent. In some urban areas, unemployment generally has actually worsened at a time when the country is enjoying overall prosperity and when national unemployment has been chopped down to less than 4 percent.

A good part of the job exodus to the suburbs has been the result of a reasoned and rational decision by employers to improve their operations. In the old days they located in the cities because this is where rail, water and auto transportation was most accessible; where retail markets were close by, and where an adequate labor supply was on tap.

As cities grew, expansion became expensive because of zoning limitations and the generally high cost of land; operations were often burdened with high tax rates, inadequate parking space for employees and customers, community complaints of air and water pollution, losses from hoodlum lawlessness, and acute traffic congestion raising the costs of loading and unloading goods. At the same time, modern automation techniques, particularly the perfecting of the computer, made possible operations with fewer people.

These factors, coming almost together, led the factory owner to consider locating where he could acquire sufficient land to permit a horizontal plant suitable for automation (as opposed to a vertical one which is usually not), with adequate space for parking of trucks and cars of employees and customers, and far enough away from neighbors to avert complaints of odors and fumes.

The fact that he would escape the problems of the city may also have weighed in his considerations. Sadly, there are too few citizens of the city in the Athenian sense.

What to do about this?

A century ago, some might have urged, "Let's stop automation. Let's wreck the computers." Today, we recognize that technology has to advance, that none of us has the right to stand in the way of progress.

Where people live: in the smaller towns being absorbed into metropolitan areas; in the better parts of the big city; and in the central city ghettos. Problem: linking jobs to people, regardless of where they live.

There are those who debate whether cybernation —computer-guided automation—is coming on fast or slow. For me, it is sufficient that the President's Commission on Technology, Automation and Economic Progress already last year found "evidence of enough increase in the pace of technological and economic change that there is no ground for complacency. Our society has not met the challenge of technical progress with complete success. There is much to be done."

Parenthetically, I note that the august Wall Street Journal covered one poor working girl's plans to stay ahead of the trend. A few months ago it reported that "the Queen of the Tassels, a Portland, Oregon, exotic dancer who figures the bumps will eventually grind her down, begins retraining as a computer programmer."

The Commission, which included, incidentally, several members of the IUD—Mr. Reuther of the Auto Workers, Mr. Hayes of the Machinists, and Mr. Beirne of the Communications Workers—as well as leaders of industry, education and government, laid down four guidelines for a worker adjustment program to provide for the change involved in cybernation.

They were:

"*First*, those displaced should be offered either a substantially equivalent or better alternative job or the training or education required to obtain such a job. This objective cannot be achieved unless displaced workers have access to the full range of available alternatives.

"*Second*, they should be guaranteed adequate financial security while searching for alternative jobs or while undertaking training.

"*Third*, they should be given sufficient financial assistance to permit them to relocate their families whenever this becomes necessary.

"*Fourth*, they should be protected against forfeiture of earned security rights, such as vacation, retirement, insurance, and related credits, resulting from job displacements."

This side of paradise: kids in a city housing authority skyscraper.

The Commission emphasized the value of advance notice as an "early warning system" so that employers and employees can prepare for change. These recommendations I heartily endorse as essential to a smooth changeover.

The national commission, in its comprehensive report, also recommended "a program of public service employment, providing, in effect, that the Government be an employer of last resort, providing work for the work for the 'hard-core unemployed' in useful community enterprises."

At the risk of being presumptuous, this is one of those situations where I concur in the result, but I would have put it differently.

Let me start this way: Despite the high unemployment rates in certain parts of the city, there's no shortage of jobs to be done.

All we have to do is look. For years, commuters have roared along through the city past daily scenes of despair and degradation, but they have turned themselves off, as some of our collegiate friends would put it. They have not walked down the street of a slum neighborhood or visited the home of a deprived Negro or Puerto Rican.

True, they have been generous with the Community Chest, in giving old clothes and in accumulating newspapers for the Salvation Army, but they have not been involved.

Perhaps they have recognized that the new messenger in the office really can't read, but solved this by replacing him. Perhaps they have suffered with the gas station attendant who really can't make change, but they worried little about whether his mistake will come out of his weekly pay check.

We need to pull up the venetian blinds and look out of those shiny office windows at the ugliness of the city. If we do, then we will confront the problem of the central city directly.

Our questions should be: What does the city need to become great again? What is necessary to renew the environment? What will it take in manpower, in funds?

This side of paradise: not enough jobs for youngsters, not enough jobs for oldsters.

This inventory, this taking stock, is the first step. Then we will need to harness private enterprise and its partners, labor and management, with government.

All three groups have been generous in financing the construction of museums, universities, stadiums, theatres and other essentials of an advanced civilization, but all three also need to focus on people and services—the need to staff the hospitals, expand the schools, clean the parks, streets and alleys, train the illiterate, upgrade the dropout, rehabilitate the criminal, to cite a few examples.

Government need not, necessarily, be the prime mover—there is plenty of room for the initiative and efforts of leaders in labor and management as well. The IUD community organizations have been a step in this direction.

The new Presidential committee of leaders of labor, business and others expert in urban affairs, to study how private resources can best be mobilized to wipe out city slums is another initiative. The commission includes George Meany, president of the AFL-CIO, Joseph Keenan of the International Brotherhood of Electrical Workers, and Walter Reuther of the Auto Workers.

Those business enterprises whose success relies on their crowd-generating ability—entertainment, retail sales, public transportation and parking, for example, have a particular stake in the saving of the city, and the owners of downtown real estate no less. And lest suburban interests forget, the city is the heartblood of the metropolitan area.

We need to regain pride in the city. Some of you here are old enough to recall a brand of beer—Feigan-span P.O.N. You know what the P.O.N. stood for? Pride of Newark. It's not being brewed any more.

There are jobs to be done, man-worthy jobs, to borrow a phrase from Paul Goodman, the social critic. And these jobs are not just limited to the unemployables, for this rehabilitation of the ignored city requires many skills and much training, much of it becoming available as cybernation necessarily grows and spreads. This is a reservoir of employment from which to draw to meet city needs.

Given a chance at useful public service, these people will not only help their city, but also become people of consequence in their own eyes. But to call government an "employer of last resort" is to demean working for the government. These are necessary and useful jobs, ones which urgently need doing. Indeed if they are not done, historians will be writing about the decline and fall of many cities.

One note of warning: These jobs should be accompanied by decent wages. There is something hypocritical about striving mightily to save and ease pain-ridden lives in the hospitals, but accomplishing this frequently by the sweat sacrifice of underpaid hospital help.

The same applies when our school teachers emphasize the value and importance of education to their students, then often have to sack groceries at a supermarket after school in order to support families.

What we need is involvement. Justice Felix Frankfurter put it very well, in these words: "People want to avoid unpleasantness. Life is hard enough even if you've got a bank account. Life is hard enough as it is, why take on something extra? 'Why go out on a limb?' as the phrase runs. 'Why stick your neck out?' —that other lovable invitation to do nothing!"

Escape to the suburbs and shutting out the city's problems takes only a few minutes by car, but how will we be rated by those who feel as Justice Oliver Wendell Holmes did:

"Life is action and passion. I think it is required of a man that he should share the action and passion of his time at peril of being judged not to have lived."

At the Board I have been taught to take due notice of the Supreme Court's every word. I urge you all to join in heeding these.

This article is based on a speech by Sam Zagoria to the IUD Conference in Washington June 28. Mr. Zagoria, a former newsman and assistant to Senator Clifford Case of New Jersey, was appointed to the NLRB by President Johnson.

MAN MUST MAKE MAIN BUSINESS LIFE, NOT DEATH

THE CHARLESTON GAZETTE

THURSDAY, MARCH 27, 1969

The following is from an extemporaneous speech delivered before an assemblage of scientists, students and others at Massachusetts Institute of Technology March 4 by George Wald, professor of biology at Harvard and Nobel Prize winner. Prof. Wald's talk was entitled "A Generation in Search of a Future."

By George Wald
Nobel Laureate

All of you know that in the last couple of years there has been student unrest, breaking at times into violence, in many parts of the world: in England, Germany, Italy, Spain, Mexico, Japan, and needless to say, many parts of this country. There has been a great deal of discussion as to what it all means. Perfectly clearly, it means something different in Mexico from what it does in France, and something different in France from what it does in Tokyo, and something different in Tokyo from what it does in this country, Yet, unless we are to assume that students have gone crazy all over the world, or that they have just decided that it's the thing to do, it must have some common meaning.

I don't need to go so far afield to look for that meaning. I am a teacher, and at Harvard I have a class of about 350 students -- men and women -- most of them freshmen and sophomores. Over these past few years, I have felt increasingly that something is terribly wrong -- and this year ever so much more than last. Something has gone sour, in teaching and in learning. It's almost as though there were a widespread feeling that education has become irrelevant.

A lecture is much more of a dialogue than many of you probably realize. As you lecture, you keep watching the faces, and information keeps coming back to you all the time. I began to feel, particularly this year, that I was missing much of what was coming back. I tried asking the students, but they didn't or couldn't help me very much.

But I think I know what's the matter. I think that this whole generation of students is beset with a profound uneasiness, and I don't think that they have yet quite defined its source. I think I understand the reasons for their uneasiness even better than they do. What is more, I share their uneasiness.

What's bothering those students? Some of them tell you it's the Vietnam War. I think the Vietnam War is the most shameful episode in the whole of American history. The concept of war crimes is an American invention. We've committed many war crimes in Vietnam -- but I'll tell you something interesting about that. We were committing war crimes in World War II: before the Nuremburg trials were held and the principle of war crimes was stated. The saturation bombing of German cities was a war crime. Dropping those atomic bombs on Hiroshima and Nagasaki was a war crime. If we had lost the war, it might have been our leaders who had to answer for such actions. I've gone through all that history lately, and I find that there's a gimmick in it.

It isn't written out, but I think we established it by precedent. That gimmick is that if one can allege that one is repelling or retaliating for an aggression, after that everything goes.

And, you see, we are living in a world in which all wars are wars of defense. All war departments are not defense departments. This is all part of the doubletalk of our time. The aggressor is always on the other side. I suppose this is why our ex-Secretary of State Dean Rusk went to such pains to insist, as he still insists, that in Vietnam we are repelling an aggression. And if that's what we are doing -- so runs the doctrine -- everything goes. If the concept of war crimes is ever to mean anything, they will have to be defined as categories of acts, regardless of alleged provocation. But that isn't so now.

I think we've lost that war, as a lot of other people think, too. The Vietnamese have a secret weapon. It's their willingness to die beyond our willingness to kill. In effect, they've been saying, You can kill us, but you'll have to kill a lot of us, you may have to kill all of us. And, thank heaven, we are not yet ready to do that.

Yet we have come a long way toward it -- far enough to sicken many Americans, far enough to sicken even our fighting men. Far enough so that our national symbols have gone sour. How many of you can sing about "the rockets red glare, the bombs bursting in air" without thinking, those are our bombs and our rockets, bursting over South Vietnamese villages? When those words were written, we were a people struggling for freedom against oppression. Now we are supporting open or thinly disguised military dictatorships all over the world, helping them to control and repress peoples struggling for their freedom.

But that Vietnam war, shameful and terrible as it is, seems to me only an immediate incident in a much larger and more stubborn situation.

* * * *

PART OF MY trouble with students is that almost all the students I teach were born after World War II. Just after World War II, a series of new and abnormal procedures came into American life. We regarded them at the time as temporary aberrations. We though we would get back to normal American life someday.

But those procedures have stayed with us now for more than 20 years, and those students of mine have never known anything else. They think those things are normal. They think that we've always had a Pentagon, that we have always had a big army, and that we have always had a draft. But those are all new things in American life, and I think that they are incompatible with what America meant before.

How many of you realize that just before World War II the entire American Army, including the Air Corps, numbered 139,000 men? Then World War II started, but we weren't yet in it, and, seeing that there was great trouble in the world, we doubled this army to 268,000 men. Then, in World War II, it got to be eight million. And then World War II came to an end and we prepared to go back to a peacetime army, somewhat as the American Army had always been before. And, indeed, in 1950 -- you think about 1950, our international commitments, the cold war,

the Truman Doctrine, and all the rest of it -- in 1950, we got down to 600,000 men.

Now we have three and a half million men under arms; about 600,000 in Vietnam, about 300,000 more in 'support areas' elsewhere in the Pacific, about 250,000 in Germany. And there are a lot at home. Some months ago; we were told that 300,000 National Guardsmen and 200,000 reservists -- so half a million men -- had been specially trained for riot duty in the cities.

I say the Vietnam war is just an immediate incident because as long as we keep that big an army, it will always find things to do. If the Vietnam war stopped tomorrow, the chances are that with that big a military establishment we would be in another such adventure, abroad or at home before you knew it.

The thing to do about the draft is not to reform it but to get rid of it.

A peacetime draft is the most un-American thing I know. All the time I was growing up, I was told about oppressive central European countries and Russia, where young men were forced into the army, and I was told what they did about it. They chopped off a finger, or shot off a couple of toes, or, better still, if they could manage it, they came to this country. And we understood that, and sympathized, and were glad to welcome them.

Now, by present estimates, from 4,000 to 6,000 Americans of draft age have left this country for Canada, 2,000 or 3,000 more have gone to Europe, and it looks as though many more were preparing to emigrate.

A bill to stop the draft was recently introduced in the Senate (S. 503), sponsored by a group of senators that runs the gamut from McGovern and Hatfield to Barry Goldwater. I hope it goes through. But I think that when we get rid of the draft we must also drastically cut back the size of the armed forces.

YET THERE IS something ever so much bigger and more important than the draft. That bigger thing, of course, is the militarization of our country. Ex-president Eisenhower, in his farewell address, warned us of what he called the military-industrial complex. I am sad to say that we must begin to think of it now as the military-industrial-labor union complex. What happened under the plea of the cold war was not alone that we built up the first big peacetime Army in our history but that we institutionalized it. We built, I suppose, the biggest government building in our history to run it, and we institutionalized it.

I don't think we can live with the present military establishment, and its $80 billion-a-year budget, and keep America anything like the America we have known in the past. It is corrupting the life of the whole country. It is buying up everything in sight: industries, banks, investors, scientists -- and lately it seems also to have bought up the labor unions.

The Defense Department is always broke, but some of the things it does with that $80 billion a year would make Buck Rogers envious. For example, the Rocky Mountain Arsenal, on the outskirts of Denver, was manufacturing a deadly nerve poison on such a scale that there was a problem of waste disposal. Nothing daunted, the people there dug a tunnel two miles deep under Denver, into which they have injected so much poisoned water that, beginning a couple of years ago,

Denver experienced a series of earth tremors of increasing severity. Now there is grave fear of a major earthquake. An interesting debate is in progress as to whether Denver will be safer if that lake of poisoned water is removed or is left in place.

Perhaps you have read also of those 6,000 sheep that suddenly died in Skull Valley, Utah, killed by another nerve poison -- a strange and, I believe, still unexplained accident, since the nearest testing seems to have been 30 miles away.

As for Vietnam, the expenditure of firepower there has been frightening. Some of you may still remember Khe Sanh, a hamlet just south of the demilitarized zone, where a force of United State Marines was beleaguered for a time. During that period, we dropped on the perimeter of Khe Sanh more explosives than fell on Japan throughout World War II, and more than fell on the whole of Europe during the years 1942 and 1943.

One of the officers there was quoted as having said afterward, "It looks like the world caught smallpox and died."

* * * *

THE ONLY POINT of government is to safeguard and foster life. Our government has become preoccupied with death, with the business of killing and being killed. So-called defense now absorbs 60 per cent of the national budget, and about 12 per cent of the Gross National Product.

A lively debate is beginning again on whether or not we should deploy antiballistic missles, the ABM. I don't have to talk about them -- everyone else here is doing that. But I should like to mention a curious circumstance. In September, 1967, or about a year and a half ago, we had a meeting of MIT and Harvard people, including experts on these matters, to talk about whether anything could be done to block the Sentinel system -- the deployment of ABMs. Everyone present thought them undesirable, but a few of the most knowledgeable persons took what seemed to be the practical view: "Why fight about a dead issue? It has been decided; the funds have been appropriated. Let's go on from there."

Well fortunately, it's not a dead issue. An ABM is a nuclear weapon. It takes a nuclear weapon to stop a nuclear weapon. And our concern must be with the whole issue of nuclear weapons.

There is an entire semantics ready to deal with the sort of thing I am about to say. It involves such phrases as "Those are the facts of life." No -- these are the facts of death. I don't accept them, and I advise you not to accept them. We are under repeated pressure to accept things that are presented to us as settled -- decisions that have been made. Always there is the thought: Let's go on from there. But this time we don't see how to go on. We will have to stick with these issues.

We are told that the United States and Russia, between them, by now have stockpiled nuclear weapons of approximately the explosive power of 15 tones of TNT for every man, woman, and child on earth. And now it is suggested that we must make more. All very regrettable, of course, but "those are the facts of life." We really would like to disarm, but our new secretary of defense has

made the ingenious proposal that now is the time to greatly increase our nuclear armaments, so that we can disarm from a position of strength.

I think all of you know there is no adequate defense against massive nuclear attack. It is both easier and cheaper to circumvent any known nuclear-defense system than to provide it. It's all pretty crazy. At the very moment we talk of deploying ABMs, we are also building the MIRV, the weapon to circumvent ABMs.

As far as I know, the most conservative estimates of the number of Americans who would be killed in a major nuclear attack, with everything working as well as can be hoped and all foreseeable precautions taken, run to about 50 million. We have become callous to gruesome statistics, and this seems at first to be only another gruesome statistic. You think, bang! -- and next morning, if you're still there, you read in the newspaper that 50 million people were killed.

But that isn't the way it happens. When we killed close to 200,000 people with those first, little, old-fashioned uranium bombs that we dropped on Hiroshima and Nagaski, about the same number of persons were maimed, blinded, burned, poisoned, and otherwise doomed. A lot of them took a long time to die.

That's the way it would be. Not a bang and a certain number of corpses to bury but a nation filled with millions of helpless, maimed, tortured, and doomed persons, and the survivors huddled with their families in shelters, with guns ready to fight off their neighbors trying to get some uncontaminated food and water.

* * * * *

A FEW MONTHS AGO, Sen. Richard Russell, of Georgia, ended a speech in the Senate with the words "If we have to start over again with another Adam and Eve, I want them to be Americans; and I want them on this continent and not in Europe." That was a United States senator making a patriotic speech. Well, here is a Nobel laureate who thinks that those words are criminally insane.

How real is the threat of full-scale nuclear war? I have my own very inexpert idea, but, realizing how little I know, and fearful that I may be a little paranoid on the subject, I take every opportunity to ask reputed experts. I asked that question of a distinguished professor of government at Harvard about a month ago. I asked him what sort of odds he would lay on the possibility of full-scale nuclear war within the foreseeable future. "Oh," he said comfortably, "I think I can give you a pretty good answer to that question. I estimate the probability of full-scale nuclear war, provided that the situation remains about as it is not, at 2 per cent per year." Anyboy can do the simple calculation that shows the 2 per cent per year means that the chance of having that full-scale nuclear war by 1990 is about 1 in 3, and by 2000 it is about 50-50.

I think I know what is bothering the students. I think that what we are up against is a generation that is by no means sure that it has a future.

I am growing old, and my future, so to speak, is already behind me. But there are those students of mine, who are in my mind always; and there are my children, the youngest of them now seven and nine, whose future is infinitely more precious to me than my own. So it isn't just their generation; it's mine, too. We're all in it together.

Are we to have a chance to live? We don't ask for prosperity, or security. Only for a reasonable chance to live, to work out our destiny in peace and decency. Not to go down in history as the apocalyptic generation.

And it isn't only nuclear war. Another overwhelming threat is in the population explosion. That has not yet even begun to come under control. There is every indication that the world population will double before the year 2000, and there is a widespread expectation of famine on an unprecedented scale in many parts of the world. Their experts tend to differ only in their estimates of when those famines will begin. Some think by 1980; others think they can be staved off until 1990; very few expect that they will not occur by the year 2000.

That is the problem. Unless we can be surer than we now are that this generation has a future, nothing else matters. It's not good enough to give it tender, loving care, to supply it with breakfast foods, to buy it expensive educations. Those things don't mean anything unless this generation has a future. And we're not sure that it does.

I don't think that there are problems of youth, or student problems. All the real problems I know about are grownup problems.

PERHAPS YOU will think me altogether absurd, or 'academic,' or hopelessly innocent -- that is, until you think of the alternatives -- if I say, as I do to you now: "We have to get rid of those nuclear weapons. There is nothing worth having that can be obtained by nuclear war -- nothing material or ideological -- no tradition that it can defend. It is utterly self-defeating. Those atomic bombs represent an unusable weapon. The only use for an atomic bomb is to keep somebody else from using one. It can give us no protection -- only the doubtful satisfaction of retaliation. Nuclear weapons offer us nothing but a balance of terror, and a balance of terror is still terror.

We have to get rid of those atomic weapons, here and everywhere. We cannot live with them.

I think we've reached a point of great decision, not just for our nation, not only for all humanity, but for life upon the earth. I tell my students, with a feeling of pride that I hope they will share, that the carbon, nitrogen, and oxygen that make up 99 per cent of our living substance were cooked in the deep interiors of earlier generations of dying stars. Gathered up from the ends of the universe, over billions of years, eventually they came to form, in part, the substance of our sun, its planets, and ourselves. Three billion years ago, life arose upon the earth. It is the only life in the solar system.

About two million years ago, man appeared. He has become the dominant species on the earth. All other living things, animal and plant, live by his sufferance. He is the custodian of life on earth, and in the solar system. It's a bit responsibility.

The thought that we're in competition with Russians or with Chinese is all a mistake, and trivial. We are one species, with a world to win. There's life all over this universe, but the only life in the solar system is on earth, and in the whole universe we are the only man.

Our business is with life, not death. Our challenge is to give what account we can of what becomes of life in the solar system, this corner of the universe that is our home, and most of all, what becomes of men -- all men, of all nations, colors, and creeds. This has become one world, a world for all men. It is only such a world that can now offer us life, and the chance to go on.

MEMO: No. 11-69
July 9, 1969

TO: Participating Organizations

FROM: Arnold Aronson, Secretary

A BLOW TO SCHOOL DESEGREGATION: AND ONE TO VOTING RIGHTS

By now you know that despite vigorous protests from many national organizations and the objections of Republican and Democratic liberals in Congress, the Administration has issued a policy statement on school desegregation that threatens to reverse the progress of the last five years.

We shall send you shortly the text of the statement and an analysis of it. At this moment it is enough to say the mere issuance of this reinterpretation of the government's school desegregation guidelines, after those guidelines have been affirmed by court decision, is a fateful compromise.

The decision to ease up on the requirement that, generally all school districts must desegregate by the start of the 1969-70 school year or face a cutoff of Federal funds is an open invitation to many Southern school officials -- and Southern politicians -- to start pressuring the Department of Health, Education and Welfare to go easy on them.

The Justice Department and HEW officials say only a few school districts will be given extensions. But these few districts are among the holdouts, the diehard, last-ditch fighters for segregation. To treat them leniently, 15 years after the Supreme Court school decision is bound to have harmful repercussions in districts that have already complied. Southern school officials who have carried out desegregation programs in good faith may face hostility in their communities because they sought to comply with the law.

The statement plays politics with constitutional rights. The immediate, informal reaction to it from various Leadership Conference officials who were called by the press was indignation. All of us should voice our protests against this shabby compromise. But more than protest is needed. The Leadership Conference must now consider ways of keeping the school desegregation program from being wiped out. We are addressing ourselves to matters of strategy and hope to have something to report in our next MEMO.

A VOTING RIGHTS BILL THAT WEAKENS VOTING RIGHTS

Attorney General John Mitchell had the unenviable task of facing critical members of the House Judiciary Committee at two hearings and defending the Administration's new Voting Rights Act proposals.

The Committee is considering a bill (H.R. 4249), cosponsored by its leading Republican and Democratic members, that would simply extend for another five years key provisions of the Voting Rights Act of 1965, now scheduled to expire on August 6, 1970. The Act had the effect of banning literacy tests in 7 Southern states. The benefits have been dramatic. Some 800,000 Negro voters have been registered since the passage of the law. Nearly 400 Negro officials have been elected in the South since 1965. The simple extension would preserve the conditions that have made such progress possible.

Strengthening That Is Weakening

Announcing it was his intention to greatly strengthen and extend the law, Mr. Mitchell offered proposals that would appear to weaken it. He proposed first, that the ban on literacy tests be extended nationwide to all the states that have such tests, even the 13 that have never used their tests to bar voters because of race. Although the Leadership Conference supports in principle the complete elimination of literacy tests, this proposal at this time would embroil voting legislation in controversy.

The Administration also proposes abandoning the present requirement that states covered by the Act must clear new voting laws and practices with the Attorney General or the District Court of the District of Columbia before putting them into effect. That would permit these states to pass any election laws they want and leave it to the Attorney General to come in and see how they work and if they appear discriminatory try to prove that in Southern Courts. It would shift the burden of proof from states now required to justify such changes, to the Department of Justice.

Mr. Mitchell is also ready to scrap the section of the Voting Rights Act that exempts Puerto Ricans, literate in Spanish, from having to submit to English literacy tests.

His proposal to ban state residency requirements for Presidential elections, while a desirable reform, raised, in the opinion of one Republican Committee member, grave constitutional questions.

The Attorney General Under Attack

The Administration proposals ran into heavy criticism. Clarence Mitchell, Legislative Chairman of the Leadership Conference, called the Attorney General's proposals "an apple of discord" thrown into the Congressional arena at a time when it will be hard enough to get a five-year extension through.

Rep. William McCulloch of Ohio, the ranking Republican on the House Judiciary Committee, said the "administration bill is actually a weaker bill. It also jeopardizes the chances of passage of voting rights legislation." He said its proposals to extend the ban on literacy tests to states where such tests have never been used discriminatorily and to scrap the review of Southern election laws, "creates a remedy for which there is no wrong and leaves grievous wrongs without adequate remedy." He said, "I ask you, what kind of civil rights bill is that?"

Rep. Emanuel Celler (D., N.Y.), Chairman of the House Judiciary Committee, called the Administration bill an "apple of Sodom." He likened it to the apple that grows beside the Dead Sea and has the appearance of being a delicious fruit until it is plucked, when it turns to dust and ashes in the hand. "Your proposal," he told the Attorney General, "will disappoint and deceive like the apple of Sodom."

The Legislative Situation

Mr. Celler suggested that the legislation be handled in two stages: the five year extension should be expedited and the Administration's proposals should be considered separately.

By the time this MEMO reaches you, his committee will probably be at work on the extension bill. Considering the strong bipartisan support it has, it should have no trouble there and may be reported out within the next few weeks.

A Senate Judiciary Subcommittee, under Senator Sam Ervin (D., N.C.), starts hearings this week on Voting Rights legislation. Clarence Mitchell and the Attorney General are both scheduled to testify.

What We Must Do

By resolutions, letters, approaches to members of Congress, the organizations of the Leadership Conference must begin now to offset any attempt to set back the Voting Rights Act. The simple five year extension is obtainable if we muster the support for it. We must do that now. Urge members of Congress to work for quick passage of H.R. 4249.

NEW DEVELOPMENTS IN FOOD STAMPS, WELFARE, FAIR HOUSING

There were new developments within the last two weeks involving three legislative matters of great concern to the Leadership Conference:

1. Food Stamps: The Senate is expected to take up shortly a food stamp bill approved by its Agriculture Committee that would improve the program in several aspects but falls short of allowing free stamps for the neediest families. The bill, among other things, would: raise the fiscal 1970 authorization to $750 million and authorize $1.5 billion a year in fiscal 1971 and 1972 and permit unused funds to be carried over the first two years; permit the Secretary of Agriculture to run Federal food stamp programs in counties that refuse to feed their poor; allow him to set uniform national eligibility standards.

A free stamp amendment will be offered on the Senate floor, probably by Senator George S. McGovern (D., S.C.). His amendment would give free stamps to a family of four with an income of $80 or less a month. Such an amendment would very likely touch off a floor fight - one we can win if there is strong coalition

support for the proposal. The food stamp bill is expected to follow the ABM debate in the Senate and may not be reached before the end of this month.

2. Welfare Freeze Lifted: The iniquitous "freeze" on the number of children eligible for assistance under the Aid to Families with Dependent Children program has been repealed. This happy development came after the Senate added to a bill to make permanent the existing temporary suspension of duty on crude chicory roots, an amendment that repealed the freeze, scheduled to take effect by midnight of this June 30; and after the House on the afternoon of June 30, agreed to accept the Senate bill amendment and all. So the freeze, which would have denied help to any more dependent children than those being helped in any state on Jan. 1, 1968, and which would have had the effect of forcing thousands of children off of welfare rolls, has been scrapped at last.

3. Fair Housing Enforcement: The Administration has asked Congress to appropriate $10.5 million in the new fiscal year for enforcement of the fair housing law. The House Appropriations Committee cut that down to a mere $3 million. The Leadership Conference and other organizations were able to persuade House members to make a floor fight on this and an amendment increasing the enforcement money to $5 million was adopted. The bill now goes to the Senate. While this is encouraging, $5 million still falls far short of the money needed to carry out a law that will cover 80 percent of the nation's housing when it comes into full effect in January 1970. A new fight will have to be waged on the Senate side to increase the appropriation even more.

TEACHING UNIONISTS ABOUT CIVIL LIBERTIES

by Harry Fleischman, Director
National Labor Service

"Where there is much desire to learn, there of necessity will be much arguing, much writing, many opinions; for opinion in good men is but knowledge in the making."

John Milton

Trying to teach trade unionists about civil liberties proves that Milton was right. That is one reason why the AFL-CIO American Federationist printed the article "Labor and Civil Liberties" in its March 1963 issue. (Reprints of this article for use in your summer schools can be secured from the AFL-CIO Publications Department, 815 16th Street, N.W., Washington, D.C. 20006 or from the National Labor Service.)

Some years ago Ben Segal and I started distributing a questionnaire on civil liberties and civil rights at union summer schools as a research tool to discover whether or not the polls in Professor Samuel A. Stouffer's book, "Communism, Conformity and Civil Liberties," were accurate. That survey, financed by the Fund for the Republic, used the Gallup and Roper organizations to poll 5,000 rank and file Americans and 1,500 community leaders -- including 1,537 rank and file unionists and 107 presidents of local unions. It showed that unionists ranked low on zeal for civil liberties. The answers to our summer school quizzes, covering 1,247 local union leaders at more than a score of institutes from 1955 to 1962, were remarkably similar to those revealed by Stouffer.

But we'd like to share with you the bonus we got at the union summer schools. We discovered that the quizzes made an invaluable teaching tool -- and one we hope you will use at your summer schools this year.

Here's how we did it:

We distributed the questionnaire at the opening institute session. They were filled out then and there -- without any discussion. We told the local union leaders not to sign their names and emphasized that this was an opinion poll, not a test. It usually took about 20 minutes to have the questionnaires completed. They were then handed in, so that we could compile the results. But we kept these results secret until the closing session of the institutes, so that knowledge of the results would not color classroom discussion.

In class the next day, we asked the students to define democracy. Invariably, and usually without much prodding, the answers -- which we put on the blackboard -- included:

- more -

* Freedom of Speech
* Freedom of Press
* Freedom of Religion
* Freedom of Assembly
* Majority Rule with Protection of the Rights of the Minority

Then, as we asked for discussion on the specific questions, a fascinating process started. As you know, on subjects like collective bargaining, labor economics and political education, most of the students are aware of and accept the union viewpoint, but civil liberties is virgin territory for them. Thus, prior to discussion, the questionnaires revealed that two out of five local union leaders would keep a Socialist from teaching, and one out of five would expel a Socialist from his local union. (See Federationist article.)

We called on students who backed each side of the issue to explain why "I don't want a Socialist giving my kids propaganda about socialism in class," said one. (We had to lay down ground rules and explain that any teacher who propagandized for any point of view was not teaching -- he was indoctrinating. The purpose of teaching, we continued, was not only to present facts to students but lead them to think for themselves about the meaning of these facts. For the sake of our discussion, we had to assume that the teacher was following the approved curriculum, or else he could be fired for not doing his job.)

"I still don't want a Socialist as a teacher. He's opposed to our economic system, and if he's a good teacher, he will have influence on the children, even outside the classroom." Back we went to the blackboard. How did this answer square with the definition of democracy he had previously approved? Brows were furrowed.

The same process, only more so, occurred when it came to atheism. More than half had voted to deny an atheist the right to teach. In talking it over, some stressed that if the atheist was a good teacher and a man of impeccable morals, he would be even more "dangerous," because then his example would be more attractive to the children. Most, however, despite strong personal misgivings, expressed the view that freedom of speech required protecting the rights of even an atheist. Some, backing that view, pointed out that the Bill of Rights declares that Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof.

What about Communists. "They're enemies of our country. Why let them use our freedoms to destroy freedom?" "They tried to bust our union before. We won't give them another chance." "Yes," replied another, "but what good is freedom of speech if we allow it only to people with whom we agree? Unless those whose views are obnoxious are free to speak, freedom is a fiction." The arguments waxed hot and heavy -- never completely resolved, but certainly with much greater thought given to the complexities of the problem.

The polls showed that five out of six would fire a Communist working in a defense plant, fearing that such employment might endanger national security, and that almost half would fire a Communist who clerked in a store. We then asked, "Should Communists have the right to eat?" When

almost all said yes, the next question was, "If you would even deny a job as a clerk in a store, what jobs should a Communist be allowed to hold? Or should he hold no job, and just be on relief, with our taxes supporting him?"

When two-thirds of the local union leaders voted that American-born admitted Communists should have their citizenship taken from them, we asked them what the U.S. Constitution provided on revoking citizenship for native Americans. They were usually shocked to find that citizenship can only be revoked for treason, and that the Constitution says that treason against the United States consists "only in levying war against them, or in adhering to their enemies, giving them aid and comfort" and that "no person shall be convicted of treason unless on the testimony of two witnesses to the same overt act or on confession in open court."

We used a similar Socratic dialogue in dealing with each of the questions in the questionnaire, to the accompaniment of furrowed brows, heated debate and eventual enlightenment. As one union staffer put it, "You're really unfair. You're making our guys think!"

If you use the same questionnaire at your schools, please send the results to the National Labor Service, 165 East 56th Street, New York, New York 10022, so that we can incorporate them in our continuing analysis of unionists' attitudes on civil liberties. We shall send copies of the overall results to all interested labor educators.

This technique, of course, is not the only successful way to teach unionists about civil liberties. But it demonstrated to us that open discussion on the issues invariably made support for civil liberties soar dramatically.

HF:eak

LABOR AND CIVIL LIBERTIES

by Harry Fleischman

Organized labor learned the need for civil liberties the hard way. As early as 1806, when Philadelphia shoemakers went on strike, they were brought on trial and found guilty for forming "a combination and conspiracy to raise their wages." In 1894, in the Pullman strike, a labor injunction—called by union leader Eugene Debs a "Gatling gun on paper"—helped crush the strike and smash the American Railway Union. Lockouts, blacklists, yellow-dog contracts, labor spies to undermine and betray unions and the use of troops and deputized thugs to terrorize workers and organizers were all part of the employer arsenal in the past.

Even today, as the last AFL-CIO convention pointed out, "freedom of speech, assembly, association and solicitation of membership for union organizers and factory workers are virtually non-existent in the rural South and all efforts to exercise these rights have been and are being frustrated, despite the guarantees of the Constitution." In 1961, two organizers of the American Federation of Hosiery Workers were brutally beaten by hoodlums in Ellijay, Georgia, and then arrested for "fighting, disorderly conduct, inciting a riot and soliciting membership without a license." A union organizer was beaten and kidnaped by a mob in Franklinton, North Carolina, while the city police and the county sheriff turned their backs. When two organizers of the Textile Workers Union of America were knifed in Fitzgerald, Georgia, police blandly wrote this incident off with a report that they got into a fight and knifed each other.

The right to dissent, to hold unpopular views, to try to convince others and change existing practices by peaceful and lawful means is the very cornerstone of American liberty, laid down 40 years before the Declaration of Independence in the celebrated trial of Peter Zenger.

Zenger, an obscure German immigrant, was thrown into jail for printing in his small newspaper, the New York Weekly World, articles criticizing the governor of the colony. To his defense came 80-year-old Andrew Hamilton, one of the most prominent attorneys in the colonies, who traveled from Philadelphia to deliver his eloquent and successful plea to the jury. It was not just the cause of a poor printer he was defending, Hamilton explained, but the cause of human liberty—"the liberty both of exposing and opposing arbitrary power . . . by speaking and writing the truth."

Yet while every AFL-CIO convention has unanimously passed tough resolutions in defense of civil liberties, there are grounds for believing there is a gap between the positions taken at conventions and the views of rank and file unionists.

Back in 1954 the Fund for the Republic polled 5,000 rank and file Americans and 1,500 community leaders on their attitudes on communists and civil liberties. The survey's results were included in a fact-packed book, "Communists, Conformity and Civil Liberties," by Harvard Professor Samuel A. Stouffer. It included data on 1,500 rank and file unionists and local union leaders.

The next year a group of union education directors conducted polls of local union leaders at 14 union leadership training institutes. Questionnaires were filled out, without any discussion, by 647 union shop stewards, committeemen, local union presidents and other union leaders. Since then, similar polls have been conducted at union institutes, several as late as 1962, polling some 600 local union leaders at nine institutes.

The remarkable thing about all these polls was that

HARRY FLEISCHMAN stresses civil liberties and civil rights in a column he writes as director of the National Labor Service, American Jewish Committee. He is co-author of the AFL-CIO booklet, "Security, Civil Liberties and Unions."

the percentage varied only slightly.

What were the results? True, the local union leaders scored high on their devotion to equal treatment of all, regardless of race, religion or national origin. More than nine out of ten insisted that unions should enforce equal opportunity in respect to apprenticeship training and job promotions. But they displayed considerably less enthusiasm for the traditional American principles embodied in the Bill of Rights. Their tolerance of people whose ideas and opinions differed from their own was lukewarm at best.

What is meant by "tolerance?" It does not necessarily mean approval. Tolerance means that, even if we disagree with other people's opinions, we uphold the civil liberties extended to them by the Constitution and the laws of the United States.

President George Meany of the AFL-CIO has stressed that "everyone devoted to democracy and human dignity must draw a sharp line of distinction between the democratic socialists and the totalitarian communists. One need not accept the doctrines of democratic socialism to realize that its adherents are true democrats who are uncompromising enemies of communism and all other forms of dictatorship. As a matter of fact, democratic socialists have often shared with free trade unionists the honor of being the first and main target of communist hostility, abuse, persecution and liquidation." And yet two out of five local trade union leaders would keep a socialist from teaching and one out of five would expel a socialist from his local union.

Although the Bill of Rights declares that Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof, more than half of our local union leaders would deny an atheist the right to teach and one out of four would keep him out of the local union.

As to communists, four-fifths of local union leaders would prevent them from teaching. Two out of three would strip American-born communists of their American citizenship.

Interestingly, less than half of the local union leaders would jail admitted communists. Apparently they feel that loss of citizenship is a smaller penalty than a jail sentence. Moreover, while five out of six would fire a communist working in a defense plant, more than half feel that communists should be allowed to work in non-defense jobs such as clerking in a store.

During the McCarthy period, labor was fearful of the witchhunts which spread throughout the land. While labor has hailed such investigations as the LaFollette probe into labor spying, AFL-CIO spokesmen have criticized "loosely-conducted congressional investigations where unfounded accusations and unproved charges had the effect of character assassination of good, loyal Americans." These inquiries were criticized as wandering from any proper legislative purpose into attempts "to enforce uniformity of opinions and to stifle the traditional American right to dissent." Yet two-thirds of local union leaders polled insisted that Congress should investigate political beliefs and associations in order to determine whether they are "un-American."

While the local union leader may not rise to the defense of an abstract principle of freedom, he tends to identify with individual victims and to respond far more affirmatively to redress specific violations of civil liberties. Thus although a majority supported security tests in other than sensitive posts, nine out of ten local union leaders supported the right of those accused as security risks under federal security programs to confront and cross-examine their accusers. Perhaps the strong support for this position comes from labor's vigorous activity against abuses in the various government security programs, as well as from the publicity some cases have received in the nation's press and on TV. Among cases enlisting their sympathy were the following:

- One "risk" was accused of "leftwing talk." What he had actually said was: "I would rather be a second-class citizen in Mississippi than a first-class citizen in Russia."
- Another man was accused of teaching languages to "persons of the Russian embassy and Russian soldiers." He had taught Russian to U.S. Army and Navy officers during World War II.
- A Negro worker defending himself against "security" charges was asked whether he favored "the mixing of Negroes and whites."
- Another worker was asked if he had dated Japanese girls during the Korean War.

When former Republican Senator Harry Cain was Chairman of the Subversive Activities Control Board, he charged that the incompetence of many government security officers was at least as dangerous as conscious sabotage. Among the derogatory information they placed against American citizens, some of it in formal charges, according to the Providence Journal Bulletin, were:

- Testimony by a neighbor who said he saw the subject on several occasions walking around his own home without clothes on.
- Statements that blood in blood banks should not be segregated by race.
- Evidence of contributions to the United Jewish Appeal.

Other stupidities of security officers included the suspension of a bachelor for "having a communist wife." A defense plant engineer was suspended because the security officer charged that he and his wife teamed up to make streetcorner communist speeches in 1939—when the husband was 15, the wife 11 years old and when they lived in different cities.

The American Legion reported a member was fired from his government job because his wife accused him of personal misconduct. Later the wife was fired from her government job because it was found that she lied about her husband. But the government refused to reinstate the husband because being accused in public was considered sufficient grounds for dismissal in his particular department.

In one of the classic cases, a unionist was declared

a "security risk" because he was too active a union man! As Jim Schuetz told the Senate Subcommittee on Constitutional Rights recently, he had worked at Bell Aircraft since 1940. Chairman of the United Auto Workers' local stewards' council, he had held a government security clearance since 1946. In late 1950, Schuetz was called into the Army Air Force office at Bell and handed a letter withdrawing his security clearance. As a "security risk," the company then told him, he no longer could be employed at Bell.

After the union appealed, Schuetz learned months later that his clearance had been withdrawn because of "picketline offenses" in the Bell Aircraft strike a year and a half earlier, which the hearing board said had shown "poor discretion" and "lack of responsibility." Schuetz was not disloyal or subversive, they said, but they implied he was too active and militant a union man. When the hearing board refused to restore his clearance, UAW officers and the Workers Defense League took the case to the Secretary of Defense in Washington. Five months after he was fired, Schuetz was cleared of the "security risk" tag and reinstated on the job. But even then, it took almost a year to get his back pay.

In another case, when Julius P. Alston was denounced as a security risk and pulled off his job at the Lockheed missiles plant in Van Nuys, Calif., which makes the Polaris missile, the government kept identity of his accusers secret. The International Association of Machinists and Aerospace Workers helped him disprove the anonymous security risk charge that cost him his job back in April 1959. Union representative Hal Shean went with Alston before a hearing board in June 1959. Alston then learned that charges against him arose because he worked for an arms plant in Connecticut where communist infiltration had taken place 17 years ago. It took another 17 months to clear Alston even though Alston, with Shean's aid, showed at the hearing that the charge against him was groundless. His reinstatement order entitled Alston to $9,000 back pay.

Six days after the Alston hearing, the U. S. Supreme Court held the government's industrial security program invalid in an 8-to-1 decision because denial of confrontation and cross examination of government witnesses, without statutory authority, was illegal. Former President Eisenhower issued an executive order restoring the program with some changes to meet the court's decision, but did not apply the confrontation and cross examination principles to all cases. A bill to back up that executive order with congressional sanction went down to defeat in the last Congress as labor pitched in, along with other liberal forces and a small group of Republicans, to point up its dangers.

American labor traditionally has opposed blacklisting as an unmitigated evil. Labor history is full of examples of active union men fired from jobs because of union activity and blacklisted so they could find no other jobs in their trades. That is why unions campaigned so vigorously for a clause in the Wagner Act to make blacklisting illegal.

During the McCarthy era, a different kind of blacklist ran rampant—the exclusion of actors, writers and others in the entertainment industries because of alleged involvement with communist or communist-front groups. Blacklisters cowed the radio and television industry—networks and stations, sponsors and advertising agencies, even the performers' union—into accepting "political reliability" as a qualification for employment in broadcasting. In part, this was a reaction to earlier communist influence in the entertainment world, where communists and fellow travelers had worked together to blacklist anti-communist writers and actors.

In the mid-fifties, John Henry Faulk, a radio-TV personality earning $36,000 a year as a humorist, decided the blacklist wasn't funny. With several other entertainers he ran for office in the New York local of the American Federation of Television and Radio Artists (AFTRA) on a slate opposing both communism and blacklisting. When the slate won, a blacklisting newsletter, AWARE, charged that Faulk had attended some communist-front meetings years before. The late Lawrence Johnson, owner of a super-

The Bill of Rights

Congress of the United States,
begun and held at the City of New-York, on
Wednesday the fourth of March, one thousand seven hundred and eighty nine.

THE Convention of a number of the States, having at the time of their adopting the Constitution, expressed a desire, in order to prevent misconstruction or abuse of its powers, that further declaratory and restrictive clauses should be added: And as extending the ground of public confidence in the Government, will best secure the beneficent ends of its institution.

RESOLVED by the Senate and House of Representatives of the United States of America, in Congress assembled, two thirds of both Houses concurring, that the following Articles be proposed to the Legislatures of the several States, as amendments to the Constitution of the United States, all or any of which Articles, when ratified by three fourths of the said Legislatures, to be valid to all intents and purposes, as part of the said Constitution, viz.

ARTICLES in addition to, and amendment of the Constitution of the United States of America, proposed by Congress, and ratified by the Legislatures of the several States, pursuant to the fifth Article of the original Constitution.

Article the first. After the first enumeration required by the first Article of the Constitution, there shall be one Representative for every thirty thousand, until the number shall amount to one hundred, after which the proportion shall be so regulated by Congress, that there shall be not less than one hundred Representatives, nor less than one Representative for every forty thousand persons,

market chain in Syracuse, N. Y., circulated AWARE's attack among Faulk's sponsors, threatening to remove their products from his stores. The sponsors deserted in droves.

Instead of bowing supinely to AWARE's power, Faulk sued AWARE, Johnson and Vincent H. Hartnett, author of the attack, for libel. Things happened fast. The Columbia Broadcasting System failed to renew Faulk's contract. Stations outside New York offered to hire him only if he dropped his suit. Faulk moved to Texas and opened a small public relations agency to try to keep going.

Finally, last year, when attorney Louis Nizer proved the AWARE charges were untrue, a jury awarded Faulk the unprecedented sum of $3.5 million in compensatory and punitive damages. How much he will collect is uncertain since multi-millionaire Johnson died just as the case went to the jury and a legal question exists as to whether his estate is responsible for his share of the damages. In the light of the Faulk verdict, other individuals similarly victimized may be expected to take similar legal action against their attackers.

Still another area of great concern to labor is the widespread use of wiretapping. As the law now stands, the Communications Act of 1934 makes it a federal crime for anybody, police included, to put a wiretap on somebody's telephone and disclose what was heard. The Supreme Court recently has ruled, in Mapp v. Ohio, that illegally obtained evidence may not be used in state or federal courts. Whether that ruling will eventually bar the use of wiretap evidence in all state courts is not yet settled.

To be able to move at top speed, the Justice Department now wants a law permitting the use of wiretap information in cases involving national security without having to request a court order. In cases where bribery, extortion, kidnapping or murder are suspected, the law would require specific court orders for permission to tap and use the evidence. State and local authorities have urged even wider use of wiretaps, leading the American Civil Liberties Union to demand a complete ban on wiretapping because "innumerable innocent people will have their privacy invaded by officials who, as Justice Brandeis said, at their best are 'men of zeal, well-meaning but without understanding' and, at their worst, susceptible to graft, corruption, extortion and other improprieties." The AFL-CIO, recognizing that wiretapping constitutes a serious threat to personal liberties and that technological developments have made it very difficult to control, has urged a law permitting wiretapping only to federal agents, under specific court orders, in an area clearly defined to cover espionage, treason and kidnapping. All other taps should be banned, said the last AFL-CIO convention, including a prohibition on divulging tapped information at congressional hearings.

In 1637, a stubborn English bookseller named John Lilburne stood trial before a star chamber, charged with having brought certain anti-religious books into

Britain. Because he refused to testify against himself, he was sentenced to be whipped.

In 1641, the House of Commons voted this sentence "illegal and against the liberty of the subject." Lilburne's fight established in the English-speaking world the principle that no man should be compelled to bear witness against himself or be tortured into confession. This safeguard was later written into the American Bill of Rights as the Fifth Amendment to the U. S. Constitution.

The Fifth Amendment states in pretty plain language that in a criminal trial no man is required to testify against himself. It also includes the provision that "no person shall be deprived of life, liberty or property without due process of law"—that is, without a fair trial. These principles go hand in hand with the assumption that a man is innocent until proved guilty.

Communists and fellow travelers have, of course, made frequent use of the Fifth Amendment. Newspapers headline cases of "Fifth Amendment Communist," "Fifth Amendment Teachers," "Fifth Amendment Gangsters" and "Fifth Amendment Racketeers." As a result, many people forget that the Fifth Amendment was put in the Bill of Rights not as an "escape hatch" for the guilty, but to protect the innocent.

The Fifth Amendment has been called "one of the greatest privileges a free people can possess." Like the rest of the Bill of Rights, it is a symbol of democracy. There were no such safeguards in fascist Italy or Nazi Germany. There is no Fifth Amendment in communist Russia.

"The reason for the guarantee is of such overwhelming importance," wrote President A. J. Hayes of the International Association of Machinists, in his union journal, "that few people would seriously contend we should abandon it and revert to the old practice, still used by communist and fascist dictators, of extracting confessions by physical and mental torture. Indeed, the Fifth Amendment is one of the basic concepts of freedom which distinguishes our form of government from communism and fascism."

Nevertheless, in October 1953 the Eisenhower security order was amended to state that any person who pleads the Fifth Amendment is automatically a "security risk" and not eligible for work on classified government materials. Some companies even dismiss any employe who has claimed the Fifth in a court case or

hearing, whether he is working on defense contracts or not.

The courts have ruled that pleading the Fifth Amendment may not be interpreted as a confession of guilt. In a recent decision, the U. S. Supreme Court declared:

". . . The privilege against self-incrimination would be reduced to a hollow mockery if its exercise could be taken as equivalent either to a confession of guilt or a conclusive presumption of perjury.

". . . A witness may have a reasonable fear of prosecution and yet be innocent of any wrongdoing. The privilege serves to protect the innocent who otherwise might be ensnared by ambiguous circumstances."

There are many reasons which may lead an innocent man to plead the Fifth. He may fear becoming involved in a case although he has committed no crime. He may be frightened and plead the Fifth to avoid further questioning. He may feel that whatever he says will be a link in the chain of his own prosecution.

In April 1956, the Supreme Court upheld the constitutionality of the Immunity Act, which permits the government to grant witnesses immunity against prosecution and force them to testify in national security cases. Under the law the government may subpoena a man to the witness stand and make him testify against himself and former associates. If he refuses, he can go to jail for contempt of Congress.

An editorial in The Wall Street Journal argued: "The law flies directly in the face of the Fifth Amendment, for the granting of immunity from prosecution is only another way to force a person to testify against himself or go to jail. No one can say what future prosecution may flow from forced testimony."

Three Bethlehem Steel employes—in plants which had no defense contracts—were fired when they pleaded the Fifth Amendment before a congressional committee. The Steelworkers Union took the case to arbitration but lost. Furthermore, the workers were refused unemployment benefits on the grounds that they had been fired for "just cause."

The executive board of the Steelworkers declared that invoking the Fifth Amendment "standing alone cannot be the basis . . . for failure of the union to protect employe rights under a collective bargaining agreement, including the right to be free from unilateral and arbitrary disciplinary action or discharge."

The International Union of Electrical, Radio and Machine Workers, the Newspaper Guild, the American Federation of Teachers and the United Auto Workers also have stated they would not go along with dismissals based solely on the fact that a worker claimed the privilege of the Fifth Amendment. If a local union has reason to believe that the individual in question is actually a communist, these national unions declare, he should be tried under local union procedure.

"From Jesus' injunction to swear not at all," noted Gordon M. Browne, Jr., past president of Local 460 of the American Federation of Teachers, "through the U. S. Supreme Court decision in Cummings vs. Missouri in 1867, which held that a test oath denying employment to non-signers was a bill of attainder and specifically forbidden by the Constitution, oaths have been despised and resisted. They have been the tool of tyrants seeking to coerce conformity, often on matters of religious belief."

Yet in the postwar era the prevalence of test oaths has grown mightily. Churches and other organizations in California enjoying tax exemption once were required to swear their corporate loyalty to preserve their tax exempt status. All over the country, teachers have been forced to sign non-communist oaths. Students must sign such oaths to receive federal aid grants. The Christian Century reported that a new subscriber had offered with his check a non-communist oath which he wanted the editor to sign for himself and all his employes before accepting the subscriber's money.

What have the oaths accomplished? They invariably are presented as a weapon against subversion, but communists and other totalitarians would have no hesitation in signing such an oath. After all, Lenin told them that lying, stealing and murder were justified because the end justified the means. The scores of teachers and professors who have been fired or forced to resign for refusal to sign such oaths have been people opposed to the oath on principle. The oath has punished no subversives but has made thornier the path of the non-conformist.

"But if you're not a subversive, why not swear loyalty to your country?" This is the classic question to which the only answer is "If we must suspect each other and be reassured only by oaths, how can a free society function?" Teachers have been special targets of oaths because their influence during the formative years of a child's development has been viewed with anxiety by oath proponents. Teachers, of course, resent such attention. They feel no more inclined to subversion than doctors or bankers—yet doctors are not asked to swear that they are not abortionists or bankers that they are not embezzlers.

What are some of the other civil liberties issues of concern to the trade union movement? Censorship and the McCarran Act are among them. The defeated Cunningham amendment to the postal rate revision bill would have banned from international and domestic mail all matter determined by the Attorney General to

be communist political propaganda. The last AFL-CIO convention opposed such attempt at censorship, rejecting "the totalitarian philosophy that some government officials can judge better than the people themselves what they shall read, see or hear." Herblock, the political cartoonist, echoed this view when he suggested: "It seems to me that we were all better off when the postal department used to deliver mail and left it to a Higher Authority to deliver us from evil."

Junius Scales, a former Communist Party organizer arrested under the Smith Act in 1954, was found guilty of active and knowing membership in the Communist Party and sentenced to six years in jail. During the seven years the case was being considered by various appeals courts, a great deal happened in the world—and to Junius Scales. In 1957 Scales quit the party. In 1961, his conviction was upheld by the U.S. Supreme Court in a 5-4 decision. (On the same day the Court threw out the conviction of John F. Noto, an admitted and continuing party functionary, on the ground that the government had failed to present sufficient evidence of "illegal party advisory.") No other Communist Party member, past or present, has been convicted on the same charge that put Scales behind bars.

As The Washington Post put it: "What a laugh this must give the commies! The government of the United States . . . in effect joins hands with [communists] to punish an ex-member whom they hate for his apostasy. Moreover the absurdity of this paradox is heightened when one reflects that Scales is being punished for a political crime—holding bad beliefs and bad associations—which most Americans like to believe is punishable only in communist countries. If President Kennedy were to pardon Scales, he would be tempering justice not only with mercy but with equity and common sense as well."

And this did happen; in a series of Christmas amnesties, Kennedy set Scales free in commuting his term.

Last year, the U. S. Supreme Court, also by a 5 to 4 vote, upheld the constitutionality of the key clause of the Internal Security Act (popularly titled the McCarran Act). The U. S. Communist Party was ordered to register as the agent of a foreign power. When the party refused, it was indicted and was recently tried along with several of its leaders. A number of organizations, including one union, were designated "communist-infiltrated" as defined by the Act and prosecutions are pending. Several publications are under orders to label themselves as communist and are threatened with prosecution if they don't.

The four Supreme Court justices who dissented in the McCarran Act decision said:

". . . the freedoms of speech, press, petition and assembly guaranteed by the First Amendment must be accorded to the ideas we hate or sooner or later they will be denied to the ideas we cherish. The first banning of an association because it advocates hated ideas—whether that association be called a political party or not—marks a fateful moment in the history of a free country.

". . . Now, when this country is trying to spread the high ideals of democracy all over the world—ideals that are revolutionary in many countries—seems to be a particularly inappropriate time to stifle First Amendment freedoms in this country. The same arguments that are used to justify the outlawry of communist ideas here could be used to justify the outlawry of the ideas of democracy in other nations.

". . . This widespread program for punishing ideas on the ground that they might endanger the internal security of the nation not only sadly fails to protect that security but also diverts our energies and thoughts from the many far more important problems that face us as a nation in this troubled world."

It has been noted that on many of the civil liberties issues confronting the nation there seems to be a gap between labor's official views and the attitudes of local union leaders and the rank and file. Nor is it only unionists who share such limited views of democracy. A Purdue University poll of teenage opinions reveals that more than half of our high school students believe that wiretapping and the third degree should be legalized to help the police maintain obedience and that police should censor books, movies, radio and TV to shield citizens from improper thinking. Moreover, 41 percent would abolish freedom of the press and 34 percent would deny freedom of speech to people who hold unpopular views. Indeed, Chief Justice Earl Warren of the U. S. Supreme Court said several years ago that he doubted the Bill of Rights would win approval if it were submitted to this generation of Americans in a referendum.

In every union leadership training institute where civil liberties questionnaires were distributed, the replies—filled out without discussion—were disheartening. Yet in every case, after open discussion on the issues, support for civil liberties soared dramatically. Nor was this due to an indoctrination process of lecturing about the "right" answers. What was done was to elicit from the local union leaders their definition of democracy. Invariably, this included not only rule by the majority but protection of the rights of the minority—including freedom of speech, press, assembly and worship. Then as discussion was requested on the specific items in the questionnaire—and the students were asked how their answers related to the definition of democracy they had worked out—they realized the indivisibility of freedom.

When they understand the issues, American workers wholeheartedly support the principles of freedom and democracy. But how to bring about that understanding? Civil liberties should be stressed in labor's schools, press and meetings. And since union members only reflect the prejudices of the communities of which they are a part, labor must push for more intensive education in public schools and in all institutions on the values of democracy.

TWENTY QUESTIONS ON HUMAN RIGHTS

WHAT DO YOU THINK?

NOTE TO UNION MEMBERS: Please fill out carefully. Many union members disagree on the correct answers to the questions below. All we are looking for is your opinion. PLEASE DON'T SIGN YOUR NAME.

Put a circle around Y (for Yes) if you agree with a statement below; if you do not agree, circle N (for No.)

1. Should Congress publicly investigate political beliefs and associations in order to determine whether they are "un-American?"	73% Y 47% Y	N 27% N 53%
2. Should the F.B.I. secretly investigate political beliefs and associations in order to determine whether they are "un-American?"	81 Y 32 Y	N 19 N 68
3. Should an admitted Communist or a Black Panther		
(a) be allowed to teach?	34/47 Y	N 66/53
(b) be expelled if he is a member of your union?	66/68 Y	N 34/32
(c) be fired if he works in a defense plant?	66/68 Y	N 34/32
(d) be fired if he is a clerk in a store?	13/6 Y	N 87/94
4. Should a member of a White Citizen's Council or the Klu Klux Klan		
(a) be allowed to teach?	28/44 Y	N 72/56
(b) be expelled if he is a member of your union?	63/38 Y	N 37/62
5. Do you favor preventive detention (in advance of being found guilty in court) of persons who, in the judgement of the police, represent a threat to the safety and property of other citizens?	81 Y 59 Y	N 19 N 41
6. Do you favor preventive detention by government of persons who, in the judgement of the F.B.I., represent a threat to national security?	88 Y 59 Y	N 12 N 41
7. Should a man who favors government ownership of the railroads and big industry		
(a) be allowed to teach?	52/67 Y	N 48/33
(b) be expelled if he is a member of your union?	34/27 Y	N 66/73
8. Should an atheist (a man who doesn't believe in the existence of God)		
(a) be allowed to teach?	72/60 Y	N 28/40
(b) be expelled if he is a member of your union?	13/40 Y	N 87/60

9.	Should native Americans, who favor forcible overthrow of the government, be made to forfeit their citizenship?	73 Y 53 Y	N 27 N 47
10.	Should naturalized Americans, who favor forcible overthrow of the government, be made to forfeit their citizenship?	77 Y 47 Y	N 23 N 53
11.	Should employers be forced to hire Negroes and other minority workers?	68 Y 63 Y	N 32 N 37
12.	Should trade unions be entitled to restrict their membership on the basis of color, religion or national origin?	0 Y 6 Y	N 100 N 94
13.	Should unions enforce equal opportunity for all, regardless of race or religion, in respect to apprenticeship training and job promotion?	100 Y 94 Y	N 0 N 6
14.	If employers in your industry hire no Negroes, should your union try to make them change their policy?	81 Y 94 Y	N 19 N 6
15.	Should landlords be forced to rent to blacks and other minorities who meet their standards for tenants?	76 Y 73 Y	N 24 N 27
16.	Should owners have the right to refuse to sell their homes to persons of any racial or religious group?	40 Y 53 Y	N 60 N 47
17.	Are people born with prejudices just the way they are born with instinctive reactions to heat, hunger and loud noises?	20 Y 6 Y	N 80 N 94
18.	Should public schools have to admit children of every race and religion?	100 Y 100 Y	N 0 N 0
19.	Are universities justified in using a quota system to insure admission of members of certain racial or religious groups?	42 Y 40 Y	N 58 N 60
20.	Is the government favoring black people over whites?	44 Y 29 Y	N 56 N 71

August 11, 1969

TO: Participating Organizations

FROM: Arnold Aronson, Secretary

A HOUSE ACTION THAT CAN WRECK SCHOOL DESEGREGATION

Just as it did in 1968, the House last week took a step that could destroy the school desegregation program. Once again it passed an appropriations bill (H.R. 13111) for the Departments of Labor and Health, Education and Welfare (HEW) with amendments in it whose clear intent is to help Southern districts keep segregated schools.

The amendments are exactly the same ones that their sponsor, Rep. Jamie Whitten of Mississippi added to last year's Labor-HEW Appropriations bill. They got through the House then, too, but the Senate was able to water down the language and render them virtually harmless. Our hope in this Congress lies with the Senate again.

Repeat Performance

"Its like watching summer reruns on TV," a secretary remarked, as she watched the action on the House floor. And sure enough, there they were again: the same Southerners professing their commitment to desegregation and civil rights while they attempted once more to scuttle the program.

The Whitten amendments say, in brief, that none of the funds allocated to HEW shall be used "to force busing of students, the abolishment of any schools" or to force a student to attend a public school against the wishes of his parent.

The two amendments together would nullify the Supreme Court decision of last year in the Green case, which held that "freedom-of-choice" plans are an acceptable way to desegregate schools in compliance with Title VI of the Civil Rights Act of 1964 only where they result in the elimination of discrimination. Mr. Whitten would make "freedom-of-choice" plans acceptable even if they didn't desegregate schools.

Little Time to Act

The way the amendments were added to the bill and brought to the House floor underscored a criticism the Leadership Conference aimed at the whole appropriations procedure in the legislative program it adopted in January.

There we observed that secret hearings and hurried reports made it almost impossible to mount any kind of effective opposition to bad legislation slipped into appropriations bills. The Whitten amendments of 1968, the Conference statement noted "were unavailable and unknown until almost the very day they were to be considered on the House floor."

Things were no different this year. The first notice of the amendments came on the afternoon of Thursday, July 24th, when the Appropriations bill was reported out of committee. Since the bill was scheduled to be taken up on Tuesday, July 29th, and action possibly completed then, there was no time to issue a warning MEMO. As it happened, action was delayed and the vote on the Whitten amendments did not come until two days later, on Thursday, July 31st. An emergency meeting of Washington representatives to the Leadership Conference was called and assignments made but there was not much time in which to act in Washington and even less in the field.

Even so, effective opposition could have been mounted and the amendments might have been beaten if there had been a greater effort in Congress and if the Administration had opposed them.

The Administration's Role

An Administration that early this month, in a policy statement declared it was "unequivocally committed to the goal of finally ending racial discrimination in the schools" was strangely silent at this crucial time. An Administration fighting loudly and strongly for a surtax extension and for the deployment of the ABM, had nothing to say in support of a civil rights program it professes to champion.

HEW issued no statement on the amendments. The White House issued none, although last year Mel Laird, then the Republican Whip, cited candidate Nixon's objections to the amendments in expressing his party's opposition to them. This year, with Mr. Laird gone to the Defense Department, House Minority Leader Gerald Ford (R., Mich.) was in charge. Mr. Ford made no speech on the amendments. And on teller votes, he walked up the aisle with the Dixiecrats in favor of the Whitten amendments, symbolizing the marriage of convenience between his party and the Southern Democrats.

This helps confirm the suspicion that the Nixon deal with Thurmond dictates the Administration's civil rights actions. It is a suspicion further confirmed by the July 3rd policy statement on school guidelines (see Memo No. 11-69) which attempts to do administratively what Whitten is trying to do legislatively.

Bi-Partisan Blame

But all the blame cannot be placed on the Republicans. At least 50 voted against the Whitten amendments. And one of the things that undermined the best efforts of the valiant opponents of the Whitten riders was the conspicuous absence from the floor of many liberal Democrats. Rep. Edith Green (D., Ore.) whose national reputation as a liberal still persists, continued to play her ambiguous role in educational matters by avowing nothing but the most liberal

motives, while she joined Republicans and Dixiecrats, first, in support of fund cuts for education and punitive measures against the campus rioters and then spoke in favor of the Whitten amendments and voted for them.

A Near-Miss Victory

There were two attempts by civil rights champions in the House to get rid of the Whitten amendments or to nullify them. Rep. Jeff Cohelan (D., Cal.), who led the fight last year, assisted by Rep. Silvio O. Conte (R., Mass.), spearheaded a bipartisan effort to strike the amendments from the bill. That move was defeated by an unrecorded teller vote of 141 to 158, in which members are counted by tellers as they walk up the aisle. Rep. James O'Hara (D., Mich.) then sought to get stricken from the amendments the language specifically aimed at the Supreme Court's "freedom-of-choice" decision. That was defeated by a teller vote of 153 to 157.

What made both defeats so hard to take was that the votes to strike or dilute the Whitten amendments were available if only attendance by liberal Democrats had been better. But the vote came at 6:15 P. M., the dinner and social hour, and on a Thursday evening, when members who commute are itching to catch planes and trains back to their districts. Had the vote come two hours earlier we might have won.

What Must Be Done

The fight now shifts to the Senate. There, the Appropriations Committee will probably have begun hearings by the time this MEMO reaches you. But it will take no action until after the summer recess, which runs from August 13 to September 3. If you know any of them, try to see members of the Appropriations Committee (list enclosed) and urge them to work to strike the Whitten amendments in Committee. Looking beyond that, to the action on the floor, we must start now to mobilize the Senate opposition to these dangerous amendments. Recess is a good time to begin. Only massive public protest can rescue school desegregation from a grave blow.

House Liberals: A Frustrated Majority

* * *

By NORMAN C. MILLER

WASHINGTON—As the largest bloc in the majority party, the liberal Democrats in the House ought to be a powerful force in Congress. Their actual influence, however, is suggested by one of the few 1969 victories they claim: Persuading Congressional leaders to grant the vacation the lawmakers have just concluded.

It was ironic to see the activist liberals prevailing upon the leaders, whom they constantly criticize for doing little, to allow Congress to do nothing at all for three weeks. The irony seemed lost on the liberals, but that was understandable: They needed the respite from the frustrations they face in the House.

The liberal Democrats know they are going to be frustrated throughout this 91st Congress and maybe for much longer. They can score an occasional legislative victory, but the realists among them emphasize the word "occasional." Liberal leaders complain about the House rules and customs that deny them power, yet they spend much time maneuvering to avoid initiating any reforms of those rules, lest an attempt at concerted action shatter their fragile bloc of stubborn individualists.

The result is a sort of paralysis that limits liberal Democrats in the House to only spasmodic effectiveness. This weakness is not new, but it is more serious with a Republican in the White House. Under a Democratic President, the liberals in the House were expected merely to follow. Now, the burden is on them to help develop and promote national party positions.

It is at once an opportunity and an awful problem for the 150 or so (out of 245) House Democrats who are more or less in the liberal camp. For before they can hope to play a more leading role, the liberals must somehow overcome their formidable internal difficulties.

To begin with, they lack a real leader. Speaker John McCormack, to be sure, is himself a liberal of New Deal vintage. But the 77-year-old Speaker merely presides over the House, he does not lead it. He allows the committee chairmen to call legislative signals, and in return they form a defensive line against any challenge to his position.

Rewarding the Hacks

The seniority system, of course, gives conservative Southerners—reelected regularly from safe districts—a disproportionately large number of committee and key subcommittee chairmanships, including the powerful Appropriations and Ways and Means posts. It is less discussed, but equally true, that the seniority system also rewards a lot of hack Democrats from the North who are perpetuated in office by big-city organizations.

Consequently, most of the Democratic powerholders are hostile or indifferent to the ideas of the liberal rank and file. "Around here, any innovation more radical than the electric light is thought to be un-American," typically grouses Thomas Rees of California.

Junior liberals like third-termer Rees find it very difficult to translate their grumbling into effective pressure for change. Unlike more visible Senators, Congressmen are hard put to command attention unless seniority has invested them with power. Speaking out against the status quo also risks retaliation. So the system tends to have a suffocating effect.

The relatively few liberals who have acquired pieces of power in the House are not eager to upset the system in which they have become comfortable. Thus, before the 91st Congress convened, Majority Leader Carl Albert rejected the pleas of some liberals that he challenge old friend John McCormack for the speakership. Arizona Rep. Morris Udall, one of the brightest liberal stars, finally mounted a candidacy—and was crushed by Mr. McCormack, 178 to 58, in the Democratic caucus.

The secret-ballot vote exposed the fact that most liberals weren't ready to revolt, despite their grumbling. Leaders of the Democratic Study Group, a loose alliance including almost all House liberals, didn't take sides publicly in the McCormack-Udall clash. Instead, they seized the chance to negotiate with Mr. McCormack for concessions. The resulting accomplishments, some bitter Udall supporters believe, undercut their candidate's chances.

Some McCormack concessions to the DSG were simply sops, like the summer vacation that House members with school-age children had long yearned for. But one concession was potentially important: An agreement to hold monthly caucuses of House Democrats for the first time in decades. Revival of the dormant caucus long had been advocated by iconoclast Richard Bolling of Missouri as the means by which the party's liberal majority could counter the dominance of conservative committee chairmen.

Whether the Bolling theory can work remains a question. Having demanded regular caucus meetings, it is up to the DSG to prod the caucus into grappling with policy decisions. But the 10-year-old DSG has existed mainly as an arm of Democratic Administrations. It has never before tried to initiate a sustained campaign, and DSG leaders aren't sure how to do it.

Thus, fourth-termer Donald Fraser has moved cautiously since beginning his one-year term as DSG Chairman in January, and the group has avoided provoking fights in the caucus—with one exception. Early in the year the DSG successfully mustered its troops to discipline Rep. John Rarick of Louisiana for his open 1968 support of third-party Presidential candidate George Wallace.

The 101-to-73 vote that stripped Mr. Rarick of his seniority nailed down precedents the liberals consider important: It put conservatives on notice that sabotage of the party's Presidential candidate won't go unpunished and it asserted the power of the caucus to overrule the Democratic members of the House Ways and Means Committee, who make the committee assignments for the party. The latter precedent was particularly pleasing to some liberals because it represented a setback for Ways and Means Chairman Wilbur Mills, most powerful of the House conservatives.

It may be questioned, however, whether the liberals' success in disciplining an obscure second-term Louisiana Congressman had significance. Since the Rarick fight back in January, nothing has happened in party caucuses that clearly tests the liberals' ability to unite on a controversial issue.

Rep. Fraser and other DSG leaders believe it's important to accustom the caucus to making decisions before confronting it with tough issues. Accordingly, the matters they have brought before the caucus have tended to be entirely noncontroversial, like a unanimous resolution favoring installation of data-processing computers to help with paperwork chores. Even one important policy matter—a recent caucus resolution favoring repeal of the investment tax credit—represented a soak-business decision that all Democrats could easily support at a time when the Republican President was seeking extension of the 10% surtax.

Avoiding a Confrontation

All the resolutions liberals have proposed so far for caucus action do have one common feature: They carefully avoid ordering committee chairmen to do anything. Yet as one DSG leader admits, "The caucus will become significant only if it gives the committees direction. Otherwise, you might as well not have it."

The reason the DSG leaders shrink from a showdown with an important committee chairman is simple: They are afraid they will lose. Remembering Morris Udall's lopsided defeat at the hands of the Speaker, neither mild-mannered Don Fraser nor any other DSG leader dares rely on general desire for change as a motive for battling the House establishment.

Nor is there much chance of DSG's unruly membership working out a point-by-point set of liberal objectives. "When you get six of these guys in the same room, you wind up with seven differences of opinion," sighs a veteran liberal staffer.

Several small DSG task forces were formed this year to develop specific positions on issues, but few of them have been active. Meantime, the liberal Democrats sometimes have seemed immobilized while legislation they favor, such as draft reform and food-stamp expansion, is bottled up by conservative committee chairmen.

To be sure, the DSG has made some strides. With an expanded staff, the research information provided for members is probably the best the DSG has ever produced. The DSG also has recruited outside experts to brief its members on military-spending issues; this has created new interest in the DSG among a number of liberals who had felt it was too preoccupied with legislation pushed by the labor movement.

And the Democratic liberals certainly have contributed importantly to the pressure that has produced a broad tax-reform bill. Two alert DSG leaders, Reps. Bolling and James O'Hara of Michigan, also exposed an embarrassing goof by Chairman Mills and his Ways and Means Committee, and forced the panel to rewrite its omnibus tax-revision bill so middle-income taxpayers would get a greater tax cut.

The liberals' most significant victory came in early August when they organized to add $894.5 million to an education money bill despite the opposition of the Appropriations

The liberals' most significant victory came in early August when they organized to add $894.5 million to an education money bill despite the opposition of the Appropriations Committee. It was the first time in the memory of many veteran legislators that the powerful Appropriations Committee had lost such a major battle on the House floor.

This DSG-managed operation succeeded mainly because education and labor lobbyists were enlisted in a well-organized pressure campaign. Heat applied by these interest groups not only generated wide support for the extra school aid but, just as importantly, spurred lawmakers to show up for the key nonrecord votes that locked the money into the bill.

The Importance of Pressures

The importance of interest-group pressure was demonstrated the day after the DSG's school-aid victory, when a bipartisan group tried to delete from the appropriations bill language that they believe will slow school integration in the South. Without a horde of watchful lobbyists in the galleries this time, many liberal Democrats didn't show up for two key nonrecord votes. Their absence was the reason the civil rights forces failed.

This unreliability of the liberal troops at crucial moments is one reason DSG leaders have no ambitious plans for new legislative forays on the House floor. On many issues, too, conservative Democrats can combine with Republicans to win even if all the liberals vote.

"We have only limited chances against targets of opportunity," says a liberal leader. "We have got to have an issue that commands broad support, not just by liberals, and be able to turn out the interest groups on our side."

If they face severe problems on the House floor, the liberal Democrats have an even more difficult task within the Democratic caucus. On paper, they have a clear majority. The question is whether they can muster the collective will to really challenge the entrenched power structure.

FROM: Arnold Aronson, Secretary

RETREAT ON SCHOOL DESEGREGATION DOCUMENTED - AND ATTACKED

The Nixon Administration's slowdown on school desegregation came in for two blunt attacks during the past week. A comprehensive study by the U. S. Civil Rights Commission verifies our own condemnation of the Administration's recent tactics. (The study finds that the new procedures the government has adopted "appear to be a major retreat in the struggle to achieve meaningful school desegregation.")

At the same time the report was issued, delegates to the Institute of Black Elected Officials, meeting in Washington, were virtually unanimous in opposing the Administration's approach to civil rights. Dr. Kenneth B. Clark, in the keynote address to the first national attempts to bring the 1,200 elected Negro officials together, said, "the promises of racial progress, initiated and accelerated during the past two decades...seem in doubt." The Institute issued no formal resolutions, but the Negro officeholders seemed to share Dr. Clark's evaluation and were strongly critical of the delays in desegregation.

A HARSH INDICTMENT

The six-man Civil Rights Commission, in its new report, "Federal Enforcement of School Desegregation" examines developments of the past two months and indicts the Administration for a slowdown. Of the Whitten Amendment to the Labor-HEW Appropriation bill, which the House adopted last month, (see MEMO 12-69) the report observes that its passage, by requiring acceptance of freedom-of-choice plans, "would slow or halt the progress of school desegregation. We believe that there is a serious chance that its passage would reverse some of the limited gains already made."

Perhaps anticipating the Commission's report, HEW Secretary Robert Finch came out with a statement the same day promising "remarkable progress" in school desegregation and expressing his opposition to the Whitten amendment. It was the Administration's refusal to speak out against the Whitten amendment earlier, and indeed the cooperation of Republican House leadership that were major factors

in adding this rider to the Appropriations bill. There is still a chance to beat the amendment in the Senate and that must become the object of a major effort by Leadership Conference organizations.

The Government Asks For A Slowdown

The Commission report notes that on July 3rd, Attorney General John Mitchell and Secretary Finch issued a joint statement affirming their commitment "to the goal of finally ending racial discrimination in schools, steadily and speedily..." The report finds little to substantiate that commitment.

In fact, it finds that since July 3rd "court orders have been entered and desegregation plans accepted which in our opinion postpone meaningful desegregation from 1969 to 1970."

Regarding the move in which Justice and HEW asked the courts in Mississippi to postpone implementation of desegregation plans in some school districts, the report observes, "for the first time since the Supreme Court ordered schools desegregated, the Federal government has requested in court a slowdown in the pace of desegregation."

What The Commission Found

In the course of its 100 page analysis, these were some of the major findings the Commission made:

1. HEW and Justice statistics on school desegregation in the July 3rd statement "give an overly optimistic, misleading and inaccurate picture of the scope of desegregation actually achieved. In fact, in a number of Southern states, relatively little desegregation of elementary and secondary schools has been accomplished in the last 15 years."

2. A major fallacy in the Administration's claim of substantial desegregation "is that many of the districts (counted as desegregated) have violated the terms of the assurances they have signed or of court orders that have been entered against them." There is insufficient personnel to police compliance and little likelihood of getting enough people for the job.

3. Court orders to desegregate generally have not been as effective in forcing desegregation as the threat of fund cutoffs. The Administration's emphasis on court orders rather than administrative proceedings, "can be expected to slow the pace of school desegregation."

4. Congress has slowed school desegregation by limiting HEW's appropriations and by placing unnecessary restrictions, such as the Whitten amendment, upon the Department's operating procedures.

5. Freedom of choice plans, as the Commission found in a 1967 report, are ineffective in desegregating schools since they place the full burden of desegregation on the shoulders of black parents and their children and often subject them to campaigns of intimidation and economic retaliation.

The Commission concludes, "If this Nation truly respected the law, if it truly cherished each of its children, the last vestiges of segregated education would have disappeared years ago. Instead, segregation continues as the pattern, and not the exception, of education in many states."

What We Must Do

On October 13, Senator Warren Magnuson, (D., Wash.) is scheduled to begin hearings on the Labor-HEW Appropriations bill and the Whitten Amendment. Here are the members of his subcommittee:

Chairman: Senator Warren Magnuson (D., Wash.)

Democrats	Republicans
Richard Russell (Ga.)	Norris Cotton (N. H.)
John Stennis (Miss.)	Clifford Case (N. J.)
Alan Bible (Nev.)	Hiram Fong (Hawaii)
Robert C. Byrd (W. Va.)	J. Caleb Boggs (Del.)
Spesard Holland (Fla.)	

Please write to these members urging them to strike the Whitten Amendment. Get your members to write their Senators urging them to support the elimination of the amendment. Write to President Nixon and Secretary Finch, expressing your dismay at the slowdown in school desegregation and urge them to use their full influence to do more than simply announce opposition. White House silence helped add the amendment to the bill. White House opposition could help get rid of it.

Great efforts on our part is necessary to beat the amendment. Passage of this rider would restrict HEW in enforcing Title VI of the Civil Rights Act of 1964 and gravely injure the school desegregation program.

Ammunition

To help you rally opposition to the Whitten amendment, we reprinted an editorial from the New York Times. Copies of the full U. S. Civil Rights Commission report can be obtained upon request by writing to:

Retreat From Integration

The United States Commission on Civil Rights has bluntly stated what had become increasingly evident —that the Nixon Administration is permitting "a major retreat in the struggle to achieve meaningful school desegregation."

The commission's statement was deliberately delayed until the facts and implications of the Administration's approach to the enforcement of desegregation could be carefully reviewed. The pattern which emerges from that analysis is one of a deliberate softening of attitudes, often hidden behind a screen of optimistic predictions and deceptive claims. It is a pattern that, in the commission's view, encourages those who, since the 1954 Supreme Court ruling, have developed high skills at evasion.

The six-man commission headed by the Rev. Theodore M. Hesburgh, president of the University of Notre Dame, was unanimous in sketching a critical picture of contradictions between the Administration's stated goals and its actions. It point out that the Administration has accepted integration delays in South Carolina and Alabama and has taken the unprecedented step of requesting the delay of the Government's own desegregation plans in Mississippi.

* * *

The indictment does not end with these specific actions. The commission properly points out that the Administration's shift from the administrative enforcement of guidelines set down by the Department of Health, Education and Welfare to reliance on court orders is a segregationist victory. Federal judges who, in the South, are frequently unsympathetic to desegregation pose less of a threat than termination of Federal funds by administrative ruling.

Perhaps the most serious threat to the future of desegregation is contained in an amendment introduced by Representative J. L. Whitten, Democrat of Mississippi, which would make freedom-of-choice plans acceptable substitutes for effective desegregation. Although the Whitten amendment was passed by the House almost two months ago, the first Administration opposition to this blatant effort at sabotage was voiced only last week by H.E.W. Secretary Robert Finch. Freedom of choice in white-supremacy regions offers no choice at all: intimidation and economic blackmail aimed at Negro parents who try to avail themselves of their "freedom" make the plan meaningless.

Despite his lame attempt to defend Administration policies before the Institute of Black Elected Officials yesterday, there is persuasive evidence that Mr. Finch and officials in his department's civil rights office are honestly dedicated to racial equality. But they lack the backing of the President, who, in his efforts to please Southern conservatives, has refrained from speaking out on this crucial issue.

The commission, in calling for "a great positive statement," warns poignantly that "time is running out on us as a nation." It is the President's responsibility to heed this warning and assert his leadership unequivocally for integration in the schools.

Violent Crimes Drop In Toledo After It Gets Law Controlling Guns

Total Off 31.5% in First Half; Results Less Encouraging In Other Cities With Curbs

Cheap Pistols' Sales Slashed

By JERRY LANDAUER
Staff Reporter of THE WALL STREET JOURNAL

TOLEDO—This city of 400,000 on the western tip of Lake Erie was once known as the gun capital of the Midwest. Firearms of all kinds could be bought at jewelry stores, gasoline stations and pawn shops. Gun dealers hawking pistols for as little as $4.95 vied for choice locations along roads leading in from Detroit, where controls were stricter. The crime rate soared.

The state legislature declined to restrict the trafficking in lethal weapons despite repeated appeals from Toledo officials. So in August 1968, the city council enacted an ordinance aimed especially at the sale of "Saturday-night specials"—cheap guns toted by holdup men to terrorize merchants on busy weekends. The ordinance prohibits anybody in the city from keeping or obtaining a pistol, revolver or other handgun without a license from the police.

At the time, few law officers believed the ordinance would reverse the city's mounting crime rate; unlicensed residents can still buy guns outside the city limits. But whether because of the gun-control law or because of other anticrime measures or even mere chance, crime is abating here while still surging higher in most cities.

Dramatic Statistics

This development shows up most dramatically in statistics released late last month by the FBI. For the nation, the violent crimes of rape, murder, robbery and aggravated assault—armed or otherwise—rose 9% in the first six months of 1969 from the like period last year. But in Toledo these violent crimes dropped 31.5% from the first half of 1968. "We're the only major city which shows such a dramatic decrease," exults John J. Burkhart, the city's chief counsel.

Indeed, crime in most other cities that have adopted gun controls, such as Washington, D.C., continues to move up pretty much in step with the national pattern. "Even if firearms were totally eliminated," contends a gun-control foe, "other weapons would be substituted."

However, crimes committed with a gun in Philadelphia have dropped since that city adopted a licensing law in 1965, even though the law exempts firearms owned at the time. In New York, Mayor John Lindsay credits gun laws with keeping murder rates low; despite its rising crime, New York often ranks lowest among the 10 largest U.S. cities in number of homicides per 100,000 population.

But Toledo's experience is unique. It may be traceable in part to special restrictions on gun dealers as well as owners, to a tough, well-publicized court crackdown on violators of the control law and to other city efforts against crime.

Crime Categories Analyzed

Whatever other factors may enter in, gun-control advocates insist that a close look at developments in major crime categories here supports their case:

—In the year before the ordinance was adopted, Toledo's police counted 422 aggravated assaults, with guns and without; these include shootings, stabbings and other attacks intended to maim or kill. In the year after enactment, the number of such attacks dipped 9% to 385. But the assaults with guns dropped much more steeply—from 152 to 83, or 45%.

—In the year before the ordinance, 36 people were murdered, 22 by handgun; in the following year, murders totaled 14, of which eight

Curbing Firearms: Violent Crimes Drop After Toledo Gets Gun Law

Continued From First Page

ledo and Detroit. In one nine-month period, his register rang up sales of 16,000 guns, including 5,500 to residents of Michigan who couldn't legally buy at home without a police permit (the revolver used in the highly publicized 1966 synagog slaying of Detroit Rabbi Morris Adler came from Toledo). But now, along with perhaps half the other gun outlets in town, the big store stands abandoned.

Besides the Toledo gun law's licensing provision, it requires detailed monthly gun sales reports to the Toledo police. It also prohibits selling to out-of-towners who aren't armed with authorization from their local police chief or sheriff.

Severe Sentences

"The sale of cheap guns is down to nothing," Chief Bosch says. "The punk who walks down the street, buys a gun and knocks off a gas station—that's all been eliminated."

In municipal court, Judge George M. Glasser says severe sentencing of violators may be another reason for the gun law's apparent effectiveness. Already, court records show, city judges have packed 37 people off to jail (the average is 90 days), mainly for possessing a gun without a license. In addition, judges have imposed 27 fines ranging from $25 to $1,000.

"The word is out that you can't just carry a gun around here without doing days in the workhouse," says chief Counsel Burkhart, praising newspapers, radio and television for publicizing the court crackdown.

(In contrast to Toledo, crime-ridden Washington can impose penalties no harsher than 10 days in jail or a $300 fine—the maximum allowed by Congress. So far there have been no prosecutions.)

In the mayor's office here, square-jawed ex-Marine William J. Ensign cites other measures that may have helped bring crime down. He points to improved street lighting; an expanded, improved police department; an active program to prevent juvenile crime; an ordinance making it a crime to harass or abuse school children or newsboys; more effective probation and parole procedures, and a 4,000-member citizens group that distributes cards pledging people to cooperate with the police whenever possible.

Inquiries From Other Cities

Mayor Ensign also feels sure that the gun law helps a lot. "You just know that the unavailability of guns has got to be a big factor," he observes. Officials in other cities think so, too. The drop in crime here is drawing inquiries about the Toledo ordinance from Wichita, Los Angeles, Dayton, Cleveland, Baltimore and Cincinnati.

As these inquiries suggest, the gun-control controversy may be shifting to the cities, while antigun agitation in Washington and in state capitals is losing steam. Last year, of course, Congress banned mail-order sales of all firearms across state lines except to licensed dealers and prohibited dealers from selling handguns over the counter to out-of-state customers. One hope was to encourage state and local governments to enact stricter controls.

One Federal official who has urged local authorities to act is FBI Director J. Edgar Hoover. He has said: "I see no great problem to the individual in requiring all guns to be registered, if the owner has nothing to hide and if he is a law-abiding citizen."

But some local policemen oppose municipal gun controls. Deputy Chief Lloyd Forbus of the Columbus, Ohio, police force, for example, asserts that the possible crime-curbing effects of local gun-control laws don't justify violating a cardinal principle of the National Rifle Association—that restrictions should be aimed only at those who misuse firearms. Mr. Forbus is an NRA member and serves as a sales manager for a gun wholesaler in his spare time.

Many hunters, marksmen and gun collectors remain convinced that ordinances such as Toledo's will eventually disarm the law-abiding citizenry. Insists Walter W. Schuhmacher, speaking for the League of Ohio Sportsmen: "This is the first step toward total disarmament."

But for the foreseeable future the civilian population will surely remain heavily armed. According to the National Commission on the Causes and Prevention of Violence, headed by Milton Eisenhower, probably 30 million guns were added to the civilian stockpile during the last decade, bringing the total to 90 million—35 million rifles, 31 million shotguns and 24 million handguns.

intended to maim or kill. In the year after enactment, the number of such attacks dipped 9% to 385. But the assaults with guns dropped much more steeply—from 152 to 83, or 45%.

—In the year before the ordinance, 36 people were murdered, 22 by handgun; in the following year, murders totaled 14, of which eight were by gun. (Because murders with other weapons dropped at roughly the same rate as murders with guns, it's possible that some factor other than the control law may be at work.)

—Robberies both armed and unarmed dropped from 1,188 in the year before gun control to 798 in the next year, a decline of 33%. But gun robberies dropped even more sharply —from 350 to 160, or 54%.

Rifle Group's View

Statistics can be tricky, of course. Woodson D. Scott, a New York attorney who is president of the National Rifle Association, an opponent of most gun control, says: "The statistics only prove that the statistics are down. In terms of cause and effect, it doesn't prove a thing."

The unexpected crime statistics have sent city counsel Burkhart scrambling to recheck them. "I've gone over every possible angle to see whether there might have been a mistake. I can't find any," he reports.

"I'm as much puzzled as anybody," Mr. Burkhart adds, noting that Toledo enacted its ordinance primarily to persuade the legislature that gun controls can be imposed with little inconvenience and minimum intrusion on citizens' rights. "It was really an effort to sell the General Assembly," says the city counsel. "I didn't think we'd be able to make an impact on crime in less than three or four years."

His caution in checking and interpreting the statistics arises partly from the gun law's relatively lenient licensing standards. Unlike New York's Sullivan Law, the Toledo plan doesn't require residents to show good cause for possessing a gun. Instead, the police must issue a numbered "handgun owner's identification card" costing $3 and good for three years to all applicants except fugitives, minors under 21, certified mental cases, narcotics addicts, habitual drunks or people who have been convicted twice in the past year of crimes involving the use or threat of force.

So far the police have issued 16,000 ID cards; roughly 100 applications have been rejected. It also seems likely that some people have been deterred from buying guns because, for various reasons, they did not want to apply to the police for a license.

Police Chief Anthony Bosch reports the law has had a harsh effect on gun dealers who formerly sold to almost any cash customer. One such dealer ran Toledo's biggest gun store in a seedy neighborhood on Jackson Street just five minutes from Interstate Route 75 linking To-

Vietnam

What businessmen did on protest day

To the surprise of their long-haired sons and the shock of some of their white-collar colleagues, thousands of businessmen across the nation participated in Wednesday's Vietnam moratorium protest. They included top executives and small entrepreneurs, Republicans and Democrats, and they acted both individually and in concert with fellow executives. They represented a minority, probably a small minority, of U. S. business sentiment, but their voices were loud and clear, and no one could accuse them of acting out of venal self-interest.

"Many in our ranks are in companies which are profiting from the war," says Henry E. Niles, chairman of Baltimore Life Insurance Co., "but there are more important things than profits—it's time to end this useless slaughter." Niles heads Business Executives Move for Vietnam Peace, a nationwide organization of some 2,500 company officials that helped mobilize business participation in the moratorium. "We found that the myth that business blindly supports the war is just that—a myth," says Niles.

'Walk for peace.' Helping puncture the myth were demonstrations and observances in a number of cities:

- In New York's financial district, 15,000 people from the business and financial communities assembled for a noontime "walk for peace" up Wall Street to historic Trinity Church. One observer described the event as "perhaps the most massive demonstration ever staged on the Street. Another big demonstration came later in the day in midtown Bryant Park.

From Trinity's two stone pulpits about 100 executives also took part in a day-long reading of the names of GIs killed in Vietnam. Among the readers: J. Sinclair Armstrong, executive vice-president of U. S. Trust Co. of New York and former chairman of the Securities & Exchange Commission; Michael Burke, president of the New York Yankees; Robert V. Roosa, partner in Brown Bros. Harriman and former Under Secretary of the Treasury; John R. Lehman of Lehman Bros.; Amyas Ames of Kidder, Peabody; John Winthrop of Wood, Struthers & Winthrop; John Whitehead, partner in Goldman, Sachs; and Roswell Gilpatric, partner in Cravath, Swaine & Moore and former Deputy Secretary of Defense.

Calling roll of dead GIs, Yankees President Michael Burke takes turn at pulpit of New York's Trinity Church.

- In Philadelphia, a group of local executives sponsored a seven-column advertisement in the morning Inquirer carrying the banner headline, "Students and Faculty We Are Behind You. Business Executives Support Today's Vietnam Moratorium." Among the signers were George E. Beggs, president of Leeds & Northrup Co; Peter A. Benoliel, president of Quaker Chemical Corp.; Kermit Fischer, president of Fischer & Porter Co; Charles E. Simpson, general manager of Philadelphia Gas Works, and Bernard S. Weiss, vice-president of Gimbel Bros. In addition, the business group paid for 55 spot ads on local radio stations supporting the moratorium.
- In downtown Chicago, several hundred businessmen led by Gordon B. Sherman, president of Midas-International Corp., participated in an afternoon peace vigil at Civic Center Plaza. Earlier Sherman and others had sponsored full-page ads in Chicago papers urging the business community to attend. Said the balding 42-year-old industrialist: "We're here to add the sober, unimpeachable voice of business to the clamor of the kids."
- In Los Angeles, scores of executives on the steps of Beverly Hills City Hall took turns reading a list of the Vietnam war dead. Al Appleby, president of National Girl Services, who organized the demonstration, announced that many of the businessmen participants would also speak out in a series of radio spots to be broadcast in the next few weeks; they will take personal stands against the war and identify themselves with their companies.

Their own thing. Besides their group activities, businessmen acted individually in a variety of ways. Many, like Clarence E. Heller, vice-president of Blair & Co.'s Schwabacher Div. in San Francisco, and R. A. Childers, president of Houston's Childers Mfg. Co., simply attended forums at nearby universities with friends and family. Others, like Kenneth Monfort, president of Monfort of Colorado, Inc., a Greeley (Colo.) meat-packing company, and Martin Stone, chairman of Monogram Industries, Inc., in Los Angeles, were featured speakers at local rallies against the war.

Not a few businessmen donated time, money, or facilities to the cause of the moratorium. In generally conservative Dallas, for example, advertising executive Norman Riffe organized a peace rally and music festival to appeal to "ordinary middle-of-the-road citizens" who might be intimidated by hippie or student rallies. Attendance at the day-long event was estimated at several thousand. And in McKeesport, Pa., Maurice Taksel, part owner of Feig's Bakery, one of the small steel city's largest baking concerns, provided facilities at the bakery for the distribution of anti-war literature.

Decisions. For many top executives, the moratorium provoked few pangs of personal conscience, but did spark some anxiety over last-minute decision-making. Should employees be given time off to attend demonstrations? Should they lose pay for time taken for such purposes? Should a company allow its premises to be used for rallies or ceremonies? The answers varied with the size of the company involved, the strength of anti-war sentiment among employees, and the political leanings of top management.

For a number of companies, the problem of laying down policy was more theoretical than real. Said an official of Cleveland Trust Co. on Tuesday: "We haven't established a formal policy, but we haven't heard much about it. We've had no indication that employees want to take time off."

Other executives were inclined to view

the day's proceedings critically: Said K. B. Chandler, president of Koehring Co.'s Koehring Div. in Milwaukee: "We're as concerned as anyone else in ending the war, but we feel nothing can be accomplished by this thing. We would take a dim view of any employee leaving to take part in the demonstrations." Dillard Munford, chairman of Atlanta's Jackson-Atlantic Co., was more emphatic: "We hope like hell we don't have any of those kind working for us. If we do, and they demonstrate, they won't work here on Thursday."

Neutrality. Most companies, though—IBM, General Motors, McGraw-Hill, and scores of others—neither condoned nor condemned the moratorium, leaving participation to individual conscience. Employees were allowed to take time off without pay or to charge their absence against vacation time or accrued personal time. And no attempt was made to ban the wearing of black armbands or buttons. As an official of Cleveland's TRW, Inc., put it: "Employees are free to wear armbands if it doesn't interfere with the operation of a machine or anything."

Not every company observed a policy of strict neutrality. A number decided that the seriousness of the issue raised by the moratorium demanded a certain generosity on the part of management. Itek Corp. of Lexington, Mass., for example, allowed those who wished to do so to leave work an hour early to attend local rallies. At Midas-International, employees were encouraged to take the afternoon off to protest. And at American Heritage Publishing Co., where many staffers had signed an anti-war letter to President Nixon, employees were informed they could leave to take part in demonstrations without loss of pay. "Our offices will be open," said a memorandum from the executive committee. "Let your conscience be your guide."

Other companies, while taking no stand on the moratorium, did permit the use of their premises for related programs. A panel discussion on the war held at Chicago's First National Bank during the noon hour featured speakers both for and against Administration policy. Similarly, Time, Inc., in New York granted employees the use of an auditorium in the Time & Life Building to hold extended discussions on Vietnam.

Busy day. In the flurry of activity over the moratorium, perhaps the busiest businessman of them all was long-time peace advocate Jerome Grossman, president of Massachusetts Envelope Co., who is credited with coming up with the idea for a national anti-war demonstration last April. Grossman had little time for business or meditation on the day he had helped plan. He delivered speeches at two local high schools and a college, distributed leaflets at several Boston shopping centers, and made a TV appearance on the Dave Garroway show.

Current Issues - 1972

THE NIXON ECONOMIC PROGRAM

- No Fairness
- No Equity
- No Justice

Statement Adopted Unanimously by the AFL-CIO Executive Council Washington, D. C., March 22, 1972

SEVEN MONTHS of the Administration's so-called new economic policy—including four months of Phase 2 controls—have demonstrated that it is nothing more than a device to make the average worker and consumer both the victim and the goat, while the banks and big business pile up increasing profits.

In the guise of an anti-inflation policy, the American people are being gouged at the supermarket and squeezed in the paycheck. The heaviest burden of this lopsided program is placed on the backs of those at the bottom of the economic ladder, who are least able to protect themselves. Meanwhile, millions of American workers remain unemployed, their wages frozen at zero, with no real prospect of relief.

The continuing, rapid rise of prices—such as February's 8.4 percent yearly rate of increase in wholesale prices—reveals the emptiness of the price control program.

Retail food prices have gone through the roof and are continuing up—eroding the buying power of American families.

WHILE THE ADMINISTRATION permits this rising tide of price increases, its Pay Board persists in holding down workers' wages. Yet profits are free to rise, without even the pretense of controls. Instead of a tax on excess profits, in a period of wage controls, the Administration has provided business with additional billions of dollars of tax bonanzas, reducing federal revenues and further inflating the deficit at the expense of the nation's most pressing needs.

Even the President's Council of Economic Advisers reports that 21 percent of the Consumer Price Index is not subject to any controls at all. Further exceptions are announced almost weekly and the Price Commission approves price boosts on a wholesale basis.

Interest rates were never controlled. Neither were fresh foods, which are part of the essential expenses of every family.

There are no controls on life insurance premiums, mortgage interest payments and the prices of land and homes. Neither are there controls on used cars, used furniture and other used goods which are bought primarily by the poor. Controls have been lifted from three-quarters of all retail stores and nearly half of all rental units.

Moreover, there is no effective machinery to enforce whatever price and rent controls remain on the books.

IN THE FACE of this record on the price front, the Administration has flouted the intent of the Congress to exempt the working poor and low-wage workers from wage controls. The Administration's Cost of Living Council exempted only wages below $1.90 an

hour—less than the amount needed to meet the government-defined poverty line for an urban family of four.

Wage increases for workers in even the smallest establishments require approval if they exceed the Pay Board's 5.5 percent guideline, although their employers are not required to file any notification about price or rent increases and may be completely exempt from such controls.

So the worker's wages are regulated and controlled, even when his employer is exempt from controls, while prices continue to "bulge."

As a result, profits have begun to skyrocket, despite the disappointing levels of sales and production, and continued heavy unemployment. In the second half of 1971, the after-tax profits of all corporations were up 19 percent from the same period of 1970—nearly three times faster than the 6.6 percent increase of total wage and salary payments to all of the nation's employes.

THE LION'S SHARE of the gain in profits is going to the big corporations and conglomerate giants. Reports indicate that the nation's 100 largest corporations scored a sensational 76 percent rise in profits last year.

The Bureau of Labor Statistics reported on Mar. 3 that the average hourly earnings of some 47 million production and non-supervisory workers in the private economy remained unchanged between January and February, at $3.54, and were merely 3 cents above December. While prices are going up and profits are soaring, workers' wages have been held down.

The record of flagrant favoritism speaks for itself. The Administration's so-called new economic policy is heavily loaded against the worker and consumer, in favor of the profits of big business and the banks, and is dominated by the view that economic progress begins and ends in the stock market and the corporate financial report.

Slick rhetoric and double-talk cannot hide these self-evident facts from the American people. There is no fairness, no equity, no justice in the Administration's economic program.

The Pay Board

THE TRADE UNION movement's direct relationship with the Administration's control program has been with the Pay Board.

It is our duty to report, after four months' experience with this Board, that it is merely a direct instrument of the Administration's economic policies, motivated by the Administration's political considerations and the interests of big business.

We joined the Pay Board in good faith, desiring—despite our misgivings—to give it a fair chance, and with the hope that we could bring the voice of workers into the decision-making process of an autonomous and genuinely tripartite wage stabilization effort.

A few weeks after the Pay Board was created, we reported to the Ninth Constitutional Convention of the AFL-CIO on Nov. 18: "The trade union movement joined the Pay Board on the basis of a commitment from the President that it would be tripartite and independent and that the public members would be citizens of high repute, knowledgeability and neutrality. That commitment has not been kept."

The so-called public members are neither neutral nor independent. They are tools of the Administration, and imbued with its viewpoint that all of the nation's economic ills are caused by high wages.

As a result, the Pay Board has been completely dominated and run, from the very start, by a coalition of the business and so-called public members. All major board decisions have been concocted by this coalition, with its mechanical majority of the votes. The trade union movement's representatives on the board have been treated as outsiders—merely as a facade to maintain the pretense of a tripartite body.

THE BOARD'S BUSINESS and so-called public member majority has continuously revealed a contempt for free collective bargaining and freely negotiated labor-management agreements. They have shown an utter lack of understanding or sympathy for workers and the realities of industrial life.

In a supposedly free country, in time of peace, with no national emergency defined or like sacrifices required of the affluent elements of society, it is not tolerable to subject free American workers to control at such hands.

The system of wage controls, under the Administration and business-dominated Pay Board, has extended a web of confusion and chaos in labor-management relations across the country. It has been a device to undermine and wreck free collective bargaining.

IT IS BUILDING UP inequities, distortions and pressures that can only be suppressed by more and more controls and acts of repression.

Complex and sometimes contradictory regulations and reporting requirements have added confusion. Smaller unions and newly organized groups of workers, in particular, have been vulnerable to the stalling, the mix-ups and confusions.

Responsible collective bargaining agreements have

been rejected and the Pay Board majority has been imposing the terms of settlements on the parties.

Equities have been ignored and workers have been denied basic rights.

Whatever small degree of justice has been achieved in the stabilization control program—such as the granting of deferred increases that were due, during the 90-day freeze, under previously negotiated agreements —has been the work of congressional legislation, imposed on the Pay Board.

ALTHOUGH ADMINISTRATION spokesmen engage in public lectures on the urgent importance of increasing productivity, and provision for the recognition and reward of greater productivity is expressly incorporated in the enabling law, the Pay Board has given this issue short shrift so as to leave the major benefits of productivity gains in the pockets of employers. The rejection of the West Coast longshore agreement, for example, will mean an average loss of about $1,150 for each of the 15,000 workers on the docks in the 18 months of the contract and a $17 million windfall profit for the employers.

The Pay Board is an integral part of the Administration's effort to place the burden of its failures on the backs of workers, while providing favors and financial gains to those who already have too much.

On Nov. 18, we reported to the AFL-CIO Convention: "There is little hope that economic justice can be achieved by this board, the majority of whom are guided by the dictates of the Administration or the interests of big business."

We have reviewed the events of the past four months. We have carefully examined the record.

IT IS OUR DUTY to report, now, to the membership of the trade union movement and the American public that we have no hope for fairness, equity or justice in the Pay Board.

The board is not tripartite. It is not independent and autonomous.

The Pay Board represents government control. It represents political and business interests.

If the wage stabilization program is to be government-controlled, let it be so, openly and clearly. Let the people who are exercising the power take the full responsibility for their decisions—without the facade of labor representation and the pretense of tripartitism.

The AFL-CIO members, therefore, are immediately resigning from the Pay Board.

WE WILL NOT BE a part of the window-dressing for this system of unfair and inequitable government control of wages, for the benefit of business profits.

It is now very clear that the Administration's "new" economic policy is nothing more nor less than a means of shifting to the average working man and his family the burden and the blame for the dismal failure of its former economic policy. It is an effort, at the expense of personal and institutional freedom in this country, to avoid the measures, resisted by big business and other selfish interests—such as constructive tax reform —most needed to correct the consequences of that failure. Having as we do a deep disbelief in and distrust of the aims and purposes of this Administration's economic and social policies, we intend at the least to free representatives of the AFL-CIO from any grounds for the inference of complicity in the formulation or execution of those policies.

The bullets at the battlefront do not discriminate—but the landlords at home do. The pack of the Negro soldier is as heavy as the white soldier's—but the burden his family at home bears is far heavier.

LYNDON B. JOHNSON
—special civil rights message to Congress, February 15, 1967

PUBLIC ORDER BASED ON EQUAL JUSTICE

BOMB-MURDERERS CAN BE PUNISHED IF 1967 CIVIL RIGHTS BILL IS ENACTED

Wharlest Jackson who lived in Natchez, Miss., until February 27, 1967, cannot write this message to you.

He is dead. He was murdered by a bomb which exploded in the engine of his pickup truck just after he had left his job at the Armstrong Tire and Rubber Company in Natchez.

Wharlest Jackson left a widow and five children, four girls and a boy. One day they had a husband and father and that same night they had a corpse.

Mr. Jackson had just been upgraded at the plant to the job of mixer, one not held before by Negro workers.

Scarcely 18 months ago, on August 27, 1965, a bomb attached to the starter of the car of George Metcalfe, an Armstrong employee, exploded as Metcalfe was leaving his work. He lived, but was crippled for life. On March 5, he was one of the pallbearers for his friend, Wharlest Jackson.

George Metcalfe was president of the Natchez NAACP and Wharlest Jackson was its treasurer.

If Wharlest Jackson could write today to the American people from coast to coast he would urge that all of them write *their* Senators and Congressmen asking them to pass the 1967 civil rights bills. These bills have a section which makes the Wharlest Jackson bomb-murder a Federal crime, punishable in Federal courts.

At present, the Federal government is limited to using a conspiracy statute which **PROVIDES ONLY A FINE AND A SHORT IMPRISONMENT,** even for murder.

The 1967 bills were sent to the Congress in the special message by President Johnson on February 15, reproduced on the pages of this booklet.

Do not be pushed to one side on this issue.

Wharlest Jackson is dead. George Metcalfe is crippled. Vernon Dahmer is dead. Andrew Goodman is dead. Viola Liuzzo is dead. James Chaney is dead. Michael Schwerner is dead. Medgar Evers is dead. The list is a long one.

Speak for the dead who were killed in hatred and cruelty by men who were sure the law would never dare touch them.

Get justice for the dead. Get a Federal law that will help stop these brutalities.

ROY WILKINS
NAACP Executive Director

BULLETS do not discriminate *LANDLORDS* DO!

By Lyndon B. Johnson

ALMOST two centuries ago, the American people declared these truths to be self-evident:

"That all men are created equal, that they are endowed by their Creator with certain inalienable rights, that among these are life, liberty and the pursuit of happiness."

Seventy-five years later, a savage war tested the foundations of their democratic faith. The issue of the struggle was, as Lincoln said, whether "we shall nobly save, or meanly lose, the last, best hope on earth."

Democracy triumphed in the field in 1865. But for the Negro American, emancipation from slavery was but the first engagement in a long campaign. He had still to endure the assaults of discrimination that denied him a decent home, refused his children a good education, closed the doors of economic progress against him, turned him away at the voting booth, the jury box, at places of public accommodation, seated him apart on buses and trains, and sometimes even threatened him with violence if he did not assent to these humiliations.

In 1948, President Truman ordered the defense establishment to accord equal treatment to servicemen of every race. That same year, the Supreme Court declared that state courts could not enforce racial covenants in the sale of houses. The court later struck down racial discrimination in public transportation.

In 1954, segregated education was found to be inherently unequal and in violation of the 14th Amendment.

In 1957, the first Civil Rights Act in 82 years passed the Congress.

Three later acts were adopted within the next decade—in 1960, 1964 and 1965. Congress prohibited interference with the right to vote—to use any hotel, restaurant or thea-

*President Johnson's message to the Congress, February 15, 1967.

ter—to secure a job on the basis of merit. It barred the use of Federal funds to any agency that practiced racial discrimination.

Within these 20 years, the institutions of democratic government have begun to make the ancient, self-evident truths a reality for all Americans.

Though much of our task still lies before us, it is important to measure the progress we have made in the past few years.

COMBATING DISCRIMINATION

Voting

SINCE the passage of the Voting Rights Act of 1965, the number of Negroes registered in the five states where voter discrimination was most severe has increased by 64 per cent—from 715,099 to 1,174,569. The vast majority of the new voters—about 334,000—were registered by local officials in voluntary compliance with the act.

The remainder—some 125,000—were registered by Federal examiners in 47 counties of the five states. Federal observers were present in many counties during the 1966 primary and general elections to insure that the newly registered voters were permitted to vote without interference.

In 1960, a Negro citizen complained that for 10 years he had tried without success to register to vote. Not a single Negro had been registered in his county for 60 years. In 1966, he ran for a seat on the local school board—and won.

Today, 20 Negroes serve in Southern Legislatures. Several important local offices, such as school boards and county commissions, now have Negro membership.

The electorate in these states has begun to change. The right to vote—the fundamental democratic right—is now exercised by men and women whose color served in years past to bar them from the polls. After centuries of silence, their voice is being heard. It will never again be stilled.

Schools

In the 1963-1964 school year, 10 years after the landmark Brown decision, 1 per cent of the Negro students in the 11 Southern states were in schools also attended by white students.

Then came the 1964 Civil Rights Act and its prohibition against the use of Federal funds to support racial bias.

In September, 1966, 12.5 per cent of the Negro students in those same states were enrolled in desegregated schools. We expect this figure to increase significantly next fall. We will proceed with the task of securing the rights of all our children.

Hospitals

This year, Negroes are being admitted to hospitals which barred them in the past. By January, 7,130 hospitals—more than 95 per cent of the hospitals in the nation—had agreed to provide services without discrimination. More than 1,500 of these hospitals have had to change past policies to make that commitment.

Getting rid of discriminatory practices has benefited hospital systems, as well as the people they serve.

Last year, for example, half the beds in an all-white hospital were unoccupied. Yet Negroes in the community were sent to a completely segregated and overcrowded hospital. The half-empty hospital changed its policies to admit Negroes, and it now operates at full capacity. The formerly Negro hospital will be converted into a nursing home serving both races. The effect of the change was to provide better medical care for the entire community.

Public Accommodations

When the 1964 Civil Rights Act was passed, prohibiting racial discrimination in places of public accommodation, fears were expressed that this sharp change in established customs would bring about serious economic loss and perhaps even violence.

Yet from the start there has been widespread voluntary compliance with the law. Thousands of restaurants, motels and hotels have been opened to Americans of all races and colors. What was thought to be laden with danger proved generally acceptable to both races.

Because all businesses of a similar type are covered, each businessman is free, for the first time, to operate on a non-discriminatory basis without fear of suffering a competitive disadvantage.

Now Negro families traveling through most parts of their country do not need to suffer the inconvenience of searching for a place to rest or eat where they will be accepted or the humiliating indignity of being turned away.

SOCIAL JUSTICE PROGRAMS

THE struggle against today's discrimination is only part of the nation's commitment to equal justice for all Americans. The bigotry of the past has its effects in broken families, men without skills, children without learning, poor housing and neighborhoods dominated by the fear of crime.

Because these effects are encrusted by generations of inferior opportunities and shattered hopes, they will not yield to laws against discrimination alone. Indeed there is no swift medicine, no matter how potent or massively applied, that can heal them at once. But we know some of the things we must do if the healing process is to begin—and we are doing them.

Education

Head Start has given deprived children a chance to learn in later years—instead of being merely exposed to school. Through this and other pre-school programs, two million children have been offered better education and health care.

More than seven million children in 70 per cent of all school districts in the United States have participated in programs under Title I of the 1965 Education Act. These programs have a single aim: to improve the education of disadvantaged children. The better libraries, larger professional staffs, advanced instructional equipment and other services they provide are investments in the future of children who need them most.

In my message on America's chil-

dren and youth, I asked the Congress to provide an additional $135-million to strengthen Head Start. With these funds, we will launch a Head Start follow-through program in the early grades of elementary school to maintain the momentum the child has gained and we will extend the Head Start program downward to cover more three-year-olds.

Extraordinary help at the start of life is necessary for all disadvantaged children. It is particularly necessary for the Negro child reared in poverty and encumbered by generations of deprivation.

Jobs and Training

Thousands of job opportunities for the young have been created by the Neighborhood Youth Corps and the Job Corps. The first, active in both urban and rural areas, has enabled many young people to earn enough to remain in school, and provided employment and remedial education for dropouts.

The Job Corps—also meant to help those between 16 and 21—has offered other thousands both a change of environment and the opportunity to acquire education and job training.

The Manpower Development and Training Act gives men without jobs or skills the chance to acquire both, by combining Government planning and resources with private industry. The work experience program offers welfare recipients a means of obtaining the experience they need for gainful employment.

Today's strong economy, which last year put almost three million more Americans on the payrolls, is also of tremendous benefit to needy persons in search of dependable employment. But for the long term, and as demand for better qualified workers grows, training and remedial education will be of even greater importance to the disadvantaged. This is particularly true for those who leave the farm and move to urban areas in search of employment, without the skills an urban society requires.

During the last three years, our training programs have provided the means of self-sufficiency to almost a million men and women. The value of these programs to the Negro American is especially great.

The unemployment rate for Negroes is more than double that for whites. About 650,000 Americans, more than 20 per cent of all unemployed, are nonwhite. About 213,000 of these are between 14 and 19 years of age. Job training is essential to enable them to get off the welfare rolls and to go on the tax rolls.

Our economy is also strengthened by these programs. If Negroes today had the same skills as other Americans, and if they were free from discrimnation in employment, our gross national product could become $30-billion higher.

I will shortly submit recommendations to strengthen and expand these training programs. I am asking the Congress for an additional $135-million in appropriations for the Office of Economic Opportunity for a special program to open the doors of opportunity and meaningful employment to our most disadvantaged citizens.

I will call for the active assistance

of private industry and organized labor to provide skills and jobs to those now confined to the welfare rolls and the slums.

NEED FOR PERSEVERANCE

THERE are those who believe this series of accomplishments is long enough. There are those who grow weary of supporting great social programs, impatient with the failures that attend them and cynical about those they are intended to help. There are those who think "equal justice" is a rhetorical phrase, intended only as an admonition to judges, not as a guiding principle for national policy.

To them I can only say: Consider the consequences if the nation—and I as the President—were to take what appears to be the easy way out, abandon the long, hard struggle for social and economic justice and say that enough has been done.

- There would be little hope of strengthening the economy of the country through the improved earning power and productive capacity of Negro Americans.
- There would be little hope of avoiding massive welfare expenditures for people denied the training and jobs they need to become self-supporting.
- There would be little hope of ending the chain of personal tragedies that began with ancient bigotry and continues to this hour.
- There would—above all—be little hope of achieving the self-respect that comes to a nation from doing what is right.

Our task is far from over. The statistics demonstrate the magnitude of the effort required.

- The life expectancy of the Negro is five years shorter than that of his white contemporary, and the infant mortality rate for Negroes is 40 per cent higher.
- The adult white has had at least three more years of education —and has been educated in better schools—than the average adult Negro.

High Unemployment Rate

- The unemployment rate for non-whites aged 21—even in this time of near full employment—is double that of whites.
- Negroes are characteristically more densely housed in units only 56 per cent of which meet health and safety standards.
- The income of the average Negro family is about 40 per cent lower than that of the average white family.

The programs we have adopted in the past few years are only a beginning. We have made a good start.

But we must remember that it is only a start, we must realize that civil rights are also civil opportunities. Unless these rights are recognized as opportunities by Negro and white alike, they can achieve nothing. We must realize that training and education programs provide skills and opportunities. But only where there is both the will to seek the job and the willingness to hire the job applicant, can these programs achieve their ultimate objectives.

The next steps are harder, but they are even more important. We shall need years of trial and error—

years in which children can be strengthened to grow into responsible young adults, years of better training, better jobs, better health, and better housing—before the results of what we have done so far can be seen.

Perseverance, the willingness to abandon what does not work, and the courage to keep searching for better solutions—these are the virtues the times require.

CIVIL RIGHTS LEGISLATION

LAST year I proopsed the enactment of important civil rights legislation. I proposed that legislation because it was right and just.

The civil rights legislation of 1966 was passed by the House of Representatives and brought to the floor of the Senate. Most of its features commanded a strong majority in both houses. None of its features was defeated on the merits.

Yet it did not become law. It could not be brought to a final vote in the Senate.

Some observers felt that the riots which occurred in several cities last summer prevented the passage of the bill.

Public concern over the riots was great, as it should have been. Lawlessness cannot be tolerated in a nation whose very existence depends upon respect for law. It cannot be permitted because it injures every American and tears at the very fabric of our democracy.

We want public order in America, and we shall have it. But a decent public order cannot be achieved solely at the end of a stick, nor by confining one race to self-perpetuating poverty.

Let us create the conditions for a public order based upon equal justice.

The act I am proposing this year is substantially the same as last year's bill. Some revisions have been incorporated to take account of useful suggestions and perfecting amendments made by the 89th Congress. I believe these revisions offer a basis for common action.

I recommend the adoption of a national policy against discrimination in housing on account of race, color, religion or national origin. I propose the adoption of progressive steps to carry out this policy.

I recommend the clarification and strengthening of existing Federal criminal laws against interference with Federal rights.

I recommend requirements for the selection of juries in Federal courts to guard against discrimination and insure that juries are properly representative of the community.

I recommend legislation to eliminate all forms of discrimination in the selection of state court juries.

I recommend that the Civil Rights Act of 1964 be amended to authorize the Equal Employment Opportunity Commission to issue judicially enforceable cease-and-desist orders.

I recommend the extension, for an additional five years, of the United States Commission on Civil Rights.

I recommend a 90 per cent increase in appropriations for the Community Relations Service.

These measures are not new. I have recommended and supported them in the past. I urge the Congress to act favorably upon them

because justice and human dignity demand these protections for each American citizen.

EQUAL JUSTICE IN HOUSING

FOR most Americans, the availability of housing depends upon one factor—their ability to pay.

For too many, however, there are other crucial factors—the color of their skin, their religion or their national origin.

When a Negro seeks a decent home for himself and his family, he frequently finds that the door is closed. It remains closed—though the Negro may be a serviceman who has fought for freedom.

The result of countless individual acts of discrimination is the spawning of urban ghettos, where housing is inferior, overcrowded and too often overpriced.

Statistics tell a part of the story. Throughout the nation, almost twice as many nonwhites as whites occupy deteriorating or dilapidated housing. In Watts, 32.5 per cent of all housing is overcrowded, compared with 11.5 per cent for the nation as a whole.

In Harlem, more than 267,000 people live in an area consisting of three and one-half square miles. This is a density of 105 people per acre. Ninety per cent of the buildings in Harlem are more than 30 years old, and almost half were built before the end of the 19th century.

The environment of most urban ghettos is the same: Inferior public facilities and services—streets, lighting, parks; sanitation and police protection; inferior schools; and isolation from job opportunities. In every sphere of urban life the ghetto-dweller is short-changed.

A child growing up in such an environment must overcome tremendous man-made obstacles to become a useful citizen. The misery we tolerate today multiplies the misery of tomorrow.

Many of our exisiting and proposed programs—though not directed simply at relieving the problems of any particular minority group—will relieve conditions found in their most acute form in the urban ghetto. These programs are necessary and they must be fully supported.

But money and assistance are not enough. Since the ratification of the 14th Amendment to the Constitution, this nation has been committed to accord every citizen the equal protection of its laws. We must strengthen that commitment as it relates to discrimination in housing —a problem that is national in scope.

The legislation I recommend would ultimately apply to all housing in the United States. It would go into effect by progressive stages.

The proposed legislation would direct the Secretary of Housing and Urban Development to carry out education and conciliation measures to seek an end to discrimination in housing. He would call conferences of leaders in the housing industry, consult with state and local officials and work with private organizations.

The prohibition against discrimination in the sale or rental of housing would become effective progressively over a two-year period:

• During 1968, to dwellings sold or rented by someone other than their occupant, and to dwellings for five or more families. Essentially, this stage would cover large apartment houses and real estate developments.

• In 1969, the act would apply to all housing.

This act would be aimed at commercial transactions, not at the privacy of the home. It would outlaw discrimination practices in financing housing and in providing real estate brokers' services. It would prohibit "block-busting," by which unscrupulous dealers seek to frighten homeowners into selling quickly, out of fear that the value of their homes will decline.

In every instance, the legislation would require the Secretary of Housing and Urban Development to try to achieve a voluntary solution. Only if such a settlement could not be reached would the Secretary be authorized to hold an administrative hearing. If, after an administrative hearing, a violation of the law were found, the Secretary would be authorized to issue a judicially enforceable cease-and-desist order.

The Secretary would work with state and municipal fair housing agencies that already exist. In appropriate cases he would be authorized to rely on their enforcement of the state and city laws.

The Attorney General would be empowered to support these enforcement efforts, when he had reason to believe that a general pattern or practice of discrimination exists.

Last year the legislation I proposed to ban discrimination in housing stirred great controversy. Although a majority of both houses in the Congress favored that legislation, it was not enacted. Some of the problems raised by its adversaries were real; most involved myths and misinformation. The summer riots in our cities did as much damage to the chances of passing that legislation as the unfounded fears of many Americans and the opposition of special interest groups.

There should be no need for laws to require men to deal fairly and decently with their fellow man. There should be no need to enact a law prohibiting discrimination in housing—just as there should have been no need to send registrars to enforce voting rights, to issue guidelines to require desegregation of our schools, to bring suits in Federal courts to insure equal access to public accommodations and to outlaw discrimination in employment.

But the Civil Rights Acts of 1957, 1960 and 1964 and the Voting Rights Act of 1965 were necessary and they have moved this country toward our goal of providing a decent life for each of our citizens.

I am proposing fair housing legislation again this year because it is decent and right. Injustice must be opposed, however difficult or unpopular the issue.

I believe that fair housing legisla-

tion must and will be enacted by the Congress of the United States. I was proud to be a member of the Congresses that enacted the Civil Rights Acts of 1957 and 1960 and as President to sign into the law the 1964 and 1965 acts. I believe the generations to come would look upon the enactment of this legislation by the 90th Congress as one of its proudest achievements.

I cannot urge too strongly that the Congress act promptly on this legislation.

Today the subject of fair housing is engulfed in a cloud of misinformation and unarticulated fear. Some believe the value of their homes must decline if their neighborhoods are integrated. They fear the conversion of their communities into unsightly slums, if a family of a different color moves into a house across the street. Neither of these events need occur. In an atmosphere of reason and justice, they would not occur. In the scores of cities and states that have such laws these events have not occurred.

The task of informing the minds and enlightening the consciences of those who are subject to these fears should begin at once. Churches can help perform this task with a unique competence—and they should. So should civic organizations, public officials, human relations commissions, labor unions and private industries. It must be done. The sooner it is done, the nearer we will come to that just America it is our purpose to achieve.

INTERFERENCE WITH RIGHTS

ANOTHER basic test of equal justice is whether all men are free to exercise rights established by the Congress and the Constitution. A right has little meaning unless it can be freely exercised. This applies in particular to Negro Americans who seek to vote, attend school and utilize public accommodations on an equal basis.

Negro children have been abused for attending previously segregated schools, shots have been fired into the homes of their parents, employers who practiced nondiscrimination have been harassed. Most shocking of all are the crimes which result in loss of life. Some of the were whites devoted to the cause of victims have been Negroes, others justice.

State and local officials are primarily responsible for preventing and punishing acts of violence. In many cases, however, these officials have not been able to detect or prosecute the perpetrators of the crimes. In some, unfortunately, they have not been willing to meet their obligations. For these reasons and because violence has too often been used to deny Federal rights, there is need for Federal legislation.

Present Federal statutes are inadequate in several respects. Maximum penalties are too low for crimes which cause death or serious injury. Only in some instances do the statutes reach misconduct by private persons not acting in concert with public officials. Existing laws do not spell out clearly the Federal rights which they protect.

To remedy these deficiencies, I

recommend legislation to:

- Specify the activities which are protected, including voting, purchasing a home, holding a job, attending a school, obtaining service in a restaurant or other place of public accommodation.
- Prohibit acts or threats of violence, by private individuals acting alone or public officials, directed against Negroes or members of other minority groups because they are or have been participating in those activities.
- Authorize victims of violence to bring civil actions for damages or injunctive relief.

The penalties prescribed are graduated, depending on the gravity of the offense. When physical injury results, the maximum penalty is imprisonment for any term of years or for life.

FEDERAL AND STATE JURIES

A FAIR jury is fundamental to our historic traditions of justice.

Fairness is most likely to result when the jury is selected from a broad cross-section of the community. The exclusion of particular groups or classes from jury duty not only denies defendants their right to an impartial jury. It also denies members of the excluded group the opportunity to fulfill an important obligation of citizenship and to participate in the processes of their government.

On many occasions, I have emphasized the importance of respect for the law. Yet, creating respect for legal institutions becomes virtually impossible when parts of our judicial system operate unlawfully or give the appearance of unfairness.

Current methods of Federal court jury selection have sometimes resulted in the exclusion of Negroes and other minority groups. Often the cause lay in the method of selection.

I recommend legislation to:

- Eliminate discrimination in the selection of juries in Federal courts.
- Insure that juries in Federal courts are uniformly drawn from a broad cross-section of the community.

To reduce to a minimum the possibility of arbitrary exclusion of certain groups, the act will spell out in detail the selection procedures to be followed in all Federal District Courts. Names of prospective jurors would be obtained by random selection from voter lists—a broadly representative source in almost all parts of the country, now that the Voting Rights Act of 1965 is being implemented. Under the bill only objective standards, including basic literacy requirements found in existing law, could be used to determine the qualifications of a prospective juror.

Legislation to deal with selection of state court juries is also needed. There has been persistent, intentional discrimination in juror selection in some localities. A recent case involved jury discrimination in a county whose population in 1960 was more than 70 per cent Negro. Of the persons listed on the jury rolls between 1953 and 1965, less than 2 per cent were Negro. No Negro had ever served as a member of a jury in that county.

Numerous criminal convictions obtained in state courts have been

set aside on the ground that Negroes were excluded from the juries. Such court decisions may assure justice in a particular case. They cannot reform the jury selection systems.

The 14th Amendment establishes equality before the law and charges the Congress with enforcing that requirement. Such flagrant, persistent abuses as are revealed in many recent jury selection cases cannot be tolerated by a society which prides itself on the rule of law.

I recommend legislation to:

- Prohibit discrimination on account of race, color, religion, national origin, sex or economic status in the selection of state or local juries.
- Authorize the Attorney General to sue state or local jury officials who exclude Negroes or members of other minority groups from juries.
- Prescribe new remedies to make it easier to prove jury discrimination.
- Authorize the courts to issue a variety of orders specially tailored to eliminate the most common methods by which jury discrimination is practiced.

JUSTICE IN EMPLOYMENT

THE Civil Rights Act of 1964 prohibited discrimination in hiring, promotion and working conditions, as well as discrimination in the membership practices of labor organizations. The Equal Employment Opportunity Commission was created to carry out the Congressional mandate.

The commission was directed to eliminate discriminatory employment practices by informal methods of conciliation and persuasion. By the end of this fiscal year, the commission will have completed over 2,000 investigations and more than 500 conciliation efforts. This is hard work, but when it succeeds, case by case it opens up new opportunities to:

- The minority group employes of an aircraft company, who no longer are confined to dead-end jobs but now have training opportunities in 40 job classifications.
- The employes of a large ship construction firm which has improved the job rights of over 5,000 Negroes.

Unlike most other Federal regulatory agencies, the Equal Employment Opportunity Commission was not given enforcement powers. If efforts to conciliate or persuade are unsuccessful, the commission itself is powerless. For the individual discriminated against, there remains only a time-consuming and expensive lawsuit.

In considering the proper role of the Equal Employment Opportunity Commission, it is important to bear in mind that nonwhite unemployment remains disproportionately high:

- In 1966, the unemployment rate was 3.3 per cent for white persons. It was 7.3 per cent for nonwhites.
- Nonwhite unemployment in 1965 was twice the rate for whites. In 1966, the ratio rose to 2.2 to 1.
- Among youth not attending school, the unemployment rate in 1966 was 8.5 per cent for whites and 20.3 per cent for nonwhites.

No single factor explains the dif-

ferences in the unemployment rates of nonwhites and whites. But part of the disparity is clearly attributable to discrimination. For that reason, effective remedies against discrimination are essential.

I recommend legislation to give the Equal Employment Opportunity Commission authority to issue orders, after a fair hearing, to require the termination of discriminatory employment practices.

The cease-and-desist orders of the commission would be enforceable in the Federal Courts of Appeal and subject to judicial review there. These powers are similar to those of other Federal regulatory agencies.

Enforcement power would harmonize the procedures of the commission with the prevailing practice among states and cities that have had fair employment practices agencies for many years. It would reduce the burden on individual complainants and on the Federal courts. It would enhance the orderly implementation of this important national policy.

The Commission on Civil Rights

The United States Commission on Civil Rights has, since its creation in 1957, proved to be an exceptionally valuable agency. This bipartisan fact-finding agency has contributed substantially to our determined effort to assure the civil rights of all Americans. Its investigations and studies have contributed to important changes in the laws and policies of the Federal Government. Publications of the commission—in the fields of voting, housing, employment, school segregation and equality of opportunity in Government programs—have been helpful to other Government agencies and to private groups interested in equality of opportunity.

The commission has also served as a clearing house for information on civil rights matters. It has provided information on Federal laws, programs and services to assist communities and private organizations in dealing with civil rights issues and with economic and social problems affecting race relations.

Under existing law, the term of the commission expires on Jan. 31, 1968. But much more remains to be done.

I recommend that the life of the commission be extended for an additional five years.

Community Relations Service

The Civil Rights Act of 1964 recognized the importance of providing bridges of understanding for communities across the land struggling with problems of equal justice and discrimination. Last year, I recommended, and you in the Congress approved, the transfer of the Community Relations Service to the Department of Justice to make it a more effective instrument of national policy.

This year, I recommended that the funds for the work of the Community Relations Service be increased by 90 per cent—from $1.4-million to $2.7-million.

In city after city and county after county, the men of the Community Relations Service have worked, quietly and effectively, behind the scenes, to conciliate disputes before

they flared up in the courtrooms or on the streets.

I deeply believe that, under our democratic system, the work of conciliation can be brought to bear increasingly to remove many of the injustices, intentional and unintentional, which derive from prejudice. It is in this spirit and with this conviction that I request a substantial increase in the funds appropriated to the Community Relations Service.

EQUAL JUSTICE

WE adopted a Constitution "to form a more perfect union, establish justice, insure the domestic transquility" and "provide for the common defense."

In our wars Americans, Negro and white, have fought side by side to defend freedom. Negro soldiers —like white soldiers—have won every medal for bravery our country bestows. The bullets of our enemies do not discriminate between Negro Marines and white Marines. They kill and maim whomever they strike.

The American Negro has waited long for first-class citizenship—for his right for equal justice. But he has long accepted the full responsibilities of citizenship.

If there were any doubt, one need only look to the servicemen who man our defenses. In Vietnam, 10.2 per cent of our soldiers are American Negroes bearing equal responsibilities in the fight for freedom—but at home, 11 per cent of our people are American Negroes struggling for equal opportunities.

The bullets at the battlefront do not discriminate—but the landlords at home do. The pack of the Negro soldier is as heavy as the white soldier's—but the burden his family at home bears is far heavier. In war, the Negro American has given this nation his best—but this nation has not given him equal justice.

It is time that the Negro be given equal justice. In America, the rights of citizenship are conferred by birth —not by death in battle. [*Italics ours*]

It is our duty—as well as our privilege—to stand before the world as a nation dedicated to equal justice. There may be doubts about some policies or programs, but there can be no doubt about the rights of each man to stand on equal ground before his government and with his fellow man.

On June 4, 1965, at Howard University, I spoke about the challenge confronting this nation—"to fulfill these rights." What I said then has even greater importance and meaning for every American today:

"Freedom is the right to share fully and equally in American society—to vote, to hold a job, to enter a public place, to go to school. It is the right to be treated in every part of our national life as a person equal in dignity and promise to all others.

"But freedom is not enough. You do not wipe away the scars of centuries by saying: Now you are free to go where you want, do as you desire and choose the leaders you please.

"You do not take a person who, for years, has been hobbled by chains and liberate him, bring him up to the starting line of a race and then say, 'You are free to compete

with all the others,' and still justly believe that you have been completely fair.

"Thus it is not enough just to open the gates of opportunity. All of our citizens must have the ability to walk through those gates.

"This is the next and more profound stage of the battle for civil rights. We seek not just freedom but opportunity—not just legal equity but human ability—not just equality as a right and a theory but equality as a fact and as a result.

"For the task is to give 20 million Negroes the same chance as every other American to learn and grow, to work and share in society, to develop their abilities—physical, mental and spiritual, and to pursue their individual happiness.

"There is no single easy answer to all of these problems.

"Jobs are part of the answer. They bring the income which permits a man to provide for his family.

"Decent homes in decent surroundings, and a chance to learn—an equal chance to learn—are part of the answer.

"Welfare and social programs better designed to hold families together are part of the answer.

"Care of the sick is part of the answer.

"An understanding heart by all Americans is also a large part of the answer.

"To all these fronts—and a dozen more—I will dedicate the expanding efforts of the Johnson Administration."

Index Guide to
"Minority Group Employment Information"

text of a document can be used to supplement words which appear in titles and further describe the document being indexed. These supplementary words are called "enrichment terms." Enrichment terms have been added to keywords drawn from titles where (1) the title was considered misleading or not revealing as to content, and (2) the project staff had access to information which provided for the selection of additional key descriptors. More detailed information about the KWIC format follows in the User's Guide.

USER'S GUIDE

Document Code

Each bibliographic entry included in the DART has been assigned a document identification code. This code is an important part of the index, and the user should understand its composition. The following are typical document identification codes:

Grouping — Author's Last Name — Author's first + middle Initial — date — ignore

CSHANLW63724
ISTEISX64373
NEDUCTS64721
NWACHDX65720

Each entry has been assigned a document identification code according to the following system:

1. The first letter refers to a specific minority group or a composite grouping with which the document is concerned. In the DART nine initial letters are used. Their references are:

9

I	Documents refer specifically to	American Indians
J		Jewish Americans
M		Mexican Americans
N		Negroes
O		Orientals
P		Puerto Ricans
W		women
C	Documents refer to more than one specific minority group, e.g., Negroes and Puerto Ricans; Negro women	
G	Documents refer to general problems involving minority group employment, e.g., provisions of Title VII of the Civil Rights Act of 1964	

2. The six letters which follow the initial letter (CSHANLW63724) refer to the first four letters of the author's last name (CSHANLW63724), the first letter of the author's first name (CSHANLW63724), and the author's middle initial (CSHANLW63724). For documents having more than one author, only the name and initials of the first author are used in constructing the document identification code. When an author's last name has less than four letters, or the author's middle initial is not supplied, the letter X has been inserted to maintain the line length of the code (e.g., MAYX). In cases of institutional authorships, the same rules have been applied with few modifications. For example, in one of the preceding document identification code illustrations (NEDUCT64721), the Education Testing Service represents an institutional author and the letters EDUCTS in the code designate this authorship.

3. The first two numbers following the author designation refer to the year of publication (CSHANLW63724; NWACHDX65720). In cases of documents bearing no publication date, the letters ND have been used.

4. The last three numbers (CSHANLW64724) are accession numbers assigned to entries by the project staff and have no user relevance.

Abbreviations and Punctuation Marks

The computer program used in preparing the DART KWIC-Index necessitated the development of several conventions affecting the use of abbreviations and punctuation marks.

Abbreviations used in the DART are listed alphabetically with their full English equivalents in Appendix A. (See Contents)

Alterations in conventional punctuation marks for purposes of computer processing include the following:

1. A single hyphen between two letters within a word is used as a substitute for the apostrophe. When an apostrophe appears at the end of the word, however, it has been omitted.

2. A single hyphen between two words is used to join those words in a compound, or conceptual, sense for purposes of indexing. For example, Title VII appears in the index as TITLE-VII, Mexican American as MEXICAN-AMERICAN, technological change as TECHNOLOGICAL-CHANGE, etc. These compound forms represent keywords developed for user convenience.

3. All quotation marks or italicizations in the original citations have been omitted.

4. The comma is used both normally and as a substitute for the semi-colon.

5. The period is used normally and as a substitute for the colon, the exclamation mark, and the question mark.

Keyword Index

Document citations are arranged alphabetically by keyword. The keywords appear in bold face on the left side of the page, as seen in the following example. Any given citation will appear as an entry under each of its keywords. If, for example, a citation contains the keywords EQUAL-EMPLOYMENT-OPPORTUNITY, DISCRIMINATION, and PRACTICES, then that citation will appear in full under each of these keywords with its assigned document code. Within the citation, the keyword being referenced will be in bold print.

```
EQUAL-EMPLOYMENT-OPP
  WHAT THE SUPERVISOR SHOULD KNOW ABOUT THE EQUAL-EMPLOYMENT-OPPORTUNITY LAW.          GAHEREX65804
  PARTIAL INVENTORY OF ON-GOING RESEARCH IN EQUAL-EMPLOYMENT-OPPORTUNITIES.            GANDEBR67589
  MANAGEMENT GUIDE. EQUAL-EMPLOYMENT-OPPORTUNITY.                                      GASSOIC63407
  AN ASSESSMENT OF THE SUITABILITY OF THE FACETED STRUCTURE OF THE WRU EDUCATION THESAURUS AS A FRAMEWORK
  FOR PREPARATION OF A THESAURUS OF EQUAL-EMPLOYMENT-OPPORTUNITY TERMS.                GBARMGC66162
  6. TEST TECHNOLOGY AND EQUAL-EMPLOYMENT-OPPORTUNITY.                                 GBAYRAG66428
  EQUAL-EMPLOYMENT-OPPORTUNITY UNDER CIVIL-RIGHTS-ACT OF 1964.                         GBERGRK64437
  EQUAL-EMPLOYMENT-OPPORTUNITY AND EXECUTIVE ORDER 10925.                              GBIRNOX62451
  THE QUESTS FOR ECONOMIC STABILITY AND EQUAL-EMPLOYMENT-OPPORTUNITY.                  GBRIMAR66475
  A SPECIAL REPORT -- THE EQUAL-EMPLOYMENT-OPPORTUNITY LAW. TITLE-VII OF THE CIVIL-RIGHTS-ACT OF 1964.   GBURENAND495
```

In the example, the keyword is truncated at 20 spaces. This is true for all keywords with more than 20 letters (including hyphens). In all cases there will be a sufficient number of letters of the keyword to enable the reader to ascertain which keyword is being referenced.

Bibliography

The bibliography is divided into nine sections, according to the initial letters of the document identification codes. (See preceding section on Document Code) The three parts of the bibliographic entry are author, title (including enrichment terms, if these have been added), and source. Each of these is illustrated by the following example:

NHOLLJH65560 HOLLAND JH (1) *EDUCATIONAL TESTING SERVICE (5)
(2) PREPARATION OF THE NEGRO COLLEGE GRADUATE FOR BUSINESS.
(3) /EMPLOYMENT-SELECTION/
(4) SELECTING AND TRAINING NEGROES FOR MANAGERIAL POSITIONS.
EDUCATIONAL TESTING SERVICE. PRINCETON, NEW JERSEY. 1965.
PP 23-34.

1. Author's last name, followed by the first letter of the author's first name and middle initial if supplied. In cases of institutional authorships, the full name or an abbreviation is given.

2. Title of document. Titles longer than one line will have the second and any additional lines indented two spaces.

3. Keywords enclosed by slashes / / are enrichment terms. These terms are NOT a part of the original document titles.

4. Source of document.

5. Names of organizations preceded by an asterisk are "supplementary index" terms and have been used to compile the Institutional Sponsors List. (See Contents) Organizations so identified are key sponsors or producers of information relating to minority group employment. In the DART they are selectively identified.

Author Index

The Author Index is arranged alphabetically by author (whether individual, corporate, primary or secondary) and the code numbers of all the entries by that author which appear in the index.

Institutional Sponsors Index

The Institutional Sponsors Index is arranged alphabetically by name of organization and the code numbers of all the entries identified with the particular organization which appear in the index.

List of Keywords

All keywords used in the index appear in this alphabetical listing. Keywords include selected important words from the titles of documents and enrichment terms purposely assigned to some documents.

When using the List of Keywords, it is important to note that certain words with variant forms may be separated in the listing because of the alphabetizing technique

used in computer processing. For example, the words COED and CO-ED both appear in the index, as do RESURVEY and RE-SURVEY, but in neither case are they listed consecutively. Thus, the user must be sensitive to words having variant forms.

List of Suppressed Words

Words in document titles that do not appear as index terms can be found in the List of Suppressed Words. This list can assist the user in avoiding fruitless searches for words that have been prevented from indexing.

Conducting a Search

The user's access to relevant documents is provided through the List of Keywords and the Keyword Index itself. The List of Suppressed Words aids the user in eliminating certain words as a starting point.

If the List of Keywords is used as the starting point for a search, the user should select from the List those keywords which best describe his subject interests. Then, by referring to the Keyword Index under each of the selected keywords, he will find a list of relevant citations. Although the user may find it easier to browse first in the List of Suppressed Words or the List of Keywords, he may, of course, use the Keyword Index directly.

The user should remember that KWIC indexes do not provide cross-references, and he must establish his own list of "see" and "see also" references. For example, if a user is interested in documents relating to fair employment legislation, relevant citations may be found under the keywords TITLE-VII, CIVIL-RIGHTS-ACT, LEGISLATION, and LAW. A user should also search the antonymic form of a given keyword, e.g., EMPLOYMENT and UNEMPLOYMENT. The normal redundancy of alphabetical listing will aid the user in his search by listing in close proximity such related keywords as EMPLOYEE, EMPLOYER, and EMPLOYMENT. When a relevant citation is located, the user may wish to expand his search by using all or some portion of the keywords assigned to that citation.

The easiest way to find all papers by a given author is to consult the Author Index, and using the document codes listed, locate the complete references in the Bibliography.

Statement by James N. Wood, Jr.
Executive Assistant
Southern Regional Council, Inc.

Special Subcommittee on Disaster Relief
Committee on Public Works
United States Senate
May 22, 1970

We appreciate the invitation to appear before this subcommittee and to once again have the opportunity to thank the chairman of the full committee and those senators associated with him in forming this subcommittee. The very existence of the subcommittee and the hearings held have already improved the federal response to disasters. Members of the subcommittee appear to share our concern that disaster relief meet the needs of individuals, regardless of their station in life.

For a number of years we have worked closely with the American Friends Service Committee on problems of racial discrimination, hunger, poverty, natural disasters and other similiar areas. We appear today to endorse the testimony made by them yesterday. We will try not to repeat their testimony, but would like to pose certain questions to the subcommittee for its consideration, questions relating generally to the coverage of the legislation under consideration.

The first question concerns disaster-related unemployment. Why is unemployment assistance limited to a major disaster? Individuals need aid whenever a disaster causes loss of jobs. Natural disasters are declared by the Secretary of Agriculture upon the request of a governor and make available a number of

aid programs to farm operators and farm owners but not to farm workers. A recent example occurred in Florida. In late March, extremely heavy rains fell for days through much of South Florida and in some areas as much as 90 per cent of the agricultural land was under water. As a result the governor of Florida requested the Secretary of Agriculture to declare a natural disaster in six counties. This made some aid programs available to farmers. The Governor was requested to ask the President to declare a major disaster because of the problems of the unemployed, but he would not act. Estimates of unemployment as a result of the heavy rains ran as high as 40,000 individuals. The Governor contended, however, that unemployment was not a serious problem. It appears to us unfortunate that disaster relief was available to farm operators and their livestock but not available to farm workers and their families.

Another section of the Act, also relating to the Secretary of Agriculture, is the emergency food section. Is the Secretary of Agriculture authorized under the legislation to put free food stamps in a county even if there is a commodity program already there? If there is no food program at all? Can there be both stamps and commodities in the same county? Since the U.S.D.A. has always claimed food stamp programs and commodity programs could not coexist in the same county, and given its past history of unimaginative use of enabling legislation to feed people, we would hope whatever bill passed could be quite clear on these points.

Insurance to adequately protect victims of disasters is a general problem area. It remains a critical problem in Mississippi today.

The subcommittee saw for itself how the lack of insurance had stalled major rebuilding along the Mississippi coast. A recent article in Businessweek, May 16, indicates that this problem remains, quote, "According to Gulf Coast residents the Carriers refuse to write policies on proposed new homes or businesses. Without such insurance little rebuilding takes place," unquote. Does the legislation before the subcommittee deal adequately with this problem?

The last question we would like to raise relates to the authority given the Farmers Home Administration. The FHA historically has dealt with farmers; does the legislation before the committee adequately authorize the FHA to extend aid to all rural people and not just those engaged in farming?

Thank you gentlemen for your time and consideration.

Resources Development Center — Special Projects

(2)

May 22

Mr. Wood. Yes, sir.

Senator Spong. Have you testified before us previously?

Mr. Wood. Yes, sir.

Senator Spong. Would you like to be heard now?

Mr. Wood. I have no objection, sir.

Senator Spong. Senator Bayh is ready to go here.

STATEMENT OF JAMES N. WOOD, JR.
EXECUTIVE ASSISTANT
SOUTHERN REGIONAL COUNCIL, INC.

Mr. Wood. We appreciate the invitation to appear before this subcommittee and to once again have the opportunity to thank the Chairman of the full committee and those Senators associated with him in forming this subcommittee. The very existence of the subcommittee and the hearings have already improved the Federal response to disasters. Members of the subcommittee appear to share our concern that disaster relief meet the needs of individuals, regardless of their station in life.

For a number of years we have worked closely with the American Friends Service Committee on problems of racial discrimination, hunger, poverty, man-made and natural disasters and other similar areas. We appear today to endorse the testimony made by them yesterday. We will try not to repeat their testimony, but would like to pose certain questions to the subcommittee for its consideration, questions relating generally to the coverage of the legislation under consideration.

The first question concerns disaster-related unemployment.

1 Why is unemployment assistance limited to a major disaster?
2 Individuals need aid whenever a disaster causes loss of jobs.
3 Natural disasters are declared by the Secretary of Agriculture
4 upon the request of a governor and make available a number of
5 aid programs to farm operators and farm owners, but not to farm
6 workers.

7 A recent example occurred in Florida. In late March extremely
8 heavy rains fell for days through much of South Florida and in
9 some areas as much as 90 percent of the agricultural land was
10 under water. As a result the Governor of Florida requested
11 the Secretary of Agriculture to declare a natural disaster in five
12 counties. This made some aid programs available to farmers.

13 The Governor was requested to ask the President to declare
14 a major disaster because of the problems of the unemployed, but
15 he would not act. Estimates of unemployment as a result of the
16 heavy rains ran as high as 40,000 individuals. The Governor con-
17 tended, however, that unemployment was not a serious problem. It
18 appears to us unfortunate that disaster relief was available
19 to farm operators and their livestock, but not available to farm
20 workers and their families.

21 Must we have great physical damage in order to have a major
22 disaster declared?

23 Another section of the Act, also relating to the Secretary
24 of Agriculture, is the emergency food section. Is the Secretary
25 of Agriculture authorized under the legislation to put free food

stamps in a county even if there is a commodity program already there? If there is no food program at all? Can there be both stamps and commodities in the same county?

Since the USDA has always claimed food stamp programs and commodity programs could not coexist in the same county, and given its past history of unimaginative use of enabling legislation to feed people, we would hope whatever bill passed could be quite clear on these points.

Insurance to adequately protect victims of disasters is a general problem area. It remains a critical problem in Mississippi today.

The subcommittee saw for itself how the lack of insurance had stalled major rebuilding along the Mississippi coast. A recent article in Business Week, May 16, indicates that this problem remains: "According to Gulf Coast residents the Carriers refuse to write policies on proposed new homes or businesses. Without such insurance little rebuilding takes place." Does the legislation before the subcommittee deal adequately with this problem?

Some of the testimony yesterday by the insurance industry, I remember one example, ~~some~~ quoted figures showing of approximately 5000 ~~4500~~ homes with ~~would be~~ VA-insured loans, ~~It stated~~ insurance fully ~~was~~ covered the damage on ~~2900~~ 3400 of them.

That sounded very nice, but if you stop and look at that, there were 30 percent of those VA-insured loans which ~~had no~~ insurance did not fully cover the damage.

1 30 percent seems to me to be a very significant figure.

2 The last question we would like to raise relates to the

3 authority given the Farmers Home Administration. The FHA his-

4 torically has dealt with farmers. Does the legislation before

5 the committee adequately authorize the FHA to extend aid to all

6 rural people and not just those engaged in farming?

7 Thank you, gentlemen, for your time and consideration.

8 Senator Bayh. Thank you very much, Mr. Wood. I appreciate

9 your taking the time to let us have your additional thoughts in

10 light of what has happened between our first discussion and now.

11 I think your point is well taken that this is a repetition of

12 concern which has been expressed earlier, as I am sure you heard

13 yesterday.

14 We need to be very careful that we are not paying more

15 attention to property rights than to personal suffering and human

16 needs. In examining our legialtion I have asked the staff to look

17 into this.

18 We do need to do more for disaster victims who are not home

19 owners, not just in the area such as you described relative to

20 farm owners and farm workers, relative to the unemployment situa-

21 tion.

22 We know our disaster bill does provide for unemployment. It

23 is just that the Governor did not ask the President for a major

24 disaster to be declared. It is difficult for me to understand

25 some of the activities of the Governor involved in this particular

area. But we also need to take into consideration the problem of those who rent a house where they lose their personal belongings.

This is a problem in the area of stamps and commodities. It is my judgment from the dialogue in the conference committee that it would be possible to have both stamps and commodities in a given area. Perhaps we should be more definite and make certain this is the case.

Mr. Wood. It is my understanding in Lubbock, although I am not complaining about the availability of food, there apparently seems to be adequate food provided. But the Department of Agriculture did so decide they could not put food stamps into that county because it was a commodity county.

Senator Bayh. I want to stress that to see whether it is a commodity county and that is the reason he did not bring it in there or because the local authorities had not taken advantage of the food stamp programs prior to that time.

Mr. Wood. This seems to be a real problem in that the Department of Agriculture is now saying if there were ~~not a~~ no stamp program in a county prior to a disaster, they could not move in.

Senator Bayh. Of course, our jurisdiction, as you know, is not unlimited, although this is a pretty broad spectrum bill that we are putting in under a disaster umbrella.

Mr. Wood. If I might, I would like to put in the record Senator Dole's question to me in Biloxi, and which he again brought

1 the question up with the Red Cross witness this morning in regard
2 to some examples that were included in the American Friends and
3 Southern Regional Council reports put in the record earlier.
4 The Senator asked the question on several occasions that
5 the American Friends Committee and Southern Regional Council
6 furnish the names to the Red Cross. As I said in Biloxi in an
7 exchange with Senator Dole and with Senator Muskie, we would
8 request those individuals for permission to release their names.
9 We have done this. The individuals have requested that we
10 not release their names. I would like the record to show that.
11 Senator Bayh. Thank you. I was about to suggest that as
12 far as the Senator from Indiana is concerned, it is difficult
13 for me to see the rationale behind other legislation which permits
14 certain officials to deny available assistance necessary to
15 hungry citizens in a nondisaster situation.
16 We have been unable to change the law yet on that. Hope-
17 fully we will be able to move in this direction so that all hungry
18 people not affected by disaster will be given adequate nutrition.
19 It seems to me there is even less reason to permit this injustice
20 to exist when the people are struck by disaster, but here again
21 we are facing the same forces who have refused to give way in the
22 nondisaster area.
23 I think the point you make is well taken. This is one member
24 of the committee who will do everything he can to see that this
25 is taken care of. We appreciate your bringing this to your

attention.

Mr. Wood. Thank you, sir.

Senator Bayh. Is Mr. Stringfellow here? Mr. Pomeroy? Or Mr. Stark? Mr. Swift?

I guess we have no recourse, but to recess and reconvene at two o'clock.

(Whereupon, at 11:55 a.m. the subcommittee recessed, to reconvene at 2 p.m. of the same day.)

ECONOMIC PROGRESS OF NEGROES IN THE UNITED STATES

The Deepening Schism

By
Andrew F. Brimmer*

To be asked to address this Founder's Day Celebration in honor of the memory of Booker T. Washington is really a way of honoring the one receiving the invitation. Not only on this campus, or in this community, but in the country at large anyone with even the most modest sense of history knows that the memory of Booker T. Washington is honored every day by the simple fact that Tuskegee Institute is here. That memory is embossed and embellished each time that this institution can render another day of service to the Negro community, to its region and to the nation through its commitment to higher education.

Yet, it is also good to pause at least once each year to reflect explicitly on the founding of this institution in rural Alabama in 1881. Since 1917, Tuskegee has found the time for such reflection, and the roster of speakers testifies to the high regard for Tuskegee in this country and in the world. This annual celebration has drawn to this campus a President of the United States, the Head of a foreign government, a Chief Justice of the Supreme Court, members of the President's Cabinet, other leading representatives of the Federal and State governments -- as well as eminent scholars and educators and

* Member, Board of Governors of the Federal Reserve System.
I am grateful to Mr. Henry S. Terrell and Miss Harriett Harper of the Board's staff for assistance in the preparation of these remarks.

outstanding figures in the private sector. However, in coming here, they came as much to encourage the work of a growing Tuskegee as to honor the memory of its founder. So I am flattered to be a part of this tradition.

Having accepted the invitation to speak before this assembly, I decided that you really did not want me to dwell on the obstacles which Booker T. Washington had to overcome in the creation of a viable institution; nor did you expect me simply to extol the record of Tuskegee's achievements during the last 89 years. Rather, given the nature of my own responsibilities, I assumed that I was invited because you thought I might have something to say with a bearing on some of the central economic issues which we face today -- especially those issues of immediate relevance to the Negro community.

On that assumption, I decided that it might be helpful to focus on a question that has generated a considerable amount of debate in the last few weeks: did Negroes make such extraordinary progress during the 1960's that the best course for public policy over the years ahead is one of "benign neglect"? Obviously this is not a trivial question. While the exact meaning of this proposition is far from clear, it has been advanced in a context whose potential impact on public policy in the area of race relations can be considerable. Thus, it is crucial that all of us have a clear understanding of the extent of economic progress which Negroes have made -- and we must also

have a full appreciation of the extent to which important segments within the Negro community have failed to share in this progress.

To help provide such an understanding, I have pulled together a considerable amount of statistical information relating to the economic experiences of Negroes during the last decade. From an examination of this evidence, I am convinced that it would be a serious mistake to conclude that the black community has been so blessed with the benefits of economic advancement that public policy -- which played such a vital role in the 1960's -- need no longer treat poverty and deprivation among such a large segment of society as a matter of national concern. To accept such a view would certainly amount to neglect -- but it would also be far from benign.

The evidence underlying my assessment is presented in some detail in the rest of these remarks, but the salient conclusions can be summarized briefly:

- During the 1960's, Negroes as a group did make significant economic progress. This can be seen in terms of higher employment and occupational upgrading as well as in lower unemployment and a narrowing of the income gap between Negroes and whites.

- However, beneath these overall improvements, another -- and disturbing -- trend is also evident: within the Negro community, there appears to be a deepening schism between the able and the less able, between the well-prepared and those with few skills.

- This deepening schism can be traced in a number of ways, including the substantial rise in the proportion of Negroes employed

in professional and technical jobs -- while the proportion in low-skilled occupations also edges upward; in the sizable decline in unemployment -- while the share of Negroes among the long-term unemployed rises; in the persistence of inequality in income distribution within the black community -- while a trend toward greater equality is evident among white families; above all in the dramatic deterioration in the position of Negro families headed by females.

- In my judgment, this deepening schism within the black community should interest us as much as the real progress that has been made by Negroes as a group.

Before concluding these remarks, I would also like to comment briefly on the new program of family assistance, recommended by the President and now being considered by the Congress. It is my impression that this program is a source of much discussion -- and some apprehension -- within the Negro community. In my personal judgment, there is more reason to support it than to campaign against its enactment.

Let us now turn to a closer examination of each of these main points.

Employment and Occupational Upgrading

The economic progress of Negroes can be traced in the trends of the labor force, employment and occupational advancement during the last decade. In 1969, there were just under 9 million nonwhites in the labor force -- meaning that they were holding jobs or seeking work.

(Well over 90 per cent of nonwhites are Negroes.) This was a rise of 16 per cent since 1960, a rate of increase virtually the same as for whites and for the total labor force. However, employment of nonwhites rose more rapidly than it did for whites (by 21 per cent to 8.4 million for the former compared with 18 per cent to 69.5 million for the latter). Expressed differently, while nonwhites represented about 11 per cent of the total labor force in both 1960 and 1969, their share of the gains in employment during the decade was somewhat larger: they accounted for 12 per cent of the employment growth, although they held just over 10 per cent of the jobs at the beginning of the period.

Advancement in the range of jobs held by Negroes in the last decade was also noticeable. This was particularly true of the improvements in the highest paying occupations. Between 1960 and 1969, the number of nonwhites in professional and technical positions increased by 109 per cent (to 692 thousand) while the increase for whites was only 41 per cent (to 10,031 thousand). By last year, nonwhites had progressed to the point where they accounted for 6-1/2 per cent of the total employment in these top categories in the occupational structure (compared with less than 4-1/2 per cent in 1960), and they got about 11 per cent of the net increase in such jobs over the decade. During this same period, the number of nonwhite managers, officials and proprietors (the second highest paying category) increased by 43 per cent (to 254 thousand) compared to an expansion of only 12 per cent

(to 7,721 thousand) for whites. In the 1960's, nonwhite workers left low-paying jobs in agriculture and household service at a rate two to three times faster than did white workers. The number of nonwhite farmers and farm workers dropped by 56 per cent (to 366 thousand) in contrast to a decline of 31 per cent (to just under 3 million) for whites in the same category. In fact, by 1969, nonwhites accounted for the same proportion (11 per cent) of employment in agriculture as their share in the total labor force; in 1960, the proportion for nonwhites (at 16-1/2 per cent) was more than 1-1/2 times their share in the total labor force. The exit of nonwhites from private household employment was even more striking. During the last decade, the number of nonwhites so employed fell by 28 per cent (to 712 thousand); the corresponding drop for white workers was only 9 per cent (to 900 thousand). Although roughly half of all household workers were nonwhite in 1960, the ratio had declined to just over two-fifths by 1969. The number of nonfarm laborers also fell (by 8 per cent to 876 thousand) over the last decade while the number of white laborers rose by the same percentage (to 2,809 thousand).

Nevertheless, as already indicated, the accelerated movement of nonwhites out of the positions at the bottom of the occupational pyramid did not carry through the entire occupational structure. For example, nonwhites in 1969 still held about 1.5 million of the service jobs outside private households -- most of which require only modest skills. This represented one-fifth of the total -- approximately the

same proportion as in 1960. Moreover, the number of nonwhites holding semi-skilled operative jobs (mainly in factories) rose by 41 per cent (to about 2 million) during the decade, compared with an expansion of only 17 per cent (to 12.4 million) for whites. The result was that nonwhites' share of the total climbed from 12 per cent to 14 per cent. Taken together, these two categories of low-skilled jobs chiefly in factories or in nonhousehold services accounted for a larger share (42 per cent) of total nonwhite employment in 1969 than they did in 1960 -- when their share was 38 per cent. In contrast, among whites the proportion was virtually unchanged -- 26 per cent at the beginning of the decade and 27 per cent at its close.

While nonwhites made substantial progress during the 1960's in obtaining clerical and sales jobs -- and also registered noticeable gains as craftsmen -- their occupational center of gravity remained anchored in those positions requiring little skill and offering few opportunities for further advancement. At the same time, it is also clear from the above analysis that those nonwhites who are well-prepared to compete for the higher-paying positions in the upper reaches of the occupation structure have made measurable gains. These contrasting experiences should be borne in mind because they point clearly to the deepening schism within the black community.

Trends in Unemployment

Over the 1960's, unemployment among Negroes declined substantially. In 1960, about 787 thousand nonwhites were unemployed,

representing 10.2 per cent of the nonwhite labor force. Among whites in the same year, about 3.1 million were without jobs, and the unemployment rate was 4.9 per cent. By 1969, unemployment had dropped by 28 per cent (to 570 thousand) for nonwhites and by 26 per cent (to 2.3 million) for whites. Their unemployment rates had fallen to 6.4 per cent and 3.1 per cent, respectively.

The incidence of joblessness among nonwhites continued to be about twice that for whites during the 1960's. Even in those categories where the most favorable experience was registered, nonwhite unemployment rates remained significantly higher than those for whites. For instance, among married nonwhite males aged 20 years and over, the unemployment rate in 1969 stood at 2.5 per cent, compared with 1.4 per cent for white men in the same circumstances. Nevertheless, one should not lose sight of the fact that -- taken as a group -- Negroes made real strides in escaping idleness in the 1960's.

But, here again, we should not stop with this over-view. On closer examination, one quickly observes that a sizable proportion of the remaining unemployment among Negroes appears to be of the long-term variety. For example, in 1969, just under 20 per cent of the unemployed nonwhites on the average had been without jobs for 15 weeks or longer; among whites the proportion was only 12-1/2 per cent. Moreover, those out of work for more than half a year represented 7 per cent of the joblessness among nonwhites compared with 4 per cent for whites. In 1961, when unemployment rose substantially under the impact of the 1960-61 recession, nonwhites accounted for about 21 per

cent of total unemployment and for roughly 24 per cent of those without jobs for at least 3-1/2 consecutive months. However, by 1969, nonwhites made up 27 per cent of the pool of long-term joblessness -- although their share of total unemployment had declined slightly to 18 per cent. So, while a significant number of Negroes did find -- and keep -- jobs during the last decade, a sizable number of others were stuck in idleness for fairly long periods of time.

Still other evidence can be cited which underlines the contrasts within the Negro community. During the first eleven months of 1969, the unemployment rate among nonwhites living in the central cities of the 20 largest metropolitan areas averaged 6.3 per cent; it was a full percentage point less among those living in the suburban sections of these areas. Among nonwhite teenagers (those members of the labor force 16 to 19 years old), the unemployment rate averaged 27 per cent. During the same period of 1969, there was very little difference in unemployment rates between whites living in central cities (3.1 per cent) and those living in suburbs (2.9 per cent), and for white teenagers, the rate was 10 per cent.

So, judged by the differential impact of unemployment -- as well as by the trend of employment and occupational upgrading -- some Negroes have experienced commendable improvement while others have lingered behind in relative stagnation.

Trends in Income: A Reexamination

Undoubtedly, income statistics are probably the most closely watched indicators of economic progress. This is true for Negroes as well as for whites. These figures also demonstrate that the Negro community recorded significant gains during the last decade. In 1961, aggregate money income of families in the United States totaled $306.6 billion, of which whites received $290.4 billion and nonwhites received $16.2 billion. Thus, the nonwhites' share was 5.3 per cent. By 1968, the total had risen to $488.4 billion -- with $454.5 billion going to whites and $33.9 billion going to nonwhites. In that year, the nonwhites' share had risen to 6.9 per cent.

In terms of median family income, the same indication of progress is evident. In 1959, the median income of nonwhite families amounted to $3,164, or 54 per cent of that for whites -- which amounted to $5,893. By 1968, the figure had risen to $8,936 for whites and to $5,590 for nonwhites, thus raising the nonwhite/white ratio to 63 per cent.

These relative family income data are a useful concept for some purposes, but they must be interpreted carefully. Otherwise they yield a misleading picture of the comparative economic status of the nonwhite population. A principal source of error is the failure of data on median family income to account for the fact that nonwhite families on average tend to be substantially larger than white families.

Data on median family income adjusted to a per capita basis to account for much larger minority families are presented in Table 1. (Attached.) When further adjustments are made to differentiate among types of families, several important conclusions result. The first and most important of these is that, for all types of families, nonwhite per capita family income is substantially lower in relation to that for white families than was suggested by the unadjusted figures. It appears that in 1967 the median income data unadjusted for differences in family size may have overstated the relative economic status of nonwhite families by something on the order of 11 per cent.

The information in Table 1 permits a further analysis of growth trends in per capita family income compared to growth trends in relative median family incomes for different types of households. For all families and for husband and wife families, the relative gains on a per capita basis were only slightly less than the relative gains on a total family income basis. The picture for female headed families, however, is completely different. The latter have the lowest median family income in general, and nonwhite families headed by females have the lowest median income compared to their white counterparts. What is perhaps even more disturbing, however, is that -- because of the much larger size of nonwhite female headed households[1/] -- the per capita differences

1/ In 1967, the average Negro husband-wife family was .76 members larger than its white counterpart, but the average Negro female headed family was 1.26 members larger.

in family income are substantially wider than the differences in median family income. In 1967, the ratio of family income per capita of female headed nonwhite families (at 44 per cent) was 18 percentage points lower than the ratio of Negro to white median family income. The data in Table 1 appear to indicate that the gap between white and Negro per capita family income has not been narrowing as rapidly as suggested by the most widely cited income figures.

The conclusion reached by expressing median family income in per capita terms is that the usually observed ratios convey an unrealistic picture of family well-being because they fail to account for the larger absolute size of nonwhite families.

Another indication of the widening gap within the Negro community is provided by the distribution of income among families and individuals at different levels of income. Data showing these trends, by race and broad groupings of income classes, are presented in Table 2.

In examining these data, the first thing to note is that the distribution of income is by no means equal in either the white or nonwhite community. If it were, each fifth of the families would receive 20 per cent of the aggregate income in each year. In reality, however, only those families around and just above the middle of the distribution come close to receiving approximately this proportion of the total income. The families constituting the lowest fifth receive between 3-1/2 per cent and 6 per cent of the income, while those in the highest fifth

receive over 40 per cent of the total. This general pattern of income distribution holds for both white and nonwhite families.

But looking beyond these overall characteristics, it will also be observed that, within the nonwhite community, the distribution of income is considerably more unequal. Among nonwhites, from the lowest through the middle fifth, for each of the years shown, the proportion of aggregate money income received by the families in each category is below that for the white community. The opposite is true for nonwhite families above the middle fifth; their share is greater than that received by white families in the same category. The same tendency is evident when the top 5 per cent of the families with the highest incomes in both groups are compared.

Moreover, in the last few years, the distribution of incomes within the nonwhite community has apparently run counter to the trend among white families. In both the 1961-65 period and the 1965-68 period, the income distribution for white families became more equal. For nonwhite families, the same trend toward greater equality was evident in the first half of the decade. However, it remained roughly constant in the 1965-68 years. And the share received by the top 5 per cent particularly showed no further tendency to decline.

Again, these figures seem to underline a conviction held by an increasing number of observers: a basic schism has developed in the black community, and it may be widening year-by-year.

Poverty in the Negro Community

Poverty is a difficult concept to define in any meaningful sense. Yet, quantitative estimates are necessary if policymakers are to have reliable information on which to make decisions. Since 1965, the United States Government has relied on the estimates developed by the Social Security Administration which, for whatever their defects, appear to be the most reliable data available. The poverty concept developed by the Social Security Administration classifies a family as poor if its income is not roughly three times as great as the cost of an economy food plan for a family of that particular size and farm or nonfarm residence. In 1968, a nonfarm family of four was assumed to be living in poverty if its total money income was less than $3,553. The income deficit of a family is that amount required to raise its income to the poverty threshold.

Table 3 reviews the 1959-68 record of the escape of individuals from poverty. These data demonstrate quite clearly that the rate of decline of poverty for whites has been substantially faster than the rate of decline for nonwhites. Between 1959 and 1968, poverty among whites declined by 39 per cent while poverty among nonwhites declined by 27 per cent. Thus, in 1968 nonwhites made up a greater proportion of the total poor population than they did in 1959 -- the fraction increasing from 27.9 per cent to 31.5 per cent. This much more rapid rate of exodus by whites from poverty is explained by the fact that in 1959 the average poor white family was not nearly as

deeply in poverty as the average poor nonwhite family. In 1959, the median income deficit for white families was only $868 while for nonwhites it was $1,280, or 47.5 per cent higher. Clearly, it took less economic achievement to lift the average white family out of poverty. It should be further noted that in 1968 the median income deficit for poor nonwhite families was $1,260 while for white families it was only $907, a difference of 38.9 per cent. Thus, these figures suggest that the future will continue to witness a more rapid rate of escape from poverty by whites than by nonwhites.

The data in Table 3 are of further interest because they permit an analysis of changes in poverty status by type of family. Disaggregating the poverty data into male and female headed families highlights several important points. Between 1959 and 1968, the rate of decline in poverty among individuals in male headed families of whites and nonwhites was roughly equal and also rather rapid. In 1968, the number of individuals classified as poor in male headed households for both races was roughly half the number in 1959.

Distressingly, however, for female headed families, the pattern was quite different. For the white population, the rate of decline among poor individuals in female headed families was substantially below the rate for individuals in male headed families. By 1968, there were only 16 per cent fewer poor individuals in white female headed households compared with 1959. For nonwhites, the data

on changes in poverty among individuals in female headed families are extremely disturbing. Between 1959 and 1968, the number of nonwhites in poor female headed families increased by 24 per cent, and the number of nonwhite family members under 18 rose by an alarming 35 per cent. Between 1959 and 1968, there was an absolute increase of 609 thousand nonwhite family members 18 or less classified as poor living in a female headed family. So while the 22 million Negroes constituted only 11 per cent of the country's total population in 1968, the 2.3 million poor children in nonwhite families headed by females represented 52 per cent of all such children.

The data on the rate of escape from poverty for different types of families also emphasize the development of a serious schism within the Negro community. Negroes in stable male headed families appear able to take advantage of economic growth and are leaving poverty at roughly the same rates as whites. The opposite appears true for families headed by a female, who appear unable to earn a sufficient income to escape poverty. The rapid increase in the number of poor nonwhites in female headed families -- and particularly the very rapid rise of children 18 and under in their families -- suggests that the problem of poverty in the black community has by no means disappeared.

Having discussed recent changes in the overall poverty population, it is important to examine briefly the rural experience. For farm families the record is much more encouraging with a decline

of almost three-fourths in the number of poor individuals in nine years. Moreover, the rate of decline was roughly equal for whites and nonwhites. These results may in part reflect a growing prosperity in agriculture, but in large part they are due to a migration of the poor of both races from rural to urban settings.

The conclusions from this section are that nonwhite poverty in general has not declined as rapidly as white poverty, primarily because nonwhites classified as poor tended to be substantially poorer than whites classified as poor. This section has also shown that in the last decade there has been an alarming rise in the number of poor nonwhite children under 18 living in female headed families.

Prosperity in the Negro Community: The Importance of Education

The above discussion has obviously reflected a rather pessimistic assessment of several aspects of economic developments in the Negro community -- focusing as it did on nonwhite poverty and the fact that actual white-nonwhite income discrepancies are wider than commonly observed statistics would suggest. To stop here, however, would present a somewhat unbalanced view of Negro economic progress. To present a more balanced picture, it is important to consider the source of some of the recent gains within the Negro community. In particular, it is important to discuss the role of education.

Recent data suggest that Negroes are making considerable gains in both secondary and higher education. Between 1960 and 1969,

the per cent of Negro males aged 25 to 29 who had completed 4 years of high school or more increased from 36 per cent to 60 per cent while the white fraction increased from 63 per cent to 78 per cent. Thus, in 1960 the gap had been 27 percentage points, and in nine years this gap had narrowed to only 18 percentage points. In 1968, for the first time a greater percentage of Negro males aged 25-29 completed high school than Negro females.

In the case of higher education, the gains also have been impressive. Table 4 presents data on trends in Negro college enrollment between 1964 and 1968. In these four years, the number of Negroes in college rose by 85 per cent. What is more striking, however, is the fact that during this period, 82 per cent of this enrollment growth occurred in institutions other than the predominantly Negro colleges. Thus, in only four years, the per cent of Negro college students enrolled outside predominantly Negro colleges increased from 49 per cent to 64 per cent. This fact suggests that the larger institutions are becoming increasingly aware of minority problems and are making a concerted effort to assist minority group students. In four years the number of Negro students at these institutions has more than doubled.

The importance of higher education in the economic achievements of whites and Negroes is underlined by the data in Table 5. It is clear that median incomes for men of both races increase dramatically with increasing amounts of education. What is even more important, the ratio of Negroes' income to that of whites rises as the level of education

climbs. Stated in a slightly different fashion, the relative gaps within the Negro community between those with higher education and those with lower education are wider than for whites. In 1968 a Negro man, aged 25-54, with a high school education had an income 29 per cent above that for a Negro man with only an 8th grade education, while for whites this gap was 26 per cent.

The case of a Negro with some higher education is of particular interest. This is a man with the highest absolute income and the highest income relative to whites. Unfortunately, due to the unavailability of more data, the figures in Table 5 probably seriously understate the contribution of higher education to Negro income. The last line in Table 5 shows the income of whites and Negroes with 1 or more years of college. This category is really a composite of the categories 1 to 3 years of college and 4 or more years of college. Of all Negro men 25 years of age or over in 1967 reporting one or more years of college, 60 per cent were concentrated in the 1-3 year category. For all white men reporting more than 1 year of college, there was a much greater tendency to have four or more years of college, with only 42 per cent concentrated in the 1-3 year class. If a more complete breakdown of the data in Table 5 were available, they would probably indicate a higher return to Negro higher education.

A second reason why the data in Table 5 may understate the returns to higher education for Negroes is that they fail to account

for the age distribution of those achieving higher education. Since major education gains among Negroes have been a rather recent occurrence the better educated Negro man will be substantially younger than his white counterpart. Table 6 documents this point by comparing educational achievements of whites and Negroes at similar age levels. These data show conclusively that the differences in educational achievements are in large part a function of age with the widest gaps among the older segments of the population. It is clear that the best educated within the Negro community are much more highly concentrated in the younger age brackets. Since income increases directly with age, when education is held constant,[1/] due to factors of experience and promotions based on length of service, the failure of the data in Table 5 to account for the relatively younger age distribution of the better educated Negro population seriously underestimates the returns to education for Negro males. The figure for white males with higher education refers to an older population and thus, in part, reflects returns to age and experience as well as returns to education. Unfortunately, we will have to wait until the processing of the 1970 Census has been completed to get more complete data.

The conclusions from this discussion of education then are much more encouraging than the results reached above. Younger Negroes

---

1/ In 1967, the median income of all males aged 25-34, with four years of college, was $8,716, for those with the same education, aged 45-54, it was $12,267, or 40.7 per cent higher.

are making substantial progress in achieving secondary and higher education, and this increased education is associated with higher absolute income and income relative to whites.

Negroes and the Family Assistance Program

As I indicated above, I would like to comment briefly on the proposal to change significantly the principal means through which the Federal Government provides assistance to needy families. In recent years, these programs have become an important source of income for many Negro families headed by females in which a sizable number of children are found. Thus, one can readily understand why the President's recommendation to change them submitted to Congress in August, 1969, has generated so much discussion (and some apprehension) in the Negro community.

It will be recalled that, in broad outline, the proposed family assistance program would have the Federal Government pay a basic income to all families who could not provide for themselves -- whether they are employed or unemployed. It would be geared to dependent families with children. It would replace entirely the largest of the Federally supported public assistance programs (i.e., aid to families with dependent children). Under the proposal, persons (except mothers with preschool children) who accept assistance would be required to register for work or training. It is estimated that in the first year of the program, over half of the families covered would have one member employed or undergoing training.

As recommended to Congress, the family assistance program would work in the following fashion: A family's basic allowance would consist of $500 for the first two members and $300 per member for each additional member. Thus, for a family of four, the allowance would be $1,600 per year.

Cash payments to families would be computed by adjusting the basic allowance to account for the earnings of the family. The first $720 of family income would not affect the payments because it is assumed that there are basic costs of transportation, lunches, clothing, etc., associated with taking a job. Cash payments to families would then be reduced by 50 cents for each additional dollar of earnings above the $720 minimum.

A simple numerical example will illustrate the program's operation. Assume a family of four has a cash income of $2,000. The first $720 of this income would be disregarded, leaving a balance of $1,280. A family's cash payment would then be reduced by half this amount, or by $640. Since the family's basic allowance was $1,600, its cash payment after earnings would be $960.

So far only a rough idea can be provided with respect to the probable coverage of the family assistance program. The projections available are shown in Table 7, as prepared by the Department of Health, Education and Welfare in February of this year. According to these estimates, in 1971, about 3.3 million families would be covered; of these 2 million (three-fifths) would be white, and 1.3 million

(two-fifths) would be nonwhites. These families would include close to 18 million persons -- of whom 44 per cent would be nonwhites. Gross payments would approximate $3.5 billion, and nonwhites would receive about $1.5 billion -- or 43 per cent. These annual payments would average around $1,060 for all families, about $1,000 for white families, and about $1,154 for nonwhites. However, since nonwhite families are expected to be somewhat larger (averaging 6.0 members vs. 5.1 members for whites and 5.4 members for all families), payments per capita would be about the same: $196 for all families, $198 for whites, and $192 for nonwhites.

It is difficult to compare the differential impact of the proposed program on particular groups of families compared with the existing program. However, it appears that a somewhat greater proportion of the families covered by the new program would be white compared with those covered by aid to families with dependent children (AFDC). In 1968, there were 1.5 million families participating in AFDC, involving 6.1 million persons, of whom 4.6 million were children. Outlays under the Federally aided programs amounted to $3.4 billion, and the average monthly payment per family was $168 (just over $2,000 per year).

In 1967, according to an HEW survey conducted in 1968, about 51.3 per cent of the families covered by AFDC were white, 46 per cent were Negro, and 2.7 per cent were other nonwhites. In 1961, whites constituted 51.8 per cent of the total, Negroes 43.1 per cent, and

other nonwhites made up the remaining 5 per cent. So during the decade of the 1960's, Negroes as a proportion of total AFDC coverage increased while the proportion for all other groups was declining.

On balance, it appears that the new family assistance program would represent a considerable improvement -- compared with the existing AFDC program -- in about 20 States. Of these, 14 are Southern States (with a heavy concentration of Negroes), and most of the remainder are Western States (with a sizable proportion of Indians and Mexican-Americans among their populations). In 1968, the average annual payment under AFDC in the 14 Southern States was approximately $1,116. However, the average payment varies greatly among these States, and in some it is much below $1,000. Thus, given an annual payment of $1,600 for a family of four, there would be an increase of roughly $480 (or well over 40 per cent) compared with the amounts received by the average AFDC family in this region. While the exact status of families under the old and new programs cannot be determined, there appears to be no doubt whatsoever that the new proposal would result in a real improvement.

In 30 States there would also be an opportunity to make further improvements. However, in these cases, the outcome would depend on whether the States and local governments maintained their existing programs at substantially the same level. If these outlays were held at no less than 90 per cent of the 1968 level, assisted families would be better off in virtually every instance. Under the existing AFDC

program, the average annual payment in these States in 1968 was $2,195 (of which $1,044 represented non-Federal payments). Under the new program (and assuming the 90 per cent maintenance factor), the average payment per family would rise to about $2,536. Thus, the new arrangement would imply an increase of roughly $340, or 15 per cent. The 30 States include primarily the heavily populated northern industrial States plus California. Most of these have a sizable concentration of low-income nonwhites in urban areas.

So, while these estimates of the probable improvement which might accrue under the new program of family assistance are obviously crude, they are suggestive. They imply that Negroes -- and particularly the poverty-stricken families headed by females -- would benefit substantially. And above all, it would create a promising basis for checking the increased dependence on public welfare of a growing segment of the population.

Concluding Observations

The analysis presented here has sketched a rather mixed picture of economic progress among Negroes in the United States. While not meaning to deny or demean the recent impressive economic gains by Negroes, we must be careful that no one is lulled into believing (falsely) that the economic problems of Negroes have been solved. In this regard, the commonly observed income statistics, when accepted at face value,

convey an unwarranted sense of greater economic parity between whites and Negroes than actually exists.

It was also noted that a closer analysis of the available data shows clearly that a definite economic schism has arisen within the Negro community. Individuals in male headed households appear able to share fairly well in economic advances, while those in female headed households are sinking backwards into poverty. Those individuals who have prepared themselves for challenging careers by seeking and obtaining higher education are registering relatively large improvements in incomes, while those without such training are falling further behind. Clearly, the economic condition of those who currently are lagging should be made a matter of serious national concern.

For this reason, the proposed family assistance program is pointing in the right direction, and -- despite reservations many might have about some of its components -- it should be viewed with greater receptivity within the Negro community.

Econ. Development

IMPROVING THE SOUTHERN ENVIRONMENT

Paper by Frank E. Smith, Director, Tennessee Valley Authority, presented at Symposium on "The Emerging South," sponsored by The L. Q. C. Lamar Society and Southwestern at Memphis, Memphis, Tennessee, April 18, 1970.

The South has not been too much concerned about the excesses which threaten the quality of our environment, just as there has not been as much concern in our region as in some other areas about the excesses of an affluent society. What might seem at first glance to be indifference is actually a matter of economics, for both of these circumstances arise from the fact that we have not fully shared in either the affluence or the economic base which has produced the affluence. We are, therefore, still too much preoccupied with efforts to develop an adequate share of that affluence to be very much concerned about some of the questionable long-range effects of the technology upon which a vastly productive economy, and an affluent society, rests.

The Southeast today has a slightly greater part of its population employed in manufacturing enterprises than any other section of the country. Our continued comparative poverty is because we have lower wage rates and because a lower percentage of our income is devoted to

and derived from service industries and to those other aspects of the economy which provide, and consume, the material amenities of present-day life. Most of our major manufacturing industries are relatively new to the region, and oftentimes new to the entire industrial scene. As a result, they are not usually among the worst polluters, for they have come upon the scene at a time when willful violations of pollution control standards can no longer be completely ignored.

This comparative position is not cause for satisfaction, however. Even though we have escaped the dubious blessings of some of the heavy industries which are major contributors to pollution in the established manufacturing centers of the East and Midwest, we have our fair share of pollution. We are meeting here on the banks of the Mississippi, the great artery of life and commerce not only for the Mid-South, but for all of Mid-America. The Mississippi has abused us many times in the past, it is true, but we have also been abusing it for many years. It has been and still is the main garbage and sewage disposal unit for Mid-America, and each year it also carries hundreds of acres of topsoil into the Gulf, washed out from the alluvial plains which surround Memphis. In addition to these long-standing pollutants, in recent years it has picked up the burden of the petro-chemical industry, concentrated from Baton Rouge south, and the agri-chemical industry, which

stretches throughout the Mississippi Valley from Wisconsin and Minnesota to Louisiana. There is no way to measure accurately either the total of these several pollutants, or the resulting compounds, carried each day into the Gulf of Mexico.

Competent students say that the Gulf is showing visible evidence of the impact of this vast tonnage of pollutants, more destructive than mere topsoil. Dr. James M. Sharp, president of Gulf Universities Research Corporation, has been quoted as saying that the Gulf "could become a dead sea," pointing to the fact that "several of our estuaries and sounds are already losing their recreational value and biological productivity."

Dr. Sharp told a group of congressmen that studies costing $150 million are needed merely to pinpoint necessary pollution controls for the Gulf. I do not doubt that the studies are needed. But they must not be accepted as a substitute for action. We know already that the Mississippi must be vastly improved, to say nothing of putting an end to oil spills in the Gulf itself.

One of the problems we face in the South in dealing with pollution is that we have struggled so long and so hard for industrial development that it is easier to look the other way at industrial abuses, whether they be low wages or the abetment (NOT abatement) of pollution. New

industries, like old ones, have learned to employ politically effective law firms and have not been hesitant to use them. I recall that ten or twelve years ago, while fighting on the floor of the House of Representatives against an amendment designed to weaken the Federal antipollution law, I naively mentioned the fact that paper companies were among the chief polluters of our streams as well as being among the leading opponents of a strong antipollution law. There were no paper companies in my then district, but within a few days I had had letters and phone calls from a dozen or so of the most prominent law firms in Mississippi, all wanting to know what I had against the paper industry.

The same hunger for industrial jobs may condition us to accept too readily the easy rationalization of dubious practices instead of demanding a confrontation with the facts.

Nearly twenty years ago I asked the Public Health Service to look into the possible damage to human health caused by the widespread use of pesticides and defoliants in my Delta district. I am ashamed to say that I accepted too readily the PHS response that no serious threat was involved. A case that there is no serious threat can still be made, but today we have a more inclusive definition of what "threat" means.

Since this paper will point up the fact that I have serious reservations about some of the current prophets of doom about the ecology,

let me point out that I, too, have several times been branded as such an irresponsible doomsday man on this subject. This began when I attempted unsuccessfully, back in 1954, to have recreation added to the benefits considered in evaluating Corps of Engineers water projects, and includes ridicule when I said just three years ago that the nation would have to spend at least $100 billion before the year 2000 in improving the quality of its water and maintaining an adequate supply. Today I think we can agree that $100 billion is a very conservative estimate, even without reading between the lines of the President's recent modest proposals.

Today we are told that the nation's entire life style must change if we are to avoid a disastrous upset in the ecological balance, assuming we accept as fact the premise that the upset has not already occurred. I agree that we must reevaluate many priorities, and some of our long accepted standards about economic progress. But I do not accept for one minute the concept that we can turn our backs on economic expansion and development. We cannot achieve a satisfactory quality of life for all Americans, let alone the South, from our present inadequate economic base. To expand that base, we are going to have to continue to develop our natural resources. That, in turn, requires a completely candid appraisal of our environmental condition.

First, as much as I deplore it, we must recognize the fact that there is no pristine wilderness left, and that we will sacrifice even more quality of life if we let our existing resources waste into a pseudo-wilderness.

Some of us must wake up to the fact that there was more pollution in a Cherokee or Choctaw wigwam than there is on the streets of Knoxville or Los Angeles, and that some of the Cherokee and Choctaw villages were as befouled with waste and water pollution as bad as some of the worst alleys in Memphis or Greenwood.

Some of the worst pollution, for me, is visual pollution, and I count as part of that the dirt and misery of rural and urban slums which still abound over the South. In my trips over southern Appalachia I see some of the most disheartening signs of rural poverty, degraded housing, and diseased water supply against a backdrop of beautiful rustic mountain greenery that, without the close-up, delights the soul of us environmentalists.

There is no possibility of providing the economic base for full opportunity for our black citizens without continued economic expansion. Whether they realize it or not, some of our best intentioned people would maintain our black people in the bleakest of environments in the name of protecting the quality of our environment. Perhaps unconsciously they buy the "big house" premise that the Negro is better off in a blessed

primitive state, dreaming from the cabin stoop of Saturday night in the by-and-by.

But continued economic expansion and development need not mean a continuing decline in the quality of our environment. Achieving the necessary environmental controls to bring about the quality will not be cheap, however. They are already costing large sums, but they will have to cost truly vast sums if they are to be effective. So far it has been easier to talk about the need to protect the environment than about the cost of that action, and we are losing valuable time every day because the talk is an excuse for further delay in putting up the money on a realistic scale.

Make no mistake about it--the added costs are going to be borne by the individual citizens of the country, both as taxpayers and as consumers. Much of the cost will come in the form of additional taxes, if the various levels of government undertake to meet their responsibilities in achieving environmental quality. If tax incentives are used on a large scale to encourage industry to adopt proper antipollution devices and processes, the result will not immediately appear in the consumer's bill, but it will appear in additional taxes to replace those which are, by this device, foregone. I think the tax incentive system has many inherent weaknesses, not the least of which is that the government may be lax in enforcement if severity means a loss of tax revenue. Pollution abatement

should be a part of the basic cost of doing business--which is already deductible--not an added tax benefit.

If rigid pollution control is accepted as a part of the cost of doing business, naturally the cost will be borne by the consumer who buys the products or services produced. The added costs of living which result from this are already noticeable, and they will become more so in a relatively short period of time. The real test of the public's willingness to pay for a quality environment will come within the next few years, in the form of items like the added costs for automobiles and the fuels which propel them. We cannot afford selective non-pollution, however, and all automobiles and all fuels should have to meet the same standards.

I am personally involved in an on-going program to provide adequate environmental controls for the TVA power generating facilities. The capital costs here will total several hundred million dollars, and they will represent a substantial item which will have to be reflected in increased costs to the users of the electricity being generated. Fuel costs have been stepped up at an annual rate of several million dollars, as a result of environmental considerations. Low sulphur content coal is an example of added control, at added cost, that TVA and other utilities are attempting to obtain, with little success. There is a limited supply at best, and most of it is being sold at negotiated prices well above the

current market to foreign metallurgical buyers, notably Japan. Another possible solution is low sulphur oil. Here we are victims of the artificial price restraints of import quotas--if there were no import quotas, low sulphur oil from the Carribbean could serve this area of the country at a price competitive with other fuels.

TVA was delinquent in not establishing, until 1965, a reclamation provision in its contracts with the suppliers of strip mine coal. Such a provision is part of our standard form now, however, even though no private utility has adopted one. We are carefully following up the reclamation procedure required, and if it proves to have any defects or loopholes, they will be corrected. I have checked a number of the areas where reclamation procedures have been followed, and in some cases after only two or three years the land is actually in better shape than the scarred hillsides that existed before mining, from both the aesthetic and the economic viewpoints.

Speaking of TVA's fuel problems, one evidence is almost within sight of this hotel, a few miles down the river--the Allen steam generating plant built by the City of Memphis after the Dixon-Yates fiasco fifteen years ago, and presently in the process of being purchased by TVA as part of the re-entry of Memphis into the TVA power system. The Allen plant was built with inadequate provisions for control of the dust particles

which sometimes make the horribly dirty smoke plumes pouring from the plant. TVA installed electrostatic precipitators which proved inadequate for the task. We have now virtually designed our own precipitators, and we hope the manufacturer can deliver according to our specifications.

However, at the Allen plant, as at all other coal burning generating stations, even with the dust removed, there is still the problem of sulphur in the fumes. We are conducting extensive research into processes for either recapturing the sulphur or eliminating it from the discharge, but progress is not very encouraging. This is one of the reasons why nuclear power plants are likely, in the long run, to be the cleanest. TVA hopes to begin next year the initial operation of the largest nuclear plant in the country, near Athens, Alabama. Although TVA will operate the plant always with great care and caution, there is no way to completely pinpoint potential environmental problems from nuclear plants except through detailed monitoring of actual operating conditions. TVA will carry on intensive monitoring and expects that the result will be a major contribution to the problem of supplying clean energy for a cleaner environment.

The chief emphasis of this paper is that we must continue to develop our natural resources and otherwise expand our economy to provide the jobs and the economic security necessary to give all of our people a

share of our national abundance. At the same time, however, we must do whatever is necessary to make sure that every aspect of this development not only protects the quality of our environment but that it improves that environment.

Improvement can be made, even if we achieve few millennia. The smog expelled from London is the now oft-repeated example, but I want to cite an example of what has been done in one part of the South which demonstrates what can be done all over the nation.

The Tennessee River is the cleanest major river in the country. What is more important for the purposes of this discussion, it is the one river that is cleaner today than it was thirty years ago, in spite of the investment of some two billion dollars in new industrial plants along the shorelines of its lakes. It is cleaner because the TVA, with relatively little enforcement power, has been working to make it so. The only antipollution power which TVA has is built around the requirement that an easement to cross the TVA shoreline be obtained from TVA for discharges from any type of installation on the shore. We have, however, no control over discharge abuses which existed before TVA, or over the pollution of some of the tributary streams before they reach the TVA impoundments.

As a result, the Olin Mathieson Company, which now owns the historic salt lick at Saltville, Virginia, continues to pour enough salt into

the north fork of the Holston River to the extent that special treatment of the water in the river as far southwest as Knoxville is necessary. Paper companies in western North Carolina continue to discharge both waste and discoloration into our tributaries there, so it has been generations since the once beautiful French Broad was clear. Farther south is the classic example of pollution, the Copper Basin of the Ocoee River east of Chattanooga, where the metallic water colors the entire stream bed, even though the sulphuric acid no longer escapes into the air.

Knoxville and Chattanooga, the two largest cities in east Tennessee, have secondary sewage treatment plants either in operation or under construction, but in Knoxville the effectiveness of the treatment is often wasted because of the discharges made by several industrial plants in the city. At Chattanooga we could not in good conscience provide recreational access facilities to the new shoreline of Nickajack Lake because of the sewage being dumped into the lake by the city and other nearby governmental subdivisions. In industrial areas I think it is evident that we really need tertiary sewage treatment.

Despite these drawbacks, however, the Tennessee River system as a whole is clean enough to allow millions of people to swim in it each spring, summer, and fall, and to afford millions more the opportunity to fish in it during all twelve months.

We believe we have made some positive gains in air quality, and not only in relation to our steam plant plumes. The most obvious example is the improvement in the smoke emissions for our cities generally. The air quality may be worse because of greater numbers of automobiles, but there is no longer the black overhang of coal smoke where electricity has become the source of both heat and power. We have hopes that TVA can help demonstrate central effluent disposal systems for industrial corridors, as an example of how existing industries can cut down air pollution with minimum cost.

I have dwelt at considerable length on TVA's efforts to improve the environment because they are related to a broader effort to help improve the quality of life by advancing the quantity of income, as well as the broader quality of the environment. The South is in the process of becoming industrialized, and consequently urbanized, but there is good reason to hope that it can escape some of the worst of urban blight while throwing off some of the worst of the rural blight which has been so prevalent for so long.

The dominant characteristic of the changing patterns of living has perhaps been the fading of independent living and working conditions based on the agrarian economy of a generation ago and the emergence of a far more complex pattern of urban living based on an industrialized

economy. The many streams of economic and social life, once looked upon as separate and self-sufficient, have reached an interdependence which is at once both stimulating and depressing.

As we attempt to adjust the South to this new interdependence, we accept, without question, the necessity of physically cleaning up our environment, but we still need to give first priority to the cleansing of the human environment so that Southerners can be equally free to develop the skills necessary to both earn a livelihood and pursue happiness in the kind of society where people can live and work together with decency and dignity.

What can we do to protect the Southern environment and improve its quality?

First of all, we can protect and improve the national environment. Very few environmental problems recognize state boundaries. Only national solutions and national standards will cure them. We must recognize the fact that very few conservation programs have been established, in the South or anywhere else, without the carrot of Federal money or the stick of Federal standards.

There is legitimate reason for cooperative enforcement programs, but final enforcement should not be a matter for solely local determination. If for no other reason, dedicated local officials need the mainstay of Federal

standards as a backup for their own procedures. As in many other matters, states' rights in this field is usually a cover for states' wrongs.

Thanks to many historic, geographic, and economic factors, we in the South have a better than average share of open space. We very much need, however, to improve its quality and make sure it is available for all citizens.

Among other goals, we need to protect it from visual pollution. The stretch of Interstate 40 that I drive from Knoxville to Memphis was one of the most beautiful in the entire country when first completed, but it is rapidly and thoroughly being polluted with endless roadside signs and billboards.

Billboard control and rural zoning are examples of the local effort needed for quality local environment. Noise abatement is another, and there is long precedent in towns like Memphis. Organized efforts do not have to be confined to national campaigns to be productive.

Another vital need is the addition of more open-space recreation areas. We do not have enough now, and the shortage will be acute in a few years. Beyond the need for more Federal, state, and local programs to acquire them, we need to step up local pressures to expand existing and developing Federal projects to make recreational benefits available as a by-product. An aggressive state agency, for instance, is an ideal instrument

for helping to establish open-space recreation areas as an adjunct to virtually every Corps of Engineers project.

The national trend toward decentralization of industry is a good one. We in the South have been trying to achieve this for a long time as part of our economic development, and for the first time there is today a general acceptance of the validity of our goals.

For a long time we were willing to accept any sort of industrial development or expansion, because it was better than nothing. We are becoming more selective, and we can become even more choosy if we selectively develop our resources on a more carefully planned basis. For instance, there is plenty of room for a Tennessee-Tombigbee project, just as there is for more industrial site-harbor development on the Mississippi. But before we bring industries into any of these sites, developed wholly or partially at public expense, the design of their plants and operations should be rigidly examined to bar any pollution. Even the plant itself should meet requirements about harmonious blending with the landscape or the general environment. The participation of some type of public program in most of the major industrial locations in the South today provides basis enough for improved environmental standards.

Before we allow ourselves to be overcome by nostalgic recollections of the real or imagined qualities of small town life in the South, let

us remember some of the very real defects. Most obviously, small town slums and small town poverty have been equaled only by rural poverty, generating a situation that made even ghetto slums more inviting. The dirtiest big city street of half-abandoned houses, stores, and factories can be no more dismal and depressing than the streets of some of our small Southern towns.

Elimination of visual pollution can be as important in keeping young people off the migrant trail as any other factor, assuming the all-important job opportunity is available. The people influenced by the small aesthetic qualities are likely to be the ones who contribute the most to achieving other environmental qualities.

There are other important goals to which we in the South can work to achieve environmental quality without sacrificing the imperative need for continued but more intelligent overall economic development.

One of our most urgent problems in the field of human conservation is the necessity of reducing the birthrate. In much of the South we have, in the past decade, achieved for the first time a balance of in-migration. This has been primarily the result of increased job opportunities in the region. Even though migration has been greatly reduced, it is still a major influence on population trends, especially in parts of Appalachia and from the old plantation country of the Mississippi Valley.

There is no pat formula for reducing the birthrate. Some reduction is occurring naturally as people with higher economic and educational levels voluntarily reduce the size of their families. Essential success, however, will come only with an aggressive program of making birth control and family planning information a basic requirement, not only for welfare clients but for all young people as they reach the age level where they might become parents. In most areas of the South there is less organized resistance by religious groups to population control procedures. There is no real reason why there should not be widespread liberalization of abortion laws, primarily to benefit low income groups. There could also be large-scale information programs about sterilization procedures.

To sum it all up, let us in the South be in the forefront of every realistic move to protect the quality of environment. But let us not forget that a lot of our environment needs its quality vastly improved before it is worth protecting. Our human resource still needs the benefit of much natural resource development before it will be in a position to use and enjoy the quality environment we all want. Because we have a better physical environment to start with, there is no reason why we should not seek the highest quality of life in our goals for the South.

As a public service—

THE SIDNEY HILLMAN FOUNDATION

is pleased to send you this

Teacher's Copy of

The Pentagon vs Free Enterprise

by Senator William Proxmire

(With Teacher's Guide Attached)

(For further information and order form for up to 100 copies for classroom use—which will be sent without charge—please turn page.)

ORDER FORM

The sample copy of our latest Sidney Hillman Reprint, with Teacher's Guide attached (see inside back cover), is sent to you as a public service for classroom use. If you would like additional copies of this reprint or of earlier reprints listed below, fill out this order form and return to us. Up to 100 copies of each reprint are available to you without charge for classroom use. For further information about the Sidney Hillman Foundation and the reprint series, see inside front cover of the Reprint itself.

If you have any comments on the usefulness of these reprints in the classroom situation, we would be happy to hear from you.

Number Thirty-Four in the
Sidney Hillman Reprint Series
published by the
SIDNEY HILLMAN FOUNDATION
as a public service

"We want a better America, an America that will give its citizens, first of all, a higher and higher standard of living so that no child will cry for food in the midst of plenty. We want to have an America where the inventions of science will be at the disposal of every American family, not merely for the few who can afford them. An America that will have no sense of insecurity and which will make it possible for all groups, regardless of race, creed or color to live in friendship, to be real neighbors; an America that will carry its great mission of helping other countries to help themselves."

SIDNEY HILLMAN, 1946

The Sidney Hillman Foundation, Inc.

The words above perhaps best sum up the ideals for which Sidney Hillman lived and died, and serve as the guiding spirit for the Foundation which bears his name. Through its program of lectureship and scholarship grants, its awards and its reprint series, the Sidney Hillman Foundation seeks to promote the ideals of service to the community cherished by Sidney Hillman and all labor, and bring them closer to realization.

SIDNEY HILLMAN REPRINT SERIES

From time to time the Sidney Hillman Foundation reprints and distributes outstanding speeches, articles and broadcasts as a public service to teachers for classroom use. These reprints deal with a variety of subjects of pressing concern, such as the protection of civil liberties, improved race relations, the advancement of social welfare and economic security and greater world understanding. Requests for quantities of up to 100 copies of each reprint will be filled without charge. For quantities of over 100 and up to 1000 copies, a mailing and handling charge of $1 per hundred has been established; remuneration should accompany each order. Orders for quantities of more than 1000 wil be filled at cost.

Sample copies of other reprints available will be sent to teachers on request.

by SENATOR WILLIAM PROXMIRE

The military-industrial complex has a great and pervasive influence on the life of the United States. Everyone agrees on that. But whether its influence is unwarranted or unhealthy is, of course, the question that has provoked heated national debate. The size and influence of the complex have given rise to legitimate concern, because of the military's tendency to identify national security with ever-larger arsenals, and because of its growing and heretofore unchallenged claim on the natural and human resources needed to combat the country's domestic ills. Compounding this concern is the documented evidence that the military and defense industries are guilty of inefficient and otherwise questionable business practices—particularly in the area of procurement—that not only are wasteful but stifle the principle of open competition that is basic to our free enterprise system.

Military and military-related spending now totals more than $80-billion annually and consumes a tenth of the Gross National Product. Because the defense budget has not been as thoroughly scrutinized and debated as budgets for civilian programs, and because of past experience with national security costs greatly exceeding initial estimates, the allocation of these funds is of primary importance. The defense budget should not be allowed to just "grow," but should be subject to the same control as the rest of the budget.

In the past only one-tenth of the total staff of the Bureau of the Budget has been assigned to review the military budget. In all fairness, Robert Mayo, the present director of the bureau, has testified that in the future military expenditures will be subject to the same scrutiny as are civilian programs. This review is absolutely essen-

tial, and I hope that it will be accomplished. My own investigations and those of Congress's Joint Economic Committee reveal that approximately $10-billion could be cut without diminishing national security in the least, and the Subcommittee on Economy in Government in its report *The Military Budget and National Economic Priorities* has formally recommended that such a cut be made.

In fiscal year 1969, $42-billion was awarded in contracts for defense procurement, making it the largest single item in the military budget (about 25 per cent of the total federal budget), and most important, therefore, to those concerned with rising military costs. Procurement includes defense contracts and all purchases or rentals of supplies, equipment, and services. Procurement is often referred to as the lifeblood of defense contractors.

The most efficient and economical way to approach procurement is through competitive bidding; the Congress has repeatedly and consistently directed the Department of Defense to buy competitively. The Pentagon, however, increasingly resorts to practices that reduce competition, and relies more and more heavily on negotiated procurement. Formally advertised competitive military contract dollar awards dropped from 13.4 per cent in fiscal year 1967 to 11 percent in fiscal year 1969. Single source procurement increased to 57.9 per cent. Last year, about 90 per cent of the Pentagon's and 98 per cent of NASA's contract awards were negotiated under "exceptions"—too often broad and vague exceptions.

The Defense Department, of course, defends negotiated procurement as being comparable to competitive bidding, but only competitive procurement can really give the desired emphasis to dollar cost. Negotiation on nonprice elements cannot completely or successfully substitute for price competition. Experts who have appeared before the Subcommittee on Economy in Government have indicated that procurement costs in the absence of competition can be from 25 per cent to 50 per cent higher than they would have

been had competition been present.

Negotiated arrangements can also lend themselves to repeated dealings with certain favored and trusted suppliers. If desired, there are practically effortless ways to get around the regulations requiring competitive bidding. As a part of these regulations, the 1962 Truth-in-Negotiations Act was designed to protect the taxpayer in the absence of true competition, but if a procurement officer determines that competition is adequate or that a standard catalogue price is in effect, the act does not apply. It is also possible to waive the requirements (again under the Truth-in-Negotiations Act) for a contractor to supply cost data. Defense firms, fully aware of the existence of these loopholes, may refuse to supply the cost data even at the risk of loss of a sale. This amounts to a gamble that the government needs their product enough to waive the requirements eventually and proceed with the purchase.

"Locked Into"

When a firm has actually won a contract to do the research on a major weapons system, it occupies a favored position and is more likely to be chosen to do the work on actual production of the system. In the jargon of defense spending, this is known as being "locked into" a contract. The knowledge gained during the research phase undoubtedly provides a competitive advantage in subsequent negotiations—an advantage that usually means the production contract.

Another way for the firm to improve its position over the life of the contract is commonly referred to as "buy in, get well later." Once a contractor has won the contract, if his costs increase or he cannot meet the agreed delivery date, the government will "get him well" by meeting the higher price or accepting later delivery.

Gordon W. Rule, a civilian procurement officer with responsibility for the F-111, the attack

plane whose production has been cut back drastically because of mechanical problems and soaring costs, has told the subcommittee, "No matter how poor the quality, how late the product, and how high the cost, they [the defense contractors] know nothing will happen to them." Thus, the contractors attach the greatest importance to submitting low estimates in order to win the contract even if they suspect at the time that costs will have to be raised later.

Prices and costs can be easily increased during production through the numerous change orders issued (which can potentially number in the thousands on a major system). Referred to as "contract nourishment," these change orders can be initiated by either the government or the supplier, and are not adequately controlled or audited—a point I will elaborate on in my discussion of defense firm accounting practices.

The Subcommittee on Economy in Government has again recommended (in its report of last May) that the Defense Department make greater use of competitive bidding in order to eliminate these problems. If necessary, further legislation should be enacted to make the submission of cost and pricing data mandatory under the Truth-in-Negotiations Act for all contracts awarded other than through formally advertised price competition procedures, and in all sole-source procurements whether or not formally advertised.

Under the conditions just outlined, it does not take much imagination to see how defense suppliers might come to occupy a secure position. Indeed, some companies do almost all of their business with the Department of Defense. In fiscal year 1968, the 100 largest defense contractors were awarded 67.4 per cent of total defense contracts, the highest percentage since 1965. The largest firms hold "entrenched" positions: eighty-four of the firms on the list of 100 largest firms in 1968 had also been on the list in 1967; eighteen of those on the list of the largest twenty-five were on this list in both 1967 and 1968. The five firms doing over $1-billion worth of business with the government in 1967 maintained this volume in the subsequent year.

In spite of their key positions with respect to defense procurement, some of these large firms, such as Lockheed, Boeing, General Dynamics, North American Rockwell, and Litton Industries, refused to appear when invited to testify at recent hearings of the Subcommittee on Economy in Government. To say the least, it appears curious that they would not want to present their views, unless of course they have nothing to add.

Interchanging Personnel

In addition to repeated dealings with these same firms, the involvement or relationship between the Pentagon and its suppliers is reinforced by the common practice of interchanging personnel. Many retired officers leave their procurement responsibilities to take positions with the very firms with which they have been negotiating. At present, more than 2,100 retired officers of the rank of colonel or higher are holding jobs with firms doing defense work. The ten companies employing the largest number of them had 1,065 on their payrolls, an average of 106, three times the average number employed in 1959.

The Subcommittee on Economy in Government, recognizing this conflict-of-interest potential, recommended that the Government Accounting Office compile a defense-industrial personnel exchange directory—a kind of catalogue of the officials who have moved from the Pentagon to defense industries or vice versa. My amendment to the military authorization act calls for yearly Pentagon disclosure of the names of all retired military procurement officers, all those of the rank of major or higher, and all former civilian personnel who occupied high positions (GS-13 or above) in the Department of Defense who go to work for the big contractors. It also calls for annual disclosures of the names of former defense contractor employees who now occupy high positions in the Department of Defense.

What this lack of competitive procedure and

poor business practices means to the government and taxpayers is higher bills to pay for inefficiencies and waste. The higher costs simply do not buy more security. The extensive and pervasive economic inefficiency and waste in military procurement have been well documented by the investigations of the Subcommittee on Economy in Government, by other committees of the House and Senate and by the General Accounting Office.

Assistant Secretary of the Air Force Robert H. Charles testified that "the procurement of our major weapons systems has in the past been characterized by enormous cost overruns—several hundred per cent—and by technical performance that did not come up to promise." He attributed a substantial portion of the waste to cost reimbursement type contracts, and to the absence of price competition.

Richard A. Stubbing, a defense analyst at the Bureau of the Budget, in a study of the performance of complex weapons systems, concluded: "The low overall performance of electronics in major weapons systems developed and produced in the last decade should give pause to even the most outspoken advocates of military-hardware programs."

It has been repeatedly pointed out that the greatest cost overruns occur in negotiated contracts. Even in the absence of overruns, however, evidence has been presented that prices are being negotiated at too high a level from the beginning. Further, a retired Air Force officer, Col. A. W. Buesking, a former director of management systems control in the Office of the Assistant Secretary of Defense, summarized a study he had conducted by saying that control systems essential to prevent excessive costs did not exist.

The cost overruns on the C-5A cargo plane (recently grounded with a wing crack) are the most shocking example of the defense industry's inefficiency and mismanagement. The total cost overrun in the C-5A program has been revealed to be as much as $2-billion. The program originally called for 120 C-5A planes to cost the government $3.4-billion, but because of cost overruns, mainly experienced in the performance of

the Lockheed C-5A contract, actual costs will total $5.3-billion. Last November the Air Force finally conceded that the cost increases made at least part of the program too expensive to continue, and it announced it would buy only eighty-one of the planes.

Still another example is a more than $200-million overrun on the Mark II Avionics program—the radars, computers, and inertial equipment for the F-111. The original contract price was $143-million, and former Secretary Charles has revealed that the actual costs may go as high as $360-million. On the Mark XVII program, the reentry system for the Minuteman, the original contract price was $36.4-million, but the actual costs had reached $70.2-million at the time the contract was ended.

Inefficiencies and Costs

In December 1969, the General Accounting Office reported that the costs of fifty-seven major weapons systems had increased by $21-billion. However, this figure is seriously understated, in my judgment, because of the inadequacies of the Pentagon's cost-information system. GAO found that the Pentagon still does not maintain a central inventory of the major weapons systems that would show their cost and other information.

The cost to the government and taxpayers is further increased, because the government encourages inefficiency. Let me elaborate on this incredible statement. The Department of Defense supplies both fixed and working capital to many contractors. DOD often owns the plant in which the contractor will work. Too frequently the amount of property owned by the government exceeds that of the defense company. Further, a disproportionate amount of this government equipment is held by the larger contractors.

In fiscal year 1968, the amount of industrial plant equipment costing over $1,000 that was used by the defense suppliers totaled $2.7-billion

—a $100-million increase over the $2.6-billion of 1967.

The Pentagon supplies working capital by making "progress payments" that can reimburse contractors for as much as 100 per cent of incurred costs. Incurred cost reimbursement payments might be a better name, however, since progress payments have no correlation to the amount of work actually completed. Under these circumstances money advanced as progress payments really amounts to a kind of no-interest government loan that inflates contractors' profits. Given this "free" working capital, a contractor is in a position to bid low for other government work or to finance commercial work. It is possible for a contractor to incur costs equal to 75 per cent of the original contract price while completing only 50 per cent or less of the job. Not only is the Department of Defense providing a negative incentive for a firm to use its own working capital, but at the same time it is developing a financial stake in the contractor.

In the C-5A case, Lockheed received progress payments of $1.52-billion on reported incurred costs of $1.57-billion, as of May 30, 1969. In addition, the contract is being performed in a government-owned plant. The plant and the government-owned machinery employed at the plant have an original acquisition cost of $113.8-million.

Yet another instance of these most unusual business practices is the government's policy with regard to patent rights. It permits contractors to obtain exclusive patent rights, free of charge, on inventions produced in the performance of their contracts. Admiral Rickover and Murray Weidenbaum (now Assistant Secretary of the Treasury) both contend that this practice further reduces competition because it gives the "ins" a competitive advantage over the "outs." Legislative action should be taken to establish uniform guidelines for all federal agencies on the use of patents obtained for inventions made under government contract.

Admiral Rickover also testified that $2-billion of excessive costs results from the absence of

uniform accounting standards alone. It is difficult to accurately determine costs and profits. "In one case," reported Admiral Rickover, "the Navy allowed a shipbuilder to charge salaries and other pay directly on government contracts, while similar costs on commercial contracts were charged as overhead and allocated to both government and commercial work. The government was thus paying directly for work done on commercial contracts. The Navy had accepted these costing methods because, it said, the contractor's system conformed to generally accepted accounting principles. In this particular case the GAO eventually found that the government had been overcharged by more than $5-million."

To quote Admiral Rickover further on the problems of accounting standards, "Thus, contractors can use change orders as a basis for repricing these contracts. They have almost unlimited freedom in pricing change orders, because their accounting system will never show the cost of the work. The government can never really evaluate the amounts claimed, or check up to see if it paid too much."

Keeping Records

The Subcommitttee on Economy in Government has recommended that the Department of Defense require contractors to maintain books and records on firm-fixed-price contracts showing the costs of manufacturing all components in accordance with uniform accounting standards.

Not only should there be tighter control on cost records, but something must be done in the area of profits. The Department of Defense cannot accurately state what profits are in defense procurement. First, it defines profits as a percentage of costs, and does not report profits as a return on investment. Second, the Department of Defense does not obtain complete information about profits on firm-fixed-price contracts. Third, without uniform accounting standards, it is diffi-

cult, if not impossible, to discover the costs and profits in defense production unless months are spent to reconstruct contractors' books.

Many witnesses have told the subcommittee that profits in defense are higher than nondefense profits. Murray Weidenbaum found in his study "that between 1962 and 1965 a sample of large defense contractors earned 17.5 per cent net profit (measured as a return on investment), while companies of similar size doing business in the commercial market earned 10.6 per cent."

Profits should also be considered both as a percentage of costs and as a return on investment. Since the Department of Defense supplies fixed and working capital in many cases, defense contractors would show an enormously high return on investment if it were computed.

Another recommendation of the subcommittee is that the GAO study the feasibility of incorporating into its review of contractors the should-cost method of estimating costs on the basis of industrial engineering and financial management principles. In this way, cost estimates could be freed from being based on original estimates that may be inflated.

Finally, we can point to a relation between defense spending and inflation. Both the Korean war period and the Vietnam era have been accompanied by price increases; this suggests that defense expenditures have made significant contributions to inflationary pressures. The consequent reduced value of savings and fixed income assets during periods of inflation and the 10 per cent income tax surcharge are certainly taxpayer burdens as much as the high cost of the defense budget.

High interest rates may eventually stop the inflation, but they hurt the homeowner, the aged, the consumer, and the small businessman in the process. A more intelligent way to curb the price spiral would be to cut defense costs.

The record is clear. Our priorities as a nation need to be restructured, and the place to start is with the bloated defense budget. Only when Congress is again in control of the entire budget can we make progress on the domestic front.

Teacher's Guide

The Pentagon vs Free Enterprise

by Senator William Proxmire

Questions

1. How large a part of our Gross National Product does military and military-related spending represent?

2. Has the Budget Bureau in the past given equal scrutiny to military as against civilian spending?

3. How much could be cut from the military budget without diminishing national security, according to the author?

4. What is the largest item in the military budget?

5. What proportion of military contracts are awarded through competitive bidding?

6. What is the practice the author described as as being "locked into" a contract?

7. Why does the author say that higher military procurement costs do not buy more security?

8. What does cost "overrun" mean, and what effect does it have on our military spending?

9. Are profits of defense contractors, measured against investment, higher or lower than non-defense companies?

Projects

1. Analyze the most recent Federal budget. What percentage of Federal spending is for defense or defense-related purposes? Break down the defense budget into its major parts.

2. Study a list of America's 50 or 100 largest corporations. Which of them largely depend on defense contracts? How many of them do some military contract work?

A New Plant Meets a New Age

By BETSY FANCHER

Photos by AL CLAYTON and FREDERICK C. BALDWIN

Beaufort, S. C.

South Carolina's Port Royal Sound, with its sky-blue estuaries, oak-forested islands and vast, undulating marshes, has been a debatable land since it was first sighted by the Indian slave trader Pedro de Quexos on Aug. 18, 1521. The discovery ushered in the spiritual tyranny of Spanish Catholicism among the Indians. A hundred years later the island was christened Hilton Head by Capt. William Hilton, who claimed it for England and returned to Carlisle Bay in January of 1664 to report on the rich yield of fish, game, wild fruit and fowl. "The ayr is clear and sweet, the country very pleasant and delightful. And we would wish that all they that want a happy settlement of our English nation were well transported here."

The first amphibious battle in U. S. military history was fought at Hilton Head Island on Port Royal Sound in 1861, when 13,000 federal marines overran the Confederate Fort Walker. Another battle followed: a battle of the spirit. The Port Royal Experiment was undertaken when dozens of young abolitionist missionaries—Gideonites they called themselves—settled in the area to deliver the newly unshackled slaves of Hilton Head and its neighboring islands into the promised land of New England liberalism. Here a peace corps of Harvard and Andover graduates, Unitarian missionaries, noted abolitionists and Yankee school marms forged philosophies of separatism, "Heart Power," reparations and land redistribution which made Hilton Head a national showcase of radical reconstruction. But these philosophies collided violently with Northern racism when Union troops went berserk on St. Helena's Island. They slaughtered the livestock and attacked the Negro women "like marauders in an enemy's territory," wrote Laura Towne, school mistress of the little hayloft school at Frogmore which was to grow into the Penn Community Center, now a training ground for community action.

Today Port Royal is the site of yet another battle—a conflict between economic development, represented by those supporting the location of a giant German chemical plant, and an unmarred environment, represented by a group of outraged developers, fishermen, conservationists and private citizens. The conflict between industrial development in an underdeveloped and hunger-scarred region and the growing national desire to protect the environment has become a great debate of the 1970s, a bitter struggle involving human resources, natural resources and contending profit motives.

In Beaufort, the town nearest Hilton Head, the principal combatants in what has become a prototypical battle in the new age of ecology are, on one side, the American subsidiary of the West German dye and chemical giant, Badische Anilin- & Soda-Fabrick, A. G., a corporate offshoot of I. G. Farben, and, on the other side, a coalition of Hilton Head developers and three commercial fishing companies, including the all-black Hilton Head fishing co-operative, which have filed suit in federal court seeking an injunction against the plant's construction on the grounds that it would "kill or render unfit for human consumption the shrimp, crabs and oysters in the fishing waters."

But there are other conflicting elements which involve the entire community of Port Royal—a region of violent contrasts whose citizens range from those Gullah Negroes who still hold to ancient rituals of their African forebears to the wealthy retirees on Hilton Head, which boasts one of the largest concentrations of Who's Who listees in the nation.

Solidly supporting BASF is the state political hierarchy, ranging from Gov. Robert McNair, who journeyed to Germany to entice the world's largest chemical corporation, to local legislators James Waddell, who has recently exercised his option to buy property adjoining the plant site, and Brantley Harvey Jr., a lawyer who represents BASF. With them stand the local NAACP, the director of the local OEO office, the Beaufort Chamber of Commerce and a strong coalition of citizens, "The Peoples Association," including John Trask, one of the county's wealthiest businessmen, and Hazel Fraser, who heads the local branch of the National Welfare Rights Organization and who will tell you she learned about pollution as a child growing up on the edge of Beaufort's city dump.

Ranged against them is another citizens group, "Progress Without Pollution," headed by a retired vice admiral and CIA deputy chief, Rufus Taylor of Frogmore. This group is composed largely of retirees on Hilton

Betsy Fancher, until recently senior editor of ATLANTA Magazine, joins the staff of SOUTH TODAY with this issue as associate editor. She has contributed to the SATURDAY REVIEW, the SATURDAY EVENING POST, ESQUIRE, HOLIDAY and other publications. Her second book, THE LEGACY OF THE GOLDEN ISLES, will be published by Doubleday this fall.

The Standards Change

BY EMORY F. VIA

Emory F. Via is director of the Resources Development Center of the Southern Regional Council, which commissioned this report. Reprints are available for 20 cents each from the Council, 5 Forsyth St., N. W., Atlanta, Ga. 30303.

For many years it has been widely accepted that a major solution to Southern problems would be found in industrial development. Gradually, an awareness has developed that in attracting industry the region could do itself a disservice if certain standards were not applied. In large measure the standards were informal. They applied primarily to the quality of the prospective industry—the quality of jobs offered and likely stability of the company in its new location. There was also concern about whether too many concessions would have to be made by state and local authorities.

With the advent of the anti-poverty and civil rights movements, new standards have been suggested. What will be the impact of the plant on low-income training opportunities? Will equality in training and job opportunities be fully practiced by the company?

The accompanying report raises some of the older questions but adds to them a pressing new standard. What will be the effect of a new plant on the environment? Today we are more aware than ever that a new industrial plant may damage wildlife, limit man's enjoyment of a "natural" place, harm other useful economic activities, and contribute to the growing threat to man's survival.

Betsy Fancher's report is about the attempts to locate one plant in an industrially undeveloped area. In large measure the arguments for and against location have been carried by contending economic interests. In this case, there has been a distressing lack of information on key issues. Further, state agencies seem to have eschewed their regulatory or fact-gathering roles in favor of a partisan stance.

It is appalling that there were no reliable predictions of the economic impact of the plant on the surrounding community and that there was no estimate of the impact of pollution on the local economy. Indeed, there was no revelation of the real nature of the proposed plants effluent and whether in fact it could be made harmless.

A large portion of Beaufort County's citizens are poor. It can be fairly said that the social and economic arrangements that affect their lives either cause that poverty or have failed to provide a way out of it. Their plight is too great to go unheeded. We cannot adequately solve their problems or protect the environment unless the proper questions are posed and unless meaningful answers are given.

Head Island. It is a small David compared to the BASF Goliath, but it is armed with the findings and recommendations of a Conservation Symposium sponsored in January by Fred Hack, president of the Hilton Head Co., and led by his brother, naturalist Orion Hack. These two developers have created at Port Royal Plantation one of the most prestigious spas on the coast, a posh development where rookeries of rare birds and an arboretum of hundreds of indigenous trees and plants bespeak their respect for the integrity of the landscape.

Still more forces are involved. Most notably there is the conflict between the State Development Board, which regards BASF as Beaufort's first major inroad into the industrial revolution, and ecologists who believe a highly automated chemical plant poses both an economic and an ecological threat to a community now supported principally by fishing and tourism. There is the conflict between "progress" and a balanced ecosystem—a particularly delicate ecosystem of estuaries and marshes which is one of the last unpolluted estuarine areas on the South Carolina coast. There is the conflict between outdated state pollution control laws and the new ecological sophistication of the seventies, between agencies such as the powerful State Ports Authority and private citizens such as retired chemist and orchid grower Dr. Amiot Hewlett, who has filed suit against the authority for mishandling of funds. And there is the swirling private controversy—"hotter than anything since the Civil War," says Port Royal writer-publicist Ralph Hilton—which has severed families, split most of the old-line power structure alignments and put articulate black leaders like Tom Barnwell, secretary-director of the Hilton Head Fishing Co-op, and James Richardson, Beaufort shoe repairman, in opposing camps.

By April the conflict had become a national issue heated enough to force Secretary of the Interior Walker Hickel, in a precedent-shattering move, to issue a statement warning BASF that the department would "strenuously oppose" degradation of the plant site's water quality or dredging that might harm fish or wildlife.

Secretary Hickel's letter to BASF's president, Dr. Hans Lautenschlager, which Gov. Robert McNair criticized as ambiguous, was variously interpreted by the news media as saying that he threatened government intervention unless environmental safeguards were guaranteed or that he warned of governmental intervention if existing water quality standards were violated. Actually, Secretary Hickel noted that "the area in question is a splendid estuary virtually free of pollution" and said "our scientists and engineers advise that it is technically feasible to construct a plant with no effluent that would completely protect the existing water quality of the area. This department would strenuously oppose any action which would result in degradation of that water quality."

And in a letter to Army Secretary Stanley Resor dated March 26, Hickel noted that BASF officials "have not as yet provided us with assurance that means and measures will be taken to prevent damage to the environment. The channelization of the rivers and sounds to serve the plant may also have a severe adverse effect on the environment of the area now in splendid natural condition. We cannot at this time support a federal project which is not consonant with the interest of this department and the Environmental Policies Act. We would strongly oppose such a project."

Both statements were strong enough to force BASF to temporarily suspend plant construction until "the responsible federal agencies have time to formulate the requirements that will be made of us," according to a letter to Secretary Hickel from BASF officials. On April 14, word leaked out that the plant had abandoned its plans to build in Beaufort County, but the following day the rumor was squelched after a breakfast meeting between Gov. McNair and Dr. Hans Lautenschlager, who said the company would maintain "a holding action" until

"problems can be worked out by the federal and state governments." Later, Bernard Timms, chairman of the board of BASF, said the firm was prepared to wait until the end of the year before making a decision to shift sites. With the firm's purchase last year of the Wyandotte Chemical Corp. in Wyandotte, Mich. "we luckily obtained sufficient grounds to allow us to switch quickly from South Carolina," he said, provoking a howl of protest from legislators who feared that other industries which have shown an interest in locating in South Carolina would look elsewhere because of the controversy generated by BASF's proposed plant.

Clearly the battle was not over and might not be for a long time. If it should terminate abruptly with BASF's withdrawal from South Carolina, it would only have set the stage for similar environmental skirmishes in other areas of the nation. In the lull, Sen. Edmund Muskie announced that he would take his environmental subcommittee on air and water pollution to Hilton Head to hold public hearings on the proposed chemical plant, tying that trip in with a similar one to Machiesport, Maine, where large oil refineries are being proposed. "The dilemma that faces us in Maine and in South Carolina is the conflict between needed economic development and our commitment to protect the environment," said Muskie. His subcommittee expects to query concerned citizens, ecologists, pollution specialists and other technical experts on such issues as the environmental risks associated with huge supertankers; the ecologocial implications of industrial waste discharges on estuarine environments; application of "maximum feasibility control

techniques" for abating pollution in new industrial facilities; and the possibility of requiring closed-cycle environmental systems, where treatment could be done within the plant without harmful discharges into the ocean.

The moratorium, however brief and troubled, also gave South Carolina an opportunity to launch an Estuarine Environmental Study, directed by Clair P. Guess, executive director of the Water Resources Commission, to "establish base-line environmental conditions" in and around Port Royal Sound, the Colleton River, Calibogue Sound and Victoria Bluff, site of BASF's proposed chemical complex. Hopefully the study would provide a sound basis for establishing guidelines for the management, protection and development of the state's tidelands; reveal basic data for new policy development; and enable South Carolina to participate more fully in two ongoing federal programs aimed at establishing a national policy and a national program for the management, protection and development of the land and water resources of all the nation's estuarine areas.

The Need for Jobs

In October of 1969, when BASF-US and Gov. McNair first announced plans for the $200 million dollar petro-chemical plant at Victoria Bluff on the Colleton River, it seemed a boon to poverty-ridden Beaufort and Jasper Counties, which had become national symbols of hunger and human deprivation.

Only a year earlier, Dr. Donald Gatch of Bluffton had testified before a House investigating committee that 73 per cent of the children of Beaufort County were infected with worms. Responding to persistent accounts of hunger along the South Carolina coast, Sen. Fritz Hollings of South Carolina had launched a much-publicized investigation of malnutrition. It produced a great outpouring of food and clothing from all over the country, conscience money for the tragic fact that next to such bastions of affluence as the Sea Pines Plantation and Fripp Island resorts, 125 black Americans on Daufuskie Island were drawing their water from a single contaminated well, suffering from parasites and living out their days in desolate shacks without privies on the meager benevolence of a monthly welfare check.

Charles Fraser, developer of Sea Pines Plantation, and Fred Hack, of Port Royal Plantation, launched a hookworm study on Hilton Head Island. Medical students from as far away as Costa Rica came to the tiny, storied hamlet of Bluffton to help with the work of Dr. Gatch. Foodstuffs kept pouring in to be stored in the barns of Jasper and Beaufort Counties and the poor for the first time found voices in the emergent black leadership—women like Hazel Fraser, the mother of 10 children, who is a militant spokesman for welfare recipients, and men like Charles Simmons of OEO, both of whom are now staunch defenders of BASF. To them and to others interested in economic development, the long-term solution lies in the paycheck, in enticing industry into an area which for the most part has been bypassed by the 20th century.

Probably no one—not Gov. McNair, not State Sen. James Waddell or Reps. Graves and Harvey, and most certainly not the Beaufort Chamber of Commerce—could have predicted the furor that the company's arrival at isolated Victoria Bluff would provoke. The state's political leadership had scored a triumph of industry seeking—but as one critic put it, it was on a 1940s level. Few states ever offered more lucrative inducement to industry. Among these were the sale by the Ports Authority of over 1,800 acres of land at about one-fifth the real value; the promise to build at state expense a 14-mile railroad into the site; the promise to build dock facilities and watersheds at the site and sponsor-extensive dredging of approximately 10 miles of channel; and a moratorium on county taxes except school taxes for five years (a favor customarily given to all new industries). While these concessions were legally binding, a report released by Fraser's Sea Pines Corp. said that the state also had promised BASF to provide the final-stage treatment of the effluent from the plant prior to discharging it into the Colleton River (an allegation denied by Clair Guess) and to provide the necessary water canals for millions of gallons of water a day through the Beaufort-Jasper Water Authority.

Resistance Grows

There had been little unfavorable reaction to BASF's original announcement on Oct. 2 that it planned to construct a $25 million dyestuffs and plastics plant on the Colleton River. But resistance mounted when, on Nov. 26, the firm announced its plans for an additional $100 million dollar petrochemical plant in the same area if the Nixon administration would grant the firm an "oil import quota," that is, an exemption from taxes on imported naphtha. Soon after this it was disclosed that BASF had filed a request with the Department of the Interior for a permit to import 40,000 barrels of petro-chemical per day free of tariffs. Meanwhile, the South Carolina State Ports Authority was petitioning the U.S. Department of Commerce for a duty-free trade zone for Charleston, with "Port Victoria" as a subzone.

Critics of BASF estimated that the state's concessions amounted to approximately $7 million in tax money, while the oil import quota requested would be worth some $20 million dollars a year in tariff exemptions. They also estimated that it would be "late in the eighties" before any return could be realized on the heavy investment in additional county costs, police protection, schools, roads, railroads and docks and the federal government's dredging operations—an investment which would soon become the burden of the taxpayer.

But, unquestionably, BASF was bringing jobs to the area. In early April, the plant director, a razor-sharp physicist, Dr. Herbert Ende, told the Southern Regional Council that BASF expected to hire 1,800 construction workers on the site at a payroll of $15 to $20 million. (The question of unionized labor was adroitly ducked, although it was known that plant officials had been getting estimates from Daniels Construction Co., one of the largest non-union construction employers in the South.) The initial dyestuffs plant, due to open at the end of 1972, would, according to Dr. Ende, hire some 600 employees, a work force composed of 25 per cent unskilled labor, who would, he said, have to be able to read scales and tables; 25 per cent semi-skilled labor; 25 per cent skilled; and 25 per cent supervisory. The work force would be drawn from the area, and unskilled workers could expect to draw a salary of $4,000 to $5,000 a year, in contrast to the "$800

average yearly pay" which he says they now earn. "And these are secure jobs, not seasonal," he emphasized. He also estimated that the plant's satellite industries would create another 7,500 jobs a year, a figure which BASF's critics term outrageously exaggerated. BASF's training program would be closely linked to the Technical Education Center in Beaufort, said Dr. Ende, adding that plans had been drawn for an $8 to $10 million additional facility to be financed by the State of South Carolina, plans which are now languishing on the drawing boards.

Developers Fred Hack and Charles Fraser countered BASF's promise of jobs by offering to purchase the company's Victoria Bluff site for an industrial park for non-polluting industry and for a Disneyland-type amusement center, "Seven Flags Over Port Royal," modeled on Atlanta's "Six Flags Over Georgia" and Texas' "Six Flags Over Texas," but admittedly not as large. According to a joint statement issued March 30, "Seven Flags Over Port Royal will be a public corporation with shares of stock selling low enough so nearly everyone can buy a piece of the action—those who will work there and those who will not."

The county's poor were skeptical of both Ende's claims for job opportunities and the developers' proposed park. While Ende had said at a public meeting at the Robert Small School that jobs at BASF would be offered on a first-come first-served basis, the company never answered the public challenge of Tom Barnwell, secretary-director of the Hilton Head Corp., to "spell out exactly what kinds of jobs they will offer and what kind of education and training these jobs will require." And Charles Simmons, after reading a newspaper account of the proposed "Seven Flags over Beaufort," said cynically: "There're a few questions I'd like to ask Mr. Fraser—like what's the pay scale going to be? How many months of the year will people be employed? Will they be college students or blacks? And just what is their feeling toward any industry coming in, say another plant equal in size to BASF? Isn't it true the tourist industry would resist any plants? They keep getting away from that. Here we are, no smoke, no smog. And they say we have no welfare recipients. Right now there're 1,055 and 122 pending this month."

Tourism and Fishing

Both Fred Hack and Charles Fraser point out that Hilton Head Island has already provided 2,000 jobs in resort and construction activities, producing 26 per cent of the county's total taxes. Fraser supports the economic stability of tourism by taking visitors to the site of Harbour Town, now rising like some improbable Mediterranean Village at the northern end of Hilton Head Island. At 4 p.m. on an average day one finds a large crew of black workmen—four to every one white, claims Fraser—laying concrete block in a mini-city of villas and town houses, shops, studios, galleries and bistros set around a circular harbor gashed by sleek yacht slips and dominated by a candy striped light house.

Fraser says his block masons make about $4 an hour and the construction payroll is expected to rise swiftly with the accelerated construction of Harbour Town. But this innovation in high-density living has been dismissed by some conservationists as "cosmetics for rape."

What type of industry is best suited to Beaufort County? A study of the entire coastal plains area, commissioned by the Coastal Plains Regional Commission, has been made by the Battelle Memorial Institute, Columbus, Ohio, and was published in January, 1969, under the title, "The Potential for High Technology Industries in the Coastal Plains Region." Its recommendations: non-electrical machinery, printing and publishing, chemical industries and other candidates in the paper, stone, clay and glass products. But quite specifically, it mentioned oceanographic research as an appropriate enterprise for unspoiled estuarine areas.

Both BASF and its opponents seized on one recommendation of the report—the need for "labor-intensive" industry. While BASF argued that it was bringing to Beaufort a labor-intensive industry, developers argued that the report did not list dyestuffs, chemicals or petroleum as "labor intensive" but defined them as companies paying high wages and using professional and skilled people only.

Actually the report went on to say that petroleum refining did account for a significant number of related jobs and estimated that for every 100 new refinery jobs in the coastal plains region, the multipliers would lead to a total new employment of between 260 and 280 jobs. But the report did not deal in depth with the complicated factors of environment and pollution, the possibility

'There must be ways Beaufort and industry can live together...'

that one new industry could damage or even destroy existing industries and the fact that industrial site selection should be based not only on the economic needs and the labor and natural resources of an area but also on its total ecology, the vast network of natural elements whose interrelationship is so delicate and vital that "to pull one thread is to unravel the whole tapestry," as one ecologist puts it.

BASF staunchly maintained that it would not damage Port Royal's unique ecology of marshes, estuaries, beaches and fishing waters. Yet Dr. Ende also maintained that recycling of the plant's effluent—whose heavy metal content was never officially revealed—was impractical. "Yes, it is possible to recycle. It's possible to go to Mars or to put a city on the North Pole, but it's not economically feasible," he said in an interview for this report. BASF did consistently state, however, that it would abide by state and federal air and water pollution control regulations. "We do *not* pollute," said Dr. Ende, strenuously denying charges that the BASF plant in Ludwigshaven was creating severe pollution in the Rhine. He dismissed the whole pollution controversy as a red herring. "Pollution is simply *not* an issue," he insisted.

But pollution was *the* issue according to the developers, the fishermen, private citizens and militant conservationists who opposed BASF. While neither BASF nor the State Pollution Control Authority gave out any specifics about the plant's effluent other than to say it would be a "mild saline solution," the Beaufort Citizens Association obtained from what it termed an unimpeachable source the information that once BASF had, in accordance with South Carolina law, removed 85 per cent of the heavy metal content of the effluent, it would still contain 22 pounds of copper and nine pounds of zinc a day.

This estimate, according to Guess, was contained in what he termed an "earlier, hypothetical report" on the effluent of the proposed BASF plant drawn up two years ago by a Georgia engineering firm and submitted to the State Development Board. "We never had any approximation of the effluent," Mr. Guess said, "no formal statement. They (BASF) hadn't finished that part of the design. It's on the drawing boards right now."

It was on this original description of the effluent that BASF's foes took their stand. The heavy metal concentrate of zinc and copper was "a concentration approximately 1,000 times that of the waters in which it will be dumped," Dr. Herbert L. Windom of the Sidaway Oceanographic Institute told a public hearing before the South Carolina House of Representatives in Columbia on March 3.

Noting that this in itself would be a serious problem to the ecosystem of the area, he stated that the zinc and copper injected into the water would be deposited in the bottom sediments of the Colleton River, where "the burrowing organisms" which depend on sediments for food would acquire dangerous concentrations of the heavy metals. These concentrations would pass on through the food chain to higher organisms such as shrimp, oysters and fish which would prove "not only harmful but even fatal to man."

Certainly the Hilton Head fishermen felt that BASF's effluent would be dangerous enough to soon place the estuarine waters off limits to commercial fishermen. Henry Driessen of the Hilton Head Fishing Co-op told the hearing that BASF's pollution potential threatened not only his livelihood but his whole way of life. "A fisherman losing his boat is like losing his life. And to be able to adjust to a new type of job is like taking a fish out of the water—he would not last long."

BASF's opponents found little comfort in the corporation's promises to abide by state laws. The laws, some of which have since been amended, were at the outset of the controversy "outdated and totally inadequate," according to Orion Hack, who led the Conservation Symposium that brought the controversy into the national spotlight and give birth to South Carolina's first two conservancy groups, one a political action group which he heads. Both he and Sea Pines developer Charles Fraser were especially critical of what they called "the grandfather clause" of the South Carolina Pollution Control law of July, 1969, which could exempt an industry from any pollution control regulations for five years if "no practical method of disposal or treatment is known" and could exempt it for still another five years if officials could show any evidence of having tried to control pollution. Another objection they saw to the law as it then stood: the individual who suffered financial injury as as result of industrial pollution had no redress for his loss, except, according to Clair Guess, through the state's "riparian act," which affected only those who might have polluted waters flowing past their property.

BASF's opponents also objected to the administration of pollution control laws. Administration is vested in the State Pollution Control Authority, operating now under the State Board of Health. The authority is made up of two members each from the State Board of Health and the ranks of labor and one member each from the Cotton Manufacturers' Association, the pulp and paper industry, the South Carolina Wildlife Federation, the Municipal Association and the farmers of the state, with the state health officer as chairman. "Not a scientist in the bunch," commented Orion Hack, not without bitterness. Said Charles Fraser: "The majority of the board has an economic interest in setting standards sufficiently low so no money has to be spent on pollution control. Every five years they grant extensions to polluters and the private citizen has no right to sue." And Bill Marsher, who wrote a status report entitled "Efforts to Save the Port Royal Sound and Coastal Area," points out that federal authorities have stated that the existing authority, to be effective, should increase its staff from the present authorized level of 37 to a minimum of 110. Early in the battle these developers were plugging a new bill which would make the South Carolina Pollution Control Authority an autonomous agency, set up local authorities for control at the local level, eliminate the "grandfather clause" and provide the individual the right to sue for any damages suffered through violation of an anti-pollution law or ordinance. The bill was passed in the last hours of the closing session of the legislature April 24.

Questions and Answers

While Adm. Taylor maintained that BASF could pollute Port Royal Sound without violating any existing laws, jeopardizing a fishing industry which provided some 3,000 jobs in the Beaufort area, Orion Hack also was concerned about aesthetic contamination and destruction of the naural beauty, clear waters and dazzling white beaches which are the basis for a recreation industry providing another 3,000 jobs. Even if the earlier stages of BASF's development left the beaches of Hilton Head intact and its waters uncontaminated, there might be the prospect of oil spills once the naphtha cracking plant was in operation.

The January Conservation Symposium, was underwritten by Fred Hack, who has also underwritten half of all the legal fees in the fight against BASF. Participants included scientists, naturalists, journalists, conservationists, engineers and oceangraphers from all over the country. They posed some hard questions for BASF—questions which have yet to be answered. Among them: What will be the content and volume of the proposed effluent? What are the specific characteristics of the adjacent ecosystem, including biotic, chemical and physical factors? Who will process the effluent from the plant? What will be the feasibility and impact of the dredging and maintenance of the proposed 50-foot shipping channel? What will be the effect on the shallow aquifier? What will be the effect of the channel and maintenance structures on beach erosion and water circulation patterns? What will be the influence on other industries in the area, specifically tourism, sports and commercial fisheries?

The symposium strongly recommended that a moratorium be immediately imposed on the location and construction of new industries and dredging and filling activities for the new development in the region covered in the South Carolina Water Resources Tidelands Report—a report whose recommendations they urged be reinforced by legislative action.

In a little-publicized tidelands report, issued late in 1969, the foes of BASF had a strong weapon. Though commissioned by Gov. McNair in 1968, it included findings which obviously had not influenced the

state's choice of a plant site for BASF. But the report, the work of 13 state agencies and six federal agencies, contained an exhaustive study of the tidelands of South Carolina, the estuarine systems, fish and wildlife resources, surface and ground water resources, mineral resources, beach erosion, water pollution and agriculture. It also studied in detail such 20th century inroads into the ecosystem as recreation and tourism, navigation, port facilities, water-oriented industrial development, highways and roads. Its recommendations, if translated into legislative action, could well make South Carolina one of the nation's most advanced states in the field of estuarine concern.

Specifically, the report calls for an Interdisciplinary Tidelands Unit to plan, preserve and manage South Carolina's 450,000 acres of tidelands resources. This unit would have legislative authority to zone the tidelands area "according to the most desirable priority use for given portions," and would have final say in all permits for construction, "use and/or alteration of the tidelands environment."

In Beaufort, both the poor blacks and the well-to-do merchants, in a new and uneasy coalition, felt that the plant offered the first viable alternative to the poverty that has plagued the area since its golden era as a capital of the sea island cotton kingdom.

Many BASF opponents soft-pedaled the poverty issue. But an OEO profile of the county, drawn up from the last available data (1966), documented the facts and figures of deprivations.

Fact: 30.7 per cent of the families in Beaufort County, which includes affluent Hilton Head and Fripp Island, received incomes of below the social security administration poverty cutoff in 1966, compared to 22.6 per cent of families in the typical U. S. county.

Fact: $517 in retail sales were transacted for each person living in Beaufort County in 1966, contrasted to $1,204 at the national norm.

Fact: 20.5 per cent of the population of Beaufort County had failed to complete more than four years of school in 1960, contrasted to a national norm of 7.8 per cent.

Fact: 2,857 infant deaths per 100,000 live births occurred in Beaufort County in 1964, compared to a national norm of 1,700.

Fact: 60.1 per cent of all poor families in Beaufort County are non-white residents of rural areas.

The Promise of Jobs

Dean J. Poucher, executive vice president of the Chamber of Commerce, who as the "Sea Island Sportsman" gives twice-daily radio reports on local sports fishing catches, estimates that BASF's presence in the Beaufort community would result in 650 new industrial jobs, in addition to the ones the chemical company would supply. And he predicts that about 30 retail operations would be established in the area to satisfy the larger market. He was among the civic leaders who presented the BASF president a petition containing 7,418 signatures of BASF supporters saying they were concerned about the "vocal minority" which opposes the plant's location at Victoria Bluff.

"I'm for it (BASF) 100 per cent," Charles E. Simmons Jr. of the Beaufort-Jasper OEO told a reporter. He noted that BASF had promised better jobs, promotional opportunities, a recreation center, swimming pools and a medical center for its employees. "They've also said they will guarantee loans to enable people to get better housing," he said.

Other blacks were skeptical of these promises. Three members of the Hilton Head Corp., had accompanied Orion Hack to Freeport, Tex., to view BASF's styrene plant there. They had found the employees living in rented trailers, had been told high school was a minimum requirement for employment and had noted that the much-vaunted training program was housed in a small, under-equipped metal building. Accustomed to the beauty of the Carolina coast they were stunned by the bleak squalor of the Freeport area. If industry did indeed bring affluence, they saw little evidence of it at BASF's Texas site.

Aesthetics held little interest for black matriarchs like Hazel Fraser, who supports 10 children on food stamps and a welfare check. As head of the local National Welfare Rights Organization, she is widely known for her militant protests against job discrimination. "You talk about pollution. When I was a young girl coming up I lived in front of the city dump. It had been there for years. The city dump right in my front yard. If that isn't pollution, what is? Garbage—all that garbage—but it didn't matter because there were nothing but blacks." Standing in front of her little brick home, barefooted, a gargantuan woman in a tattered blue dress, she folded her arms stolidly over her chest. "Nobody would want the water polluted. But a lot of men need work. You see them on the street corners, just waiting. For years every time you hear about a large factory, something would

happen, something to stop it from coming. They say anybody who'd want BASF to come here is crazy. Probably I'm in that crazy group. Charles Fraser, he's got something going for him. But he's got a fight coming."

'This Ecology Bit'

From his little office in Bluffton, Dr. Donald Gatch surveyed the controversy with some bitterness. "Creative energy is being used to fight things that don't exist. I'm mad at America for being on this ecology bit. These people who fight BASF have made their money polluting. Now they expect the poor to clean up their mess. Instead of improving people's lives, they're dealing with external things."

John Gadson, director of the Penn Community Center, noted: "There's been a history of some kind of opposition to any industry that tried to come in here, not just BASF. We've got to make up our mind whether we will be industrialized or whether we will just be a beautiful resort. BASF will attract others. A lot of people are inclined to let the jobs come. There just aren't enough jobs on the bottom level, and people need jobs, they need them more than just a part of the year. Hilton Head and Fripp are low and seasonal. For waitresses, the hotel rate is $1.30 an hour, not $1.60. They say they're paying the minimum wage, but we have our doubts," he said. He had his doubts too about BASF, doubts about the real potential for pollution, doubts about their employment practices.

Dr. Gatch was suggesting a "health unit" manufacturing plant, entirely controlled by blacks, to manufacture the health unit which he designed several years ago as the answer to Beaufort County's housing problem, a unit that would include a kitchen, sewerage and running water, a prefabricated unit that could be put into place in one day, and that could be purchased for $750. He also was hoping to step up plans, already in motion, for paramedical schools in the area under the sponsorship of Harlem Hospital, an arm of Columbia University.

While the Battelle report had recommended labor-intensive industry for the coastal plains area, and the tidelands report had recommended higher state water quality standards, most observers hoped to solve Beaufort County's dilemma by attracting light non-polluting industry to the area. By mid-April some of BASF's most powerful foes, who had drawn on Sen. Strom Thurmond to enlist Secretary Hickel in the controversy, were turning to Congressman L. Mendel Rivers of Charleston, hoping to enlist his support in attracting an aircraft assembly plant, similar to Savannah's Grumman, into beleagured Beaufort County.

To the Capital Cities

BASF, concerned about its international image, slipped quietly into the background, leaving the State Development Board to represent its interests. This was one more state concession, according to the company's foes. Sen. Ernest F. Hollings entered the fray, stating in a letter to a Beaufort newspaper that "the state was on the sell. It was promising railheads, dredging, docking facilities and everything else to attract BASF and no emphasis was placed on anti-pollution requirements." By the end of the month, the battle had shifted to Columbia to erupt on the floor of the General Assembly. In a rare closing day speech, Gov. McNair accused BASF's foes of threatening the state's industrial development in the name of pollution. "While we welcome the new and growing public concern with regard to control of this earth's environment," he said, "we deplore the activities of the few citizens of this state who would attempt to use this legitimate issue as a means of tarnishing the image and reputation not only of BASF corporation, but of the entire state as well."

The General Assembly supported his stance by passing two resolutions, one urging Secretary Hickel to assure that pollution pronouncements made for South Carolina should be applied uniformly and another pledging cooperation to the BASF corporation. But in those last few hours of the closing session the legislators also greatly strengthened the state's pollution control laws, making the Pollution Control Authority an autonomous agency by July 1, 1971, and expanding it to 13 members. Special interest groups such as the textile manufacturers and labor were eliminated from specified representation on the authority. The House and Senate compromised to include a provision that pollution shall be unlawful when it interferes with the enjoyment of life or use of property, and an individual was given the right to sue for damages when his property is polluted. The final bill also provided penalties for accidental pollution of the air or water. The controversial "grandfather clause" had been eliminated in an earlier bill.

Three days later, two members of the Hilton Head co-op and three members of the resort development community who had embarked on a shrimp boat excursion up the inland waterway, to promote new industry for Port Royal and present Secretary Hickel with an anti-BASF petition bearing a reported 45,000 names, arrived at their destination. Secretary Hickel met them at the dock and told Orion Hack before a battery of newsmen: "Your cause is right and it will prevail. The waters of the bay belong to the people. Existing industries must be protected. We cannot prevent the plant from being built but we can and will insist that any water returned to the bay be in exactly the same condition it was when taken out."

Back in Beaufort, James Richardson, president of the Beaufort County Voters League, was rallying the county's poor for a bus trip to Washington to lay their case before the Department of the Interior. "The majority of people want BASF to locate here," he said. "Last year everyone was talking about people starving here. Now they've ruined our chance to help the overall economy."

And a mass rally was held on Hilton Head Island by the "United Citizens for the Poor" under the leadership of the Rev. Cornelius Hayes, pastor of Beaufort's Grace AME Church. He told newsmen: "We would have our friends across the nation to know that we are still poor, we're still infected with worms, and because of the basic food diet, the awful statistics stated by our distinguished senator (Hollings) are still with us."

But was BASF the answer? The firm could promise no more than 150 jobs for unskilled workers and Dr. Ende indicated these would go to the most qualified applicants, not necessarily residents of Beaufort County. While he was still denying that pollution was an issue, BASF's petrochemical plant in Wyandotte, Mich., was closed by order of that state's attorney general for the deadly mercury contamination of Lake St. Clair. Its waters are now off limits to commercial fishermen and the sale of fresh-water fish is prohibited. Pollution suits have been filed against Wyandotte in Ohio and Michigan.

'Clear and Sweet'

In Beaufort this spring, the air was "clear and sweet, the country very pleasant and delightful," as it was when Capt. William Hilton first claimed it for England. April alleviated some of the harsher scars of poverty. A fine skein of dogwood veiled the sad little shanties on streets paced by young people who would soon graduate from high school to face a bleakly uncertain future.

But the atmosphere was tense as a bitterly divided community awaited the outcome of a major struggle of the seventies. The BASF controversy had come to be regarded as a survival issue by both the county's poor and those who regard industrial development as the most effective cure for poverty. It was a "gut" issue, too, for the ecologists, the new Jeremiahs of the 20th century, who are convinced the seventies will be the decisive decade in man's struggle to preserve his environment.

But men like Orion Hack refused to see the controversy as an either-or dilemma. He engaged Skidmore, Owens and Merrill, a nationwide firm of industrial and community planners, to do a study of the Port Royal area and come up with recommendations for new industries that would be compatible with the unique Port Royal ecology on which tourism and fishing now thrive. "From the beginning, even though we were opposing BASF, we made it clear that we were well aware of the dire need for jobs in Beaufort County," said Hack, speaking as naturalist as well as developer. "We understand the plight of the poor in Beaufort County and we've never lost sight of the fact that these people need help. But we don't think BASF is the answer. If the same resources and talent had been used to solicit more industries rather than concentrating on just one we'd have $10-million industries which could offer a lot more jobs than BASF and would not have a death grip on the economy of the county. This is the approach we intend to take in order to secure industry for Beaufort County.'"

At Penn Community Center, John Gadson also was searching for answers to Beaufort County's dilemma. "This is a beautiful place," he said in April, walking beneath the moss-bearded oaks at the center, whose first mistress was dedicated to bringing the Northern primer to the abandoned Port Royal slaves, forbidden by law to read or write.

"I can't say I want it ruined. There must be ways industry and Beaufort can live together, a way we can have jobs without pollution. It hurts to see the high school graduates each year, hurts to see them just get on a bus and go. Beaufort keeps a large number who just couldn't cut it in the city. These are realities. I taught school. Those that can't go on to college just go to get a train ticket. I don't want that either. I say let's get down to the really nitty gritty. Let's see what can be done to have clean water and clean air and at the same time provide jobs."

April 27, 1966

ECONOMIC OPPORTUNITY COMMISSION
(A Non-Profit Federally Supported Anti-Poverty Agency)
St. Clair County, Illinois

ALREADY APPROVED

1. Economic Opportunity Commission Office Headquarters

   For planning, directing and coordinating War On Poverty Community Action Programs in St. Clair County. May 1965 thru December 1966.

2. Headstart (Summer 1965)

   600 pre-school low income children given medical examinations and training. School District 189. Many parents involved.

3. Teacher Training Course (Summer 1965)

   Twenty East Saint Louis teachers given special Remedial Reading training so as to assist poor readers in Target Area elementary schools.

4. Pre-School Readiness Centers

   Funded by E.O.C. and operated by S.I.U. Three-Hundred children from Target Area to be given year round pre-school training in six Pre-School Centers.

5. Reading Clinic

   E.O.C. funds to School District 189 Reading Clinic to help 300 disadvantaged Target Area children to read. In-Service training for teachers.

6. Neighborhood Youth Corps (NYC)

   Approximately one-million dollars will have been allocated by June 30, 1966 to help 1,800 disadvantaged boys and girls 16 thru 21 in a comprehensive work-training experience.

   This includes work for needy children while attending school and those who are not in school.

   Over 90 different community groups cooperating. Federal officials have repeatedly highlighted our NYC as an outstanding national model.

   NYC spearheaded a massive eight weeks - long "Operation Assist" on a Clean-Up Fix-Up, Paint-Up Project throughout the South End. Done in cooperation with City of East Saint Louis and many other groups.

   NYC is now conducting city-wide neighborhood Beautification Project in joint sponsorship with the City of East Saint Louis.

7. Medicare Alert (February and March)

   Designed to locate and encourage older persons to apply for the new Federal health insurance before its deadline. Thrity-five elderly, low income persons employed as community field workers. Sponsored jointly with Madison County (27 workers there).

8. E.O.C. Neighborhood Opportunity Centers

Six new community centers will bring directly into poverty areas such services as family counselling, homemaking, health services, job counselling, legal aid services, recreation and neighborhood improvement programs. New advisory councils will be formed and select representatives who will serve directly on the E.O.C. Board of Directors.

9. Family To Family Project (Family Service Agency of Southwestern Illinois)

A special family life improvement program to assist up to 400 needy and disadvantaged families. Expert case work counselling will also be utilized.

10 Utilization of low income and disadvantaged persons in E.O.C. Operations.

A. The E.O.C. is deeply committed to the use of the poor both in policy making roles and as paid participants in operations. Target Area residents serve on its Board and Executive Committee and help in setting policies.

B. 20 serve as sub-professionals at the EOC Headquarters.

C. 20 are employed with the Pre-school Readiness Centers.

D. 5 low income, elderly residents work with Medicare Alert.

E. Nine full time community aides perform a variety of important tasks with Youth Opportunity Centers, at EOC and in other assignments including recreation aides.

11 Upward Bound (University of Illinois)

A program designed to motivate disadvantaged high school youths to enter college.

UNDER FEDERAL REVIEW

12 Day Care Centers

Five centers and one Nursery to provide expert child care for disadvantaged children whose parents are at work, adult education school, etc.

13 On The Job Training Project (OJT)

An overall program to place 500 youths and adults who are the victims of unemployment and underemployment on a job where they will get special training while getting some financial aid if eligible. (Jointly with Madison County)

ON THE PLANNING BOARD

14. Legal Aid

Free legal aid services will be available to eligible low-income families... To be located at EOC Neighborhood Centers.

15 Small Business Project

Federal louns and business advice to aid small neighborhood business operations.

16. Housing Proposal

A proposal submitted by S.I.U. for an educational campaign to help tenants better care for housing.

17. T. B. Control Project

An Anti-T.B. and health project designed to help locate and eradicate tiberculosis in our community.

18. Nelson Amendment

A plan to put hard-core unemployed men to work on community beautification projects.

19. Comprehensive Dental Program

It is designed to provide both preventive and corrective dental services to the disadvantaged

EAST SIDE POVERTY PROGRAM A NATIONAL MODEL

St. Clair Economic Opportunity Commission Celebrating Its First Birthday This Month

BY LARRY WEIS
Globe-Democrat Staff Writer

The St. Clair County Economic Opportunity Commission is celebrating its first birthday this month.

In one year the East Side poverty program has emerged as a national model. Labor Secretary Willard Wirtz made a special visit here in January to praise it.

Mayor Alvin G. Fields gives the commission credit for creating a new civic spirit in East St. Louis. Wesley Cobb, regional director of the Neighborhood Youth Corps, describes the East Side effort as a "national prototype," a model program.

Commission director, J. Philip Waring accepts the political praise, but he draws the line. "We've managed to stay out of politics," he points out. The non-political approach, he believes, is one reason for the East Side program's success.

The E.O.C. has enlisted the support of more than 100 public and private organizations. Its programs are closely coordinated with such agencies as the Illinois State Employment Service, the East St. Louis Human Relations Commission and Southern Illinois University.

Project results are numerous. Many officials say E.O.C. programs prevented racial disorders during the summer of 1965. For 1966, the commission has launched Project Long-Hot Summer. Community service programs will be publicized throughout the area. A team of more than 40 Vista volunteers, domestic peace corps workers, will be stationed on the East Side.

Juvenile delinquency has dropped substantially since the Neighborhood Youth Corps was formed. East St. Louis police report a dip of more than 18 per cent, as a result of N.Y.C. efforts.

St. Clair County has an estimated population of 315,000. Mr. Waring points out that 30 per cent of the county's population is "disadvantaged," either economically, educationally or culturally.

Despite a successful first year, Mr. Waring admits that only a small percentage of the county's poor have been reached. He says, "We need more money to serve more people."

Most E.O.C. programs have long waiting lists. He explains that although 600 pre-school children were admitted to a summer Headstart program in 1965, more than 600 were turned away because of a lack of funds.

Funds approved for E.O.C. projects in 1965-66 total more than $2,000,000. Two additional projects now awaiting approval will bring the total to $2,700,000. The commission is also considering seven proposals which would cost more than $1,500,000. Of the sene, renewal of the NYC program is the most certain to gain approval.

Following is a list of projects which are being operated or which are awaiting federal approval:

PROJECTS FUNDED

ITEM	AMOUNT
Pre-School Readiness Centers	$ 129,000
Reading Clinics	54,000
Neighborhood Youth Corps	1,000,000
Family to Family Project (Family Service Agency)	96,000
Neighborhood Opportunity Centers	529,000
College-Upward Bound (S.I.U.)	105,000
EOC, Administrative Headquarters	152,000
TOTAL	$2,065,000

PROJECTS AWAITING FUNDS

Day Care Centers	$425,000
On Job Training	280,000
TOTAL	$705,000

PROJECTS IN PLANNING

Legal Aid Service	$150,000
Small Business Assistance	$ 100,000
NYC (renewal 1965-66 program)	1,100,000
Summer Headstart	140,000
Housing Improvement*	.....
T.B. Control*	.....
Dental Service*	.....
Nelson Act, Beautification Project*	.....
TOTAL	$1,490,000

*Project needs not yet determined

PROJECTS COMPLETED

Summer Headstart (1965)	$106,000
Teacher Training (1965)	16,000
Medicare Alert	21,000
TOTAL	$143,000

ONE: Six pre-school readiness centers, operated year-round, to provide training for 300 children. The program is operated by Southern Illinois University and funded by the E.O.C.

TWO. A reading clinic serving 300 students classed as potential dropouts.

THREE. The Neighborhood Youth Corps, providing work-training experience for 1800 boys and girls, ages 16 through 21. The NYC operates programs for both in and out of school youngsters.

FOUR. Six Neighborhood Opportunity Centers to offer poverty areas with legal, counseling, health and recreational services. The project was funded in April and is now being staffed.

FIVE. Family-to-Family, operated through the Family Service Agency of Southwestern Illinois and approved in April. The project will serve more than 600 disadvantaged families by bringing them into contact with middleclass families in the area.

SIX. Upward Bound, a program geared to motivate lower income high school students to attend college. The program is directed by Southern Illinois University and is being offered to 60 area students.

SEVEN. Five day care centers for more than 200 children whose parents are at work. The $425,000 program is awaiting federal approval and has not yet been funded.

EIGHT. O.J.T., On Job Training, a project to provide jobs for more than 500 un- or underemployed youths and adults. The program is to be handled jointly with Madison County poverty officials and is now awaiting federal approval.

In addition to the eight programs listed above, the E.O.C. has on its planning board projects to provide free legal services to low income families, to assist small businesses with federal loans and advice, to offer housing care assistance to low income tenants, to place "hard-core," unemployed persons on community beautification projects through the Nelson Amendment, a health campaign to locate and eliminate tuberculosis and a dental health program.

QUICK FACTS ABOUT THE WAR ON POVERTY

THE JOB CORPS -- Provides residential centers for young men and women, 16 through 21, in a coordinated program of basic education, skill training and constructive work experience. Designed for youth lacking schooling and skills for jobs. Smaller centers will be located on public lands; larger ones will be on unused Federal facilities near cities. A voluntary program. Forty thousand will be enrolled in the first year, and 100,000 in the second.

Write: Job Corps, Office of Economic Opportunity, Washington, D. C.

THE NEIGHBORHOOD YOUTH CORPS -- Provides full- or part-time work experience and training for youths, 16 through 21, enabling them to stay in or return to school, or increase employability. Can be carried out by agency of State, local government, or nonprofit organization. Will place youngsters in work in hospitals, settlement houses, schools, libraries, courts, parks and playgrounds.

Write: Neighborhood Youth Corps, Department of Labor, Washington, D. C.

THE WORK-STUDY PROGRAM -- Provides part-time employment of college, university students from low-income families. On-campus jobs to include dormitory and plant maintenance, food service, clerical work, library indexing, lab assistance, and others. Off-campus employment, conducted under agreement with public or nonprofit organizations, will place students as tutors, youth workers, recreation leaders, community service aides.

Write: Commissioner of Education, HEW, Washington, D. C.

COMMUNITY ACTION PROGRAMS -- Provides financial support for local anti-poverty campaigns in urban and rural areas, on Indian reservations and among migrant workers. Possible projects in local anti-poverty programs include: remedial reading, literacy instruction, job training, employment counseling, homemaker services, job development, vocational rehabilitation, health services, among others. Will enable communities to attack the network of problems with network of positive, varied, coordinated programs. Federal assistance depends on community's determination to (1) mobilize its own public and private resources, (2) develop programs of sufficient scope and size that promise to eliminate the causes of poverty, (3) involve the poor themselves in developing and operating the anti-poverty attacks, and (4) administer and coordinate the community action programs through public or private non-profit agencies, or a combination of these. Federal government to pay up to 90 percent of cost of local programs in first two years; after that assistance on 50-50 matching basis.

Write: Community Action, Office of Economic Opportunity, Washington, D. C.

(More)

PROJECT HEAD-START -- Provides financial support (90% federal funds) for communities to organize and operate pre-school programs which create an environment to develop children to their full potential. Programs should be designed to: improve the health and physical abilities of poor children, develop their self-confidence and ability to relate to others, increase their verbal and conceptual skills, involve parents in activities with their children, provide appropriate social service for the family.

Write: Project Head-Start, CAP, Office of Economic Opportunity, Washington.

VISTA Volunteers (Volunteers in Service to America) -- Provides an opportunity for those, 18 and over, to join the War on Poverty. Volunteers will work with migrant laborers, on Indian reservations in urban and rural community action programs, in slum areas, hospitals, schools and in institutions for mentally ill and retarded. Period of service one year. Volunteers will receive a living allowance and $50 a month. Plans call for 5,000 VISTA Volunteers.

Write: VISTA Volunteers, Office of Economic Opportunity, Washington, D. C.

ADULT BASIC EDUCATION PROGRAM -- Provides assistance to States for special programs of literacy instruction. Allotments to States is based on the number of adults 18 and over with less than a 6th grade education.

Write: Commissioner of Education, HEW, Washington, D. C.

SPECIAL PROGRAMS TO COMBAT POVERTY IN RURAL AREAS -- Provides loans and technical assistance to help very low income farm families to increase their income from farming or in other ways. The loans also will assist other rural families develop new opportunities for earning added income. In addition, there will be loans to start or strengthen cooperatives serving these families.

Write: Administrator, Farmers Home Administration, Department of Agriculture, Washington, D. C.

ASSISTANCE FOR MIGRANT AGRICULTURAL WORKERS AND THEIR FAMILIES -- Provides grants, loans, and loan guarantees to assist States and localities for special needs in housing, sanitation, education, and the day care of children.

Write: Community Action, Office of Economic Opportunity, Washington, D. C.

AN EMPLOYMENT AND INVESTMENT INCENTIVES PROGRAM -- Provides up to $25,000 for small businesses not eligible under other loan programs. These include: retail and service enterprises employing three or fewer persons, such as luncheonettes, filling stations, drug stores, barber shops, delicatessens, beauty parlors, furniture movers, cleaning shops, etc.

Write: Nearest Field Office, Small Business Administration.

A WORK-EXPERIENCE PROGRAM -- Provides funds for projects to help unemployed fathers and other needy persons to gain work experience and job training. Directed primarily toward jobless heads of families in which there are dependent children.

Write: Commissioner, Welfare Administration, HEW, Washington, D. C.

East St. Louis 'Far Ahead' in Poverty War

"The East St. Louis area is so far out in front of the rest of downstate Illinois in the War on Poverty it's fantastic."

That's how Gerald Osborne, regional director of the Illinois Office of Economic Opportunity, Carbondale, views the area's anti-poverty efforts.

Metro-East's progress in the war is a varied picture of success, with touches of the problems that have plagued the program nationally.

The East St. Louis area's Neighborhood Youth Corps is ranked as one of the most successful in the nation. So far the entire St. Clair county effort has been free from political pressures and scandals. The corps in particular has been inventive, involving the poor in decision making.

But in Madison County the program has been beset with claims of political control and lack of representation of the poor before it even could start.

Now it looks like the Madison County program is under way.

In many ways Metro-East is a "little United States" in the poverty war. It has big cities where poverty is a major problem. It has wealthy communities. It has rural areas where the suggestion of poverty is considered an insult.

The only operating program so far is in East St. Louis area, except for "Head Start" preschool programs and a rural youth corps that touched the Livingston area in Madison County.

So far, $1,307,211 has been spent for programs, administration and teacher training in St. Clair County. Problems have been minor, such as dismissal of youths who misrepresented their ages in the youth corps, some discipline problems and one forgery case.

Backers believe hiring of well-trained professionals is one of the major reasons for minimum incidents. Leaders so far are all social welfare workers and administrators.

The political structure has cooperated by co-sponsoring clean-up programs.

A $593,042 neighborhood counseling, and rehabilitation program is the major one awaiting approval in St. Clair County. This type program nationally has had some opposition when political machine leaders believe organization of the poor is a threat to them.

Leaders of groups claiming to represent the needy in the Venice-Madison area and portions of Alton and Wood River charged the Madison County proposal was controlled by politicians and did not represent the needs of the Negro or the needy in the county. After three separate applications for funds were filed, the county learned it had to consolidate interests to get started.

Nearly 100 youths from the Metro-East have gone into the Job Corps, and the area's drop-out rate has been much less than the national rate.

St. Clair County Gets $136,000 Poverty Grants

The St. Clair County Economic Opportunity Commission has been awarded two grants totaling $136,000, J. Philip Waring, director, said Sunday.

Notice of the grants was received from the Office of Economic Opportunity in Washington, the agency that administers the national anti-poverty program.

One grant of $88,000 will pay for continued operation of the commission's office and supervision of the over-all program. The other, for $48,000, will be used to establish a reading clinic for elementary school children of low income areas.

The clinic will be operated by the East St. Louis public schools, Mr. Waring said.

Mr. Waring also said the county's Neighborhood Youth Corps will serve as a model of NYC work at a six-state regional conference in Chicago the first week in January.

Several officials and student members will go to Chicago for a presentation before directors of other NYC projects in the region.

'OPERATION ASSIST' CLEAN-UP PROJECT IS SUCCESSFUL VENTURE

Several blocks in the vicinity of 17th Street and Gay Avenue in East St. Louis received a face lifting Saturday, as part of a volunteer Neighborhood Youth Corps project to rejuvenate the area.

Jack White, director, called the clean-up campaign a success and said he hopes similar projects can be conducted in other neighborhoods on future Saturdays.

About 475 youngsters volunteered their labor, White estimated. Many of them came from St. Louis, including Washington University students and members of a church choir.

They painted picket fences, mowed weeds, cleaned up piles of rubble, and swept the sidewalks and curbing. Some of the volunteers did routine carpentry work, repairing fences and porches.

Girls wearing shorts and sweatshirts pushed street department brooms, occasionally wiping their brows and pushing a strand of hair out of their eyes with a single motion. Up and down the streets, the tedious job of painting fence pickets went on through the afternoon.

The city furnished brooms and tools, trucks and bulldozers, weed cutters and foremen. A few condemned shacks were pushed down by the heavy equipment and were to be hauled away. A lot on Gay Avenue was cleared and installation of donated playground equipment was under way.

Many residents of the area also went to work on their property, and some provided sandwiches and cool drinks for the thirsty volunteers.

White said he thinks the project sufficiently awakened city officials to the need to do even more for the neighborhood. He said he is hopeful that residents will continue to improve their homes.

About 75 youngsters had arrived at the new Neighborhood Youth Center at 17th and Gay by 9 a. m. At noon, lunch was sold to raise money to renovate the center, which was donated by a church. Food firms donated weiners, chickens, hams, buns and pickles. About 4 p. m., the work force disbanded.

Franklin Park equipment to be installed at the Gay Avenue playground includes a jungle gym, swings, see-saw, and whirlagig, according to Bob Connors, recreation chairman.

Some of the youngsters were sociology students who had read of the project in a newspaper and "just decided to pitch in and give them a hand."

Rev. M.R. Lemons, one of the leaders in the clean-up and paint-up campaign, climbed atop this playground equipment and the Crusader photographer "snapped him" before he made his descent. Headquarters for the project was at the Fellowship Hall at 17th & Gay avenue, owned by the Pilgrim Baptist Church, of which Rev. Lemons is pastor. Rev. Lemons worked up a real sweat last Saturday.

OLD BRICK, NEW USE

Brick believed to have been laid by slaves in the Seventh Street and Collinsville Avenue area is being used by members of the Neighborhood Youth Corps to remodel the interior of the old Pilgrim Baptist Church, 1700 Gay Avenue. The old church building is the site of a center for youth in the 17th Street and Gay Avenue area. Louis Gillespie, left, a field representative of the adult council, gives NYC workers some tuckpointing tips here. Left to right [illegible] lespie, Eddie [illegible] lie James Owens, and Johnny Radford.

Profile of Anti-poverty Chief

'I See a Wonderful Rebirth'

By Steve Tatarsky
Of the Journal

When East St. Louis' chief poverty fighter says "needy persons CAN move ahead and make something of themselves" his hand swoops upward and onward with a flourish.

His tone of voice makes you sure that many of the needy persons who have come in contact with J. Philip Waring have moved on to higher things —just as his hand moves skyward.

Monday Waring applied his hand for the first time to the anti-poverty program in East St. Louis, Stites, Canteen and Centreville townships.

The new director of the Economic Opportunity Commission wasted no time.

Two hours after he first picked up the telephone in the Arcade building office, he had special permission to apply for a Neighborhood Youth Corps. He had gotten a reversal of a previous decision that the city was too late to get in on the Youth Corps rush.

"I have never had such a rewarding first day in my 23-year career," Waring said of that day.

Up at 6 a. m., at work at 8 and on the phone to Chicago at 9, by 11 a. m. he had the green light to apply for the youth corps. Then it was an afternoon of arranging meetings, lining up information and starting on an application.

'Long Overdue'

He thinks the $800 million Economic Opportunity Act which makes local action possible was long overdue.

Philip Waring

"All programs will create and enhance human resources . . . and any time we lift human resources . . . we not only help people, but the community."

He sees programs for children, teenagers and adults as the first step in attracting new business and industry as well. He says all the efforts in economic development are fine . . . "but personal rehabilitation comes first."

New plants and persons will not move into areas where unemployment, despair and poverty cast a shadow, he says

Waring forsees neighborhood devlopment centers as a way to bring programs to the people. Neighborhood centers would have volunteer counselors, professional advisers and poor people themselves working to aid their peers.

Centers to improve family life, teach health, manners, legal rights and encourage neighborhood pride and improved housing all are part of personal rehabilitation.

Waring is a man with professional ability and feeling, and is a quick-minded administrator as well.

Interrupted by questions, telephone calls and visitors as he discusses the city's poverty problem, Waring shows a rare trait of being able to pick up a broken conversation and return to his original words without hesitation.

When most people say "Now where was I," when they interrupt a thought, Waring moves right ahead, anticipating every idea and question.

He's no recent college graduate out to make a name for himself and then move on. He is a 53-year-old with the sprightliness of a 25-year old. He came to East St. Louis because he sees a new spirit in the city and wants to be a part of it.

Sees 'Rebirth'

"I see a new sign of wonderful human and physical rebirth." Improved city government, the hiring of a professional city administrator, business rebuilding and hospital improvements and a long-range plan for community improvement are five signs of the new spirit in East St. Louis, Waring says.

"When the Museum of Transport becomes reality, the riverfront could bring national acclaim to East St. Louis," he said.

A man of practicality as well as dedication and hope for the impoverished, Waring made a careful study of East St. Louis before deciding to apply for the job.

He looked into the spirit of Southern Illinois University, Community Progress, Inc., city officials, citizens and the anti-poverty commission. Then he decided the city was moving ahead, not backwards and sought the job.

Another factor: "East St. Louis has had a streak of bad luck . . . I always have sort of been for the underdog anyway."

He is moving to involve the city in more activities. Through his former position as Commissioner of the Division of Community Services of the St. Louis Department of Welfare and consultant to the city's 18-month-old anti-poverty program, Waring is working to coordinate East St. Louis and St. Louis ideas and planning programs.

He will be working to cement relations with other private and public groups in the city which are also fighting poverty.

He has a bachelor's degree from West Virginia State, a master's degree in social work from Columbia University in New York, and has done other advanced study. He also is developing ties with SIU's programs in the area.

In 10 years in St. Louis, he has experience with East St Louis as Executive Secretary of the St. Louis Council on Human Relations. Other background includes Urban League work in Springfield, St. Louis, Jacksonville, Fla., and the Bronx and Harlem in New York.

He's been cited by the Episcopal Church for his work in fighting poverty and delinquency and for administrative leadership in World War II.

APPROVES FUND FOR E. ST. LOUIS YOUTH CORPS

ST. LOUIS POST DISPATCH

Sunday July 25, 1965

Labor Department Marks $445,000 for Antipoverty Setup

Related Article on Page 4A

The United States Department of Labor has approved a $445,000 application to finance a Neighborhood Youth Corps in an antipoverty project in East St. Louis.

The announcement was made yesterday by J. Philip Waring, director of the East St. Louis Economic Opportunity Commission. The Federal Government will provide $399,000 and the balance of the $445,000 will be contributed by participating agencies.

Waring said that the project was intended primarily to give summer pobs to youths from 16 to 21 years old in 65 public and private non-profit organizations in the East St. Louis area. The program is expected to begin next week, Waring said.

He said that the grant was the largest made by the Federal Government in the antipoverty program to an Illinois area outside of Chicago.

Representative Melvin Price (Dem.), East St. Louis, who informed Waring of the application approval, said that the jobs provided by the various participating agencies would pay $1.25 an hour, up to 30 hours a week.

Agencies taking part in the project includes the St. Clair county Board of Supervisors which will provide work on road and bridge projects, and the St. Clair county Tuberculosis Association which has a testing and X-ray program.

The four townships served by the East St. Louis Economic Opportunity Commission are East St. Louis, Stites, Canteen, and Centreville.

Waring estimated that about 850 youths would be employed. They will be supervised by a staff of 12. The East St. Louis office of the Illinois State Employment Service has been screening applicants.

Area Poverty Plans Total

Friday, September 17, 1965

$2.8 Million

War on Poverty programs in operation or on the drawing board for the East St. Louis area total $2.8 million, J. Philip Waring, Economic Opportunity Commission director, said today.

Waring said programs now in effect in East St. Louis, Stites, Canteen and Centreville Townships have received $748,319.24.

Programs which have been proposed to federal authorities and for which funds have not been released total $2,162,605.17.

Programs in effect are:

1. Program development grant — For administrative expenses to operate the programs.

2. Out-of-school Neighborhood Youth Corps summer program employing 850 youths — Will cease operations Oct. 12.

3. University summer course for teachers of deprived children—Was held for 18 teachers and two administrators of East St. Louis School District 189 this summer at St. Louis University.

4. Headstart program for 640 youngsters which ended last summer, in East St. Louis District 189 ($109,000) and Brooklyn District 188 ($6,820).

5. Prep-school readiness centers for deprived children from ages three to five—Will be operated by Southern Illinois University and is similar to Headstart program.

The programs now in Washington, for which funds are awaited:

1. Counseling program to extend help to deprived children in District 189.

2. Tutorial program to help deprived children maintain a level of efficiency in school subjects in District 189.

3. Reading clinic for deprived children in District 189.

4. Neighborhood Youth Corps in-school program for 500 youngsters in public and parochial schools in East St. Louis area.

5. Neighborhood Youth Corps out-of-school program for 560 youngsters in an extension of the one which will end Oct. 12.

6. Program development grant for administrative operations.

7. Neighborhood center proposal — A major program in which a network of community centers which will offer new services emphasizing self help programs.

8. Culture enrichment program through SIU—Designed to bring dance, grammar, concerts, and art to children in community where they can participate in programs.

FUNDED PROGRAMS

Item	Amount
Program Development Grant	$ 45,000.00
Out-of-school Neighborhood Youth Corps	442,199.24
Course for teachers of deprived children	16,300.00
Head Start	115,820.00
Pre-school readiness centers	129,000.00
Total	$ 748,319.24

PROGRAMS PENDING

Counseling program	$ 92,895.85
Tutorial program	16,518.00
Reading program	53,950.00
Youth Corps in-school plan	412,141.42
Youth Corps out-of-school plan	581,196.30
New program development grant	99,327.60
Neighborhood center plan	593,042.00
Boy Scout proposal	57,534
Culture enrichment program	256,000.00
Total	$2,162,605.17
Grand Total	$2,910,924.41

Two programs totaling $650,576 were approved by the Economic Opportunity Commission for the East St. Louis area at a meeting Thursday night.

One, totaling $593,042 would provide for establishment of six community centers in the four-township area. The other, totaling $57,534, would assist in establishing a Boy Scout program for disadvantaged youngsters.

Both require approval by the federal Office of Economic Opportunity. Federal funds sought for the community center program total $519,485, and for the Boy Scout program $49,703. The remainder will be made up of local contributions in facilities and services.

In other business, the Commission honored Armin A. Rippelmeyer, retiring chairman of the commission, and voted to expand the area served by the commission.

Rippelmeyer, regional director of the Illinois Department of Public Aid, resigned as chairman of the commission last spring. He was given a framed, hand-lettered certificate citing him for leadership in getting the program under way.

Acting at the suggestion of the Office of Economic Opportunity, the commission voted to expand its service area to cover all of St. Clair County. It now serves Stites, Centreville, Canteen and East St. Louis Townships.

J. Philip Waring, commission director, said the action is not expected to have much practical effect, since the commission now covers more than 95 per cent of the impoverished areas of the county. However, the action will permit the commission to serve "small pockets of poverty" in the county without setting new administrative machinery.

In his monthly report, Waring said commission programs totoling $748,000 have been approved by the federal government and others totaling $2,162,605 are waiting approval.

He said the commission's Neighborhood Youth Corps projects has been selected as the subject of a nine-state seminar to be held at the University of Chicago in October. It will be used as a model for other programs in the nine-state area. Jack White is director of the Youth Corps.

Judge Billy Jones served as chairman of the meeting. The meeting was held in St. Luke's AME Church, 414 N. 14th St., East St. Louis.

Youth Corps 'Troops' on the Job East St. Louis

Youth Corps workers Vernon Allen and Geore Smith trim baseball diamond under direc of Park Employe John Haywood

Application for the second East St. Louis area Neighborhood Youth Corps is expected to total "close to one million dollars" for a 42-week job program serving 1,200 needy youths.

Jack White, Youth Corps director, said the application is expected to be sent to Washington, D. C., by the end of next week.

The proposed new youth corps would be for 16-to-21-year-olds in nine public and parochial junior and senior high schools.

The application is to expand the present $455,291 corps, particularly to provide part-time jobs to needy youths who would be in school.

All 850 jobs in the first corps were to be filled by noon today, with a surplus of more than 250 youths.

The summer jobs will be extended until Oct. 2 so a full 11-week program can be offered. Youths who plan to return to school in September will do so, and their jobs can be filled from the surplus pool.

The purpose of the Youth Corps is to give work experience to many youngsters who have never had jobs. It also will help them support themselves and their families. Classroom programs to teach good grooming, job behavior and good working habits all are designed to improve chances for future permanent employment.

The youths are paid $1.25 an your and the normal work week is 30 hours.

Some programs provide new or accelerated community activities. One is for the St. Clair County Tuberculosis Assn. so it can step-up TB testing.

About 23 workers are working at St. Paul's Church to set up recreation and playground activity programs in five different playground areas.

Some of the other agencies and types of jobs provided are:

St. Mary's and Christian Welfare Hospitals, maintenance aides.

Cities of Cahokia, Alorton, Centreville, Brooklyn, Venice, East St. Louis—maintenance and some clerical work, dog wardens and inspectors.

East Side Levee and Sanitary District telephone operator to grounds maintenance.

East St. Louis Housing Authority—recreation, mainenance aid and some clerical.

New Hope Church — clerical.

High schools — clerical and some maintenance.

Illinois Youth Commission—recreation aides.

Salvation Army—maintenance and clerical.

Cahokia Mounds State Park—archeological aides.

Youth Corps Savings Accounts Grow

Work in the Neighborhood Youth Corps will mean money in the savings account for many East St. Louis youngsters.

Youth Corps workers were encouraged to open accounts Friday in banks and savings and loan firms.

The youths are paid $37.50 for a 30-hour work week. In addition to working for governmental and private nonprofit organizations, they are given orientation sessions in citizenship, job performance, and personal habits. In addition, they are encouraged to save part of their pay for future use.

The youth corps, operated under the anti-poverty program, is serving about 800 youths in the East St. Louis area.

The jobs are ones that would not normally have been filled by the 64 public and private nonprofit agencies involved. The local share of the project is counted as the supervision the agencies give the youths. The federal grant was $399,154.

Randolph Iby, 423 S. 55th St., opens an account at First National Bank. Mrs. Dorothy Maxwell is the teller

Highly Efficient Staff Seen As Key To Success Of Local "War On Poverty"

AUGUST 4 - 10, 1965
THE MONITOR

Many of these workers resigned teaching and civil service protected jobs to serve with the War on Poverty. Inserts: Left is Jerry Findley and Miss Elsa Haupt and Robert L. Perkins in center.

The astounishing swift pace by which various programs under the "War On Poverty" Act has been initiated in the East St. Louis area is, in the opinions of most observers, due to the highly efficient staff in the office of the Greater East St. Louis Economic Opportunity Commission.

Staff workers include professional social workers, teachers and an attorney who have lent their talents and efforts to the fight against poverty.

Pictured above are members of the staff. From left to right, first row; J. Phillip Waring, executive director, Economic Opportunity Comm. (standing); Charles D. Steele, accountant-Neighborhood Youth Corp; Jack W. White, director, NWC; Jerome Lacy, field representative of the Economic Opportunity Office for the State of Illinois, and Alfred Lucas, assistant director, EOC (standing).

Left to right, second row seated; Wyvetta Young, unit supervisor; Patricia D. Kelley, deputy director, and Cecilia Millard, clerk typist, all of the Neighborhood Youth Corp.

Left to right, third row seated; James C. Leonard and Charles M. Roma, work advisors, NYC.

EOC to Hire 20 Workers

The St. Clair County Economic Opportunity Commission is hiring 20 area residents to help operate the War on Poverty in the county.

Most of the workers are needy adults from Stites, Canteen, East St. Louis and Centreville Townships. Now that the commission has expanded operations to cover the entire county, some will come from the other areas, according to J. Philip Waring, commission director.

About 10 of the 20 were trained this summer at Southern Illinois University, Carbondale, to be community workers in anti-poverty programs in Illinois and Missouri.

SIU found out later that Missouri had no job classification for "community workers" under the State Employment Service Civil Service rules. So the Missouri persons had no jobs.

The 20 workers will be paid under the $88,437 grant made Tuesday to the commission to continue operation for another year. The commission was the first in Metro-East to get started, having received a program development grant of $39,000 last April to start the War on Poverty.

Waring said the community workers would do survey work in the needy areas of the county, clerical, and other administrative work.

It is the first large-scale hiring of non-professionals by the commission. The staff is composed of professional persons trained in working with the poor.

The community workers will be paid $1.50 an hour and work 20 hours a week. Some already are at work.

If the EOC receives approval of a $593,042 neighborhood service center proposal, the workers also would work in six neighborhood areas helping in family counseling, homemaking and other training and recreation programs.

NEIGHBORHOOD YOUTH CORPS

Youths were urged to join the Neighborhood Youth Corps during 'Operations Assist' clean-up project in the 17th and Gay Ave. area last Saturday. A special application and information center was operated at the site.

Pictured above, left to right seated: Eric Corbett, an interviewer with the Ill. State Employment Service; Mrs. Goldie F. Orr, supervisor employment counselor with the Ill. State Employment Service and Jerry Finley, an official of the NYC.

Standing, left to right: Elmo J. Bush, administrator of Adult Education School, School District 189; Francis J. Foley, chief supervisor, East St. Louis Township, and Fred L. Teer, principal of the Adult Education School and a CPI official.

Applications for the Youth Corps are screened by the state employment service.

Some of the 450 youngsters who volunteered their labor in a clean-up campaign in the vicinity of 17th and Gay Avenue last Saturday are pictured above painting a fence. The project to rejuvenate the area was sponsored by the Neighborhood Youth Corps.

Interested observers watching the youths are, left to right: J. Phillip Waring, director of the East St. Louis ECO nomic Opportunity Commission; City Commissioner Ester Saverson and the Rev. O. W. Goldstein.

Jack White, Neighborhood Youth Corps director, is pictured above fifth from left as he observes volunteer youths and adults cleaning up a vacant field near 17th and Gay Avenue as part of last Saturday's clean-up project.

Commissioner Ester Saverson is at left raking weeds, while City Bldg. Superintendent Harry Tharp and City Relief Works Program Supt. Theodore Gaten looks on.

Enrollment Starts Monday

Pre-school Centers Ready to Go

Enrollment begins Monday for war on poverty pre-school readiness centers to be operated in East St. Louis.

The $129,736 project will provide basic cultural training and education to try to improve the chances of the needy child to do well in school.

Parents living in the vicinity of the Orr-Weathers Housing Project, 1400 Missouri Ave., and the Pilgrim Baptist Church, 17th and Gay Ave. are asked to bring their children to the centers Monday.

Robert E. Rockwell, project director for Southern Illinois University, said the centers will start their programs after the first of the year when all equipment is available. Needy children age 2½ to six can be enrolled.

The St. Clair County Economic Opportunity Commission is subcontracting the program to the SIU Delinquency Study Project.

All parents are to bring birth certificats and clinic cards on their children to the enrollment centers.

Enrollment for children living near Orr-Weathers is in the community room of the D-1 building from 9:30 a.m. to noon and from 1 to 2:30 p.m. Monday, Tuesday and Wednesday.

Enrollment in the church basement will be the same times and dates.

The first two centers will enroll from 45 to 60 children, depending on the age range of the applicants, Rockwell said.

Eventually five centers will be opened. Teachers and teacher aides now are being trained and research methods for classes and evaluation are being developed under a separate $75,000 project.

The youngest children will be taught colors, numbers, shapes, words and other basic nursery-school programs. The purpose would be to uplift their overall interest level. Many needy pupils are far behind others in schools because they do not pick up basics at home, Rockwell said.

The youngest child would be in the center for only one to 1½ hours, two or three times aweek, depending on how many are enrolled. It is possible these children can be served by the program for several years, if it is extended past the present Sept. 30, 1966 expiration date.

The older children will be taught basics and prepared for the public schools. East St. Louis District 189 now has no kindergarten.

Preschool Teachers Trained

Teacher trainees, who Monday will enroll pupils in two East St. Louis pre-school centers observe children in one of existing centers.

The project was supposed to have started in November, but there was a delay in getting funds. Leases for the other three centers now are being completed and their locations will be announced. Rockwell said the program will work with the parents and the pupils in many cases, and parents are urged to enroll their children in centers nearest their home.

Criteria for selection of children are: The 2½-year-olds must be toilet trained and the parents must stay with them in the center until the teachers are sure the child is content with the new situation. This may be one day or one week, for an hour each day.

The older children also must come from needy families and the parents must spend the first morning or afternoon in the center to see what the children will be doing.

All parents must attend a minimum of one parent meeting each month. Rockwell said teachers, aides and the staff social worker will be making visits in the home.

Part of the idea behind the program is that a child's home environment determines to a great extent how the child will react to learning. The idea is to work with the child as part of his family and help the entire unit, he said.

Director Appointed

Robert E. Rockwell

OVER PLEASE

Gay Avenue: New Face

The area near 17th and Gay Avenue, long considered one of East St. Louis' worst eyesores, is beginning to take a new look thanks to the Neighborhood Youth Corps.

In recent weeks, some 150 Youth Corps members have been:

1. Remodeling the old building of the Pilgrim Baptist Church, 1700 Gay Ave., and converting it into a youth center.

2. Repairing and building fences and, with help from city's street department, demolishing several dilapidated homes.

3. Converting empty lots into playgrounds, including one area which is to be made into a football field.

Jack White, NYC director, explains that most of the work has been done under a program called, "Project Assist." This means the youths donate their time and do the work without pay.

One example is the Pilgrim Church building. Fifteen youths, ages 16 to 21, have been assigned to the church remodeling on a paid basis. NYC members are paid $1.25 an hour. However some 25 youths plus many other adul are helping at the center wit out pay during their spa time.

A dozen activities are ta ing place at the center cu rently, including arts ar crafts, tutoring, home econ mics, and classes in eleme tary electronics. The remode ing is to be completed withi the next two months.

Youth Corps Impressive To Inspector

A regional inspector for the U. S. Department of Labor has been "very impressed" with the Neighborhood Youth Program in the East St. Louis area.

Miss Julia A. Spenney, a task force coordinator for Region IV of the Neighborhood Youth Corps, said East St. Louis has the second largest program in the state "and all indications are it's proceeding very nicely." Miss Spenney arrived in East St. Louis Friday for a three-day inspection of the area.

On Friday afternoon, she visited an NYC project in the 17th Street and Gay Avenue area, where a youth center is being developed and the neighborhood is undergoing a face lifting with the help of volunteer workers.

TOP LEVEL DISCUSSION

Miss Julia Ann Spenney, task force coordinator for Region IV of the Neighborhood Youth Corps, discusses the East St. Louis NYC program with Jack White, East St. Louis, and Charles Roma, right, his assistant. Miss Spenney inspected the East St. Louis NYC program.

Region 4 encompasses six states and has some 30,000 youths enrolled in NYC programs, Miss Spenney said. "The NYC has taken hold and it is here to stay," she added, emphasizing the program is an integral part of the Administration's War on Poverty.

Miss Spenney said the NYC is part of the U. S. Department of Labor Manpower Administration and is designed to make it possible for youths 16 to 21 to:

1. Stay in school.
2. Return to school if they have already left the classroom.
3. Obtain work experience and develop work habits if they are out of school and out of work.

'East St. Louis City With Critical Need' METRO-EAST JOURNAL
Tuesday, October 26, 1965

Officials Tour Youth Corps Work

The East St. Louis Neighborhood Youth Corps is getting a close look from the rest of the nation.

Government officials from Chicago Detroit, Mich., Cleveland, Ohio, Minneapolis, Minn. and Washington, D. C. toured the youth work experience program Monday and today.

The staff meeting of the regional youth corps office of the Department of Labor was held in East St. Louis, the first time a regional meeting was held in the field.

The regional office in Chicago administers 80 projects in Illinois, Indiana, Michigan, Ohio, Minnesota and Wisconsin.

Regional director Wesley Ted Cobb Monday called the War on Poverty program "a hand up, not a hand out."

The purpose of the corps is to give needy youths age 16 to through 21 work experience and some counseling and training. They work in public and non-profit agencies.

The East St. Louis program aided as many as 1,000 different youths this summer and this fall.

Another program for 500 is beginning to help needy high school pupils make some money while they go to school.

Area Program Successful

The regional meeting was brought here because the program has been pointed out as one of the most successful in the nation. "East St. Louis is a city with a critical need for the youth corps and was given special priority by the regional office," Cobb said.

He said public understanding and acceptance of the project is important if it is to have results. He said East St. Louis is "a community with guts and drive," to do something about its problems.

About 60,000 youths are working in the Illinois, Ohio, Indiana, Minnesota and Wisconsin NYC programs.

Cobb estimates some two million youths age 16 to 21 could be aided by the youth corps.

In the 6-state region, some programs had to be cut back this fiscal year, he said. This is because so many more communities in the nation applied for youth corps programs.

St. Louis' program had to be trimmed by more than two-thirds. East St. Louis' budget remained about the same, although the numbers of youths served has to be combined in both in-school and out-of-school programs.

Room for Expansion

Jack White, East St. Louis project director, has estimated 3,000 to 4,000 eligible youths still have not been served by the program.

The East St. Louis program to provide jobs for high school dropouts already has resulted in decisions by 91 of them to return to school and try to get more of an education.

Youths out of school can remain in the program only six months, unless their leaders decide they need more time in the corps.

Youths can stay in the in-school programs during two school years. "This is not a welfare program but is to inspire a youth to go ahead," said Frank Stanard, Detroit, district director.

Program leaders are being urged to develop jobs for the youths who end their tour of duty. But jobs are not necessarily the end goal. The work experience creates improved attitudes in the youths about themselves.

It also is to help show youths the need for more education and skill training to get jobs today.

Stanton said the difference between the youth corps today and the youth work programs of the depression is that in the 1930's everyone involved was poor. "Today the poor are those left behind by prosperity," he said.

Other regional and national officials present were Morris Riger, district director, Cleveland; Alfred Fisher, field consultant, Washington; Miss Rose Nathenson, deputy regional director, Chicago and Miss Lillian Anthony, district director, Minneapolis.

Local Poverty Office Cited

Twin honors came recently to the Economic Opportunity Commission War On Poverty agency. The Midwestern Regional Office of the Neighborhood Youth Corps in Chicago recently selected the East St. Louis Area Youth Corps to be used as a special model at the University of Chicago before an area-wide seminar of professional youth specialists. Jack White is Director of the NYC department.

In another announcement the Chicago Regional Office of Economic Opportunity informed the local Economic Opportunity Commission that it had been listed as "one of the ten outstanding CAP operations in its area". Coupled with these two honors was an official field visit last weekend to the agency of Miss Julia A. Spenny, task force coordinator for Region IV of the NYC Chicago Regional Office, who also complimented the local NYC operation as "most impressive".

Judge Billy Jones, EOC Board chairman, announced that the agency had recently voted to expand its co. St. Clair County and its 315,000 people. It formerly served only Metropolitan East St. Louis which contains over 95% of the poverty of the county.

The new agency which opened its office for full operations last May under the directorship of J. Phillip Waring, has already secured $748,319 in Federal and local funds to operate six different programs.

The agency, which in less than five months has expanded into the second largest anti-poverty CAP operation in Illinois, has over $2,300,000 in ten different proposals which are either already in Washington for review or on the agency's drawing boards. These projects will give employment to over three hundred professional, sub-professional, clerical and maintenance workers while rendering direct service to uplift thousands of persons who live in pockets of poverty. This will mean that over three million dollars will be secured to first poverty and create new opporrunities in the St. Clair County Area.

Earl Huch, NYC Advisory Committee Chairman, said that the summer-time participation of sixty-five different public and private agencies in the NYC work-training program highlighted excellent community help and cooperation in the War On Poverty in St. Clair County.

East St. Louis

METRO-EAST JOURNAL

Poor Readers Get Clinic to Help

As many as 400 needy East St. Louis area youngsters who are falling behind in school because they are poor readers will get a helping hand from the War on Poverty.

A $48,373 federal grand approved Friday will enable School District 189 to open its first reading clinic.

The clinic will try to uplift reading skills and prevent children from falling behind in school. The problem has been that children who read poorly often loose interest in school, drop out, and end up on unemployment and relief lists.

The school district hopes to start operation of the clinic by Jan. 24, according to Bolen Carter, assistant district superintendent. The school district will provide $5,378 in goodsand services as the area share.

The Economic Opportunity Commission, serving St. Clair County, first sought the reading clinic last April. The application was updated in September.

Site Located

The center will be in Lafayette School, 4800 Bond Ave. Mrs. Lillian Bracy, director of reading for the district, will be in charge.

Carter said the 1,710-square foot room in the school is the only available single, large clinic. Work will star to partition the room into smaller areas so individual pupils can work directly with teachers or in small classes.

The clinic will serve mostly pupils in the third, fourth, fifth and sixth grades, he said. "But it will not be restricted to those grades." It can serve pupils fromthe first to 12th. We will pick out kids who need help the most," Carter said.

He said pupils with reading problems usually come from homes in which "reading is not a habit." Books and magazines are scarce in the home. "As long as schools deal with textbooks, pupils are going to have to read," he said. When they can't, they fall behind. This leads to emotional blocks to learning in many needy children, he said. As pupils become indifferent, many drop out of school, compounding the problems of poverty in the community.

To Aid Teachers

Regular teachers in District 189 will be used in the clinic, working under teachers who have special skills in reading improvement. The in-service training for the teachers also will help them in their own

"The program will profit both pupils and teachers," Carter said. No new teachers will be hired.

It is the first such program on a district-wide scale ever tried in the city. Carter said most of the pupils are expected to come from 15 schools in the most disadvantaged areas of the district. Other youths from other schools will be served when the need is found.

Pupils will be asked to go to the clinic by principals or teachers. Tests will be given to determine the pupils reading problem.

A doctor and nurse will be employed to conduct ear and eye tests to make sure physical defects are not involved. Special testing and reading devices will be purchased under the grant.

The program will last one year, including the summer.

The clinic is the third war on poverty project for the school district. The others were the $115,820 "Head Start" project and a $16,300 program in which teachers went to St. Louis University for special training in wirking with disadvantages pupils.

Youth Corps

DEC 12/65

Beautification Goal of Project

East St. Louis City

The Neighborhood Youth Corps and the City of East St. Louis have started a cooperative beautification project.

Corps and city workers will help in clean-up programs in various St. Clair County communities in addition to their regular duties, said Bobby Joe Connors, youth corps counselor and beautification coordinator with the city.

One project has been done. It was to plant shrubbery in a small area at the Vogel Place entrance at State Street in East St. Louis. Donated shrubbery was used to help beautify the entrance.

Bobby Joe Connors

Youth Corps workers are employed by city, county and state public agencies and private nonprofit organizations. The program is to give needy youths work experience, some training and a job reference for permanent employment.

Connors said the youth corps and city will work together to beautify areas where there is a need. He said the program also is designed to help motivate homeowners to participate in beautification.

He said if projects are successful, a large-scale clean-up and beautification program might be attempted for the entire city. The youth corps and city already have cooperated to clean some of the most needy areas of the city and the city has pledged to enforce litter ordinances to help keep the areas clean.

Under the new Housing and Urban Development Act, cities are eligible to receive federal grants up to 90 per cent of the total cost of major demonstration projects. Such beautification projects must be designed to show how a city can improve its looks so it can be used as a model by other cities.

One planner has said he thinks such a demonstration project could be applied for to beautify the riverfront.

Connors said a committee of citizens to advise the corps and city on beautification will be formed.

"We feel that the citizens should be involved in the beautification of their city."

Six Neighborhood Centers To Open Here

A recent grant of $539,000 ($480,965 in Federal Funds for the 90% share) will provide for establishment of six multi-function Neighborhood Opportunity Centers in some of the worse poverty areas in St. Clair Co. This figure includes $480,965 as the 90 percent federal share.

J. Philip Waring, executive director of the E.O.C., which will sponsor the new centers, said this was the largest single anti-poverty grant ever made in Metro-East. The six new centers will bring job counselling, consumer education classes, family management programs, health services, family counselling, Neighborhood Youth Corps, free legal aid and group work services directly into poverty areas.

The E.O.C. Board approved the proposal for the centers last September and it was sent to the Chicago Regional Office. Later Alfred E. Lucas, associate director of E.O.C., rewrote the proposal several times to make it comply with more strict federal regulations governing the operation of neighborhood services.

Professional, supervisory and technical staff will be recruited immediately during phase one. This includes a Project Director and six coordinators to head the six centers, a registered nurse, a family service administrator, three case workers, two home economists, and a group work recreation specialist.

Selection of staff will depend on education, training and previous professional experience, including work with the disadvantaged, all of which are Federal requirements for neighborhood services workers.

The agency's personnel committee requires open advertising of all job openings. Some fifty jobs will be open for non-professional personal who live in the Target Areas adjacent to the new centers. The latter group will be recruited during phase two at the end of April and early in May.

Salaries range from $5,700 to $11,000 for professional, technical and supervisory staff who will organize program activities and conduct health, family case work, consumer education, group work services and youth guidance.

Non-professionals who are residents of the Target areas may apply for positions such as bookkeepers, interviewers, janitors, community aides, stenographers, neighborhood developers and clerk-typists. Salary ranges run from $3,390 to over $6,000 per year.

Persons interested may secure job application forms from the E.O.C., 219 South 26th St., (in the Levee Board Yards), East St. Louis. Forms must be completed and should be mailed to File N. O. C., P. O. Box 619, East St. Louis, Ill. Previous military service records, school transcripts and references, both character and business, may be requested.

ST. LOUIS POST-DISPATCH Tues., April 5, 1966

GRANT TO SET UP SIX AID CENTERS FOR EAST SIDE

St. Louis Globe-Democrat
THE CRUSADER
EAST ST. LOUIS MONITOR

The Economic Opportunity Commission has been given a federal grant of $480,965 to operate six neighborhood opportunity centers on the East Side, Philip Waring, executive director of the commission, announced yesterday. The commission is the antipoverty agency for St. Clair county.

Waring said the centers, when in full operation, would offer family counseling, job counseling, home management courses, civil legal aid, recreation and leisure time activities, health services and Neighborhood Youth Corps services.

Purpose of the centers is to bring services to the poor in their own neighborhoods and to help them organize themselves to solve their problems, Waring explained.

In addition to a professional staff, about 60 persons will be hired as community aid workers, typists, clerks and for other positions. Most of these jobs will be filled by residents of the neighborhood to be served.

The professional staff will consist of a neighborhood opportunity centers director, six neighborhood developers, a family service administrator, three social workers, two home economists, a registered nurse and a recreation director.

The lawyers for the legal aid program will be hired when that project is funded by the Government, Waring explained.

The neighborhood centers will be located in the south end of East St. Louis, Rush City, Centreville, Canteen Township, Brooklyn and in the northwestern part of East St. Louis.

Total cost of the program, for one year, is $539,000, Waring said. This includes the required local contribution, usually made in services and facilities rather than in cash.

East St. Louis METRO-EAST JOURNAL

Geodesic dome architecture would be used for community center in East St. Louis

Community Center Fund Drive Slated

A fund-raising drive has been started in East St. Louis to raise $50,000 for a proposed community center.

A Neighborhood Advisory Committee has been formed to raise the funds and hire architects. The group tentatively has chosen a geodesic dome to house the proposed center.

Any such center would have to be approved by the City Council. The plan is to ask the city to apply for a federal grant to cover about $100,000 of the estimated cost. The rest would be in donations and perhaps land donated by the Park Board. There would be no city cost.

The advisory committee is trying to involve the low-income residents of the area in raising funds. A chicken-dinner sale will be held each weekend.

Another group which already has local funds also plans to ask the city to apply for a grant. The city has learned that only one application can be made by East St. Louis under the Neighborhood Faciilties Section of the Housing and Urban Development Act.

The other proposal is by the St. Clair County Health and Welfare Council to purchase and renovate the Knights of Columbus Building at 1447 State St. for an office building for private welfare agencies.

Titus Tolson is chairman of the Neighborhood Advisory Committee Fund Drive. "Many civic and social organizations in our community have indicated that they will make substantial contributions towards the costs of the proposed center," he said. Serving on the committee with Tolson are Mrs. Helen Bush, president of the Delta Sigma Theta Sorority, Philip Beck, representing Kappa Alpha Psi Fraternity, and Donnell Curry, representing the Pro 8 Club.

The Rev. William Royston, pastor of Mt. Olive Baptist Church, is the chairman of the Church Division for the drive. All of the churches in East St. Louis will be asked to take up an offering on April 24.

A speakers bureau is being organized to address organizations.

The architect firm of P. A. Phillips of Canton, Ill. has donated services for preliminary plans. It was contacted because it is one of the few firms in the nation that work with geodesic domes. The domes were invented by Buckminster Fuller, design professor at Southern Illinois University.

The dome was chosen because it is not as costly and can be put up by fewer workers, backers of the project said.

PRESIDENT EISENHOWER'S ANALYSIS OF THE ECONOMIC SITUATION

(FROM ECONOMIC REPORT OF THE PRESIDENT, 1960)

By the first quarter of 1959, the recovery that started early in 1958 had already carried production and income to levels higher than ever before attained in the American economy. A considerable further advance was scored during the remainder of 1959, despite the deep effect of the 116-day strike in the steel industry.

The Nation's output of goods and services in the fourth quarter of 1959 was at an annual rate of $482 billion. When adjusted for price changes, this rate of output was 3½ percent higher than the rate attained in the corresponding period in 1958. By December 1959 total employment had reached a record level, 66.2 million, on a seasonally adjusted basis. And personal income payments in December were at an annual rate of $391 billion, $24 billion greater than a year earlier. After adjustment for increases in prices, the rise in total personal income in 1959 represented a gain of nearly 5 percent in the real buying power of our Nation.

As we look ahead, there are good grounds for confidence that this economic advance can be extended through 1960. Furthermore, with appropriate private actions and public policies, it can carry well beyond the present year.

However, as always in periods of rapid economic expansion, we must avoid speculative excesses and actions that would compress gains into so short a period that the rate of growth could not be sustained. We must seek, through both private actions and public policies, to

minimize and contain inflationary pressures that could undermine the basis for a high, continuing rate of growth.

Three elements stand out in the Government's program for realizing the objectives of high production, employment, and income set forth in the Employment Act: first, favorable action by the Congress on the recommendations for appropriations and for measures affecting Federal revenues presented in the Budget for the fiscal year 1961; second, use of the resulting surplus, now estimated at $4.2 billion, to retire Federal debt; third, action by the Congress to remove the interest rate limitation that currently inhibits the noninflationary management of the Federal debt. Numerous additional proposals, many of which are described in Chapter 4 of the Economic Report, will be made to supplement the Federal Government's existing economic and financial programs.

Following the budget balance now in prospect for the fiscal year 1960, these three elements of the 1960 program will strengthen and be strengthened by the essential contributions to sustainable economic growth made through the policies of the independent Federal Reserve System. Fiscal and monetary policies, which are powerful instruments for preventing the development of inflationary pressures, can effectively reinforce one another.

But these Government policies must be supplemented by appropriate private actions, especially with respect to profits and wages. In our system of free competitive enterprise and shared responsibility, we do not rely on Government alone for the achievement of inflation-free economic growth. On the contrary, that achievement requires a blending of suitable private actions and public policies. Our success in realizing the opportunities that lie ahead will therefore depend in large part upon the ways in which business management, labor leaders, and consumers perform their own economic functions.

A well-informed and vigilant public opinion is essential in our free society for helping achieve the conditions necessary for price stability and vigorous economic growth. Such public opinion can be an effective safeguard against attempts arbitrarily to establish prices or wages at levels that are inconsistent with the general welfare. Informed public opinion is also necessary to support the laws and regulations that provide the framework for the conduct of our economic affairs.

Further progress is needed in establishing a broad public understanding of the relationships of productivity and rewards to costs and prices. It would be a grave mistake to believe that we can successfully substitute legislation or controls for such understanding. Indeed, the complex relationships involved cannot be fixed by law, and attempts to determine them by restrictive governmental action would jeopardize our freedoms and other conditions essential to sound economic growth.

Our system of free institutions and shared responsibility has served us well in achieving economic growth and improvement. From our past experience, we are confident that our changing and increasing needs in the future can be met within this flexible system, which gains strength from the incentive it provides for individuals, from the scope it affords for individual initiative and action, and from the assurance it gives that government remains responsive to the will of the people.

March 1960

Report of the Joint Economic Committee on the 1960 Economic Report
(p 2-4 majority views)

THE PRESIDENT'S BUDGET AND ECONOMIC REPORT

The programs outlined in the President's budget and Economic Report will not achieve the objectives of the Employment Act in 1960. Moreover, they do not call for the actions which, as a result of its studies, this committee believes are necessary to raise the rate of economic growth while achieving a high and steady rate of employment and a stable price level. The public responsibilities for schools, slum clearance, resource development, the elimination of depressed areas, and other functions which are among the major keys to economic growth are either starved for funds or their programs are limited in scope.

Furthermore, while this committee cannot pass on whether the specific parts of the defense budget are adequate for our military needs, there is a considerable body of expert and nonpartisan opinion which believes that much more must be done in the fields of missiles, space, and combat strength if we are not to jeopardize our security and our defense. If more needs to be done, we are confident that it can be done without endangering our economy, if the proper policies are followed.

SUMMARY OF NEEDED PROGRAMS FOR GROWTH, MAXIMUM EMPLOYMENT, AND STABLE PRICES

The conclusions arrived at as a result of the committee's recent investigation of the economy were:

(1) The slow rate of growth in the economy in the recent past has been caused in large part by public policies which created instability in the economy and brought too frequent recessions.

To meet this problem there must be both fiscal and monetary reforms. The Government must act more quickly and more promptly to offset declines,

especially through tax policy. The automatic fiscal stabilizers must be improved, especially unemployment compensation.

(2) In the interests of a higher rate of economic growth, we must place greater reliance on fiscal policy. This includes larger budget surpluses in prosperous periods than we have had, a tax structure which is both more equitable and which will promote a faster degree of growth, and a reordering of the priorities in Federal expenditure programs to promote these programs which stimulate growth and to cut back or eliminate those programs or subsidies which support inefficiency in the economy.

(3) We need a loss restrictive monetary policy within the framework of a more effective fiscal policy. Specifically, the money supply should grow in line with the growth in output. Interest rates could then be lower and would support a more adequate rate of growth and investment without inflation. With a more effective fiscal policy, monetary policy would be more effective in stabilizing the economy than it has been in recent periods.

In recent times the administration has relied heavily upon the monetary authorities to carry out stabilization policy which should properly be the concern not only of the monetary authorities but of the Government as a whole. In turn, the monetary authorities have limited their actions almost exclusively to only one aspect of the problem, i. e., stabilizing the price levels, while they have largely ignored the problems of economic growth and excessive unemployment.

(4) The problem of market power must be attacked. This is the ability of some to set prices without relationship to the demand for their goods or services because of their monopoly or semimonopoly position. Various private, and Government devices which protect the ability of these groups to exercise market power should be reduced or eliminated. Basically, there must be a more effective antitrust policy. In addition, tariffs should continue to be lowered in order to provide more competition; the continued lowering of tariffs should be accompanied by vigorous bargaining on specific

items to achieve in greater degree the objective of reciprocity. This would improve the structure of the economy.

(5) Both private and Government groups must emphasize growth producing policies and programs. This means especially improving the skills and education of our people through Federal aid to education without Federal control; the creation of greater economic opportunity for all of our people, especially the unskilled, women, the aged, and minority groups whose talents are not now used to the full and whose potential abilities and productivity are wasted; improving the health of our people through both private and public programs; placing major emphasis on research, including basic research; and better programs of unemployment compensation, retraining, and the reduction of frictional and technological unemployment through appropriate means.

THE PRESIDENT'S BUDGET AND ECONOMIC REPORT AND THE NATION'S NEEDS

We do not see in the budget for fiscal 1961 and the President's Economic Report for 1960 any fundamental changes in the directions which we think are necessary. By and large they are a status quo budget and report. Comprehensive programs to promote improvements in the skills of our people— schools, health, and retraining— are not adequately emphasized.

The Economic Report does not recognize the basic changes which must be made in our antitrust program if the sources of market power are to be dealt with. We say this even though the specific recommendations for the antitrust program are good in general.

Monetary policy for the current and coming years is not discussed in any constructive way.

There is no reordering of the priorities in this budget over past ones, either for new programs which are needed or for old programs which are wasteful.

The major tax loopholes are not mentioned and there are no recommendations concerning them, although some relatively minor changes are proposed.

The public policies required for economic stability in 1960 are not adequately dealt with.

The Economic Report does contain a large number of proposals which, while appropriate subjects for consideration by the legislative committees of the Congress, are not of sufficient importance in the context of the broad purposes of the Employment Act to warrant filling the pages of the Economic Report year in and year out with their detailed enumeration.

The President's Economic Report endorses in general terms programs such as school aid or aid to depressed areas which are important for the Nation's long-run growth. But the specific legislation proposed by the President to carry out these objectives would build almost no schools or give little aid to those who need it. Each problem is broken down into a series of minute recommendations which give the appearance of support and action but which when added together provide no effective program.

Res

For Tomorrow's Agenda . . . .

Fighting poverty is one thing . . . . getting more equal distribution of wealth is another

ECONOMIC EQUALITY!

Today, the elimination of poverty dominates the American agenda of national policy. But as we reduce poverty, we shall be confronted increasingly with the problem of inequality.

The "income revolution" of increasing equality, which was heralded as a major social achievement during Eisenhower years, turns out to have been both short-lived and overstated. The rate of decline in inequality has halted; indeed, in some cases it has widened. Neither economic growth nor the reduction of poverty assures us of progress towards making the Great Society a more equal society.

How does inequality differ from poverty?

Poverty refers to those who do not command sufficient income to obtain a *minimum* level of goods and services.

At one time the minimum level was a subsistence level, based on mere physical survival. We now recognize that the standard is not absolute; it shifts over time. The poor are those who are not keeping up with the rising standards of the society—in regard to food, shelter, medical care and education as well as income and wealth.

Poverty is thus relative to a standard, although we can—and do—have continuous debate about what the standard should fairly be.

Inequality poses a wholly different question: "What is the degree to which wealth, or good living conditions, or power, are concentrated in a society?" Or, how do groups fare relative to each other?

Inequality involves shares rather than standards. The question is what proportion of national income or medical services is going to the bottom 20 percent of families or to the top five percent. Inequality refers to how the economic pie is divided, rather than to the adequacy of the slice.

By definition, there will always be a bottom 20 percent, unless everyone had the same income. Consequently, increasing inequality—a declining share for the bottom—does not necessarily mean increasing poverty. On the other hand, the reduction of poverty does not automatically lead to declining inequalities.

The effort to reduce inequality does not necessarily imply the utopian and perhaps naive goal of complete equality where everyone receives the same income. Rather, the issue is whether our society desires to continue the lopsided distribution of income which exists today.

Inequality must be examined from many different perspectives, for no one measure yields an adequate understanding of its growth or decline. One common way is by ranking families in terms of the size of their incomes, then dividing them into five or ten equal groups, and comparing the share of national income of each of the groups.

- Thus: the top fifth currently receives 45 percent of national income, more than two times the share it should have received on the basis of its size.
- The lowest fifth received only five percent of national income, a quarter of its proportionate share.
- The top five percent received 20 percent, four times its population size.

This distribution clearly indicates a strong degree of income inequality.

Is the share of the lowest income groupings increasing or decreasing? Not surprisingly, the answer depends on how far back we go in making comparisons.

Gabriel Kolko, a historian who sparked much

INEQUALITIES–NATIONAL INCOME

TOP 20% GETS 45% NATIONAL INCOME

LOWEST 20% GETS 5% NATIONAL INCOME

Black Star

of the attention to inequality in present day America, shows that in 1910 the lowest tenth received 3.4 percent of national income; in 1959, it had only 1.1 percent. In 1962, it was virtually at the same level. The lowest fifth similarly suffered a decline, though less pronounced—from 8.3 percent to 4.0 percent. These sharp drops in the shares of the bottom tenth and fifth have been challenged; the data for the early years are regarded by many as unreliable.

In any event, the share of income going to the bottom fifth has been stable at about four or five percent for over 20 years. While present statistics do not show a growth in inequality, they *do* show that increasing affluence is not expanding the *share* of the have-nots.

Inequalities are also clearly to be observed in the distribution of wealth, the possession of assets. The upper *one* percent holds 28 percent of all the wealth!

The concentration of wealth declined between 1922 and 1949, to be sure, but since then it has been increasing at a faster rate than it had declined before.

The available evidence about income and wealth suggests, however, that the reports which suggested that inequalities were succumbing to the impact of economic growth were exaggerated. As better measuring methods become available, we believe that they will show a trend toward inequality. Indeed, that trend can be seen in the evidence about Negroes and education.

Negroes today are generally much better off economically than they were 10, 20 or 30 years ago. But—and this is a big but—they are falling behind the whites. Inequalities are growing, and the income chasm between white and Negro is increasing.

In 1939, non-white male workers received 41 percent of the average white man's wages; in 1950, the non-white's position improved to 61 percent. The war years produced a real social and economic advance for Negroes and other disadvantaged groups.

Since then, the move toward equality has faltered, and non-white workers now are paid only 55 percent of the wages of white workers—a gain since 1939, but a backward step when compared with 1950.

In terms of unemployment, the gap between Negroes and whites not only has grown, but Negroes are actually worse off today than they were in earlier periods. In other aspects of their economic condition, it is not that Negroes as a group

have suffered an actual decline; rather, their situations are not improving as rapidly as in the white sectors of society.

Education demonstrates the paradoxical point that increased inequalities accompany increased improvements. The higher the level of educational achievement, *the greater the spread* between the incomes of Negroes and similarly educated whites! Thus, education appears to heighten frustration, for it increases the sense of relative deprivation.

A startling statistic spotlights the fact that 18 percent of non-white heads of college-educated families were in a poverty status in 1959; the comparable figure for whites was only seven percent. Education is not reducing the economic in-

equality of Negroes.

The economic platform of the Negro civil rights revolution is at root a struggle for equality. The aim is not only to raise income levels, but to reduce the degree of economic inequality between Negroes and whites.

In effect, what Negroes have been saying is that their conditions should improve at least as rapidly as the rest of society. This is a concern about inequality.

The increasing stress on education is producing a new economic and social divide—between the diploma elite with their college sheepskins and the rest of society. The incomes of the diploma elite are advancing much more rapidly than those of the lesser educated, and this is likely to continue. For instance:

Photo by Black Star

Working with machinery. . . .

- In 1949, an elementary school graduate earned 78.9 percent of the income of a high-school graduate. By 1958, this figure had dropped to 74.8 percent.
- The earnings of a high school graduate were 66.4 percent of the college graduate's earnings in 1949, but by 1958 this had declined to 58.9 percent.

Education is increasingly becoming the route for social advance. As average educational levels move up in the United States, the point at which education makes a marked difference in occupational and income opportunities escalates. The trend is apt to continue.

Poverty and inequality are not wholly separate concepts, for the reduction of poverty will require a lessening of some inequalities.

The distinction between poverty and inequality is important for long-range policy. A public commitment to the elimination of poverty rests upon a humanitarian sense of charity and compassion, that no man should live in hunger or squalor or below a commonly accepted level of living.

The goal of eliminating inequality, by contrast, probes the more fundamental issues of the purposes of our way of life. It requires a philosophy and a vision of the great society—in short, an ideology.

The elimination of poverty as an act of charity can be regarded as an all-win game in which every group benefits, but the concern with inequality has harsher implications. The more equitable distribution of income and social services must mean that some groups get more while others get relatively less.

Thus the subject of inequality opens for public debate the searching policy issues of what kind of society we want. . . . Who should be the most rewarded? How great should be the economic and social cleavage among economic and social groups? What balance do we want between economic growth and economic justice?

As we succeed in reducing poverty and as we confront inequality, national attention will be riveted on new and competing strategies of redistribution. We are already witnessing this: the Elementary Education Act of 1965 attempts to redirect educational expenditures so that the low income groups get more benefits.

We have not yet made a similar commitment to tax reductions designed to promote economic growth and reduce economic inequalities among people. We could produce a major reform in the social security system by raising taxable earnings to, say, $20,000, while retaining the present type of benefit schedule. That would be a step to promote a more equitable distribution of resources.

Poverty is an age-old problem which we thought the concepts of the welfare state had conquered. Inequality, we assumed, had surrendered to economic growth. Neither is true.

Now we have begun to accept a commitment to eliminate poverty. Reducing inequalities will become tomorrow's responsibility.

This article was written jointly by S. M. Miller, professor of sociology at the Maxwell Graduate School of Syracuse University, and Martin Rein, associate professor of social work at Bryn Mawr.

HOW MANY JOBS? WHAT KINDS OF JOBS?

The past several years have witnessed dramatic changes in the nation's economy. The current business expansion has now continued without interruption for four and one-half years, the longest period of sustained economic growth in our peacetime history. Employment has risen sharply—by almost 1.75 million over the past year—and unemployment has been reduced, although not nearly to the level we would like to achieve.

Significantly, much of the growth represented expansion in the goods-producing industries and in blue-collar jobs, especially at the semiskilled level. These are sectors of the economy which we had almost given up as sources of new employment.

These changes are heartening, but they seem unlikely to reverse or halt the shifts in the pattern of demand for workers, both by industry and occupation, which have caused severe employment dislocations throughout much of the postwar period.

During most of the last 20 years, three trends have dominated employment growth in the United States:

♦ A sharp rise in the service-producing industries at the expense of the goods-producing industries.

♦ An expansion of white-collar and service jobs, with relatively little or no growth in blue-collar jobs.

♦ A dramatic increase in the number and proportion of women workers.

The shift from goods to service industries has been going on for a long time, but it has been particularly dramatic since 1947. Almost four-fifths of the nonfarm employment increase during that period has occurred in service and related industries—trade, finance, services, transportation and government. Only in the last year has employment in the nonfarm goods-producing industries regained the level it had achieved in 1953. From 1957 to 1962, employment in these industries actually declined by an average of 100,000 a year.

Occupational trends have generally mirrored the industrial trends. Sharp declines in manufacturing during the three recessions following 1953 brought drastic cuts in employment opportunities for blue-collar workers.

For example: From 1957 to 1962 employment in manual occupations actually dropped by 600,000 jobs, and most of the loss was at the semiskilled level. In contrast, white-collar jobs—professional, managerial, clerical, and sales—have multiplied. These occupations accounted for two-thirds of all nonfarm employment growth between 1947 and 1957, and in the next five years they included 85 percent of the increase.

Anyone looking at the changes in America knows that one of the most dramatic has been the increasing employment of women. Women make up about two-thirds of the total increase in the civilian labor force since 1947. In part this is due to the rapid expansion of trade and service industries, which are major employers of married women.

For workers, there are some obvious implications in these trends. Men, who predominate in goods-producing industries and in blue-collar jobs, have been affected most by the relative drop in employment opportunities there. This is particularly true of the less skilled, the poorly educated, Negroes, and untrained youths. The older men's vulnerability is manifest, not only in higher unemployment rates, but in his tendency to drop out of the labor force altogether.

Even though some older workers can claim early retirement benefits, evidence is accumulating that many of them are forced to accept reduced social security benefits following an extended period of joblessness. The need to supplement these benefits has made part-year and part-time work increasingly important for them.

The employment pattern of the past decade clearly indicates that workers in goods-producing industries, blue-collar workers, and workers at the lower skill levels in general, all tend to bear the brunt of a recession, or even of a slowdown in economic growth. Furthermore, the goods-producing industries and the blue-collar occupation groups have tended to experience employment expansion only in periods of vigorous growth.

We are currently experiencing just such an expansion—and one of its outstanding characteristics has been the healthy growth both in output and jobs in the goods-producing industries.

There has also been a sharp recovery in blue-collar employment since 1961, particularly at the semiskilled level. Blue-collar jobs have increased at an annual rate of over half a million between 1961 and 1964. Similarly, employment in goods-producing industries increased 400,000 workers per year from 1961 to 1964, and by mid-1965 their employment had increased by an additional 800,000.

Moreover, these increases have not occurred at the expense of the service industries and white-collar jobs. White-collar and service occupations have continued to rise at their earlier rapid pace, and there has been actually some further pickup

in employment growth in the service industries.

The character of the recent expansion, as well as its unprecedented strength, has raised the question of whether any basic changes in the pattern of employment growth are emerging. Can we again look to the goods-producing industries and the blue-collar occupations to provide a major source of employment opportunities? The answer seems to be negative.

Recent projections of employment prepared by the Department of Labor suggest that even under

Black Star Photo

More jobs for women . . .

conditions of rapid overall growth in employment, these sectors are unlikely to grow apace. The prospects are that although employment in the goods-producing industries and in blue-collar jobs will be below average, they can be looked to as a source of moderate employment growth—but only if the economy is kept prosperous.

Moreover, during the next decade we will be facing significant changes in the size and composition of the labor supply which could further increase manpower problems:

1. The pace of growth in the labor force will accelerate sharply.

Compared to an average growth of about 900,000 per year since 1947, the total labor force is expected to increase by an average of 1.5 million each year during the next decade. *We will have to generate jobs at a considerably faster rate than in most recent years to prevent rising unemployment.*

2. Most of the additional growth will be among young workers.

The full impact of the enormous number of births after World War II is just beginning to be felt in the labor force. An average of some 600,000 persons under 25 will start looking for jobs each year between now and 1975, compared with an average increase of less than 150,000 per year from 1947 to 1964.

3. The number of Negroes in the labor force is expected to grow at a very rapid rate. Nonwhites will represent one-fifth of the total expansion of the labor force in the next five years, nearly twice their proportion in the current labor force.

4. Almost half a million women will be entering the labor force each year during the next decade, continuing the rapid increase during the entire postwar period.

Thus, the coming decade is likely to see a continuation of the major industry and occupation trends of recent years, as well as an influx into the labor force of a relatively large number of workers with special employment problems—the young, the inexperienced, and nonwhite workers.

It seems clear that a prerequisite for expansion of job opportunities in the goods-producing industries and the manual occupations—where many of these workers have traditionally found employment—is a strong rate of overall economic growth, such as we have had in the past several years.

Workers must look for new employment opportunities largely in the expanding service industries, in the more skilled blue-collar jobs, and in white-collar occupations. Unions will have to concentrate additional organizing effort in these expanding fields if they are to maintain and increase their membership.

Virtually all of the projected changes in occupation and industry demand for jobs confirm the need for workers to get more education and training.

Industry and unions must continue to increase their efforts to establish and expand programs of job training for the large number of young people newly entering the labor force. Of course, these trends underline the need for expanded efforts of retraining of the unemployed and underemployed, as well as for other manpower programs to ease the inevitable manpower adjustments associated with industrial and technological change.

Only by means of cooperative efforts on a broad front by organized labor, business and government can we expect to develop and carry out programs needed to meet the tasks before us.

Curtis Aller, a recognized expert on employment trends, is director of the Office of Manpower, Automation and Training of the U.S. Department of Labor in Washington.

Jobs and prosperity are linked to government programs of taxing and spending

THE FISCAL THAT MAKES

During the past four years, the American economy has achieved significant progress.

Total output of goods and services has grown from $514 billion in the second quarter of 1961 to $658 billion four years later, a yearly growth rate of 6.4 percent. Even with adjustments for price increases, the rate works out at a respectable 4.6 percent.

Perhaps even more important, over four million new job opportunities have been created during the period, and the rate of unemployment has fallen from 6.9 percent to 4.7 percent.

These are impressive figures, indeed—doubly impressive compared with the sluggish rate of progress during the late 1950s.

What caused this improvement?

Many factors contributed to the upturn in the economic fortunes of the nation, but one was of greatest importance: The coming into office of an Administration determined to use the tools of federal fiscal and monetary policy to promote economic recovery.

To achieve this purpose, federal spending rose almost 25 percent—from $99.5 billion in the year ended June 30, 1961, to $122.4 billion four years later. In addition, from the time the federal budget for 1963 was presented early in 1962, the Administration proposed a major tax cut to bolster the economy by increasing the actual take-home pay of millions of taxpayers.

The success of these policies has been demonstrated beyond doubt. Yet we dare not remain complacent in the light of what has been achieved, because even today, after more than four years of uninterrupted economic growth, we still have 3.6 million unemployed and two million under-employed persons. These figures may even understate the true position.

Finding new job opportunities for the unemployed and under-employed will continue to rank as a problem of the greatest urgency. The task is complicated by the fact that during the next few years about one and a third million jobs will have to be found every year for newcomers to the labor force, over and above those who die or retire. In addition, over two million job opportunities are needed every year to offset gains in productivity.

How can this gigantic task best be accomplished?

In future years, as in the past, private enterprise will continue to provide the great majority of all job opportunities. However, it is unlikely that it can discharge this task entirely unaided. It will be the responsibility of the federal govern-

POLICY $ENSE

Photo by Black Star

ment to pursue policies that will encourage and assist private enterprise to provide the highest possible number of jobs.

For this purpose, policies for the maintenance of sufficient demand to absorb the nation's growing output of goods and services are most important. The business community must remain convinced that the Administration will not hesitate to employ all the measures at its disposal to achieve this objective.

Two of the most important tools available to the federal government are its monetary and fiscal policy measures.

Monetary policy can contribute to the maintenance of sufficient demand by making credit not too difficult to obtain and by preventing the cost of borrowing from rising too high.

Fiscal policy is concerned primarily with taxes and expenditures. It is the most important single tool that can be employed by the federal government to ensure the success of its policies.

During the last few years, taxes and tax reduction have received the most attention. In order to ensure a continuation of economic prosperity, federal income taxes were reduced in 1964 and again this year, and excise taxes were reduced just a few months ago.

These measures have achieved their purpose, as can be seen by the generally healthy state of the nation's economy at present. Millions of wage and salary earners throughout the nation have enjoyed an increase in their take-home pay because of lower withholding taxes. It is tempting to argue that all we need to stay prosperous may be a series of further tax reductions, judiciously timed to counter any signs of faltering in the economy!

However, quite apart from the difficulty of determining the correct timing, federal tax reduction must be judged from a wider point of view. For a complete picture, social security contributions and state and local taxes are of very great importance. Even all of these factors will be inadequate without considering government expenditures.

As a general rule, social security contributions and most state and local taxes—unlike federal income and profits taxes—impose a heavy burden on lower-income families, who are least able to bear it. This is particularly true of sales taxes, especially in those states and localities where food is a taxable item.

Because of the steadily increasing demands for services provided by state and local governments —education is only one example—tax reductions

will be out of the question on the state and local level. Indeed, the outlook is rather for a slow but steady increase in these burdens. At the same time, social security taxes are scheduled to get a number of built-in increases during the next few years.

So, any talk of further tax reductions is generally confined to federal taxes, many of them shouldered by corporations and higher-income taxpayers. Unless federal tax reductions in the future concentrate on giving most relief to lower-income taxpayers, it is doubtful whether they can achieve their stated purpose of stimulating maximum purchasing power in the most effective way possible.

The importance of expenditures by all levels of government (federal, state and local) in maintaining and expanding the demand for goods and services has perhaps not been stressed sufficiently in recent years.

Yet government plays an impressive role in sustaining our prosperity. State and local purchases of goods and services have risen from $50 billion in the second quarter of 1961 to $67 billion in the second quarter of 1965, while total federal expenditures have climbed by about $10 billion over the same period.

Today, nearly one out of every seven Americans in civilian employment works for government—federal, state or local. While federal employment hasn't increased by more than 100,000 since 1961, the number of state and local government employees has increased by 1.25 million in the same four years.

State and local governments have provided job opportunities increasing by about 300,000 year after year, and there is every reason to assume that such employment will continue to grow at least as fast during future years. This is one of the most dynamic sectors of the economy from the standpoint of creating additional jobs.

The need for higher government spending at all levels is going to continue. Federal expenditures on education, urban development, health, economic opportunity and similar welfare type programs can be expected to rise considerably in the near future.

In the past, the greater part of these expenditures has been shouldered by state and local governments. Now it is becoming increasingly obvious that if we want to improve the standards of all these services, federal financial help will be needed—even though the administration of most of these programs will remain in local hands.

INCREASE IN NET PRIVATE AND PUBLIC DEBT
(billions of dollars)

	1946	1964
FEDERAL GOVERNMENT[1]	$230	$267
STATE AND LOCAL GOVERNMENT	$ 14	$ 86
CORPORATE	$ 93	$395
INDIVIDUAL[2]	$ 61	$416

[1] Excludes Federal debt held by government agencies (such as the Social Security system). In 1964, about $61 billion of Federal debt was thus held by the government itself.
[2] Includes debt of unincorporated business, consumer credit, personal loans, mortgages, etc.

Federal expenditures for these purposes could more than double by 1975 as a result of pressures for better schools and colleges, better health services, and a better deal for the poor and the aged. Certainly, the need for expanding government services in all these fields is clearly established.

The Administration has given convincing proof that it intends to make certain that these needs

THE NATIONAL DEBT AND GROSS NATIONAL PRODUCT

[1] Net National Debt figures are for December of each year and for June 1965.

are met, although it is realized that it must take some time before they can be met fully.

However, it may be asked, what will these increasing expenditures do to the financial position of the federal government? Will such government spending not result in an unbalanced budget and steadily growing deficits?

The answer is that increased government spending can be met from rising federal revenues—providing our national economy is growing quickly enough to maintain reasonably full employment. (Of course, one should add, circumstances can change quickly; the Viet Nam situation, for instance, required unexpected increases in defense spending.)

The recent tax cut has furnished us with a good demonstration. Taxes were cut by about $8 billion in the first stage of the tax revision, ending June 30, 1965. Despite this, the economy performed so well that federal receipts actually *increased* by $4.2 billion during the year ended June 30, 1965. The deficit which had been estimated earlier was greatly reduced.

Once a level of reasonably full employment is reached and the American economy keeps on growing at a satisfactory rate, federal tax receipts will rise by about $7 or $8 billion every year. These figures assume a slight price increase, but no more than we have experienced since 1961.

This rise in federal receipts will leave ample room for tax reductions or increased expenditures—or preferably for a judicious mixture of both.

It also should be noted that increases in federal expenditure for education and many "welfare" type programs will go a long way to help the finances of state and local governments. This will reduce the necessity to increase state and local sales and property taxes which hit low-income families especially hard, and it will provide an important measure of indirect tax relief.

We have seen that fiscal policy is a very powerful tool that can help the federal government to achieve and sustain a full employment economy. Properly used, in combination with other government measures, an "expansionary" fiscal policy provides the assurance that the Administration will remain faithful to the provisions of the Employment Act of 1946, and that it will constantly strive toward the constant goal of prosperity for all Americans.

Dr. Peter Wagner, the author of this discussion of fiscal policy, is an economist with the National Planning Association, an independent organization with headquarters in Washington.

If there is going to be a successful war against poverty, then a very special campaign must be waged against the tenacious poverty which affects so many Negroes. And if the right to public accommodation and the vote which the civil rights movement is winning are to be truly an emancipation, then the nation cannot allow the

ECONOMICS FOR THE MINORITY

Michael Harrington stresses need for unity among labor, civil rights groups as a hope for future progress

economics of racial poverty to nullify the legislative and political gains.

Thus, it is extremely important to understand why the poverty of the black man is, in a sense, an even greater indignity than that of the white —and to do something about it.

There are deep historical roots to the economic misery of the American Negro, of his almost hereditary poverty.

At the end of the 1930s, however, came the greatest period of Negro economic advance (it was in this period, that the racist economy allowed the Negro to get "all the way" to 55 percent of the white wage!). There was full employment because of the war; and the industrial unions organized *all* the workers in a plant, white and black. But by a terrible irony, the Negro had journeyed from the rural South to the northern ghetto and then finally into modern, unionized industry at the very moment when mass production work became more and more problematic.

In the 1950s, as the last hired, the Negro was the first fired.

So it was, and is, that the Negro suffered so terribly from the chronic high unemployment and under-employment which have plagued America for over a decade. Throughout this period, Negro unemployment was twice that of white; and, tragically for the younger generation, Negro youth unemployment was also double the white. That meant that the young Negroes were living under depression conditions with joblessness rates going as high as 30 percent.

In the July 1965, government report on unemployment, while practically every other group was making remarkable positive gains, the Negro unemployment rate was going the other way: up.

This situation is particularly disastrous for the young Negroes.

About 18 percent of the new entrants to the labor force in 1965 will be black (as against 11 percent of the population). Approximately 50 percent of these young people will lack high school educations and almost all of them will have gone to inferior schools as compared to whites.

In an economy in which, as Secretary of Labor Wirtz put it, machines are now regularly being built with high school educations, how can these youth hope to have a decent economic future? And if they do not, then there is every indication that poverty among Negroes could actually increase—and in the very midst of our official war against poverty!

The basic reasons for Negro poverty are, then, historical and economic.

As a slave, the black man was treated as an animal; as a freed man in the post-Civil War South, he was economically and socially segregated, in part to keep him from joining politically with the poor whites; in the North after the turn of the century, the Negro improved his lot but, just at the possible moment of breakthrough when World War II and the labor movement brought him into the modern sector of the economy, chronic high unemployment and automation started pushing him back. Thus, black America, for no fault of its own, has been cruelly denied the escape route out of poverty which a growing, blue-collar economy provided the European immigrant groups.

It is a tribute to the resourcefulness of the Negro that despite these incredible hardships the civil rights movement has been able to make such an impact on the society. And yet, if the

Black Star Photo

Negro learns that his emancipation from legalized, state-enforced segregation only means his entry into an economically and socially segregated America, this most dynamic, creative and moral movement in our recent history will lose its driving force.

Even now, there is a certain demoralization, a despair, which affects some in the racial ghettoes.

Well meaning people have often misunderstood this aspect of the problem and it is worth pausing over it for a moment.

Under slavery, the Negro was denied the right to a family life (this made slavery in the United States even more vicious than in Latin America where marriage at least, was allowed). More recently, brilliant Negro scholars like the late Franklin Frazier and Kenneth Clark have documented the weakness of the Negro family structure, the widespread problem of illegitimacy in the ghetto, and so on.

There are some concerned people who have concluded that the basic Negro problem is therefore one of "self help" or some kind of moral reform. The civil rights movement is told to make the people "better" within the ghetto. Then, they will be able to break down the walls of segregation.

Black Star

This attitude assumes that the demoralizing impact of poverty on the personal life and psychology of many Negroes is an individual thing. It does not understand the way in which this familiar disorder has been imposed by the economy upon the Negro. If there is no economic basis for marriage among a significant number of Negro males—if there isn't decent paying work which will let them be breadwinners for a family—all of the exhortation about self-help cannot motivate them to the impossible.

Indeed, the sermons have the effect of implying that it is a failure of will, a personal fault, that an individual's marriage is broken up when it is much more often a social and economic consequence beyond his control.

An analogy to Kenneth Clark's discussion of the "culturally deprived" child might illuminate this point.

In *Dark Ghetto,* Clark tells how some theorists have argued that the main problem with Negro (and white) poor children is that they have no contact with culture at home. First, they say, this cultural deprivation must be changed. Only then can one treat the problem of education for the poor.

These one-sided analysts, Clark holds, turn our attention from a big fact: one of the main reasons ghetto children do badly in school is that their schools are so much inferior as compared to those for whites. Change the educational environment, Clark says, and give the child from the culturally deprived home a chance for decent instruction and he will make enormous progress *even with* his problems at home.

Similarly with the ravages of poverty within the family structure of the Negro poor: give them an economic chance for stable marriage, that is, a job, and many will take it without any exhortings required. Here, as in almost every aspect of Negro poverty, the problem is to get to the underlying economic causes.

One thing that can be done is to extend minimum wage to the working poor. Many of the unprotected jobs are those held by Negroes—laundry work, migrant agricultural labor and so on.

The Administration has proposed giving coverage to 4.5 million workers; the AFL-CIO for giving it to 5.3 million. The labor movement's proposal is superior, but I would suggest two additions to it: farm work and domestic work (there are federal jurisdictional problems with the latter category, but they have been solved for social security, so why not for minimum wage?). These additions would give minimum wage an even greater effect upon poverty and particularly Negro poverty.

But providing a non-poverty wage for present workers, black and white, is still not going to get to the core of the problem of race poverty.

For there is this literal horde of young Negros coming into the labor market without enough education. They need the training programs which are already being developed under the Office of Economic Opportunity and the Manpower Development and Training program.

When they graduate, will we have decent jobs for them? According to the Department of Labor's 1965 Manpower Report, the Administration does not presently foresee an economic growth rate which will provide enough new work in an automating economy to absorb the millions of young workers who will be looking for work in the next few years.

Therefore, if we are serious about civil rights and the War on Poverty, we are going to have to create jobs for these youth (and for others as well).

Perhaps one of the best suggestions of how to do this has been made by Senator Joseph Clark's Subcommittee on Manpower and Employment. It called for a full employment budget which would add $5 billion of federal social spending (for schools, decent, integrated housing, hospitals, transportation systems) each year. The Clark proposals would also give the President and the Council of Economic Advisers the responsibility of drawing up a national budget for the entire economy, public and private, and for seeing to it (by federal action if necessary) that the result would yield work for all who need it.

In short, national economic planning and massive social investments are required if the Negro is to be given a real chance to escape poverty.

But doing this is hardly a giveaway program, for it amounts to raising the educational, health and aesthetic level of the entire society. The 75 percent of the poor who are white would benefit, and so even would the non-poor taxpayer who has to support the "custodial" programs of police, fire and medicine which are required because of the special and terrible problems of the slums. And every American would gain because the whole level of the society would rise.

In 1964, Senator Goldwater tried the trick which southern reaction had successfully used in the 1870s: he attempted to turn the white worker against the black worker. Both labor and the civil rights movement understood that it would be disastrous if such a split should occur and they united behind President Johnson. That alliance has to become a permanent, working arrangement.

Specifically, Negroes must understand that they can only find the jobs which will allow the escape from poverty if the whole economy, black and white, is put to work. And the unions have to continue to understand that Negroes have been the first to suffer from automation and unemployment . . . but that if this situation persists, they will not be the only ones. If the economy can crush the Negro worker today, it can crush the white worker tomorrow.

If the Negro and white poor, the Negro and white workers, fight against one another for scarce jobs, everybody loses. If they join together, we may be able to win the war against poverty and give social and economic meaning to civil rights.

Radicals try to rewrite the book

New Left economists seek to put a theoretical base under their attack on capitalism

In 1962, a small, relatively unknown organization named Students for a Democratic Society met in Port Huron, Mich., and issued a statement calling for a "New Left" to start "controversy across the land." That was the beginning of a campus revolt that each year seems to find new leaders and new issues, creating a tradition of radicalism among American youth that has been wholly absent since the 1930s.

For both the activists and those disturbed by their activities, there always has been a question: Would the radicalism prove of enduring significance or would it turn out to be the political equivalent of that 1950-style challenge to authority—the panty raid? The test comes when student rebels graduate and start settling into the careers for which education has prepared them.

From this standpoint, the development over the past year of organized leftwing groups in virtually every academic discipline probably has been more important than the widely publicized factional squabbles of the student left. In the past month, several of these groups have made their presence felt. Radical psychologists disrupted the annual meeting of the American Psychological Assn. in Washington, D. C., with demands for "reparations" for blacks; a group calling itself the Sociology Liberation Movement staged a "counter convention" in a San Francisco church a block away from where the American Sociological Assn. was meeting; and the Caucus for a New Political Science ran several panels (and a slate of officers) at the annual convention of the American Political Science Assn.

Hurdles. For all of these organizations, getting attention is only the first stage of a program to establish an intellectual base for the new radical tradition. To accomplish this, the young members of the New Left will have to solve two problems: first, to win tolerance as political radicals within their profession; second, to develop an intellectual restatement of their discipline capable of competing with established doctrine.

Progress on both fronts varies widely among professions. Some, like sociology, have a native radical strain of long standing. Others have such a strong centrist tradition that they can not easily accommodate radicalism.

Economics—at least in the U. S.—is clearly in the second category. Partly because of philosophical bent, partly because economists play a more practical role in society than other social scientists, the profession tends to be stubbornly nonideological. Still, a movement exists toward radicalizing the profession.

The Union for Radical Political Economics was founded last year at an Ann Arbor, Mich., conference called by a group of University of Michigan graduate students, some of whom had been among the original members of SDS. It has about 500 paid-up members, half graduate students and half junior faculty. Another 500 or so are on its mailing list, kept, appropriately enough, on a computer printout run off at the Massachusetts Institute of Technology. The group already has had two national conventions and several regional meetings and has those indispensable academic trappings—a book of proceedings and a review.

Karl Marx is in vogue again, but the New Left is making some changes of its own.

Acceptance. A decade ago, acquiring a reputation as a radical would have been courting academic disaster. Although a number of economists admit to a left-wing past, in the 1950s only one acknowledged Marxist economist, Paul Baran, taught at a major U. S. university (Stanford). Now, although "hard-core Marxists" are still out of favor, being an active radical is apparently no bar to university employment—and in some cases may even help.

Events at American University symbolize the change. Both James Weaver, head of the Economics Dept. last year, and Charles Wilber, the present chairman, are members in good standing of the Union for Radical Political Economics. This year, they have hired two URPE members from the University of Michigan to teach urban economics. They also have brought in as visiting professors two European economists whose work is particularly popular with the New Left—Yugoslavia's Branko Horvath, one of the leading theoreticians of decentralized socialism, and E. J. Mishan of the London School of Economics. His book, The Costs of Economic Growth, attacks the liberal faith in growth as a social cure-all.

Movement. American University is perhaps an extreme example—a deliberate attempt to cultivate a reputation as a radical economics department in order to attract students to what at this point has not been considered a very exciting school. But members of URPE are on the faculties of schools all over the country: Harvard, the University of Michigan, Yale, State University of New York (SUNY), Massachusetts Institute of Technology, San Jose State College, Pennsylvania State University, and the New School of Social Research in New York City, one of the real centers of radical economics.

Harvard, which has the best liberal economists and, next to the University of Chicago, the best conservatives, also seems to have the best group of radicals. It includes Samuel Bowles, son of the former advertising executive and ambassador to India, who is making a reputation as a specialist in the economics of education. The Harvard group has an economics course specifically aimed at demonstrating, as one instructor explains, "that capitalism can't solve its problems."

The young Harvard group has so impressed their distinguished elder colleague, Wassily Leontief, president-elect of the American Economic Assn., that he has invited it to give a paper on the radical economics course at the December AEA meeting.

Change. The willingness to listen to—and employ—radicals is, of course, in the liberal tradition of tolerance. But it is a toleration mixed with chagrin. Much has happened in the last five years to shake the economics profession from its smug complacency with received doctrine of the early 1960s.

Some problems are technical. The Keynesian model just doesn't seem to crank out the right numbers anymore. According to everything the new economists have believed for the past generation, business should have hit the skids early this year. The fact it did not puts a key card in the hand of the Chicago School of monetary economists. But it also helps those who want the economics profession

PAGINATION INCORRECT

Michael Zweig of the Stony Brook faculty of the State University of New York calls himself a free-market anarchist.

Samuel Bowles, son of the former Ambassador to India, is in Harvard group giving a paper to American Economic Assn.

to get over its decade-old infatuation with stabilization policy.

Probably more than anything else, New Left economists are in revolt against the attitude expressed in President John F. Kennedy's 1962 Yale University speech. "What is at stake in our economic decisions," he said then, "is not some grand warfare of rival ideologies which will sweep the country with passion but the practical management of a modern economy."

Behind that was a seemingly naive faith in economic growth as a social lubricant. In theory, high-level growth should make everyone content with his lot and prevent bitter contention between different groups in society. But after more than eight years of the greatest upshooting in gross national product in history, there has rarely been so much social conflict.

Complaint. The major charge that all radicals lodge against orthodox economists is that they tend to overlook the connection between the economic system and other aspects of society. Tied to this is a contention that economists are wedded to the status quo. "Economics is so involved in the maintenance of the present economic system that it cannot conceive of alternatives," says American University's Weaver. "Economists should be critics, not celebrants."

The specifics of the complaint range from the strident Marxist contention that economists are simply servants of the ruling class to a more sophisticated view that the way neoclassical economists look at the world prevents them from even thinking about alternatives to corporate capitalism.

Orthodox economists always have prided themselves on their tight analytical thinking. Walter W. Heller, former Chairman of the Council of Economic Advisers, once said, "The economist's discipline constantly conditions him to marginal, rather than all-or-nothing, thinking, to a balancing of costs and benefits at the margins of policy."

The new left has no use for margins. Snorts Michael Zweig, a lushly bearded assistant professor at Stony Brook campus of the State University of New York: "A dedication to marginal analysis has kept economists from dealing systematically with important questions of American economic institutions and relations, not the least of which concerns their legitimacy."

Practicality. For all of their talk about systematic thinking, however, radical economists are not very far along with the job of devising an intellectual system that can compete in the marketplace of ideas with traditional economic theory. At present, being a radical economist is more a state of mind than a body of doctrine.

That, of course, is not surprising, considering the origins of student radicalism. The SDS—at least until last year—fought "ideology" with almost as much fervor as it fought the "establishment." Its notion was that political ideas grow out of action and that theoretical niceties had traditionally been the cardinal sin of the left.

For radicals who want to make reputations as economists, however, this sort of thinking is not very fruitful, and they are rather desperately trying to develop a theory to go with their rhetoric. At URPE's convention last month attended by less than 100 members, it was clear they had not come very far. The ideological content ranged from fairly orthodox Marx to warmed-over Mao.

Old hat. Though most apologize for not having read him in the original, Karl Marx is much in vogue among the radical economists (and among the leftists in most other social sciences as well). The attraction is obvious. Accepting the view that capitalism is at the roots of most of society's problems, the radicals need some body of theory that looks at the over-all system. Western social science has tended to keep things such as economics, politics, and psychology separate. Marxist analysis purports to have an integrated view, which, moreover, addresses itself to the question of how society can undergo radical change.

Emerging from this jumble of ideas is a pattern of themes on supposed failures of corporate capitalism and the social crises that allegedly it has produced. Many on the left are convinced that they are the first generation of a "post-scarcity so-

Shouldn't you?

ciety" which has solved the technological problems of production but is prevented from reaping the benefits by the system of corporate capitalism.

It is a complex theme with many elements: the charge that corporations block technological change to protect their vested interests; the charge (borrowed from Harvard economist John K. Galbraith's book, The New Industrial State) that capitalism has been made to work by artificially induced waste; the charge that "human values" are subordinated to requirements of economic efficiency.

Voice. The last is a complaint about both capitalism and orthodox economics which radicals tend to see as synonymous. "Economics is unidimensional," says Herbert A. Gintis, a young instructor at Harvard. "It deals only in questions of material welfare, which become of lesser importance as society increases in abundance." His doctorial dissertation, Alienation and Power: Toward a Radical Welfare Theory, is probably the first attempt to provide a framework for New Left economics—and an economic explanation of the student power movement. Though Gintis is far from doctrinaire, his work is basically a Marxian analysis topped off with the modern sociology of Harvard's Talcott Parsons.

At the start, Gintis breaks through the traditional hangup of classical welfare theory—the refusal to make judgments about individual values and tastes. This, for one thing, prevents orthodox economists from saying anything about such obvious social questions as distribution of income.

The New Left, in Gintis' view, is in revolt among other things against the concept of "consumer sovereignty," which is the popular version of economic neutrality on personal tastes. To radicals, values and taste are not "given" but determined by social (and many say economic) forces. According to Gintis, corporate capitalism has produced a false sense of values. These values will only be changed, he concludes, when capitalism is replaced by some other social system.

Objections. According to Gintis, modern capitalism produces social alienation in much the same way as Marx saw it in the 19th Century. By "selling his labor as a commodity," the worker relinquishes control over conditions of his employment; work, therefore, is conducted solely according to the managerial criterion of economic efficiency, which is a loss of "human values" in the sense of participation or personal enjoyment.

Students are rebelling against this regime, Gintis says, and his most significant updating of Marx is to locate in the student power movement the vanguard of a "working class" that can serve as an agent for social change. Up to now, the main problem of Marxist dialetical determinism is the fact the "proletariat" has not played the role assigned to it. Rather than being

rebellious, the industrial working class in the West has been generally a satisfied, conservative force.

But as Gintis sees it, "Affluence has permitted large groups of people to be concerned about other things. Naturally, those most concerned are the students. They, Gintis says, are starting to see themselves as being forced by schools into molds set by the manpower requirements of business.

Studies. Most studies of the economics of education simply try to associate various types of education with economic success or failure. The Harvard group uses a concept of "educational production function" to ask the question: What specifically does education do to make workers more productive? Its tentative answer, based on a sophisticated statistical analysis of education tests, is that education works not by broadening individuals but by narrowing the range of their thoughts. To Gintis, this means that "education becomes productive only insofar as it is repressive."

The New Left is by no means certain what they want to substitute for capitalist society. One of the things that most distinguishes today's radicals from those of the 1930s is the vision of a "participatory democracy" that eliminates any coercive authority. There has been a slow erosion of this theme as emotions generated by bitter opposition to the war in Vietnam and of clashes with the police have pushed many toward the traditional Marxist views of class conflict and violent revolution. But the model of a decentralized economy based on community ownership and control is still a good idea for most of the left. Many are studying the decentralized socialism of Yugoslavia and the Israeli kibbutz. Few show interest in the Soviet Union or Communist China (though Mao is a popular hero even for the non-Marxists).

There is, in fact, a decided strain of anarchism among the New Left that persists even when the radicalism takes more systematic intellectual form. Zweig argues for a society that begins with a revolution to redistribute property ("the existing distribution of property is the result of theft," he says) and ends with freedom from any governmental interference.

According to his analysis, modern capitalism has failed because so many of the "real costs" of economic activity are borne by the public at large. Air pollution is an obvious example. A free market that forced everyone to pay the real social costs of production would probably maximize welfare with a minimum of constraints, he contends.

To economists over thirty, such utopian thinking is a sign of intellectual confusion. But, however confused the New Left economists might seem to be, they still offer a powerful challenge to the "Establishment" of both the economics profession and the society that it serves. **End**

Technology in the Mindless Market

By ARLEN J. LARGE

WASHINGTON — President Nixon's decision to go ahead with the supersonic transport is a striking example of the pressures of technology on classical economic concepts of the marketplace.

Technology is expanding the old marketplace boundaries far beyond mere buyer and seller, involving ever more "outside" parties —people who want *right now* technological fruits that the classical market isn't ready to provide, and people who fear bad side effects of technology evolving from the narrow interaction of buyer and seller alone.

The "natural" economy isn't yet ready to produce an SST, though aeronautical engineers say they have the skill to make one. An outside party—the President—insists that for reasons of statecraft the plane be built now anyway, doctrines of Adam Smith notwithstanding. Still other parties besides the eventual buyers and sellers of the SST's services want a piece of the action; they are worried about the fallout of noise, dirt and airport congestion resulting from this latest technological leap forward.

A Basic Change

Thus the basic nature of economic decision-making is changing in ways that scientists, technocrats, government officials and businessmen are only lately beginning to recognize. Moreover, there are some significant proposals taking shape for controlling this change in ways for the better. And arguments already are starting about whether the proposals may only make things worse.

Classical theory holds that a market economy works best when everyone does his own thing. Sellers and buyers act only in their own interests. Suppliers of demanded goods and services prosper, the others simply disappear. The market's pricing system, geared to countless individual transactions between buyers and sellers, will blindly and mindlessly result in the most efficient allocation of the economy's resources.

But the post-World War II technological explosion provides an increasingly powerful motive for imposing conscious guidance upon the mindless marketplace. Classical theory may deem the SST premature, but technology has nurtured a demand for one, so an artificial concentration of Federal cash will create it. In the other direction, classical theory may dictate that inter-city passenger trains must die, but technology's awful alternative is more auto congestion and exhaust pollution, so human reason demands that the trains survive, even if artificially subsidized.

Technology widens the impact of marketplace decisions beyond what anyone may intend. A chemical company in the '50s couldn't be faulted for selling, in its own profit-making interest, DDT to a farmer needing an effective defense against bugs threatening his own crop yields and profits. But that DDT is still chemically intact today, a possible threat to the health of people who weren't parties to the original market transaction and weren't aware they would ever be involved. Belatedly, in their own interest, they are raising hell.

"Technology is always rewarding and punishing you almost simultaneously," says White House guru Daniel P. Moynihan.

The need to involve a wider group of people in the takeoff of new technology is emphasized in a recent report prepared for Congress by a special panel of the National Academy of Sciences. Headed by Harvey Brooks, Harvard's dean of Engineering and Applied Physics, the panel deals thoughtfully with problems of "technology assessment": How to push ahead with modern marvels that help society while incurring a minimum of bad side effects.

Possibly the most arresting statement in the report is that it's possible to achieve these twin goals at all. Thanks to the technology explosion of the past 20 years, the panel says, "Our visions and capacities have so broadened and deepened that we can now, for the first time in human history, realistically aspire to have it both ways: To maximize our gains while minimizing our losses. The challenge is to discipline technological progress in order to make the most of this vast new opportunity."

One innovation this effort requires is "technological forecasting," defined by the Brooks Panel as "an attempt to project the likely growth and probable impacts of specific technologies—such as weather modification, the supersonic transport, satellite communications and computer-aided instruction." Any such early warning system has been mainly lacking in corporate board rooms when executives decided on "economic" grounds how much to spend, what to make, how much to charge.

There is growing interest in a theory that these private, nobody-else's-business decisions haven't always reflected the total cost-benefit equation. The other day Health, Education and Welfare Secretary Robert Finch was testifying before a Senate subcommittee studying trash disposal. Mr. Finch was lamenting the trend toward pop bottles that don't have to be returned to the store, and thus become a trash disposal problem after being used only once. The reason for the trend, he said, is that bottlers find it cheaper to switch to non-returnable containers than to collect and wash old bottles for re-use.

But the equation, seemingly efficient, is not completed, he suggested: "It may be 'efficient' for industry to use these containers *only* because the efficiency formula *excludes* the cost to society of disposing of indestructible non-returnable containers." Federal men working on the trash problem are pondering ways to complete the cost equation by levying bottle taxes (ultimately borne by pop-drinkers) to cover disposal costs at the city dump, or by providing subsidies from Washington to induce bottlers to go back to the returnable kind.

Government Pressures

Even in the 19th century the Federal Government was nudging private technology's cost equations through such acts as granting public lands to railroads. The Brooks Panel observes that by now, with Uncle Sam financing nearly 50% of industrial research and development, Government policy has become "at least as influential as the forces of the ordinary market" in setting directions for technological change.

The Government's technology choices are determined less by classical market forces than by the political clout of pressure groups competing for Federal funds. Mixed up with the SST's technical formulas on weight, payload and range are the influence of Boeing and its employes and Washington state's two Senators. Coal interests implore the Government to plow more funds into research for producing a cleaner-burning fuel, while going slow on development of nuclear reactors. Truck operators seeking the cost-cutting efficiencies of bigger vehicles must win their goal not in the marketplace but in Congress, where ordinary motorists fight for the freeway status quo.

Huge Federal bureaucracies acquire vested interests in pushing "their" technologies, without worrying much about bad side effects. As prime promoter of the SST, the Federal Aviation Administration "cannot be fully trusted to evaluate the sonic boom objectively," says the Brooks Panel. "In a similar vein, the Bureau of Public Roads has hardly been noted for its devotion to the preservation of the natural beauty of the countryside."

The panel proposes a new "technology assessment mechanism" for making sure that a wider spectrum of individuals and groups has a voice in setting Federal policy on research and development. It suggests expanding the President's Office of Science and Technology into a clearing-house for forecasting future problems and devising ways to avoid them. Also proposed is a new joint House-Senate committee to study bad side effects of technology.

In proposing its new "technology assessment mechanism," the panel insists the last thing it wants is a czar. The panel says it would "emphatically oppose any scheme that would empower an agency to decide, on behalf of something called 'society' or 'the environment,' which technological developments will be permitted and which prohibited." The proposed agency, it says, "must be able to evaluate but neither to sponsor nor to prevent."

Even with that strong disclaimer, the idea of a new Government agency looking over the shoulders of private industry researchers draws a dissent from one of the panel members. "The introduction of a new product or the entry into a new area of commerce are perhaps the greatest risk decisions that a private enterprise makes," says Morris Tenenbaum, general manager of Western Electric Co.'s engineering division. "To the degree that new assessment mechanisms create new uncertainties, this could discourage private investment in areas of technology . . . where innovation is most important and private participation most desirable."

'Assessment Mechanism' Coming?

But technology-minded businessmen had better reconcile themselves to the prospect that some kind of "assessment mechanism" is coming. On Capitol Hill, lawmakers are falling over each other in proposing splashy ways to protect the environment. Sen. Edmund Muskie of Maine wants a Presidential

is coming. On Capitol Hill, lawmakers are falling over each other in proposing splashy ways to protect the environment. Sen. Edmund Muskie of Maine wants a Presidential Office of Environmental Quality, which would, among other things, "assure evaluation of new and changing technologies for their potential effects on the environment prior to their implementation." Sen. Henry Jackson of Washington backs a somewhat duplicate Board of Environmental Quality Advisers. Rather than choose between the competing bills of these two powerful Democrats, the Senate has passed them both. The House hasn't yet fully concurred.

New bureaucracies like these wouldn't be suggested if there weren't any noisy SSTs to afflict the environment. President Nixon wouldn't have to command Federal funds to support the SST if the aeronautical engineers here and in Europe weren't so skillful at their craft. But such skills are the glory of 20th century Western civilization, and their impact both on individual lives and on traditional market institutions is becoming greater all the time.

CHILD CARE: A GROWING PROBLEM

by Jane O'Grady

By the end of this decade, the majority of American children will have working mothers. The trend of ever larger numbers of women joining the workforce has changed American society drastically from what it was just a few years ago.

With that change has come the transformation of care for the pre-school and school-age children of working mothers from an isolated, individual problem into a subject of national concern—just as the demise of the family farm a few decades ago contributed to the national willingness to provide for the aged and retired on a stable basis through Social Security.

The official government figures on working mothers are indeed dramatic. In 1950, 22 percent of all mothers worked full- or part-time; in 1970, the percentage has doubled to 42 percent. In 1950, 33 percent of mothers with school-age children (6 to 17 years) were in the labor force; in 1970, more than half (52 percent) of these mothers were working. And, while only 14 percent of the mothers with pre-school children under 6 years worked in 1950, today 32 percent are in the workforce.

Most of these women are working—and will be working in the future—out of economic necessity. They are either the sole support of their households or are supplementing the inadequate earnings of their husbands. But the changing view that women have of their role in society today will also add to the workforce many women who wish to work for the personal satisfaction of using their education, skills and creativity. And current efforts to reduce welfare rolls, particularly by requiring welfare mothers to accept job training and employment, will add further to the numbers of women with children participating in the workforce. Most families receiving Aid to Families with Dependent Children today consist of a mother and children, with no father present. In December 1970, 7 million children were on the AFDC rolls, 2.3 million under 6 years of age. If their mothers are to be sent out into the labor force, some provision for the care of these children will be required.

While the influx of women into the workforce has made the child care problem visible, it has not necessarily helped clarify what kind of child care the nation should be seeking. For analyzing the need for child care solely in terms of the increasing numbers of

JANE O'GRADY is legislative representative of the Amalgamated Clothing Workers, a union which has pioneered in the development of child care centers.

PAGINATION INCORRECT

working mothers runs the risk of inadequate consideration of the range of possible solutions. It becomes all too easy to say simply that places must be found to "park" the children while the mothers are at work. Such a solution leaves out a critical ingredient—the needs of the growing child.

Many other changes taking place in American society today form a broader view of the national debate over society's obligations to young children. The urbanization of the American family is one such social change. More and more families are living in the isolating atmosphere of the big cities, which reduce opportunities for close familial and neighborly contacts for children. The heightened mobility of the American family to urban areas and between urban areas increases the extent to which families must rely on their own resources for the early nurturance of their offspring.

Another factor is the nation's attempt, exemplified in the Great Society programs of the 1960s, to eradicate the sources of poverty—ignorance, lack of skill training, poor emotional and physical health. Combined with this focus on the disadvantaged is the growing recognition of the special needs of all children, even from the most affluent families, who suffer emotional disturbance, mental retardation or physical disability and who are in desperate need of personalized care and family support services.

Perhaps most important in this broad view is the recent documentation by psychologists, psychiatrists, educators and medical professionals of the critical significance of the first five years of life. The experiences of children in their pre-school years can become crucial to their future abilities to function as productive adults, the experts tell us.

The circumstances of a rapidly changing society give the issue of child care a wider dimension than the mere need for baby-sitting services while mothers are at work. We are talking about greater and more profound changes in the American family and its pattern of living; about society's responsibilities to its citizens, even down to the youngest child; and advances in educational theory that recognize the importance of learning experiences of the early childhood years. And thus we are talking about child care as playing a significant social role in the well-being and healthly development of the nation's children.

These terms help to dictate the ingredients needed in child care services. While the home and family remain the central focus of the child's life, supplementary developmental services can contribute to the intellectual, social, emotional and physical growth needs of all the nation's children—from infants to teenagers. Such programs can have a constructive influence on children and their families, helping functioning families to lead more satisfying lives, assisting children to become productive adults. A humane concern for the full development of human potential is the reason for a national commitment to the needs of young children.

Licensed day care homes and centers in the United States today have spaces for about 700,000 children. That figure is pitifully small in a nation with 76 million children under 18—32 million of whom have mothers who work.

Whether the potential need is narrowly defined as the pre-school children of working mothers, or the broader need of young children from all walks of life who could benefit from early childhood educational experiences, the 700,000 figure speaks eloquently of the nation's lack of commitment. And more than half of these centers are proprietary ones, operated by people seeking a profit in the business of child care. Since providing quality care is an expensive undertaking, to add a profit on top of that requires that relatively high fees must be charged for the child care service. Consequently, most of the users of these centers are children from relatively affluent families.

On the other hand, for children from welfare families, there are some opportunities, though severely limited, for government subsidy of child care services. Under the Social Security Act and the Economic Opportunity Act, the federal government has set up a limited matching grant system with the states to provide day care services for welfare mothers who are working or are in training and who need day care for their children. Headstart, a comprehensive pre-school program for poor children, is perhaps the best publically financed child care program now in operation. At best, however, only 300,000 children are served in full-year (Headstart) programs; 200,000 in summer programs.

In the vast majority of cases, low- to moderate-income families make provision for their children in the best way they can, which usually consists of the free services of another family member or close relative or an outside babysitter at minimal cost. In a distressingly large number of instances, the children from such families are left on their own, or virtually under their own care. While some of these arrange-

ments may be adequate, many of them offer little opportunity to stimulate the growth and development, or even protect the safety, of a young child. For most children with working mothers, TV is the nation's provider of child care service.

Current resources in this country, both private and public, leave a large gap between the very poor who are served—inadequately—by government programs and the more affluent who can pay for costly day care and nursery school services. In between are the families who have too much income to be eligible for the government programs and too little income to afford privately operated child care, even if they could find it available.

By any standard of measurement, the nation lacks a comprehensive system of developmental child care services. However, some local efforts in the child care field have been undertaken over the years with some success. No doubt, thousands of children and their families have received beneficial services from programs developed and run by church groups, parent cooperatives, local community organizations and business and labor groups. Although no systematic survey of the wide variety of these individual child care efforts is possible, they exist in communities all over the country; many people have contributed many hours, often volunteer hours, to their creation; and they have answered a need and provided a benefit to the limited numbers of children and their families involved. Through the pooling of resources and the use of available facilities, child care reaches a fortunate few in these local community programs.

Industry involvement in child care—what little there is of it—seems to be pragmatically generated in large part by a desire to improve the working potential of the women in its workforce. A happier workforce, with less absenteeism and more production, is often cited by industry leaders as the provocation for providing child care services for the children of their women workers. Some industries, as a consequence, have begun to provide in-plant or nearby facilities, often operated through the private educational groups which have sprung up in the child care field. Most of these facilities require a payment on the part of the participating parents and most are limited to the children of the plant workers. These programs too provide a needed service for the participants.

Union involvement in the field of child care stems from a desire to be of help to their membership in as many aspects of their lives as possible—the trade union philosophy that recognizes the union member as a participant in the larger society with social needs that go beyond an adequate paycheck and good working conditions. Thus child care activities fit logically into the list of services provided to union members over the years—health insurance, pensions, low-cost banking services, low-to-moderate income housing, retiree centers, college scholarships and pre-paid legal services.

Two regional affiliates of the Clothing Workers have developed child care centers. Baltimore began its program in the mid-1960s. Today, in five local areas in Maryland, Pennsylvania and Virginia, this union operates child care facilities for approximately 1,000 children of its members. These centers are staffed by professionals in the field of child care; offer a complete range of developmental services; and charge a minimal fee of $1 per day per child for the service rendered.

In Chicago, the Clothing Workers operates a pilot child care project adjacent to its headquarters, serving 60 children of its members. This center also offers a complete range of educational, social, medical and nutritional services, all free to the participating families. This program in Chicago is being used as a research and demonstration project by other educational institutions and government agencies in the field of child care.

These union-sponsored child care programs are financed through contributions (percent of payroll) by the employers under contract with the respective union organizations. To make this possible, it was necessary to amend the national labor relations law, which keeps a tight check on joint labor-management trust funds by spelling out specifically the fringe benefits such funds may be used to finance. Child care had to be added to the list by congressional action to amend the Taft-Hartley Act. This change in the law opens the way for all unions to make child care, like pensions and health insurance, a subject of collective bargaining with their employers.

Other unions, notably the New York City local of the Teachers, have also developed child care programs for their members as well. The United Federation of Teachers has established an early childhood program in New York under contract with the city Board of Education, designed to provide care and education to the children of teachers returning to teach in poverty areas as well as to serve the needs of the community's children.

The Communications Workers, a union which has over 50 percent women members, is participating in experimental child care centers in Washington, D.C., and in Chicago. It is hoped that these centers will serve as pilots for other CWA installations across the country and in several of CWA's 10 districts, research studies on child care are under way.

All of these efforts by private organizations, including the efforts of labor and management, fill an important need in the communities they serve. But while the creativity and resourcefulness may be commendable, even under the best of circumstances these private efforts are not and cannot be the entire answer.

The only answer to the broad problem of early childhood developmental care is a massive federal commitment to the provision of such services for all children. Individual efforts or private group efforts will always be too few, too costly, or too limited.

The national significance of quality child care has not escaped the attention of Congress, where efforts

have been made to devise a program which takes into account both the necessity from the influx of mothers into the workforce and the potential of skilled care in the development of pre-school youngsters.

For some years, such congressional leaders as Representatives John Brademas (D-Ind.) and Patsy Mink (D-Hawaii) and Sen. Walter F. Mondale (D-Minn.) have recognized the need for a national solution to the crisis in child care. But one of the most concentrated recent efforts ran into a roadblock in December 1971 when President Nixon vetoed the comprehensive child care bill with a rationale that included the implication that such federal action would "lead toward altering the family relationship."

At present, Congress is working on legislation that will accomplish something while neutralizing the political considerations at work last year—in short, picking up the pieces from that veto and trying again. Part of the impetus is from a broadly-based coalition of private organizations which came into existence in early 1971 to promote the bill which Nixon vetoed.

Prominent in this child care coalition were the AFL-CIO, the Ladies' Garment Workers and the Clothing Workers. Other organizations affiliated with the coalition, which numbered 26 in total, included the Auto Workers, the League of Women Voters, the Leadership Conference on Civil Rights, the National Council of Churches, the National League of Cities-U.S. Conference of Mayors and the Washington Research Project Action Council.

These groups adopted a statement of principles for devising federal legislation, including:

- that programs must be of high quality, comprehensive and developmental, oriented to the needs of children and available to all children;
- that parents must be directly involved in decisions affecting their own children;
- that programs must be locally controlled and flexible enough to meet individual community needs;
- that programs must be designed to include children with a variety of backgrounds;
- that adequate protections must be provided to assure that the needs of minority group and economically disadvantaged children are met; and
- that substantial new public funds would be needed to begin to meet the compelling and immediate need for these services.

As the second session of the 92nd Congress got under way in 1972, the renewed effort on child care took the form of a separate piece of legislation worked out in cooperation between the Democratic and Republican sponsors of the 1971 bill. Strong efforts were made to meet the objections expressed by the President in his veto message. Additional hearings were held to accommodate some of the opponents of the legislation. This bill, the Comprehensive Headstart, Child Development and Family Services Act of 1972, emphasizes quality developmental care, with significant parental involvement and local control, as did the

The Clothing Workers' child care program in Baltimore started in the mid-1960s and now serves 1,000 children in five locations.

1971 bill. The bill seeks to build on the successful Headstart program and sets free services at an income level below the government-defined poverty level of $4,320 for a family of four.

Under the Senate bill, a state, city or county with a population of 25,000 or more could apply to the Secretary of Health, Education and Welfare to be a sponsor of programs in their locality. This application must include an overall child care program design meeting the requirements HEW sets up. Upon approval of a program, the Secretary of HEW will designate that state, city or county as a "prime sponsor" of child care programs and will allocate funds based on the number of children to be served.

Once a unit of government has become a prime sponsor, the governor, mayor or county executive will set up a Child and Family Service Council made up of parents of eligible children and other public members with child service skills to approve an administering agency for the child care program in their areas. At that point, local community groups who wish to operate child care centers—churches, parent cooperatives, unions or business groups—would make application to the designated administering agency. Such an application would indicate the kind of facility, program, staff and operating costs of the proposed center. The child care administering agency will then approve these project applications for the actual operation of child care centers under its jurisdiction.

Federal funds will pay 90 percent of the operation of such programs; in some instances of need, the federal share can go up to 100 percent. Project applicants will make up the additional 10 percent through public or private funds in the form of cash, goods, services, or facilities, including union or employer contributions.

This bill was debated and passed by the Senate in June 1972 by a vote of 73-12. Attempts were made again by Republicans to reduce parental involvement and increase the size of local communities eligible to sponsor programs. Several modifications in the bill were made during the Senate's deliberations. The principal, and perhaps most controversial, change is the amendment offered by Sen. Peter Dominick (R-Colo.) which would allow the Secretary of HEW total discretion in choosing among competing applicants for prime sponsorship of child care programs. The fear is that political considerations would result in states being selected over local communities to run programs—with a consequent loss in direct parent control and participation by minorities in the running of centers for their children.

With the strong bipartisan effort involved in the child care bill just passed by the Senate, the House may be able to achieve a similar, bipartisan bill. If the House can be persuaded to pass a companion bill to the Senate measure, a new child care bill may be on the President's desk before the November election—perhaps an incentive to a presidential signature.

The shape of the present legislation benefited from

With Children,

The following description of the Clothing Workers' Chicago child care center is excerpted from a speech by Joyce Miller, director of social services for the ACWA's Chicago Joint Board and the administrator of the center.

Our day care center in Chicago accommodates 60 children and opened in March 1970. When we made the decision to get involved in day care, we spent about a year and a half trying to work with a local government organization. We learned that it costs as much to rehabilitate a building as it does to build a new one.

But the union owned a piece of property near our union headquarters, so we went to an architect and said, "Build us a building that will accommodate the maximum number of children."

The building cost $125,000. We spend no more money than is absolutely necessary. However, we will not stint one cent on having a quality center.

The key thing was hiring a director who was truly knowledgeable and experienced in the field of child care; then we worked together, my job being the administrator of the center and dealing with the trade union movement and our own members and hers being the field of child development.

We find that we are spending $140,000 a year. It comes out to a little over $55 a week per child in operating costs. We pay the entire cost for the center; there is no charge of any kind to the member. We feel our members are entitled to this service as part of belonging to the union and its social welfare benefits.

We pay for the center out of the Amalgamated Social Benefits Association. This is a trust negotiated by the union and the employers contribute a percentage of payroll. In the clothing industry it is 10.1 percent of payroll and in cotton garment it is 9.5 percent of payroll. This money is used for all our social welfare programs, including pensions, insurance, supplementary union insurance. The ASBA was established in 1923.

The employers have seen the value of our center in Chicago and one of our very big companies, which now is planning a new factory, is going to put a day care center right into the factory. If and when this becomes a reality, then we will really have achieved one of our major goals. We set up our center as a pilot program—to show the way.

Children of our members were being left with relatives or neighbors who were being paid anywhere from $17 to $25 per week per child. Of the 60 kids who came into the center, about a quarter of them were in some kind of group care facilities. When the children came in, it was obvious that they spent a tremendous amount of time in front of the TV set. They were not getting fine care in

's Not So Simple to Re-do a Poor Job

any way. One example was that we saw them playing vampires, which is not ordinary behavior. The children had been exposed to a TV program in the middle of the afternoon called "Dark Shadows," and they were busy acting this out in the day care center.

We do have a television set, but we use it judiciously. We wanted to break this television-watching habit and we felt that there are so many other enriching and more worthwhile things that the children could and should be doing.

Even if we did nothing else but provide a building and a babysitter and keep the kids physically safe and save our members the $17 to $25 a week that they were spending, in my judgment we would be making a contribution to their lives. Economically, they're that much ahead. But it was interesting that the parents—with this financial burden lifted from them—still said, "We want our kids to learn something; is this a school?" "Will they be better off when they start first grade?"

Employment in a garment factory, working at a sewing machine or a pressing machine, is a very painstaking, precise kind of work. Our members work from 7 a.m. to 3 or 3:30 p.m. They leave work physically and emotionally exhausted. They return home and have to clean plus carry out all the other responsibilities of running a household. Women who work are holding two full-time jobs at the same time. Now, how much does that parent have to give to her child after working all day in a garment factory and taking care of all the responsibilities she has at home? Truly, it's not very much.

This does not mean that these parents don't love their children—they love their children very much. It is that they have very little left to give at the end of the day. They're emotionally and physically depleted. Quality day care—if we were going to do any kind of meaningful job—presented itself naturally.

We have a complete pediatric and dental program as an integral part of the day care center. The children entering have a complete physical and dental examination, and follow-up work. We give them hearing and eye tests.

We have a complete dental program with a pedodentist. We found at least eight kids who had really terrible mouths. One child had completely black teeth, bottom and top; the nerves in his teeth were dying. Our dentist said he could rehabilitate the boy's entire mouth. His father, a big burly fellow, couldn't get over it and actually cried, because he never dreamed that his son's teeth could ever be fixed. He knew he and his wife couldn't afford it and thought they'd just have to let it go.

In the present recession our members are working short hours and layoffs are taking place. We found children coming to the center hungry. We quickly switched our juice and cracker snack to high protein.

Our members, 80 percent of whom are women, are working because they have to put food on the table and pay the rent. They're not working for pin money, or to provide luxuries. They're working because the high cost of living combined with low wages puts many families below the poverty level unless both parents work. At the same time, we know that our members have as much concern and love for their children as any more fortunate mother who is able to stay home.

We have three men on our staff, because young boys need male identification figures; some come from homes where there is no father present.

We had children who, when they entered the day care center, did not speak any English. Eighteen spoke only Spanish or only Polish; one spoke only Italian; two youngsters just came from Nigeria and spoke only Ibo. Not only are we teaching the children English, but the parents take great pride that the child is able to come home and help teach them English. It's very important that the staff reflect the same kind of racial and ethnic mix as the children.

One mother entered her 3-year-old child. After a few weeks she remained when she picked up her child, sort of shy. One day she anxiously asked, "Will my son learn to read; when are you going to teach him to read?" The mother was strangely concerned about a 3-year-old reading, which usually comes at age six. It developed that she herself did not know how to read. She was ashamed to say so; she, therefore, put all of these sights on her son. We arranged a tutoring program for her and she is now learning to read. We also have a paperback lending library on child care for the parents.

Enrollment in a day care center, while free, is not automatic. As in any other facility, outstanding and worthwhile though it may be, people have to be educated to use it. But the center was filled to capacity 10 months after opening and there is a waiting list of 14 children.

One of our parents, in very broken English, said at one of our parent meetings that although he was pleased that he no longer had to pay a sitter to care for his two daughters, this was the least of his satisfactions with the center. What pleased him most was the real interest and concern that the staff showed for the children. He said: "If any of the parents made a mistake and sewed something the wrong way, they could always rip it out and do it over again. But the teachers are working with much more precious material where it is not so simple to re-do a poor job."

the work done in 1971 on the earlier bill, which was introduced in the Senate by Mondale. Through a series of hearings before the Mondale Subcommittee on Children and Youth, a persuasive case was made by professionals in the field of child development as well as concerned representatives of private organizations for the need for federal legislation in this field. After full deliberation in the subscommittee and the full Senate Labor and Public Welfare Committee, the Child Development bill was made part of a bill to extend the life of the Office of Economic Opportunity. On the committee's unanimous recommendation, the Senate adopted this measure in September last year.

In the House, a child development bill introduced by Rep. Brademas and 97 other House members was added as an amendment to the OEO extension bill on the floor of the House in September 1971.

The House and Senate bills were similar in many respects. They both established a system of federally funded comprehensive child care services, emphasizing health, educational, nutritional and social developmental components. Both bills gave priority to children from disadvantaged families—for poor families, the services were free; families above low-income levels would pay fees. Both bills included a diversity of programs which could be provided depending on the need for such services in individual localities. This range of programs included those for infants to 14-year-olds; full or part-time care, night care and after-school programs. Both bills emphasized local control of programs through a prime sponsorship mechanism which would have allowed small units of local government to become day care sponsors for their localities. And both emphasized, through participation on local program councils, the involvement of parents in the planning and monitoring of child care programs in their communities. The Senate bill cited a specific funding request of $2 billion; the House bill called for an open-ended authorization of funds.

It was clear early in the consideration of this legislation that the Nixon Administration had serious reservations about embarking on a major new social program such as envisioned in the child development bills. The Administration opposition was based in large part on an unwillingness to spend additional federal monies for a program of this magnitude. The Administration had already taken its stand on child care in their welfare reform proposals, which called for $750 million for day care services for the children of welfare mothers who would be required to accept work or training under the terms of the welfare legislation. As a consequence, the Administration made little effort to seriously involve itself in the design of the legislation as it made its way through Congress.

Republican members of both the House and Senate did do battle over some of the provisions of the child care bills. The principal battlefield was the issue of the involvement of the states in the operation of the programs. The proponents of the legislation were

strongly opposed to funneling the child care monies into state-run child care operations. States had not shown particular interest or motivation in the child care field under existing legislation; there was no reason to think they would improve appreciably in this respect with the passage of new child care legislation.

Also, the bill's proponents felt strongly that local sponsorship of programs would permit the best kind of parental participation, another issue which created controversy. Some attempts were made to reduce the parents' role in the planning and operation of child care programs to merely advisory ones. These efforts were largely unsuccessful.

Also at issue was the level at which free services were to be provided. The proponents of the legislation argued strongly that families with incomes that were low but still above the government-defined poverty line should be given an opportunity for free services under this legislation in order to obtain a socially desirable economic mix of children in the centers.

It was at the point of the conference committee meetings to iron out the differences between the House and Senate versions of the bill that Administration displeasure became a serious obstacle. The Republican conferees warned that the bill was in for a veto on the grounds of high cost, too high an income figure for free services and too much local and parent control. The conference finally agreed on a bill, but three of five Senate Republicans and five of six House Republicans did not sign the conference report.

The conference report on the Comprehensive Child Development Act of 1971 retained strong parental involvement in program planning, authorized $2 billion for program operation, allowed localities with populations of 5,000 or more to be designated as prime sponsors and made services free to families of four below the $4,320 income level, with fee schedules established above that income figure. The conference report passed both houses overwhelmingly—and the child care bill went to the White House as part of the renewal of the poverty program.

A major effort was mounted by the coalition of private organizations to urge the President to sign the bill, but on Dec. 9, 1971, President Nixon vetoed the legislation and issued one of the most controversial veto messages of recent days. In it, he made several points with regard to the child care program which were hotly disputed by the proponents of the legislation. The President stated in his veto message that the child development legislation had been passed "in the absence of a great national debate upon its merits" and that "neither the immediate need nor desirability of a national child development program . . . had been demonstrated."

Critics of the President's veto were quick to point out that comprehensive child development legislation had been the No. 1 priority recommendation, after thorough discussion and debate, of the participants in the President's own White House Conference on Children, representing national organizations with broad constituencies of parents, educators, child development experts, minority groups, community groups and church groups.

The most insidious charge the President leveled was the one about altering the family relationship, claiming that the bill committed "the vast moral authority of the national government to the side of communal approaches to child rearing over the family-centered approach." This was said despite the strong emphasis in the legislation on parent involvement in the day-to-day operations of programs and its wholly voluntary character—as opposed to the Administration's alternative in its welfare legislation forcing children into day-care programs while the mothers were required to seek work and training.

An attempt to override the veto by a two-thirds vote of the Senate was unsuccessful, but the vote of 51-36 did reflect majority support for this legislation in spite of the presidential objections—and guaranteed that a renewed effort would be made in the second session in 1972, as it has been.

However the new legislative efforts turn out in this session of Congress, the social pressures and growing concern for full development of the potential of the nation's children will continue to be a major prod to legislators to devise appropriate and responsive social structures. It is no longer a question of whether American families and their children should have child care services available to them, but whether the child care they do have is good—good for the child, good for the family and good for the country.

Quality Education

Quality teaching: some new thoughts on AFT's role in inservice training

A commitment to quality teaching is nowhere more evident than among the vast majority of members of the American Federation of Teachers.

By the thousands, AFT members have planned and attended conferences and workshops on Racism in Education, More Effective Schools, and labor education at which they've confronted the inadequacies of the urban curricula. These conferences have been held in virtually every major city where AFT is the bargaining agent over the past few years. In coming months, AFT will sponsor three regional meetings on decentralization and community control and others on quality education standards in teaching (QUEST).

In addition to its own union-sponsored conferences and institutes, AFT locals are insisting, more and more, that relevant inservice education programs be made a matter of collective bargaining. Teachers are demanding the right to identify weaknesses and plan the programs to correct these weaknesses.

The following survey, by AFT Research Director Robert Bhaerman, takes a look at the union's role in the continuing training of classroom teachers.

BY ROBERT D. BHAERMAN

They got no course credit, but these teachers—part of the 1,500 at the Michigan AFT conference on racism in education two years ago—were alive, involved, receptive, and sharpening their professional skills. Such experiences may be far more valuable in teacher education than the traditional course-counting drudgery, this article suggests.

Probably the most serious problem regarding inservice education has to do with the word itself. To many teachers, "inservice" brings to mind endless hours of unstimulating institutes. All too often, "Mickey Mouse courses" are accurate descriptions of what takes place. In other words, not much.

Recently, Harold Taylor, formerly president of Sarah Lawrence College, wrote that he would "like to see everyone in education . . . free themselves for more time to raise questions about what they should be doing to make education interesting and engrossing to those undergoing it." But the term "inservice education" usually makes teachers say "phooey," and worse, when it is mentioned. The continuous education of teachers must be made not only "interesting and engrossing," but more meaningful and significant than it has been in the past. This is not easy, however, because a great number of other problems are both directly and indirectly related.

One of these areas, not surprisingly, is teacher certification. According to the most recent **Manual on Certification Requirements for School Personnel in the United States**, 23 of the 50 states do not issue permanent certificates; that is, certificates must be renewed in some manner. Usually that is through additional education courses. In Pennsylvania, for example, 24 post-baccalaureate credits must be earned during the first six years of actual teaching. In Indiana, provisional certificates are convertible to permanent professional certificates with a master's degree and three years experience. Massachusetts also has a permanent certificate, but that state is undergoing a fascinating and troubling review of certification requirements. In addition to Massachusetts, the states of Washington, Pennsylvania, Kentucky, and North Carolina currently are revising their certification regulations, and others are sure to follow.

DANGER OF HARASSMENT

In the Massachusetts review, one finds a number of suggestions which indicate an effort to set up arbitrary requirements, rigid patterns, and the machinery for widespread teacher harassment, stratification, and control. Here, in brief, is what Massachusetts is considering:

- **Four levels of licenses are suggested: internship licenses for those in training; associate-teacher licenses for beginning teachers; professional licenses for those who demonstrate ability to handle professional assignments independently of supervision; and educational specialists licenses for "high level" teachers. (p. 13-14)**
- **Provisions should be made for periodic renewals of licenses, without reference to tenure, based upon demonstrated maintenance of scholarship and professional competence. Suggested renewal points are: internship licenses—annually; associate teacher licenses—every three years; professional and educational specialists licenses—every seven years. (p. 14)**
- **Judgments of successful practice are to be made at various points in the careers of all educational personnel; during training, at the time of employment, for particular assignments, for retention in a position or school system, when tenure is awarded, for promotions, and—yes, in some school systems—as a basis for merit raises. (p. 62)**
- **Policies such as employment qualifications, staffing assignments, salaries, promotion, and tenure should be related to the new differentiated uses of teaching talents. A key objective should be to provide opportunities for appropriate professional contributions, advancement, financial reward and professional prestige within the instructional team. (p. 12) School systems should move as rapidly as possible to adapt all personnel policies to the new differentiations of teaching that qualify teachers for higher levels of certification and for the periodic renewal of licenses. (p. 18)**
- **To protect against professional obsolescence, the renewal of all certificates needs to be required at periodic intervals. Decisions to extend licenses to practice should be based upon judgments of adequate professional performance at the level of certification. (p. 60)**
- **Failure to maintain the level of performance for licensure could result in nonrenewal, thus disqualification. In some instances, however, when the failure is inability to perform at an advanced professional level, such as professional or specialists, it may be decided to reduce the level of license to that of performance capabilities. Thus, a professional teacher who fails to maintain competence to perform independently might be licensed as an associate teacher and permitted to work under supervision. (p. 72)**

At least five major issues are raised: (1) evaluation of competencies, (2) differentiated staff, (3) tenure, (4) merit pay, and (5) the related problems of certification levels, obsolescence of skills, renewal of certificates, and, hence, inservice education. In discussing these, it must be emphasized that these are my personal views, and not necessarily AFT policy.

EVALUATION: HOW?

As far as the evaluation of teaching competencies, my purpose is not to spell out the details of how this can be done. Others are doing that. However, I wish to make three points: evaluation of competencies is being done with increasing frequency; I am confident that it can be done with an increasing degree of reliability, validity, and sophistication; and I support the work of those research scholars who are working to develop such devices. While I am concerned, obviously, with **how** evaluation is done technically, I am as much concerned with **when** it is done, by **whom** it is done, and the **framework** and **spirit** in which it is done.

While it has not yet found wide adoption in practice, the concept of differentiated staff levels also is being considered by many persons in education. And while I cannot accept all of the goals of the advocates of differentiated staff (e.g., merit), I do not entirely discount the validity of the concept, particularly as it implies **differentiated activities and responsibilities** on a horizontal and not vertical level.

Task analysis must be ongoing. Some teachers are more skilled at some things than others. Hence, some should be involved with diagnosis and guidance, others with directing instruction, still others with "support centers" (to use the language of the times). It is not the concept itself I am questioning, it is the unnecessary next step which the advocates make, that is, that differentiated activities and responsibilities must lead to differentiated salary schedules and a hierarchy of certificate levels. A differentiated staff, in my mind, is one in which some teachers diagnose pupils' strengths and weaknesses, while others work with the tools of the trade to build upon these identified strengths and correct the weaknesses. This is legitimate, not divisive, differentiation.

TENURE, MERIT PAY

That the matter of tenure is still relevant may surprise some people. But apparently the principle of job security is an ideal which, like freedom, must be fought for in each generation. As the Massachusetts proposal assures us, the tenure issue is very much alive. For when it is suggested that tenure regulations should be adapted to support the proposed certification levels, we know that once more we must renew the battle for hard-earned job security.

As with tenure, merit pay periodically comes back as an issue and periodically is rejected by the vast majority of teachers, administrators, and school districts. I believed that Carl Megel, AFT director of legislation, had buried the issue once and for all when, as AFT president, he effectively argued the issue in several articles and pamphlets. In 1962 the AFT's Conference on Merit Rating concluded that this type of rating is a device leading to educational "ward heeling" among faculties, and that it fosters confusion, friction, and ill-will among staff members. This is no less true today than it was then.

There is no doubt that the really tough issues are those dealing with the levels of certification, renewal, and obsolescence. It is trite to say that teachers must be continuously alert to the many new insights into educational theory, the learning process, curriculum and methodology. Teachers obviously must never stop growing or they are dead.

But once again, the question simply is not whether they do or whether they don't. It is: What is the fairest, most mature, and most professional way? Obsolescence can be overcome, I feel, without the restrictions imposed by rigid certification levels and forced renewal, but through meaningful inservice-education programs or "on-the-job training."

WHAT AFT HAS DONE

AFT-negotiated contracts often contain provisions relating to inservice training. Some sample clauses follow.

BOSTON: "Inservice meetings shall be programed and conducted by the teaching staff in cooperation with the principal."

HARTFORD: "When an eligible teacher, as hereinafter described, successfully completes courses in fields of study for which he has received board approval, the board will reimburse such teacher one-half of his tuition for one course a semester and up to two courses in summer . . . . The board shall pay the reasonable expenses . . . incurred by teachers who attend workshops, seminars, conferences, conventions, or other professional improvement sessions. . ."

LYNN, Mass.: "The parties agree that the school committee should continue to provide improved and diversified inservice training programs for teachers. It is further agreed that aid to nontenure teachers, in their teaching performance, be included."

CHELSEA, Mass: "Teachers are to be allowed to attend professional conferences or conventions on approval of the superintendent."

TAYLOR, Mich.: "A reasonable number of classroom teachers shall be encouraged to attend meetings of professional organizations each year; requests for attending such meetings shall be made in writing to the superintendent."

PHILADELPHIA: "The board shall negotiate with local area colleges for an extension of inservice training in cooperation with the colleges whereby such course work will be recognized for purpose of teacher certification and advanced degrees. A sum of $600,000 shall be appropriated for the summer of 1967 and a like sum for the summer of 1968 for teacher fellowships for study in accredited colleges and universities under the criteria hereinafter set forth. The intent is to provide a grant of a sum equal to 70 percent of summer-school teachers' salary. . ."

NEW HAVEN, Conn.: "Programs will be developed, and instituted by the superintendent, which shall be aimed at topics such as the following: inner-city schools, disruptive child, curriculum and teaching methods, assisting individual teachers in improvement of their teaching methods, underachievers, teacher consultation . . . . Such meetings will be held in the afternoon on released time when such can be worked into the schedule."

CHICAGO HEIGHTS, Ill.: "The board agrees to allow each teacher one professional day a year to attend professional meetings or visit professional activities."

BALTIMORE: "Teachers will be informed of all institutes and professional improvement programs sponsored by the department of education through the medium of the staff newsletter."

WASHINGTON, D.C.: "Teachers will be involved in decision making "in every phase and at every stage of staff and curriculum development" and the pro-

American Teacher

Education — Bauman FEB 1972

Two films, many questions

Robert Bhaerman

AFT Director of Educational Research

Educational Research Report

Recently, two widely divergent films have come to our attention: one from the United Federation of Teachers, AFT Local 2, the other from New York University. Yet, in spite of their differences, both raise analogous questions regarding the processes and politics of education. This report will focus on these films.

"The UFT Looks Ahead: Which Way for Accountability?" is the title of the first film. If you were unable to attend the forum series in New York last spring, four lectures by UFT President Albert Shanker, this film would serve as a substitute for the session which dealt with the ubiquitous concept of accountability. This 40-minute film captures the spirit of the session: the perceptive questioning by two reporters; the attentive audience; the surfacing and then devastating wit; and the seriousness of the issues as one educational fad and panacea after another are encountered, logically dealt with, and destroyed.

Shanker begins by discerning three distinct notions in the current debate on accountability: (1) The view held by some that teachers are the "hired minds" of groups who might retain or get rid of any teacher whom they want to whether on the basis of adequate or inadequate knowledge; (2) the desire by some "educators" and politicians to tightly control educational expenditures (i.e., the question: how are schools accounting for the dollars that are spent?); and (3) the development of professional standards, the view which Shanker expounds so cogently in this filmed speech.

This conception of accountability would explore why things work in schools. It would reject the gimmicks which attempt to convince the public that so-called "innovators" in the form of private business firms are doing something new and creative. Shanker makes it clear that vouchers and performance contracts are perversions of the concept of accountability. The former would result in dismantling the public-school system and handing it over to the private sector, while the latter is a deceit which "guarantees" outcomes and is based upon the notion of product rather than proc-

- **To develop a technology for teachers—the proper use of educational hardware—which does not now exist.**
- **To utilize a scientific research model to identify the variables within districts, schools, and programs which are doing something to reach the objectives.**

Elsewhere, Shanker has written on the need to identify the factors which have nothing to do with the objectives, which are neutral, and those which are dysfunctional:

"Teachers do not work in a vacuum, a controlled environment with all random factors controlled. So it is impossible to develop a design that will tell you what the teacher should be doing, or which practices are good and which bad, without considering those random factors, or outside influences, that limit the performance of even the best teachers. The individual student, his family, his socioeconomic background and the school system itself, must all be held accountable in degrees yet to be determined for everyone involved."

In an earlier address, Shanker made a similar point: "These gimmicks (performance contracts and vouchers) should be rejected, for unlike many educational experiments which can be tried and, if they fail, be rejected—these experiments which reduce the commitments of government to education and which move the schools from the public to the private sector are, like experiments with hard drugs, irreversible. Our public schools, with all their faults, are worth keeping, and their improvement will come, not from gimmicks but from the same type of slow, painful, unrestricted, free, scientific inquiry that brought other areas of human concern into the modern world."

No teacher union, indeed no one in education, can escape the threats of performance contracts and vouchers. Neither can they avoid accountability. As Shanker has stated so precisely elsewhere, "Where accountability is concerned, no man is an island."

ALREADY TOO LATE?

"Inside Out" is the title of the second film. Whereas the underlying basic assumption of the UFT film is that public schools must be made to work, the assumptions of this film is that it is already too late.

Produced by Dr. Jack Robertson of New York University, "Inside Out" is based upon a series of highly controversial premises:

- **The entire school system is outmoded. Band-Aid remedies will not work anymore. The system is not about to collapse. It already has.**
- **Schools as we know them are corrupt, for they do not exist for learning.**
- **Middle-class teachers are part of the problem and, in many ways, are as victimized as the children.**
- **Putting more money into a bad system is like throwing it down the drain.**
- **Children must be taken out of the traditional school setting and put into a real-life environment.**
- **Class size is not the issue. Changes in attitudes and school structure are.**
- **Schools do not need any more piecemeal innovations but rather total renovations.**
- **One does not need to be a licensed teacher in order to be effective.**
- **The public can save money by not building any more schools. Space is not the problem: the city is the school.**

The bulk of the film then, quite logically, is about the Parkway Program in Philadelphia, often referred to as the "School without Walls." Parkway certainly has something going for it. However, in this exceedingly uncritical view, it achieves near-panacea status.

The oversimplification of the Parkway project is particularly troubling in view of the film's apparently blind and undiscriminating acceptance of the role of corporate giants. Ignored in Robertson's analysis are the educational and political motivations of such new saviors of our schools as the altruistic gas company!

If you agree that his premises are not overrated (my own feeling is that many of them are), you will agree that Robertson raises some important questions: Do we have the vision and vitality to build a new system? Or will the resistance of the old one prevail?

Robertson himself is optimistic of the outcome. He states, "What man has made, man can change." His proposed solutions, therefore, are along the lines that (1) attitudes of the total population must change and (2) we must "get the kids out of the school and into the community." He believes:

- **We should not sit in judgment of students, if we wish them to learn.**
- **Students must see themselves as a reflection of the community in which they live.**

But in spite of those two positive aphorisms, Robertson's message primarily is this: "The system has a stake in perpetuating itself even when it is a failure."

One thing I will say for him is that at least he (apparently) views the solution within the framework of public education. No calls are made for turning

things work in schools. It would reject the gimmicks which attempt to convince the public that so-called "innovators" in the form of private business firms are doing something new and creative. Shanker makes it clear that vouchers and performance contracts are perversions of the concept of accountability. The former would result in dismantling the public-school system and handing it over to the private sector, while the latter is a deceit which "guarantees" outcomes and is based upon the notion of product rather than process. And as with other business ventures, it involves false packaging. ("Our company guarantees that all of you can be above average!")

Shanker has put performance contracts and vouchers into proper perspective, part of the political strategy of Nixon and his Rumsfeld-Sanchez supporters who only offer excuses to stop spending money on education until "the results are in."

A more meaningful approach to accountability than the oversimplified solutions and gimmicks of the educational entrepreneurs is offered in Shanker's three-part assessment of needs.

- **To re-define educational objectives, not so narrow as to turn children into machines but also not so broad as to make measurement impossible.**

"Inside Out" is the title of the second film. While the underlying basic assumption of the UFT film is that public schools must be made to work, the assumptions of this film is that it is already too late.

Produced by Dr. Jack Robertson of New York University, "Inside Out" is based upon a series of highly controversial premises:

- **The entire school system is outmoded. Band-Aid remedies will not work anymore. The system is not about to collapse. It already has.**

Where to rent the films

"The UFT Looks Ahead: Which Way for Accountability?" can be rented from the AFT, 1012 14th St. N.W., Washington, D.C. 20005, or from the UFT film distributor, Evelyn Tinsley, Harold Mayer Productions, 155 W. 72nd St., New York, N.Y. Prints are limited, so order well in advance. There is a fine for prints returned more than five days after showing.

"Inside Out" rents for $60 per day from Dr. Jack Robertson, 3 Washington Square Village, New York, N.Y. 10012.

wish them to learn.

- **Students must see themselves as a reflection of the community in which they live.**

But in spite of those two positive aphorisms, Robertson's message primarily is this: "The system has a stake in perpetuating itself even when it is a failure."

One thing I will say for him is that at least he (apparently) views the solution within the framework of public education. No calls are made for turning public schools over to private voucher-operated schools or to private contractors, although, as indicated, courses are offered by such "social institutions" as an insurance company and the United Gas Improvement Company. The only call is to turn schools "inside out." The basic question is this: Has Robertson accurately described the problem for which he so dramatically proposed his Parkway-type solution?

If drastic surgery is necessary (according to Robertson the patient has expired already), could it be done along the lines of the John Dewey High School experiment in New York City in which the patient hasn't been turned so much "inside out" as "right-side up." In JDHS, the school has retained its walls; but they are not made with intractable wall-board!

In defense of 'free schools:' a reply to Ben Rust

In the December Changing Education, author and teacher Ben Rust wrote a critique of Steve Bhaerman's defense of 'free' schools. Here is Bhaerman's rebuttal:

I agree with Ben Rust [AT, Dec.] that public school is important because it is the only chance many people get. But just because it is open to everyone doesn't mean the public school is a democratic institution. It has a caste system based on ability grouping, competitiveness which divides and demoralizes, and compulsory-education laws which not only tell you that you must attend school but also specify what type of school.

Public schools are not helping desegregation. If anything, they are resegregating kids according to academic ability (which often runs along race and class lines). Poor people and blacks especially are led to believe that education is their only option, but instead the school reinforces their feelings of inferiority. The judgment of a "scientific," "objective" test is far more difficult to overcome than mere racial prejudice. As long as public schools reinforce old hierarchies or create new ones, all the other reform remains insignificant and deceptive.

It's meaningless to discuss public schools out of political context as Rust does. How can there be "learning for learning's sake" as long as the diploma is seen as necessary to make a living? I, too, would prefer to see small classes and loving teachers, but the public schools are clearly not moving in this direction. Instead of making small classes a reality by hiring more teachers, most school systems are cutting back. In California, Gov. Reagan is limiting funds for teacher-training programs in order to reduce the "glut" of teachers. This policy is not merely due to Nixonian economics or the current recession. Ongoing innovative projects center around technology and educational testing and these are proving profitable. Gadgets, teaching programs, and sophisticated tests can all be consumed more quickly than teachers.

Rust proposes to shelter kids from the same reality which pervades the school and determines its policies. The kids who started our free school realized that it's useless to study reality without changing it. For example, we were aware of the "reality" that private schools tend to be elitist. We were determined to change this reality, to make our school as public as possible. We asked $275 per year from each student but those who couldn't pay (because of poverty or lack of parental support) still participated in activities. A few even lived at our communal house.

Another "reality" was that a school needed a huge endowment, rich facilities, and a large student body to be successful. But, operating on a small scale that first year (20-25 students) we were able to manage money communally, look to our own resources instead of consuming curriculum, and, most important, relate to each other as brothers and sisters. Our school integrated ideas with experience and provided a communal and supportive social form.

I don't find that "becoming cynical and depressed destroys us as educators." Cynicism was essential for us to see our way through the insanity and begin to educate ourselves. Reality is "sordid" only when you have been deceived about it. When you've been taught in school that America has God on her side and find out in some rice paddy that she has Lt. Calley instead, that's sordid. But once you move past that point, once you see the world as it really it, reality ceases to be "sordid" or "evil." Our reality at the school was joyful, painful, exasperating, educational. Most important, we had some control over it.

Public school reinforces powerlessness, convinces people they are incapable of making the most simple decisions affecting their own lives. They can't even decide not to come to school or not to participate when they get there. They are thus prepared for the outside world which, as Kurt Vonnegut says, is just a replay of high school. To be sure, school offers an abundance of choice. Answer the question with A, B, C, or D. Never mind that none of these feels right—just choose A, B, C, or D. Later on, you will be called upon to make similar choices: the army, Canada, or jail. Nixon or Humphrey. It doesn't matter if they're not right either. That's all the choice you get and it's better than no choice at all.

Rust insists school must be separated from life. Yet it's precisely this separation which makes people incapable of action and facilitates mystification. When you make school a sanctuary for "free inquiry" and idealism, inferring that there's little room for either in later life, the sanctuary can quite easily become a prison. Idealism can be imprisoned in the school the same way religion is often imprisoned in the church (visiting hours: Sundays only). When idealism and religious feelings are confined to specific institutions, daily life can proceed unfettered by either.

Our society finds it convenient to isolate philosophy from practice so that idealism is relegated to the realm of the impossible. Peace becomes a "utopian" and, therefore, unattainable goal. This frees us to continue making war. Those few who care to make their actions consistent with their ideas are called "conscientious objectors" and are subject to all kinds of harassment for their integrity (for "integration" of word and act).

Those of us who have spent time in college know that academic freedom means very little without the freedom to act. The war continues despite years of teach-ins, volumes of words. Certainly the teach-ins informed people about what was going on. But that was just part of it. They weren't educated until they applied what they had learned, until they organized people around the war, worked for peace candidates, got their heads bashed at Chicago, formed communes and counter-institutions. Free inquiry is indeed "the name of the game." And it will remain a "game" until people take their lives into their own hands. The free school served this purpose for us. In the words of one student, it was a "crucible" melting away the chains which bound us to our past.—**Steve Bhaerman**

Education - Governance

'I am opposed... to holding teachers accountable for the learning of their students.'

Holding the system accountable

By AL MAYRHOFER

Al Mayrhofer is a member of the staff of Learning Foundations, Inc.

I have taught, been a school administrator, and worked in the field of accountability for approximately 12 years —that's a little before some of the writing started. I am going to address accountability in terms of public accountability, because that is what is generating, in my opinion, the current furor and some of the political activity as regards the schools.

The term accountability shares much with the terms busing and capital punishment, because they all have evoked more heat than light, and for good reason. It is not atypical for people and groups in a pluralistic society to have motives, objectives, opinions, and preferences which are at variance with each other. Indeed, it is one of the strengths of America, and it takes a strong and a wise people to secure the operational patterns which provide optimum choices for society with minimum stresses on individuals and groups. I, too, have opinions, particularly on accountability as it applies to teachers. I think my record in the past on this is pretty clear, but I would like to go over it again.

I am opposed, except under certain circumstances, very special in nature, to holding teachers accountable for the learning of their students. Remember, I am addressing the issue of public accountability. I am indebted to Albert Shanker, president of the United Federa-

the system itself. It is for these and other reasons that I take the firm position that it is the system which must be held accountable.

I said earlier that teachers might be held accountable under special circumstances. Let me give a real-life illustration. I once worked in a school system which had a superintendent who believed that teachers could be led to greater productivity by the most creative, best organized, and most responsible of their colleagues. He got the board to set up an investment-capital account for research and development, which amounted to about one-fifteenth of a budget of $15 million for a school district of, roughly, 12,000 youngsters. A needs-assessment by a logistics group set up the largest accomplishments. Any teacher or a group of teachers could submit what amounted to a bid for a piece of that investment capital. No administrator or group could stop the proposal from being heard by the board. Any proposal recommended by the Academy of Instruction, which was an elected teachers' group, and the principal's council had advantage in the hearing with the board, but no one could stop a teacher or a group of teachers from getting a hearing on a proposal.

Now, the criteria for implementation included the probability of success based on learning-research findings, cost effectiveness, and the practicability of installation in other schools. Those who were successful bidders depended for continued funding of this operation only on meeting their stated objectives and their objectives were stated in terms of student learning. They were given every logistic support possible—that was my job, and I really enjoyed working with those people for not only their friendship, but for what was produced.

To list a few accomplishments of these teachers: a drug-abuse program that was good enough to win one of the 10 national awards of the National Laboratory for the Advancement of Education and which worked in the school district (that's more important); a reading laboratory in which, in over five years, kids advanced an average of 2.8 grade levels per semester and gained success in their other subject-matter areas, and which has been installed in

but I would like to go over it again.

I am opposed, except under certain circumstances, very special in nature, to holding teachers accountable for the learning of their students. Remember, I am addressing the issue of public accountability. I am indebted to Albert Shanker, president of the United Federation of Teachers, for specific support of one aspect of my opposing position, and will quote part of an article that he authored (it appears in a new publication by Leon Lessinger and Ralph Tyler, "Accountability in Education," which was done for the National Society for the Study of Education):

"Teachers are also disturbed by the frequent association of accountability with something called teacher motivation, a doctrine which holds that many teachers fail to reach their children because they really don't want to."

I have been privileged to work with literally hundreds of teachers and my experience denies this dictum or doctrine. Oh, sure, there are a few here and there, but no more than in any other profession. The majority of the teachers I have worked with are good, dedicated persons doing as well as they know how to do. Shanker goes on:

"This view of accountability poses a great threat because, to be honest, most teachers aren't doing the best they can."

You notice he says, "the best they can," and for a very simple reason: they don't know how to do it any other way; let's get this accurate, they don't know any other way of doing things.

They are victims, if you like, of a system that has seen 8,000 new teachers move into New York, for example, every year for the past 20 years.

Shanker goes on to say that with 20,000 diverse backgrounds, after four weeks of teaching in New York City it is almost impossible to distinguish the new teachers from the ones they replaced. He concludes from this that, with few exceptions, teachers do what the system compels them to do.

But I'd like to extend Shanker's ideas and say that it is not the teachers alone who don't know any better way, but Laboratory for the Advancement of Education and which worked in the school district (that's more important); a reading laboratory in which, in over five years, kids advanced an average of 2.8 grade levels per semester and gained success in their other subject-matter areas, and which has been installed in other schools and other school districts and works there, as well; achievement, by system-technology methods, of the social-study survival concepts in America, performance objectives and criterion-reference items for each of these linked; a math program which was very similar to the reading program both in terms of process and product; and a physical-fitness testing program, which measures and prescribes the kinds of activities most helpful to kids, run by teachers and kids.

There are many others—these are but examples of conditions in which teachers were happy to be held accountable because they found a better way and received logistic and administrative support to develop, install, and disseminate the better way. Those teachers are doing that right now in other school districts around the country.

Teachers need pre- and post-certification training and continuing support and they are not getting it, either from the colleges of education or the systems.

Administrators need help in acquisition of management skills. Teachers and their children are the victims of that management and, of course, eventually, of society. A system's capability cannot exceed that of the people who operate it. We must insist on holding the system accountable for the sake of our children, our nation, and our profession. In this way, we can get the monkey of blame off of the teacher's back.

We must see that if accountability measures are used, they be used accountably, as the engine which furnishes the energy to develop the objectives and feedback mechanisms to improve the quality and relevance of education. In this way, we can secure the student accomplishment our nation needs at a price it can afford and is willing to pay.

Free-schoolers' countermeeting adds interest to AFT consortium

WASHINGTON, D.C.

A counter-conference to the AFT's QuEST consortium?

No doubt about it, the Festival for Alternatives in Education was scheduled for the same three days as the consortium, and less than half a dozen blocks away, in a Quaker meeting house.

Would it draw consortium-goers away from the regular sessions? Would the leaders try to disrupt the program? What in the world was in store for the QuESTers?

Well, the first thing was a greeting committee handing out alternative programs near the registration desk Sunday night. Many of the greeters wore odd costumes, and had faces brightly painted in intricate designs. Most AFTers stared from a distance.

Later, the group joined the cash-bar reception. They put on a few skits in one corner, and had a recitation or two, but after more awkward stares, the AFTers turned back to their own conversations and drinks. Soon, the alternatives contingent gave up on the theater, and joined the conversational groups.

And that was the way it stayed, for the next three days. Few if any AFT members ventured to the alternatives conference, and most of those from the alternatives group came to meetings—unpainted and in mufti—of the workshops that interested them. Tempers were lost on one or two occasions, briefly.

The alternatives people, who were teachers, parents, and students in free schools throughout the Washington area, presented their views at both plenary and workshop sessions, but sat and listened, too, and often joined the regular participants in similar reactions to the parade of "experts" from government and the universities with their own solutions to educational problems. By the end of the conference, unless there was a sharp age difference, the two groups were nearly indistinguishable.

What threatened to be another awkward moment in the consortium was the head-table lineup at the Tuesday luncheon: 15 white males, all of whom were speakers, workshop leaders, or AFT leaders. Three empty seats belonged to three female workshop leaders who had decided, quite separately, to eat lunch elsewhere that day.

AFT Vice-President Herrick Roth, who is also president of the Colorado AFL-CIO, introduced a head-table waitress, shop steward of Waitresses Local 507, and called repeatedly for the three missing women. The next day, at a well-integrated luncheon head table, AFT President David Selden apologized for the gaffe of the day before, and said that more care would be taken in the future to make sure programs were more integrated, racially and sexually.

Education — Governance

More money and good intentions alone will not bring about needed reform in the schools.

Innovation without change

Am. Teacher

By JAMES CASS

James Cass is education editor of Saturday Review.

Most of us, probably, have observed cases in which wide-ranging innovation brought very little change in the schools, but I guess that few of us had as dramatic an experience as John Henry Martin when he was superintendent of schools in a suburb of New York City just a few years ago. In his book, "Freedom to Learn," which is to be published later this month, he tells how in the mid-1960s he persuaded his board of education to increase the school budget by $4 million, which was, I believe, an increase of something like 50 percent. All of this increase was to be used to introduce the newest and most hopeful innovations in the district schools.

Class size was reduced from just over 30 to an average of just over 20. Specialists of every kind were hired, including guidance personnel, psychologists, social workers, classroom aides, and remedial specialists. More teachers with advanced degrees were hired. Modern math, modern physics, and advanced courses were introduced. Five out of every six teachers were engaged in retraining programs. More than 60 curricular and teaching reforms were instituted, and a teachers' council was elected to sit in review on the superintendent's recommendations to the board.

After two years, Dr. Martin hired a top-flight psychometrician to find out whether the school district's investment had paid off. At the conclusion of a painstaking and sophisticated study, the expert's report said, in effect, "Dear John Henry, the $4 million has purchased 125 students, each of the teachers put his desk in one corner of the room and very little changed, except for the rhetoric in the teachers' lounge. In the same way, it's all too possible to introduce an ungraded classroom in which modules of learning do not replace the grades but merely substitute for them.

The problems of replicating effective programs in practice, in other words, are more difficult than we anticipated a few years ago. It is very easy to reproduce the form and structure of innovative programs while missing their substance.

In other words, it's far too easy to innovate, without changing what actually happens to the children in the classrooms.

One of the basic problems here, it seems to me, is people. We all find it enormously difficult to change our patterns of thought and behavior even when we want to. We are fundamentally resistant to change and have a great capacity for developing ingenious ways of accommodating to the pressures of necessity when they arise without actually altering our behavior. And most of the time the institutional structures within which we function not only serve to reinforce our accustomed patterns of thought and action, but actively inhibit any fundamental change.

But perhaps we shouldn't be too surprised at our own reluctance to change. Perhaps we shouldn't be particularly startled that, in Pogo's famous phrase, "we have met the enemy and he is us."

You'll remember that Professor Benjamin Bloom, distinguished-service professor at the University of Chicago, in his classic study "Stability and Change in Human Characteristics," tells us that the older a child becomes, the more difficult it is to influence and shape the development of his individual characteristics, and that the older he is, the more intensive the environment must be and the more protracted its influence in order to induce any change.

He tells us, too, that something like half a child's development has taken place by the age of five, and that the process is virtually complete at the age of 17 or 18. Since most of us are somewhat older than that, it's small wonder that we change with difficulty or that we change only when the environment within which we are functioning is very intensive indeed.

But, after all, all is not lost. We adults do change, we do adapt to new circumstances. Human-relations training, specifically geared to facilitating change in human beings, is available to some of us, and most of us are dedicated to the idea of reform, to improving the educational process, to helping children achieve everything they are capable of. So some change does take place; some reforms are introduced, despite the resistance from those among us who feel threatened by change.

Almost invariably, however, the reforms that take place don't come close to solving the massive problems that the schools face. It's almost always a matter of too little, too late. I don't mean for a moment to denigrate the reforms of the 1960s. Many of them, I'm sure, have been effective to a degree. Many of them have made individual schools and individual classrooms more exciting and more humane places for the children to function there. I think that our problem is that we have operated on old assumptions and, consequently, what too often we have done is to shore up the status quo and we have not yet pointed to the future.

The problem of the future, it seems to me, is the lack of understanding or acceptance of the new role that the schools are asked to play in contemporary society, and our reluctance to put the knowledge that we already have of the teaching/learning process to work in the classrooms.

As long as society merely asked the schools to function as a vast sorting machine, to separate out the winners from the losers, a competitive system of education worked very well. Our rhetoric didn't have to bear any direct relationship to classroom reality. We could talk endlessly about helping every child to develop his own talents to the fullest and then hand out classroom rewards solely on the basis of each child's ability to compete, not infrequently damaging the self-image of those youngsters who were unprepared to make it on equal terms with their peers, even when their own private learning curves were very positive indeed.

We could talk with great fervor about recognizing individual differences—in talent, in interest, in aptitude, in motivation and all the rest—and then in the classroom insist that every child learn the same amount of the same thing in the same length of time or fail.

We could, in short, make schooling into an educational horse-race in which those who were better trained, better prepared, and more talented started the race with a great advantage and so, inevitably, were the winners.

This conception of what schooling is all about is the major source of the shrill and angry criticism of the '60s and the message that it carries is that this conception of schooling will not work

'We're being challenged to make the reality of classroom practice match the euphoric humanity of our rhetoric...'

for the '70s. Now, the schools are being asked to make sure that every youngster is a winner.

What's happening is that we're being challenged to make the reality of classroom practice match the euphoric humanity of our rhetoric, and that's going to take some doing. The problem, of course, is how we should go about it. There are few guidelines or precedents, but there are some. There are some things we can learn, for instance, both positive and negative, from the experience of free schools and open classrooms, whether within the system or outside of it, but we should remember always that, if the challenge of the '70s is to be met, it has to be in the public schools, it has to be within the system. Free schools may serve some youngsters well and they may provide useful experiences from which we can learn, but if the overwhelming proportion of the nation's children are to be well and truly served, it will have to be within the public schools themselves.

I would like to take just a few minutes to try to define two or three perspectives on what seems to me to be one, if not the central, issue in any discussion of the role of the schools in society and the nature of fundamental school reform. The central issue, it seems to me, is the assumption that we make about who can learn what in school. These assumptions, I am convinced, lie right at the heart of the conception of education as a competitive rather than a developmental process. There is some fascinating evidence coming out of research and experience in higher education that bears on this issue, but I think today we should focus on our perspectives that are closer to our immediate concerns.

You will remember that two or three years ago Professor Arthur Jensen in his elegantly lucid and, I believe, woefully wrong-headed study of race and intelligence in the Harvard Education Review, seemed to assure that the development of the kind of intelligence that IQ tests measure is the primary, if not the sole, academic task of the schools. Vo-

out of every six teachers were engaged in retraining programs. More than 60 curricular and teaching reforms were instituted, and a teachers' council was elected to sit in review on the superintendent's recommendations to the board.

After two years, Dr. Martin hired a top-flight psychometrician to find out whether the school district's investment had paid off. At the conclusion of a painstaking and sophisticated study, the expert's report said, in effect, "Dear John Henry, the $4 million has purchased no measurable change in student achievement."

Now, there are many ways in which we could interpret Dr. Martin's experience. At the very least, it seems to me, it illustrates clearly that more money and good intentions alone will not bring about the needed reform in the schools. Neither, I hasten to add, is the necessary change likely to come without more money and good intentions. What is required, in addition, it seems to me, is a more sophisticated awareness of just how difficult it is for men and their institutions to change and a clearer understanding of what education has to be all about in the decade of the '70s.

Now, about the difficulty of getting human beings to change, you remember that two or three years ago, Dr. John Goodlad of UCLA reported on his studies of new approaches in school practice. In the course of visits to several hundred elementary-school classrooms, he and his colleagues found that teachers and principals often were eager to talk about education and how to improve the classroom experience. Not infrequently they thought that they already were individualizing instruction, encouraging self-propelled learning, and doing all of the other things that were included in the liberal litany of educational reform. But Goodlad and his associates found very little evidence of real change in the classrooms.

Similarly, I'm sure that many of us have seen schools that introduce team teaching in ungraded classrooms, for instance, with great fanfare. But when everything had settled down and the team of teachers had grown accustomed to their over-sized open classrooms with what older than that, it's small wonder that we change with difficulty or that we change only when the environment within which we are functioning is very intensive indeed.

But, after all, all is not lost. We adults do change, we do adapt to new circumstances. Human-relations training, specifically geared to facilitating change in human beings, is available to some of us, and most of us are dedicated to the

We could, in short, make schooling into an educational horse-race in which those who were better trained, better prepared, and more talented started the race with a great advantage and so, inevitably, were the winners.

This conception of what schooling is all about is the major source of the shrill and angry criticism of the '60s and the message that it carries is that this conception of schooling will not work should focus on our perspectives that are closer to our immediate concerns.

You will remember that two or three years ago Professor Arthur Jensen in his elegantly lucid and, I believe, woefully wrong-headed study of race and intelligence in the Harvard Education Review, seemed to assure that the development of the kind of intelligence that IQ tests measure is the primary, if not the sole, academic task of the schools. Vo-

cational training is something else. And, as I've thought about his study, I have come to believe that his assumption is shared by a high proportion of the teachers and administrators in the schools.

Certainly the development of the capacity for abstract reasoning and problem solving, as Jensen defines intelligence, is an important function of the schools and, as long as education was conceived as a means for sorting out the winners and losers in society, rather than as a means for stimulating individual development, this limited conception of the function of the schools worked perfectly well. But in terms of the way in which most schools functioned, it certainly didn't have very much to do with the development of many of the youngsters who were forced to be in school by law.

There was another section of Professor Jensen's study that received less extended treatment, but I found it fascinating. At one point, he devotes a short section to the relationship of IQ to prestige professions. He noted that these occupations tend to be filled by people with high IQs, and that the speed and ease of training for various occupational skills shows a high correlation with high IQ. But, then, he also reports that IQ scores have a relatively low correlation with proficiency on the job after training is completed, and he adds: "This means that once the training hurdle has been surmounted, many factors beside intelligence are largely involved in success on the job."

It would be all too easy for an eager layman to over-interpret Professor Jensen's careful scholarship, but it seems to me that the data he cites strongly suggest at least two conclusions. First, that youngsters who learn more slowly than some of their peers may nevertheless still master necessary skills just as effectively if given the time and the encouragement; and, second, that possibly some of those other factors that make for job proficiency should occupy a more central role in the life of the schools. We'll come back to this second point a little later.

This first perspective suggested by Professor Jensen, it seems to me, is powerfully reinforced by Professor Bloom, whose Learning for Mastery program, I'm sure, is familiar to many of you. Going a bit beyond what I have heard him say, or have read that he has said, in an address at the inauguration of Dean James Doi at the College of Education at the University of Rochester a few weeks ago, Professor Bloom re-

'As long as society merely asked the schools...to separate out the winners from the losers, a competitive system worked very well.'

reveal that as high as 90 percent of the students can learn these school subjects up to the same standard that only the top 10 percent of the students have been learning under usual conditions. As this research proceeds, special conditions have been discovered under which both the level of learning and the rate of learning become much the same from student to student. That is, there is growing evidence that much of what we have termed individual differences in school learning is the effect of particular school conditions rather than of basic differences in the capabilities of the students. As we learn more about how individual differences in school learning are maximized, our responsibility for the learning of students will become greater and greater."

Now, I find that pretty heady stuff, and certainly it strikes very directly at the heart of the assumptions we've been accustomed to make about who can learn what in school, as well as about who is responsible for failure. It also, I believe, points the direction which a fundamental rethinking of what schools are all about must take for the 1970s.

For a moment, I would like to turn back to our discussion of Professor Jensen and those factors that make for job proficiency but do not bear a high correlation with the kind of intelligence measured by IQ tests. What are these qualities, and what can the schools do about them? I must admit that no highly informed researchers confided the answer to me. This is one of the questions that I hope to spend a great deal of my time pursuing in the course of the next year or two. It does seem that simple logic would indicate that they are the qualities that make for effective human beings, and if the schools are to start living up to their educational rhetoric of the last generation, they're going to have to find means for encouraging the development of these qualities—all of which, of course, is so cosmically general that it's no practical help

will measure the ability of individuals to

able to measure so far. It may even be

fessor Jensen, it seems to me, is powerfully reinforced by Professor Bloom, whose Learning for Mastery program, I'm sure, is familiar to many of you. Going a bit beyond what I have heard him say, or have read that he has said, in an address at the inauguration of Dean James Doi at the College of Education at the University of Rochester a few weeks ago, Professor Bloom reminded his audience that less than a decade ago most educators were convinced that the learning capacity of individuals differed greatly and that most of us assumed that only 10 percent to 15 percent were capable of truly mastering an academic curriculum. Shades of Dr. James B. Conant's dicta in the late 1950s! We also assumed, according to Dr. Bloom, that the reasons for failure were genetic, socioeconomic status, language facility, or other factors that lay outside the responsibility of the school. But then he goes on to say, and I quote him here at some length:

"More recently, we have come to understand that under appropriate learning conditions, students differ in the rate in which they can learn, not the level to which they can achieve or in their basic capacity to learn. Fundamental research on these ideas is still in process. Studies in which these ideas have been applied to actual school subjects next year or two. It does seem that simple logic would indicate that they are the qualities that make for effective human beings, and if the schools are to start living up to their educational rhetoric of the last generation, they're going to have to find means for encouraging the development of these qualities—all of which, of course, is so cosmically general that it's no practical help.

There may be some help on the horizon, perhaps from what would seem an unlikely source—the test-makers. This morning there was more than one mention, as I recall, about the increasing sophistication of the test-making profession. I am not expert in these matters but, as I understand it, there are several groups who are now hard at work developing instruments for measuring the effectiveness of affective education programs. It may well be that their work will point new directions to ways in which strong, stable personalities can be developed with the help of the schools.

Others are working at ways to measure and, hopefully, to develop creativity in young people.

My old friend and collaborator, Max Birnbaum, of the Boston University Human Relations Laboratory, is working with his colleagues to develop a social IQ, a social intelligence quotient, which

will measure the ability of individuals to work effectively with others and to help others function more effectively themselves. And there is, I understand, at least some tentative evidence that some creative programs in the visual and performing arts have been found to actively stimulate cognitive learning in a fashion that can be measured, even though it is not yet fully understood.

Obviously, most of these perspectives on the '70s, if that's not too sententious a label for them, are merely suggestive of what's coming over the education horizon. In other cases, they seem to point specific directions that the educational process must take if it is to discharge its commitment to the nation's children. It may be that we will find that we're already doing better than we know, but that we have simply been looking for the wrong outcomes, or looking for too limited outcomes.

It may be that some of the changes—some of the innovations—of the '70s have produced more than we have been able to measure so far. It may even be that all of John Henry Martin's $4 million did not go down the drain, that it did help students in many areas of their lives that were not measured. There are today, I think the evidence clearly indicates, ways of doing things better than those we employ.

There are insurmountable obstacles for many of you, I am sure, in your individual schools and classrooms for making the necessary changes. The day-by-day demands are far too great, but I am constantly reminded of the old story about the county agent in the midwest who was attempting to get one farmer to innovate, to do it better than he had been doing it. Finally, he lost patience after several visits and said, "Damn it! Don't you want to farm better?" And the farmer said, "Hell, man, I don't farm half as good now as I know how."

I think that, during the 1970s, we're all going to have to farm just as good as we know how.

Class size, textbooks bother first-year teacher

Chuck Stoll, looking like one of his own students, had traveled from Roseville, Mich., to attend the QuEST consortium. A teacher of junior-high-school math, he hoped the seminars at the consortium would give him some insights on how to be more effective in the classroom during this, his first year of teaching. Having discovered that his major problem was the size of the class, when queried about the open classroom, he said, "If the class size is low, the teacher can be effective using the traditional method when it is applicable." Citing his own experience, he added that, "When the kids first begin the period, I use the traditional method to calm them down. After about half the period is over, I gradually work into the open method. With a large class, it takes too much time to discipline the kids, and establishes an atmosphere which destroys the educational environment. I think the most important item needed to help teachers is more funds to aid them to improve what they're already doing, and to help get the class size lowered."

In addition to class size, he thought a major area of distress for his students lay in the textbook. "The kids I teach largely come from blue-collar homes, and the textbook is geared to the middleclass. The course should be more individualized. Unless study is relevant to the life the kids lead out of school, they won't be interested. I would like to throw out the text, and allow the students to choose their own learning experience, either to work on their own or with a tutor."

Stoll was not as enthusiastic about all the innovative techniques discussed at the consortium. "I feel that some of the new techniques work against the teachers," he stated. "The performance contract can only be viable if it is written by the teacher who's using it, and the voucher system is prejudiced and regressive. They're not really practical in any respect," he reiterated.

Education - Governance

PRESESSION:

'Free schools' inside the system

The QuEST consortium's early-morning presession on the question of open schools attracted better than 40 persons, most of whom had attended the session which extended until late the preceding evening. Though the consortium program promised coffee and pastry to the early risers, the teachers participating sacrificed their sleep because of a real desire to explore all the alternatives available within the school system.

The session was opened by Patrick Fitzgerald, member of Local 28, St. Paul, Minn., a young teacher on the staff of the St. Paul Open School, which was initiated by a group of parents dissatisfied with the traditional school system, who brought a proposal for an open school to the St. Paul school board. The parents guaranteed that they would match funds provided by the board, and eventually secured a grant of $200,000. This money was used to purchase an old office building, second-hand furniture and general equipment.

The school limited itself to a student enrollment of 600 pupils encompassing all grades from kindergarten through twelfth. The only prerequisite for a student was his desire to attend. The same qualification was required of the staff, who were hired on a projected ratio of 10 to one. No set curriculum was established, and attendance was extremely loose. Any resource the school lacked on its premises was sought after in the wider city, including specialized courses offered in the public schools. The staff enlisted years experience who chose the alternative school as a viable option to improve the quality of education within the system. The Seattle school is very similar to that in St. Paul, though it confines itself to the traditional building with more rigidity. Inside the building, however, prevails the open school described by Fitzgerald.

The audience, though interested in the open-school concept, was curious as to the preparation necessary for a teacher in such a school. Fitzgerald suggested that any such training include sensitivity groups, combined with any discipline which interested the individual. The consensus of reaction from his listeners was that the staff must be able to accept the open school, and that it was not the answer for all teachers.

Burns summarized the open-school position when he stated that, though it was only one alternative, the major idea the open-school concept was working for, was to make learning relevant and desired by the child, an idea which he hoped could be successfully adapted to any method of teaching.

PRESESSION:

...and 'free schools' on the outside

"I don't think public-school teachers and those in free schools should see each other as antagonists, as they often do," said Joel Denker, who had come to an 8 a.m. QuEST consortium presession to talk about his experiences in both kinds of schools.

His audience, some 60 or so early-er, December, 1971). "The school never ever relates what's taught in the classroom with what happens to a kid, and I think that's done with a purpose," he said. "When we formed our own school, we were working out of the consumer trap," and out of what we felt was the suburban aim of making students into managers of others, and the inner-city aim of creating petty bureaucrats.

"School means more when the student decides to go there," Bhaerman observed.

The first question from the audience was a bristling "Who financed you?"

"We did," Bhaerman replied, "and we had extreme difficulty." He described the tuition (which included room and board) of from $275 to $350 a year, plus one $1,000 donation the first year, and a $10,000 grant the second.

"What about all of us who feel a great need for change?" the same questioner persisted. "You took a small number . . ."

Bhaerman: "Most of these projects that start on a larger scale, like John F. Kennedy High School [a Maryland "free-plan" public school which changed its style this fall], get people involved who don't want to be, and they'll sabotage it."

Denker: "People in free schools are beginning to see their role in more political terms. You can't just start an alternative school and assume it will survive by its beliefs alone. You have to deal with all the incredible regulations, steel doors, parking space, etc., things which keep young people from renting their own houses, the compulsory-schooling laws. You have to call it a school. I don't think it's enough to seize control of existing public schools, and say that's enough. One of the destructive things about public school is the relationships between teachers and students."

A man sitting on the floor chimed in, "Don't hunt for the sole answer. If free schools say they have an answer . . . people don't have the guts to fight for it when they're in . . ."

And a woman from Philadelphia: "We can question."

"It sounds like an escape from integrated schools, and is it an excuse to take public monies from public schools," said a teacher from New York City.

Denker: "As a public-school teacher, you're the legislator in power of the compulsory-school law. You have to enforce certain kinds of discipline on kids."

"The freedom that you call freedom," said a woman from New York, "could often be very detrimental to the child," and she described her own son's experiences in "the free school of his day."

Bhaerman spoke of a substitute teacher in New York who saw her job "as that of a policeman," and who felt the need to impress the school administration with her competence at that. The woman from New York nodded, recognizing the situation.

"Free schools are pretty good, they serve their purpose," said a younger man in the audience. "The system is pretty big, the country reaches from here to Honolulu, and to effect change, we know we have to unite. We've got to get together on it and decide what we're to do."

"B. F. Skinner says what you're doing is therapeutic," said still another teacher.

Denker: "There's no place in our society for young people to function. There's a moratorium between childhood and adulthood, grown even longer because of the draft. Schools are fulfilling a social responsibility forced on them by the society."

"What you're doing," said a woman with nearly the last word, "is turning out revolutionaries. We turn out an excellent product for the system. What you're doing is creating a revolution. You're getting your children ready for very uncomfortable lives."

ing, second-hand furniture and general equipment.

The school limited itself to a student enrollment of 600 pupils encompassing all grades from kindergarten through twelfth. The only prerequisite for a student was his desire to attend. The same qualification was required of the staff, who were hired on a projected ratio of 10 to one. No set curriculum was established, and attendance was extremely loose. Any resource the school lacked on its premises was sought after in the wider city, including specialized courses offered in the public schools. The staff enlisted the aid of community volunteers and parent aides to travel with the younger children, and to further reduce the pupil/adult ratio.

After describing the physical properties of St. Paul Open School, Fitzgerald explained its underlying motivations and philosophy. "The open school," he said, "is an expansion of the open classroom." It exists on the basic premise that all learning is one whole, and therefore relevant to the student's life, because he is in essence, his own "living textbook."

All learning in the school is informal, done in learning modules called experience sites, Fitzgerald explained. The learning takes place at random, rather than sequentially, and is based on the student's own experiences, interests, and ability to choose. The teacher acts as a functional administrator, who is an advisor to the student, aiding him to set up a week's program of activities, rather than as an information-giver. It is a child-centered school, and there is no pass or fail, and no grades. There is no structured hierarchy. The teacher is respected for his greater knowledge, but is in no way an authority figure. Decisions on school policy are made by the entire staff at biweekly staff meetings, which are themselves optional, though well attended. The staff is advised by a council composed of two community people, two parents, two members of the staff and 10 students.

After Fitzgerald's talk, Donald Burns, member of the Seattle Federation of Teachers, Local 200, and teacher on the staff of the Seattle Alternative School, compared his school's setup to the St. Paul School. Burns is a teacher of many

schools' on the outside

"I don't think public-school teachers and those in free schools should see each other as antagonists, as they often do," said Joel Denker, who had come to an 8 a.m. QuEST consortium presession to talk about his experiences in both kinds of schools.

His audience, some 60 or so early-rising conference-goers, munched rolls, drank coffee, and tried to get over the chip on its collective shoulder, some bending to the task by sitting on the carpet of the hotel meeting room.

Denker and Steve Bhaerman, his co-author of a book on their two-year experience running a free school in the Washington, D.C., area, appeared a little more slicked-up than usual (Bhaerman was wearing a suit), apparently trying to meet the audience at least halfway. But despite all this, some observers felt a certain tension remained.

Denker continued, speaking of his hope for an "interchange," in which teachers and students would go to a public school, then to a free school, then back, which he recommended to achieve a feeling of "security."

"When I taught in a public school, I felt insecure, boxed in," he said, recounting his problems with student and teacher freedoms at a suburban Maryland school. "When we were in a free school, the responsibility was up to us. We learned how to have responsibility, and how to fail.

"People in public schools tend to internalize their anger," he said, "to take it all out on themselves, or they externalize —blame it all on someone else." Denker emphasized his belief, clearly stated in his chapters in the book, "No Particular Place to Go: The Making of a Free High School" (Simon and Schuster, 1972), that the free-school experience was one of self-discovery for both teachers and students.

Bhaerman described his experiences as a Teacher Corps intern in an inner-city Washington school (see American Teach-

with all the incredible regulations, steel doors, parking space, etc., things which keep young people from renting their own houses, the compulsory-schooling laws. You have to call it a school. I don't think it's enough to seize control of existing public schools, and say that's enough. One of the destructive things about public school is the relationships between teachers and students."

A man sitting on the floor chimed in, "Don't hunt for the sole answer. If free schools say they have an answer . . .

ciety for young people to function. There's a moratorium between childhood and adulthood, grown even longer because of the draft. Schools are fulfilling a social responsibility forced on them by the society."

"What you're doing," said a woman with nearly the last word, "is turning out revolutionaries. We turn out an excellent product for the system. What you're doing is creating a revolution. You're getting your children ready for very uncomfortable lives."

Discipline: 'Involve the family'

Zelma Harmon and **Sylvia Shufenthal** were among the many experienced teachers attending the QuEST consortium. Both women, now members of AFT Local 2, have been teaching in the New York City public-school system for more than 20 years. Their attitude toward education is one of progression, they feel that a good teacher never ceases to learn the art and craft of teaching. According to Harmon, the consortium provided the opportunity to "discuss education with other teachers, to help me plan new techniques and be effective in their use."

Some of the new techniques, however, elicited a less than enthusiastic response from the two teachers. After attending a seminar on teacher accountability, Harmon concluded that "I'm against it as it is being proposed. I think that most teachers do a good job, and as professionals, are accountable to themselves." Shufenthal, who has taught both typing and English in New York City's high schools, concurred. "The accountability system, as proposed, doesn't really want to improve a teacher's ability to teach. Instead, I think it will make them teach the tests for which they are being held accountable."

Drawing on her impressions formed during years of classroom teaching and as a teacher of inservice courses on guidance, Harmon offered the suggestion that "new teachers should spend time in other classes and diverse parts of the building, doing any kind of job to further their understanding of the machinations of the school, and to see the worst as well as the best. The best way to learn is by example."

Both agreed that the major problem they encountered in their classes was discipline. Each felt there was no ultimate solution they could offer, but had developed a mode of behavior which alleviated the problem to some degree. Harmon believed that "involving the family is the most effective action a teacher can take, because I feel that 90 percent of the problem goes back to the home situation." Shufenthal counseled, "Kindness and courtesy, together with a very calm manner. It also is important to make the subject relevant to the child. If you can get a child willing to come to you to talk about something other than school, you have made it."

School Superintendent Finds That These Days His Tenure Is Tenuous

Tom Shaheen, Who Supports Busing in San Francisco, May Be Expelled Shortly

5/2/72

Rent, Don't Buy, Your Home

By JOANN S. LUBLIN
Staff Reporter of THE WALL STREET JOURNAL

SAN FRANCISCO — In the school-district parking lot here, the names of most top officials appear painted in bright-white letters on their parking spaces. But one spot has no name —only the title, "superintendent."

"Well, superintendents come and go," wistfully muses Thomas A. Shaheen, the 55-year-old current holder of that title, as he slowly walks to his district-owned Ford. The short, stocky official knows only too well what he's talking about.

During his 22 months as chief executive of San Francisco's public schools, Tom Shaheen has become the political lightning rod in an emotional, divisive storm over busing. That unenviable position may soon cost him his job, frightening the scores of school superintendents around the country who are also backing—willingly or unwillingly—this integration method despite widespread protests by parents.

In January, four members of San Francisco's seven-member school board warned Superintendent Shaheen that they would fire him if he didn't resign. The usually genial and charming Tom Shaheen angrily refused to abandon his $42,000-a-year contract, which expires in mid-1974. So the board stripped him of key administrative powers and handed them to a deputy.

In February, 250 angry antibusing parents chased Mr. Shaheen out of Chinatown, chanting, "Kill him!" And in recent weeks, Mr. Shaheen and busing have emerged as prime issues in next Tuesday's school-board elections. The implications of these developments are clear, San Francisco busing opponents say: A new, predominantly conservative school board may be more successful in getting rid of Tom Shaheen—and in reducing large-scale busing.

A Nomadic Existence

The bitter battle that Mr. Shaheen is caught up in illustrates the perils of being a school superintendent in these days of agitation over busing and other school issues. In recent years, big-city school superintendents have often become the victims of community pressure—so that their average job tenure has dropped to less than three years. A 1960 study showed that 90% of big-city superintendents had held their present job or a maximum of two jobs for the previous ten years.

Superintendencies in 15 of the nation's largest 22 cities have been vacated within the past two years; New York, Los Angeles and San Diego are among the cities that have had vacancies. In fact, two of those 15 cities—Boston and Detroit—have supposedly been considering Mr. Shaheen to fill their vacancies.

Tom Shaheen apparently resigned himself to the fact that an urban school chief now leads a fairly nomadic existence. In assuming his first big-city post, Mr. Shaheen decided to rent a house here. "I had always *owned* a house before coming to San Francisco," he says.

Mr. Shaheen, a balding Lebanese-American with silver sideburns, stirred up the cauldron of trouble here by implementing last fall a desegregation plan for 97 elementary schools ordered by a federal court. The $1.5 million program involved busing 25,000 of the city's 40,000 elementary-school children. The total pupil enrollment was 6,000 fewer than expected reflecting a number of disgruntled parents' protests over the plan.

Two Busing Foes Appointed

Another indication of public sentiment on the busing issue was Mayor Joseph Alioto's appointment last November of busing opponents George Chinn and Dr. Eugene Hopp to the school board. They replaced a pair of liberal, pro-integration members whose terms expired, leaving Mr. Shaheen's supporters in the minority. Also in November San Francisco voters decided to change the school board to an elected one, demonstrating, in part, disenchantment with the appointed board.

Mr. Shaheen also has polarized this polyglot, multiethnic city—whose black, Latino and other minority-group children combined form the district's majority—by seeking to desegregate the school district's predominantly white administrative staff. And, not surprisingly, the superintendent's push to integrate the 18 junior high schools next autumn through extensive busing immediately met with stiff resistance from some school-board members. In fact, on April 6 the board majority killed junior-high integration entirely for next year. This action prompted a $295 million lawsuit by the local chapter of the National Association for the Advancement of Colored People. The suit demands complete integration of the city's 30 junior and senior high schools by next fall and $50,000 in damages for each black student currently attending segregated secondary schools.

Links to the Past

It isn't the first time that Tom Shaheen, a battle-scarred veteran of 28 years of school superintendencies, has been the target of busing opponents. He recalls a similar chain of events in Rockford, Ill., where he headed the school system for five years.

Mr. Shaheen's "strong support" for a pilot busing program at two elementary schools in Rockford prompted four antibusing candidates to run for the school board in 1970. They won, taking control of the board. Soon after, Mr. Shaheen left the conservative city for San Francisco, his first big-city school superintendency. With his departure, the Rockford School

Please Turn to Page 17, Column 1

Academic Hot Seat: A School Chief Finds That His Tenure Is Tenuous

Continued From First Page

Board dropped the controversial busing program.

Referring to himself in the third person—as he often does—Mr. Shaheen resignedly asserts that the current school-board campaign in San Francisco is built "around scapegoating the superintendent" and "around desegregation." He sees himself as the "whipping boy" for problems that "it is easy to indict a superintendent for."

Life hasn't been too easy for this school superintendent in recent months. Mr. Shaheen, a modish dresser, looks tired: Heavy bags hang under his eyes, and deep creases line his high forehead. At the time he was readying the 130 desegregation buses for school last fall, he separated and filed for a divorce from his wife of 30 years. And his father died a few weeks after school began.

Still, Superintendent Shaheen insists he hasn't been emotionally worn down by the political pressures of administering this city's school system and its integration program. The broad-shouldered 195-pounder, who once wrote an-advice-to-superintendents article called "Rejoice in Conflict," remarks, "I know what I stand for and what I believe in."

Mr. Shaheen's busing critics accuse him of an inflexible philosophical commitment to "forced busing" as a school-segregation remedy. Without this commitment, Mr. Shaheen would "have made a fight" over last spring's court order, seeking to gain more time to consider alternatives to busing such as redrawing school boundaries, say critics like Mr. Chinn, the new school-board member, who is an attorney here.

Mr. Shaheen concedes that he could have sided with the school board's appeal of the desegregation order of Federal District Judge Stanley Weigel. (That appeal is still pending, awaiting the U.S. Supreme Court's ruling on a similar case in Denver.) "But my commitment was to desegregation," the superintendent explains in a nasal New England accent left from boyhood days in Lowell, Mass. "The sooner we desegregate the schools, the better."

But, according to his critic, Mr. Chinn, in desegregating the schools, Superintendent Shaheen seems "only interested in the advancement of his idea, which is racial balancing"—and not in better schools.

Has Busing Worked?

Tom Shaheen fiercely defends his belief that integration will result in "quality-equality" education for all children. He is the kind of school administrator who gives top priority to what he thinks students, and not their parents, want—whether it is integrated classes or a student bill of rights. "If there's any support I have in the community, it's from the kids," Mr. Shaheen says as he hands a Lifesaver mint to a black child while visiting an integrated elementary school. "It's one of the reasons I'm unpopular."

But busing hasn't fully integrated the schools, another critic argues, because more than one-third of the elementary schools remained racially imbalanced at midyear. "That's one of my quarrels with the superintendent," says Dr. Hopp, the other new school-board member, who is an ear, nose and throat specialist. "Busing isn't working." Mr. Shaheen replies that the imbalanced schools simply "indicate that we have some problems."

Mr. Shaheen's opponents also say he lacked judgment, planning and sensitivity in carrying out the district's citizen-designed "horseshoe" busing plan. (The horseshoe plan divided the city into zones to minimize the distances children would have to be bused.) For instance, Mr. Chinn charges that the superintendent "gave the appearance of not caring" when a vocal minority of Chinese parents protested the horseshoe plan at school-board meetings last year.

And Mr. Shaheen's Feb. 7 flight from a Chinatown YWCA busing meeting crowded with shouting, placard-waving Chinese citizens "demonstrated the rapport he has with the people. Not too hot," James Wong says. Mr. Wong, a data processor for the city, serves on the board of directors of Chinatown's Telesis School. Telesis is one of three private schools set up for Chinese pupils in September after Chinese parents were unable to block busing in the courts. About 1,600 Chinese students are enrolled in the private schools. But the remaining majority of the city's 6,000 Chinese elementary-school children attend public schools.

Teachers also allegedly were ill-prepared for desegregation. "The day before school started, hundreds of elementary teachers didn't know where they were to be assigned," says James Ballard, president of the 1,500-member teachers' union.

The Pressures of Time

Superintendent Shaheen readily admits that the time pressures of the court order meant that in-service training to prepare the teaching staff for 40,000 racially and economically diverse children also "was very, very limited." So what? he asks. "What was so beautiful about education before" in decaying, inner-city schools? he wonders.

But the lack of community preparation for busing created a chaotic situation in September, when "everything was in turmoil—parents, teachers and children," says Albert Astor, a sixth-grade teacher at Lawton Elementary School. A school-board member charges that "Mr. Shaheen did little to diffuse a potentially explosive situation or prepare for a better educational system" at the end of the bus ride.

This busing turmoil, the superintendent's critics contend, was exacerbated further by his announced vacation-business trip for the second week of school. Mr. Shaheen canceled the trip ("I was pleased they thought I was so important," he says wryly) after an indignant clamor. Typical of the outcry over his supposed lack of judgment was the demand for the superintendent's resignation by the 2,700-member Classroom Teacher Association.

Many black leaders rallied to the superintendent's defense. Benjamin Criswell, president of the local chapter of the NAACP, says resentment of Mr. Shaheen's vacation plans and opposition in general to busing typify the "bigots" who sought "to make Tom Shaheen the scapegoat of this thing." He adds that he is more interested in seeing Judge Weigel's busing order carried out than in protecting Mr. Shaheen's career.

Integrating Administrators

Still, some seasoned district observers say the superintendent could have more easily integrated the city's elementary schools if he hadn't also tried to integrate administrators. White school-district officials, angered and alienated by what they considered Mr. Shaheen's advocacy of "racism in reverse" in a pair of attempts to integrate the staff, threw roadblocks into the busing plan's administration, Bill Keesey charges. "It's impossible to have the staff he has and expect him to achieve successful integration," says Mr. Keesey, a Filipino and an assistant junior high-

school principal, who is currently on a sabbatical. He is also head of the Urban School Administrators, whose members include half the district's 70 minority administrators.

Just as Mr. Shaheen emerged as the central figure in the busing issue, so, too, has he been blamed for the two staff-desegregation policies. Ironically, the former liberal majority on the school board—and not Mr. Shaheen—pushed through the first of those staff-opposed integration moves, a policy known as "deselection."

In March 1971 the superintendent suggested "deselecting," or demoting, a number of administrators on a strict seniority basis to reduce the top-heavy bureaucracy. But the board president at that time, Dr. Zuretti L. Goosby, a black dentist, objected that Mr. Shaheen's proposal would also demote newly appointed black, Latino and Asian school officials. So, in executive session, the board majority voted to exempt minorities and only demote an all-white group of 125 administrators.

Mr. Shaheen, who was "not unhappy with the board decision," received the full brunt of many district employes' resentment over the "deselection" policy—even months after the board abandoned it after demoting only a handful of administrators.

If the proposed "deselection" was "devastating" in causing a polarization and loss of morale among the approximately 4,000 white teachers and administrators, this sentiment intensified in December, according to Reynold Colvin, who had been ready to sue the district as attorney for many of the deselected whites. In December the board approved a modified version of a plan to promote and hire minority-group members that was proposed by Mr. Shaheen. The proposal set yearly quotas for appointments and promotions to bring the proportion of minority administrators more into balance with the district's primarily minority-student population.

As a result of both "deselection" and this action, a San Francisco Chronicle story at the time reported, only 5% of the 104 top district headquarters administrators remained Shaheen backers. "Those figures were pretty accurate," a veteran headquarters insider says. (As a result of the central-office antagonism, Mr. Shaheen now spends much of his working day at a field office.)

And in March, Mr. Colvin did file suit against the hiring and promotion plan, arguing that what the suit called the racially discriminatory practices of the proposal means "there will be a zero quota" of whites hired or promoted in administrative positions.

This issue helped unite the board to seek Superintendent Shaheen's removal in late January, recalls John Crowley, an opponent of the plan who has since left the board. A majority of four—created by the addition of busing opponents Mr. Chinn and Dr. Hopp—issued the firing ultimatum just three weeks after the new members took office. And all the board members except Dr. Goosby told Mr. Shaheen that they wanted him to resign voluntarily. In a closed-door Sunday-evening board meeting, the greatly surprised superintendent said firmly, "I intend to stay." And then he walked out of the room.

City-County Link Gets School Study

Governace
Atl. Journal
7/27/72

The Fulton County Board of Education is sending four staff members to Indianapolis and Toronto to look at the effects of governmental consolidation on schools there.

Board Chairman W. L. Robinson said Thursday these two systems were selected because of their similarity to the consolidation proposals being considered for metro Atlanta.

The board investigated the possibility of looking at systems closer to home, such as Duval County and Dade County in Florida and Davidson County, Tenn.

However, it concluded their school system organization is not like that which exists here.

The trip may indicate a softening of the county school board's opposition to governmental consolidation in Atlanta and Fulton County.

"RATHER THAN being negative, the board is going to approach the question of consolidation with an open mind," said Fulton School Supt. E. E. Baker.

"We are interested in finding out how the school systems were treated under consolidated governmental situations," Baker continued.

Baker, associate Supt. John W. Grindle, attendance director Lawson Sayer and attorney James P. Groton are scheduled to make the trip.

They plan to visit Indianapolis Aug. 7 and Aug. 8, and spend Aug. 9 through Aug. 11 in Toronto.

The trip grew out of the deliberations of the Commission to Study the Governmental Structure of Fulton County which was set up by the legislature before it adjourned to look at consolidation possibilities for Atlanta.

BAKER IS CHAIRMAN of the education subcommittee of the commission, and at a recent meeting it was suggested the chairman and members of the sub committee visit Indianapolis and Toronto.

According to the minutes of the meeting, Mills B. Lane, vice chairman of the board of Citizens and Southern National Bank, has offered to make the bank's airplanes available to the committee to visit these cities.

There is a lawsuit pending in Atlanta seeking to consolidate nine metropolitan area school systems, either under a large umbrella school board with smaller operating school boards or into one large system.

According to Robinson, Toronto has small borough school boards which operate under a larger metro school board which has major control over the budget of the entire system.

In Indianapolis, the governments were consolidated but the ten school systems were left independent, according to Baker.

Dade County, Florida, which is a consolidation of services between Dade County and the City of Miami, did not involve the school system as there was only one countywide school district in operation there originally.

A Growing Partnership

UNIONS and COMMUNITY COLLEGES

By ALEX BILANOW

Trade unions are playing a growing role in the nation's community, or two-year, colleges.

Craft unions in Coos Bay, Oregon, for example, got together and founded Southwestern Community College to remedy a shortage of skilled workers in that area.

Genese Community College in Flint and Macomb County Community College in Warren, both in Michigan, are now operating apprenticeship training programs in cooperation with the United Auto Workers.

The International Association of Machinists has close ties with City College of Chicago. IAM officials serve on the college's advisory board and a number of skilled IAM craftsmen serve on the faculty.

At Coolidge, Arizona, Central Arizona Community College offers training courses for heavy equipment operators. The school uses members of the Operating Engineers to teach them.

In Los Angeles, that city's trade union council works closely with LA Technical College, providing curriculum know-how and instructors for courses in carpentry, painting, masonry and other construction crafts.

In other cities across the country members of the Teamsters, American Federation of State, County and Municipal Employees, Painters and many other unions are involved, in one form or another, with the community colleges in their areas.

If the involvement is not by having union leaders serve on the colleges' advisory boards, or having members of the unions working as instructors, then it is by enrolling union members themselves, as well as their sons and daughters.

Of the 2.7 million students enrolled currently in the nation's 1,120 community colleges, the bulk come from the families of workers. These young people are striving for a better way of life by "going to college." Usually, their parents are unable to pay charges at four-year institutions.

Most community colleges charge $250 to $350 per year tuition and in some states, like California, tuition is free.

At the same time, the two-year institutions provide an open door into the four-year colleges. The American Association of Community and Junior Colleges (AACJC), based in Washington, D.C., estimates that about one-third of the students who graduate from a two-year college go on to enroll in a four year university.

Labor Involvement Encouraged

The AACJC, whose membership includes nearly all public and private two-year colleges, wants to see more labor involvement.

"When you think of unions representing working people, you can say that community colleges serve the working man. We have that in common with unions," said Andrew Korim, an occupational education specialist with the association.

"There is a definite role for unions to play in the training and education programs of community colleges, and we would encourage labor to expand that role," he added.

Another AACJC official, William Harper, pointed out that community colleges stand today as the fastest-growing part of the nation's educational establishment. An estimated 20 to 30 new community colleges will be founded during this year. The Carnegie Commission on Higher Education estimates that at least 230 more two-year colleges will be needed by 1980.

"With that kind of growth on the drawing boards, we'll be needing all the help we can get from unions and union members," Harper said.

"That help can take many forms—duty with college advisory boards, technical assistance in setting up training and apprenticeship programs, helping enrollments through establishing trade union scholarships, and even, as voters, in supporting bond issues to finance the colleges," Harper explained.

The two-year college, he noted, is an American invention. It is hardly new, having been around since the turn of the century. But for years, it languished in the shadows of the four-year universities. In rank, it hardly stood taller than the average high school.

The first public community college, according to AACJC historical records, was organized in 1901-02 in Joliet, Ill. Joliet College was built on the campus of the University of Chicago.

Educators at the University of California, meanwhile, were promoting a new educational reform—establishment of post-graduate studies in public high schools. This was gradually carried out. However, rather than stressing technical education and training, the schools tended to focus on liberal arts.

The community college movement grew slowly until the 1950's and 1960's. In 1920, there were 207 such institutions operating, only 70 of them publicly-supported. The total grew to 678 in 1960, with an enrollment of 660,216. In 1965 there were 771 community colleges, enrolling 1,292,753 students. Five years later there were 1,091 community colleges with a combined enrollment of 2,499,837. While the explosive pace of the growth has ended, the growth is nevertheless continuing, although at a slower rate.

Community colleges are now located in every state. In a number of states, like California, Kentucky and Florida, they are the keystone of the state's higher education systems.

Florida Adds Something New

California now has 93 community colleges. Florida has 27 and Kentucky 22. In Florida, something new was added several years ago—a two-year college offering a student his third and fourth years of schooling.

Florida now has four so-called "senior" colleges. Another 26 have been established in other states.

Community colleges pride themselves on their open enrollment—anyone is allowed to enter, usually with or without the "good grades" from high school that most colleges make an entry requirement.

"We feel that if a kid goofed off in high school—perhaps he was more attentive to playing football than he was to studying—then he deserves a chance for another try, if he's got the stuff," Harper said.

The institution also makes it a point to be a "part of the community" in which it is located. It tries to sink roots deep among the local populace.

If a group of citizens approaches their local community college and asks that a certain course be set up, like welding, or auto mechanics, or art or even cooking, then it can usually be done, and in a reasonably short time, too, say AACJC officials.

One North Carolina community college president recently set up a program of classes in remedial reading and writing when a local poverty agency asked for help in reaching out to some town residents who had never been to school.

"We brought in one of the people from the community to teach the class. He knew the people and their problems, and they trusted him. It was an enriching experience for all of us," he said.

Some community college leaders urge that such colleges be established within a commuting bus ride of any resident in a city. That is one of the goals of the AACJC. With the help of the Higher Education Act recently passed by the Congress, the goal may become a reality.

The Act authorizes $275 million in Federal grants to community colleges over the next three years to start new institutions and enable existing ones to expand. It is the first time community colleges have been targeted for such a large chunk of aid. It is perhaps recognition by Congress, at last, of the crucial role community colleges are playing in opening opportunity's door to plain, ordinary people.

That's more reason why more labor organizations, and union families—both parents as well as children—should get "involved" in their local community college. It is union-brand democracy in action.

Charlotte School To Open Monday For Seniors Only

CHARLOTTE (AP) — Charlotte's troubled West Mecklenburg High School will be open for seniors only Monday, following the school's closing Friday in the wake of racial fighting.

A school spokesman said junior students will attend class at West Mecklenburg on Tuesday and sophomores will return alone on Wednesday.

School administrators said Saturday they have not made a decision as to what action will be taken next Thursday or Friday.

At South Mecklenburg High, where a brief non-violent confrontation disrupted classes for about an hour Friday, classes will be held as usual Monday, officials said. 3.4.73 S-A-C

Ten N. C. Students Injured In Clash

Ed-

The State 3.6.73

CHARLOTTE, N.C. (AP)—At least 10 persons were injured Monday in a confrontation between white and black students at Charlotte's South Mecklenburg High School.

Fighting broke out on the school lawn shortly after 8 a.m., and at least 10 white students were treated in the school's health room for various injuries. Students of both races said the violence grew out of racial tension which had lingered since last week.

Some 50 black students left the campus after they were ordered by Principal E.H. Edmisten to report to classes. Several of them said they were not allowed to return to classes by some of the teachers on hall duty.

The students began grouping by races as they arrived on the campus Monday morning, but reports varied as to what actually sparked the fighting.

West Mecklenburg officials would not reveal how many students attended classes Monday, and refused to release the number of students suspended after the Friday incident.

7 Injured In N.C. School Unrest

CHARLOTTE (UPI) — Seven students were injured seriously enough to require hospital treatment, a car was overturned and windshields and school windows were smashed here as racial disorders wracked five schools in the Charlotte-Mecklenburg system Tuesday.

City and county police took at least a dozen persons into custody.

An estimated 400 students brawled at modern Garinger High School on Charlotte's east side in the most serious clash, apparently sparked by an exchange of words following an assembly program.

A small red foreign car was overturned behind the school during the rampage which brought city and county police rushing to the scene and later resulted in the closing of the school.

Four arrests were reported at Quail Hollow Junior High School but it and three other schools which reported racial incidents continued to operate as school officials huddled in an effort to head off further disruptions.

One other school, South Mecklenburg High, was already closed Tuesday because of tensions resulting from a walkout Monday. Still another, West Mecklenburg High, was operating on a curtailed attendance schedule because of a fight last Friday.

South Mecklenburg's class cancellation was not announced until early Tuesday morning. Assistant Superintendent Dr. Chris Folk said classes were called off after administrators learned of a planned boycott by some white students who claimed they were being disciplined more severely than blacks.

Principal Jack Stern said the 2,100-member student body of Garinger High was leaving a morning assembly program featuring a musical group when "pushing, fighting and shoving" broke out. He said the incident was apparently sparked by an exchange of words among students.

Seven students from Garinger were taken by ambulance to local hospitals. All were treated and released. School system spokesman Henry Bostic said school officials had no estimate of the number of injuries that were minor enough to be treated at the scene.

Rock and bottle throwing was also reported near Garinger after police began dispersing the students from Garinger. Many of the students at the school were taken home in school buses and some others were picked up by parents.

The Charlotte-Mecklenburg School Board was to meet Tuesday night for an extensive look at the situation in the system, one of the 50 largest in the nation.

Garinger Incident Worst Of 6

By WALTER JACKSON
and BRADLEY MARTIN
Observer Staff Writers

A group of students at Garinger High School went on a rampage Tuesday, injuring 16 students, overturning a car and breaking windshields and windows in the school vicinity.

All of the injuries were relatively minor.

Tension and minor disturbances were reported at five other schools Tuesday — some fighting at Quail Hollow and J. Mason Smith junior highs, students refusing to attend class at Harding High and Carmel Junior High, and tension "thick enough to stir" at Myers Park High.

Senior high schools where the main problems have

•

BULLETIN

Superior Court Judge Frank W. Snepp signed an order Tuesday night banning unauthorized visiting and weapons at Charlotte-Mecklenburg schools.

The order, which places violators subject to a contempt of court citation, was issued at the school board's request in the wake of disruptions at several junior and senior high schools.

At Garinger, 'Everything Broke Loose' After Concert

By BILL McGRAW
Observer Staff Writer

When students and faculty arrived at Garinger High School Tuesday morning, there was no expectation of trouble, classes went smoothly. A schoolwide assembly program was scheduled for second period featuring a rock musical group, "The Spurlows."

"The assembly was very orderly," said Dr. Jack Stern, principal of Garinger. "There was no indication that anything was going to happen.

"The entire student body seemed to be enjoying the concert," Stern said. "They seemed to 'dig it.'

"After the performance everyone seemed to be leaving in an orderly manner," Stern said, "and some of the students were even getting autographs from the leader of the group."

Suddenly there was a scream and then "everything broke loose," Stan said.

Terry Ware, a senior All-County tailback, said "everything was going along normal" until the assembly was over.

"I was going out," Ware said, "and everybody started pushing. I didn't know who was pushing, but some white dude hit me."

Ware said that he hit back and then "everybody started gettin' into it."

"Everybody was leaving and pushing," Ware said. "They was just doing it to be doing it."

Ware said that he quit fighting when a football coach told him to. He said that he respected his coaches and did what they told him to do. After the fight he said he left campus at once.

Ware said that he thought some of the students were fighting just because there had been trouble at other area high

spected his coleaders and told what they told him to do. After the fight he said he left campus at once.

Ware said that he thought some of the students were fighting just because there had been trouble at other area high schools.

"Just because all the other schools were gettin' out," Ware said, "I guess some of 'em figured why couldn't we get out."

Assistant principal T. E. Asbury said that the disturbance came as a "total surprise."

Another assistant principal, Richard Cansler, agreed with Asbury: "Here at Garinger we've had only extremely isolated incidents and individual confrontations."

A fight broke loose outside the gym where the performance had just ended and crowds of students gathered around.

Suddenly two groups of stu-

Please turn to Page 4A Col. 1

nights, students refusing to attend class at Harding High and Carmel Junior High, and tension "thick enough to stir" at Myers Park High.

Senior high schools where the main problems have erupted will be on special schedules today.

In the worst incident Tuesday, the one at Garinger, several students suffered what hospital officials termed minor injuries after an assembly featuring rock songs of brotherhood ended in the gymnasium. Witnesses said that after a struggle at the gym door, the fighting was on.

Witnesses said students armed themselves with rocks, bricks, clubs and sharp-pointed Afro combs. A car was overturned and windows in other cars — as well as in school buildings — were broken out as a relatively small group of 20 or so galloped around the Eastway Drive campus.

Quail Hollow Principal Vernon Dreibelbis said the trouble at that school began about 8:10 when a number of students, black and white, declined to follow orders to report to their homerooms.

Dreibelbis said that when the estimated 100 to 150 students refused to go to class he reported the incident to the Education Center, and police were sent to the school.

Reporters arriving at the scene about 8:15 found a handful of white students leaving the school, saying that a group of blacks was attacking whites inside.

A number of black and white

Continued From Page 1A

dents formed. Police estimated that a group of black students numbering at least 300 and a group of white students numbering over 300 gathered.

Police said that most of the students in the large groups were merely onlookers. One witness said that a small group of black students broke away from the main group and started breaking windows in the cafeteria.

The two large groups of students quickly broke down into smaller groups and went to various parts of the campus. Students screamed and some openly wept, one witness said. For about 20 minutes the campus was in disorder.

During the melee several students and two faculty members were injured. An assistant principal, a teacher and seven students told police that they were hurt.

Student Ray Hargis's car was turned over on campus and 10 more cars suffered damage, including smashed windows and dents. Eight windows and one door were smashed by students throwing rocks and kicking, police said.

Two teen-agers were arrested off campus, but in the vicinity of the high school by Charlotte police.

Robert M. Scott, 17, of 3212 Country Club Drive was arrested and charged with carrying a dangerous weapon within the immediate vicinity of a riot. Police said that Scott was found with a 45-caliber Mark III Commando gun and a knife near the intersection of Meadow Lane and Academy Street.

Mary Thomas, 17, of 115 Piedmont Courts was arrested and charged with disorderly conduct. Police said she kicked a squad car that was parked at the intersection of Pickney Street and 28th Street.

The teen-agers were taken to Mecklenburg County Jail where Scott was released on a $500 bond and Miss Thomas was released on a $100 bond.

Four white students, two girls and two boys, were taken to Presbyterian Hospital, according to J. Robert Hudson, hospital vice president. Three of the students were immediately released following treatment for minor injuries, but a fourth, James W. Carnes, 17, was admitted for observation. He suffered a possible mild concussion and shock.

A hospital spokesman said that Carnes had suffered head injuries, but was feeling well enough to talk with his parents. The spokesman said late Tuesday that Carnes would remain at Presbyterian at least through Tuesday night.

Five white students were taken to Memorial Hospital in ambulances, police said. A spokesman for the hospital said that all of the students were able to walk into the emergency room and that none of the injuries was serious.

Continued From Page 1A

students could be seen running in halls in the school, but newsmen who entered the school were ordered out of the building by police and school security officers.

Dreibelbis said Tuesday afternoon only one student was known injured in "three or four individual fights" that occurred at the school. He said the student had been hit in the back of the head with a wooden object, but was not seriously injured.

He acknowledged that other students may have been hurt, but said there was "nothing more serious than some minor injuries that will require a bit of ice here and there."

Dreibelbis said there had been no evidence of racial tension among the 1,352 students at the school during the past few days, and said he believed the disruption was caused in large part by students who wanted to get out of school for a holiday.

A number of parents began arriving at the school shortly after the incident occurred to take their children home.

Most of them said their children had called them and told them there was fighting at the school and asked to be taken home.

At least one parent who arrived at the school decided to leave her child at the school after she had found out, she said, that "everything is safe."

One woman entering the school to get her son said she had been called by a neighbor who said her son had told her the other woman's son had been hit.

"Whether he's hit or not they're not learning anything today," the woman said as she entered the school.

Three black girls taken from the school by the mother of two of the girls said police used nightsticks only against black students to stop fighting between blacks and whites.

The girls further charged that black students at the school had been incensed by racial slurs written on walls at the school recently by whites.

There was also brief fighting between a small number of blacks and whites at J. Mason Smith Junior High School Tuesday morning before 8 o'clock, but the incident was not a major one and police were not called, according to assistant principal Ralph M. Harrison.

Harrison said that only "a dozen or half a dozen" students were involved in the fights, and no one was injured and there were no suspensions.

Conflicting reports were issued by school officials on the disturbance at Harding High School. A spokesman for the school system's information office said that some 40 students were involved in fights at Harding before the beginning of classes Tuesday.

But Principal Joe H. Hunt maintained that only three or four students were involved in fights, and the main reason police were called to the school was "to make sure there wouldn't be any trouble" after some students had refused to go to class.

Hunt said a number of students involved in the incident were sent home on an "absence before conference" basis, meaning that they must bring their parents for a conference when they return to school.

There was "no incident, period" at Carmel Junior High School, according to Principal George Allen. Allen said some students, in an atmosphere of joking, did not report to their second-period classes at the school, but milled around in hallways.

When he told the students on the school's public address system to go to class or leave the campus, most of them went on to class, he said, while less than 35 others left the school grounds.

Parents who were called to the school by their children were generally "disgusted" that they had been called, he added.

No incidents were reported at Myers Park High School, although, as one student said, tension was "thick enough to stir, almost."

A school official said that a decision was made to allow a "cooling - off" period at the school, and only seniors will attend school today.

Senior Highs Split Classes

Here is the schedule for senior high schools today:

Garinger High — Only seniors will attend. Thursday, only juniors will attend and Friday, only sophomores. All students will return Monday.

Harding High — Seniors only today. No decision has been made on the schedule for the rest of the week.

Myers Park High — Seniors only today.

South Mecklenburg High — Seniors only today.

West Mecklenburg High — Sophomores only today. All students will return Thursday.

The Education Center announced that students attending those schools this week would be required to present their identification cards.

All other high schools and the junior high schools will be on their regular schedules.

Educ.

Highlights Of Assignment Report

On Sept. 12, 1972, the Charlotte - Mecklenburg Board of Education formally requested Supt. Rolland W. Jones and his staff to examine in detail the school system's present pupil-assignment plan.

The examination, the board resolved, was "for the purpose of identifying any inequities which may exist and recommending improvements which are needed to meet the educational objectives of our system."

On Tuesday night, after months of study and consultation involving teachers, parents and students as well as Jones's staff members, the staff's 35-page report was presented to the board. Following are several key sections of the report:

Section IV

Inequities Suffered By Children

A salient fact of the (present) assignment plan is that black members of the community are bearing the dominant burden of assignment change and time of transportation both in hours and years. It is also true that certain areas of the white community are bearing a burden greater than are others.

It is stated by some as fact that black children stand to gain from the results of the assignment plan and white children stand to lose; the opposite is said by some. The demarkation between the speakers on each side is not purely a racial one. Some blacks have said that their children are being "mutilated" by the assignment plan; some whites have said that their children's education is enhanced by their attendance at a racially mixed or even "former black" school. Unnumbered statements that lie between these divergent positions appear as expressions of personal judgment on the school experience.

However, there are some absolute inequities to children in the assignment plan:

1. The plan calls for the extensive assignment of the youngest black children out of their home neighborhood for ten (in some cases, all) of their school years.

2. The plan calls for the extensive cross-bussing of white 5th and 6th grade children for two years of their schooling.

3. The plan calls for more extensive cross-busing for the north and west sides of the city than for any other area. This does not refer to distance alone, but to school-passing routes.

4. Implementation of the plan has necessitated the use of contract buses from the City Coach company. The lack of school system control of these buses and their schedules leads to undependabilities and passenger abuses that are considered to be inequities to those assigned to them.

5. The plan calls for the dispersal and fragmentation of populations, tending to disconnect them from their schools and from each other.

6. The plan calls for placing all black students into a position of minority population in all schools; in many there is at least some lack of commitment to their acceptance and needs.

7. The plan, or any plan involving massive and distant transportation, involves danger and undependability of vehicle that is without question a burden; it is an inequity when it is demanded of some and not of others. The magnitude of transportation under the plan produces this wide-spread inequity.

8. Students so totally dependent on bus transportation are severely limited to the school activities that are confined to the school day. They are virtually excluded from activities, programs, or extra learning sessions that might follow the closing hour of the day.

Inequities and Problems Involving School Personnel

1. Classroom teachers are frequently called upon to conduct courses and class periods for larger than optimum-sized groups of students with a very wide span of achievement level and capacity to pursue the work of the course. The results, among others, are that the extremes of the student group tend to be either neglected or to occupy a disproportionate share of the teacher's time and attention. The solution of "ability grouping" too frequently is de-facto resegregation; the solution of individualizing instruction involves a major degree of training and re-orientation on the part of even the best of teachers. The inequity to the teacher in this situation is real; it is debilitating and frustrating.

2. In some schools, school administrators, counselors, and many competently willing teachers are diverted from program planning and from teaching to problems of daily control on buses and in the cafeterias, halls and classrooms. The management of attendance, promptness and deportment consumes time to such an extent that the students do not receive the benefit of as much careful planning as is desirable.

3. The assignment plan and other regulations have injected racial balance of school faculties as a major factor in teachers' school assignment.

4. Though elementary schools with only the 5th and 6th grades have adjusted their programs and suffered less than is frequently asserted in the community, they have still a more limiting inventory of wide-ranging materials and they need increased time from the specialized itinerant teachers.

The Inequities Suffered By Charlotte And Its School System

The impact of the assignment plan on housing patterns and family resident change is far greater than is the impact on the schools.

Because of residential changes — in part responsive to the selection of schools for their ratio, grade organization or "formerly black" status — the assignment plan is self-destroying. Schools that exceed 30 per cent black tend to experience accelerated increases in the black ratio. Schools with an assignment of lower ratios of black students and minimum years out of neighborhood for white children tend to increase to a size beyond their capacity.

The assignment plan has had perhaps unequal but opposite effects on community attitudes: on the one hand it has intensified racial polarization and its outward visibility; on the other hand it has helped bring about increased interaction between racial groups and persons. The latter has surely been the case among young school children and professionals in the school system.

The assignment plan makes little provision for any planned "economic mix" of students in the schools. Some schools and communities suffer from difficulties in finding and developing leadership persons among students of either race or their parent community.

With the increasing enrollments in non-public schools, the Charlotte-Mecklenburg Schools have lost financial support in significant amounts.

Section V

The Summary Conclusion

1. An equitable and stable assignment plan is hardly possible as long as school assignments are based on residence.

2. The school system will have to enlist other major agencies of the county and city, such as housing authorities, planning commissions, and any agencies that can exercise control on housing patterns, in order to reach any lasting solution.

3. The school system needs to gain the support of the community as it faces these dilemmas; every effort should be directed toward soliciting and meriting this support, within and outside the system itself.

4. The concept on an inequity is far from absolute; it depends greatly on the attitude and convictions of each person. To call assignment to a "formerly black" school or a school with a higher than average black ratio an **inequity** is not valid. To call the need to assimilate newly assigned children from out of neighborhood an **inequity** is not valid.

5. There is a strong feeling in the community that progress in adjustment to the present assignment plan is being made and that changes will have a noticeably negative effect on the community and on the schools which may go through another change in student population.

6. There is no doubt but that the highest priority for modification of assignments remains in the feeder areas of the two high schools that are under capacity: West Charlotte and Harding. Some rectifying action is essential.

MAP SHOWS that north and west Mecklenburg County have 10 times the black population of south and east Mecklenburg County.

The Compensation

Discussion in many meetings on the assignment plan led into inspection of the concept of an inequity. It is far from an absolute; the designation as "an inequity" depends on the attitudes and convictions of the viewer.

The dictionary allows emphasis or inequality or on injustice.

To rectify an inequality could be to pass around the burden so that different people take their turn.

To rectify an injustice is to reduce it, eliminate it, or compensate for it.

In trying to identify and solve the inequities arising out of the pupil assignment plan, we recognize that "taking turns" solves little and seriously interferes with the development of school programs toward the assimilation of all students into our schools. It is a temporary maneuver to make some feel better and others worse.

When we emphasize the **injustice** factor we look for reductions and compensations through specific modifications of the programs serving the children who suffer from the **inequities.**

In other parts of the report we deal with the specific assignment changes that can reduce inequities and establish better racial ratios.

Transportation

1. Some identify the extensive busing, in years and miles, of all young (grades 1 to 4) black children as an inequity. A high proportion have only two years in a nearby school; many have none.

Compensation for this inequity could be accorded by provision of greatly improved bus schedule for these children. Sufficient buses for direct routing of uncrowded buses would minimize waiting and riding time and fatigue built up by misbehavior.

2. Desegregation has brought other inequities related to transportation:

a. Limitation on activity participation at school.

Compensation: "Activity" or late schedule buses.

b. Breakdown of discipline on some buses.

Compensation: Paid adult bus supervision; a number of persons per feeder area to manage transportation and ride buses as necessary. Compensation: added buses to reduce over-crowding and schedule time caused by serving two or more schools.

School Capacity

3. The assignment plan has resulted in some schools operating considerably under-capacity. In addition to rectification by changed assignments, there could be other compensations:

a. Increased staff above normal allotment.

b. Increased offerings in special curricular areas such as the arts and occupational courses.

4. The assignment plan has resulted in some schools operating considerably over-capacity. In addition to rectification by changed assignments, there could be other **compensations:**

a. Added administrative and counselor personnel.

b. Variation in the school day permitting some to arrive and stay late.

c. Space and materials increase.

d. Variation in the school year length; a summer term.

Formerly Black Schools

5. There remains in Charlotte a negative attitude toward a school identifiable as a "former black school." (Though this attitude appears to be diminishing, and though there are such schools which do not suffer under this designation: Sterling, Northeast and Pawtuckett.)

Compensation: Conscious efforts have been made to assigned pupils and teachers to break the racial identity, but it may be necessary to go further, particularly with respect to administrators, counselors and office personnel. It is possible that a systematic rotation of principals and administrative personnel should be effected.

Achievement Levels

6. The assignment plan has brought about conditions in all schools and classrooms where the span of achievement levels is great and the less well adapted to school learning are more visible. This creates an inequity in the eyes of many teachers and to some highly motivated and able students.

Compensation could be achieved in two categories:

a. More favorable adult-student ratios.

b. Intensified staff development.

(Solution by "ability grouping" or separation of the most or least able is untenable because of its resegregation effect and questionable educational value.)

a. Added personnel: compensatory personnel could be assigned by a dollar or person allotment to principals on the basis of student numbers and ability levels. The principal could, within his discretion, use this allotment for administrators, teachers, aides, counselors or monitors.

b. **Staff Development:** increased funding at the disposal of the staff development department would be used for in-service training, teacher counseling, implementation of the "master-teacher" concept, and other mechanisms for helping the teacher develop techniques, methods, and courses to increase the assimilation of all students into the program of learning. Staff development in the area of "human relations" is an effort to develop attitudes that help in this process of assimilation. The need at all levels of school personnel is acknowledged and was re-emphasized in the 1972 Community Relations Committee Report.

Curriculum

7. Though desegregation has been a force toward opening the curriculum to greater variation, the trend has not been rapid and there is a strong counter force toward intensifying the rigidities of a program that is oriented more strictly toward academic achievements as measured by examinations and progression toward higher education. The inequities that must be rectified or compensated for lie in both the assimilation of the less school-oriented children and the individualization of the programs for the more highly motivated.

Compensations are to be found in the further increase of adult personnel and in the curriculum aspects of staff development.

Particular increases are:

a. Components of the Specialty School concept.

b. Extended and intensified programs for the learning disability students in all categories.

c. Provision for individualized and out-of-school learning as now encouraged by action of the State Board of Education. Revisions of the explicit graduation requirements could be implemented without loss of "Standards."

Community Support

8. There is a stated inequity in the varying degrees of parental and community support enjoyed by the schools. This can be seen in the auxiliary financial support accorded by PTA's and in the school committee, or individual participation, in the various neighborhoods. Outlying elementary schools tend to receive greater strength than do some others, particularly the grade 5-6 schools in the city. Though many schools less well supported are showing great gains in this area, inequities remain.

Compensation: Employment of public relations and communications persons to work on school support, particularly in the neighborhoods separated from their schools.

Compensation: Arrange a benefit-sharing plan between paired schools and feeder schools.

Compensation: Fund materials purchases for schools with less ability to have supportive projects. (Example: $5.00 per student to be used at the discretion of the principal and staff after consultation with parent organizations.)

A Special Statement On One Inequity

Members of the (staff) steering committee worked long and hard on a single outstanding inequity of the assignment plan: that the youngest black children bear the major burden of travel and of out-of-district school assignment. These members of the committee wanted a strong emphasis on this subject in addition to its already noted mention.

The committee made extensive search for solutions both within and outside the limits of the feeder plan. Two concepts were studied, but no specific assignment change recommendations were arrived at. The concepts:

a. To rearrange paired schools so that one or more inner-city elementary schools service the primary grades.

b. The establishment of 1-8 elementary schools wherever possible in the county, using busing from any neighborhood to achieve appropriate ratios.

It is recognized:

- That these concepts will lead to major changes in the assignments of many children;
- That formulas for pairing of schools and maintaining ratios limits the inner-city schools to two-grades each or will demand greatly increased busing both out and in;
- That some moves toward this concept are essential to the breaking of continued reenforcement of the cycle of desegreation.

It is also recognized that, with extensive expansion of kindergarten programs, the inequity will be compounded if only present primary schools add kindergartens.

Principals are continuing to search for specific proposals to achieve a righting of this inequity.

Ed. Criticism

Start With the Schools

The following guest editorial is by Harold Howe II, former U.S. commissioner of education and now vice-president of the Ford Foundation's Division of Education and Research.

Most Americans would probably agree that developing a society in which people care for and respect each other deserves high priority on the nation's agenda. Most would agree, too, that the schools should play a central role in our efforts to move toward such a humane goal. But the schools today are ill-prepared to assume that responsibility, and we have given too little thought to how they could serve such a purpose.

First, I'm convinced racial and economic integration of our educational institutions is a prerequisite. To the degree that an institution says "no admittance" to some class of people because of race or color or nationality, it diminishes the chance that those it does admit will develop a sense of humanity. This is the basic argument against segregation. Physical or cultural differences among men breed fear and suspicion that are passed on from one generation to the next, but these *can* be overcome by the rational and civilized attainments of human beings. The schools are especially important, because there most of us have our earliest and most impressionable experiences with people outside our own families. Racial prejudice is learned, not inherited; thus, we need to create an environment for children that will give them the chance to learn mutual respect.

I emphasize this point because so much recent research and argument has been devoted to whether or not integration produces better reading scores or better mathematics scores or fewer dropouts among minority-group children. Without denying the value of such studies and debates, I contend that there are vastly more significant considerations: the intangible effects on individual children of being segregated or integrated and, even more significant, the influence of education upon the nature and values of society.

But the battle is far from won even when a school enrolls a cross section of Americans among its students. From well-documented experience in countless "desegregated" schools, we know that *inside* the school young people are experiencing discrimination. In the guidance office, in testing procedures, in assignment to programs and courses, in the application of discipline, and in countless other ways, there is clear evidence that segregation and discrimination have moved inside the school.

How then can we change schooling more fundamentally than by bringing together children of different races and backgrounds? The first requirement is a transition from competition to cooperation as the dominant mode of the school; the second is the alteration this shift in values will imply in the authority structure and human relationships within the school.

For many Americans competition is a fundamental principle of life, and some of us tend to equate it with motherhood on the relative scale of values. Faith in the values of competition undergirds the schools' commitment to interscholastic sports (which deny opportunity to the female 50 per cent of the population and to all but a small percentage of males as well) and their use of marking systems (which are frequently arranged to put down as many students as they encourage).

If we are to have a humane society anywhere in the world, we shall have to rid ourselves of much of the competitiveness that dominates our every action and decision. On the world scene the overriding fact is the misery of 75 per cent of the world's people as the few luxuriate in affluence. Greater cooperation is the only possible answer to the perils that lie ahead in this explosive contrast. In our own society we are just beginning to face the hard fact that some of us will have to settle for less in goods and services if all of us are to have the chance for a reasonable existence. As the energy crisis and environmental problems force themselves upon us in the years ahead, the ethic of competitiveness as productive of the greatest good for the greatest number will come increasingly into question.

So I suggest that the school is one place to start the revolution in our values and behavior that is required in the interest of humane survival. If we can give pupils status-producing recognition for what they achieve personally, can't we be clever enough to give equal or greater status for what they contribute to the school, to the class, or to the learning of others?

It is possible, of course, to argue that this is a competitive world and that the schools will serve children ill unless they prepare them through competition. This argument defends the sorting-out function of the schools, the advancement of some and the rejection of others, partly on the grounds that the toughness and resolution needed to deal with the realities of life can be produced only in a competitive environment. The argument contends also that competition is necessary to produce quality in intellectual endeavors. This sort of Social Darwinism seems to me utterly fallacious. It assumes that there is no rigor, discipline, or character development in a cooperative environment. I submit that the opposite is true and that the sense of responsibility, the power of restraint, and the patience an individual must have to function effectively in a cooperative venture are more highly civilized attributes than those produced by competition. They are more useful and more humane. The idea that high-quality intellectual endeavor is dependent on competition, on beating the other fellow out for the Nobel Prize or the Phi Beta Kappa key or the best scholastic average, is a ridiculously simplistic interpretation of the motivation of scholars.

A closely related issue is the use and abuse of authority in schools. Cooperation, and the mutual respect and tolerance that are both its product and its source, cannot exist in a rigid, authoritarian system. Many pressures today are bending the school toward more rigidities. Occasional or even regular violence calls forth restrictions, policing, and punishments. Threats from the surrounding community force schools to lock their doors against that community, which may be their greatest learning resource. Teachers need protection and so do students, but the need for basic protection should not be allowed to create a fortress climate in our schools.

There is no easy solution to these problems. Some of their causes lie deep in the wounds of our society and will continue to operate until those wounds start to heal. But secure and confident teachers and administrators can begin to find ways to run their institutions in a style that says to students and teachers, "We trust you." Where this message is clear and where the relations among the adults in a school are open, direct, and respectful, there will be a response, and the school will be on the way to useful change.

PROPOSAL FOR A REVOLUTION

by JOSEPH P. LYFORD

This article, published in two parts, in the October 19 and October 26, 1963, issues of the *Saturday Review,* has been reprinted by the Center for the Study of Democratic Institutions, Box 4068, Santa Barbara, California. The author, a staff member of the Center, is preparing a study of the problems of the Negro, Puerto Rican and white inhabitants of a neighborhood on the West Side of Manhattan in New York City. The study, entitled *The Area,* will be published in 1964 as part of the Center's Study of the American Character.

Negroes, Education, and the Two-Edged Sword

IN THE course of his struggle, the Negro has presented Americans with a basic education about themselves. He has demonstrated that the majority of white Americans, in the South and out of it, are in varying degrees violently or silently opposed to the universal application of the Bill of Rights. By interposing his own body he has shown, beyond any reasonable doubt, the inability of the government of the people to guarantee the freedom of all the people or even protect the safety of their persons if they happen to be of an unusual color. The Negro has made it fairly clear that the Protestant churches in America have countenanced the subversion of fundamental Christian principles about as often as they have advanced the idea of human brotherhood.

But the Negro has done a great deal more than expose the contradictions between the actual and professed beliefs of the American citizen. His battle for freedom has established the fact that the Negro cannot win equality of opportunity until American society as a whole develops some way of dealing with the rise of mass unemployment and the growing ineffectiveness of our political and educational system. What we call the "Negro revolution" is a preview of a much bigger crisis to come; it is forcing us to take a closer look at certain extremely unpleasant developments that are going to transform or destroy the traditional institutions and habits of all of us, black and white. If we fully understand the significance of the Negro's present experience, we will realize how great a stake we have in his success. Given the recent past, however, it seems more likely that we will react by building "monstrosities," as Arnold Toynbee calls them. A "monstrosity" is an ugly construction set up by a society to deal with the effects of a problem it is unwilling to solve, current examples being our public welfare program and the proliferation of mental hospitals.

Paradoxically, some Negro leaders do not seem to be fully aware of what they are up against—at least they have not broadened their attack on the problems of the Negro. They continue to concentrate almost entirely on desegregation, the right to vote, fair employment practices, and the breaking down of all types of racial discrimination. The means of reaching these objectives still seem to be mainly a matter of picketing, protest, pressure, and litigation. Perhaps this is all the civil rights groups are able to do. If so, the Negro badly needs a new type of organization that will work on his more general problems. Negro leaders and their white allies may win battle after battle for Constitutional rights only to find that these rights have little practical meaning for the majority of American Negroes under present conditions. The entry of a pair of Negro children into an all-white Birmingham school is an important victory for a fundamental principle, but it carries no immediate hope for Negro children, who will continue to starve to death educationally in the still-segregated schools of the South and hundreds of thousands more who are overcrowding classrooms in the slum-area schools of the North. Forcing open a Jim Crow construction union in New York City to a handful of Negro apprentices is a step forward for decency, yet it has almost no bearing on the employment prospects of hundreds of thousands of teen-agers and millions of adults—white and Negro—who are sinking to the bottom of a society that may very well have 14,000,000 unemployed by 1970. A clean sweep of housing discrimination will not wipe out a single slum or ghetto. The Negro who cries "now" is having to face these facts.

The white man has to face these facts, too. If he thinks very much about joblessness and the state of our educational system, it must occur to him that the Negro is struggling against forces that are undermining white society as well. The Negro has begun to react before anyone else because, being economically in the most exposed position, he is far more sensitive to the shock signals that are traveling through the country. But there should be no assumption on anybody's part that his fate can be divided from the rest of America's. If the Negro does not prevail over the forces that are driving him downward, the white American will go down with him. The issue is the survival of an entire people whose basic educational, political, and economic arrangements are on the verge of breaking down.

IT IS now just about official that mass unemployment can be added to death and taxes as an inevitable part of the American way of life. Like most inevitable things, they are also totally mysterious. Ed Lahey, an irreverent Washington reporter who has spent most of his time poking into economic riddles, says that there are only three people—he declines to name them—who can understand our tax laws. There is almost as much confusion about unemployment and what it is about to do to us. Our ignorance is becoming more and more apparent at the very moment automation is wiping out 200,000 jobs annually in factories alone and we are trying to figure out what to do about the demands of the Negro for fair and adequate employment.

The most ominous fact about our attitude on unemployment is not that we have failed to discover a solution. It is that we have been unable to come to any sort of agreement in Congress, industry, or labor about what we are dealing with. We have not made the essential connection between unemployment and the breakdown of our system of public education. We have not accepted the fact that the Negro cannot become a part of American society until we find some answer to unemployment. We have not even decided whether 5,000,000 unemployed and 35,000,000 more underemployed are the result of gross economic mismanagement or whether mass idleness is an integral part of a new economic system based on a technological revolution.

Our reaction to the spread of unemployment bears some resemblance to the psychological paralysis that attacks us when we consider the threat of war. In both situations we face problems that have been with us so long they seem permanent, and permanent problems easily become incurable diseases. So, as Jerome Frank has said, we pretend that the diseases don't exist and transfer our attention to such matters as moon shots and the decline of British morality.

WHILE we have postponed a persistent and scientific examination of unemployment, our ignorance has increased as the crisis has worsened. An investigation into the various devices we use to measure unemployment reveals that we have only a cloudy notion of how many people are out of work. Generally accepted estimates tend to understate the problem, partly because unemployment figures are a political issue filtered through governmental agencies and partly because we

have no psychological tests to use on people to find out whether they can work, want to work, and have looked for work. Our detection devices are also unreliable: there are thousands of drifting, anonymous people who have become so isolated from American society that they are invisible even to the census-taker. We have only the sketchiest impressions about the attitudes of the unemployed—Negro and white, young and old—toward their situation and a society that finds no practical use for their services. Yet these attitudes may very well cause a major political upheaval if they continue to ferment.

We are also in the dark about the capacities and potentialities of our unemployed and the many millions of others who inhabit the impoverished "other America" described by Michael Harrington. For example, last year the President's Council of Economic Advisers reported that racial bias has prevented us from utilizing the existing or potential skills of the Negro and that the annual loss to the country is between $13 and $17 billion per year. But discrimination is only one cause of our failure to use manpower efficiently. A random sample of the relatively few job-training programs now in effect indicates that we do not know how to find out what people can do, regardless of what color they are, or how to train them or what to train them for.

Without necessarily saying so, we generally assume that when a man is out of work it is because he is lazy or because there is nothing useful he can do. We feel that because the Negro has always been at the bottom of the educational ladder (69 per cent of the Negroes in New York City have not finished high school), it is natural for him to end up on welfare and spend the rest of his life looking for odd jobs. At the same time we ignore the fact that 61.6 per cent of whites in the same city also do not have a high school diploma but are twice as successful in earning a living. Our thinking about the unemployed is largely speculation; and in all of our speculation there is the more or less subconscious conclusion that the middle-aged Negro, the Kentucky miner in the Cumberlands, the aging migrant worker are, economically speaking, multiple amputees who will have to be written off or absorbed into some sort of relief program. We then turn our attention to the children and hold sporadic discussions about saving them from their parents' fate, thereby entering a new realm of misconceptions about a new generation. Our approach to all the above-mentioned matters is fitful, disorganized, and superficial.

Certainly there is little evidence that our political and governmental officials, our labor unions, management, or individual economists have done much more than throw up their hands, blame automation for reducing us to a state of inactivity, and say, "That's life. It's the price of progress." We accept the inevitability of mass unemployment and propose five-hour weeks and salaries for everybody, or we make a few experimental doodles with retraining programs we know are either unworkable or prohibitively expensive and tinker with our educational system in the hope it will get around to producing repairmen for a world of pushbuttons, electronic brains, and dial systems. Beyond this, there is almost nothing. Since glaciers are not melted by cigarette lighters, the freezing process continues.

We cannot afford to resign ourselves to the situation, and there is no need to. We have been given an opportunity by our improved technology to concentrate fully on some of the really important business of living for the first time in our history. In order to get at this business, we need to recognize that it is legitimate and important even though it pays no profits to stockholders or management. We are going to have to junk traditional attitudes about what constitutes the proper business of government before anything of importance happens in the attack on unemployment. We have to redefine the meaning of urgent and necessary work to include jobs that promote the general welfare even to the exclusion of private profit. We are going to have to get rid of political, business, and labor leadership that says—although it doesn't believe what it says—that government has no role to play in the economic sphere except to act as an umpire for private quarrels and create regulatory bodies that regulate nothing but the critics. Unemployment is a massive problem, with massive effects on our future and it will not yield to anything but a massive attack. The direction of this attack, since it has not and cannot be assumed by labor and business, should be undertaken by government.

The private areas of our economy should be cooperating partners in the attack, if not voluntarily then under duress. It has always been fashionable to protest against government compulsion, but there will be compulsion from somewhere even if it does not come from government. We already have had innumerable demonstrations of such compulsion; the government's intervention in the rail situation, with the support of U. S. industry, is only the most recent example. If unemployment continues to grow, there will be other, far more explosive pressures compelling us to act. The discontent of those people for whom our republic indicates it has no use will be more than economic. Robert Weaver writes that, for the first time in our history, we now have "class" unemployment. The discontent will be class discontent, and circulating through it will be the inflammable antagonisms between the Negro who finds himself the most expendable part of the system we still refer to as free, private enterprise, and the unemployed white with whom he is competing for dwindling job opportunities.

WHAT is the important business of America that remains to be done, now that we have buttons and levers handling the garbage and ready to make automobiles? The first order of business is education. This is a process in which every American can participate, whether as a teacher, a student, a bricklayer, a parent, or a taxpayer. It is a business which up to now has been regarded chiefly as an annoying and expensive sacrifice of public funds. When one compares the magnitude of the need for a broadened program of public education with the size of our commitment, it is fair to say that we are still living in the pre-education phase of American history. Walter Lippmann has pointed out that in 1900 the U. S. government spent $1 for education to every $2 for other purposes, while more than fifty years later we are spending $1 out of every $6, despite the fact that the importance and complexity of education are greater today than ever before.

The old squabbles over infinitesimal financial increases in our educational commitment and the eventual adoption of some token federal aid to education and a few $5-a-week raises for teachers have no relevance any more. We will have to expand our educational coverage to the point at which every educable person will receive a high school diploma. This means raising the limit for compulsory school attendance from sixteen to eighteen. At the same time we have to intensify the educational experience of the individual pupil, not to the point at which all our class sizes are below thirty children, but to the point at which the ratio of teachers to pupils is one to fifteen, or even less, and where special services are available to children who start their education with severe economic, psychological, or cultural handicaps. A revolutionary expansion of our public education program to three or four times its present level can be financed once we have accepted its necessity. We have been able to mobilize far greater amounts for the construction of weapons and the subsidy of weapon makers and their shareholders. At this point, more and better education is more important to our national security than bigger and cleaner bombs. An

uneducated, unemployable population is becoming the greatest threat to our national equilibrium. Education must become one of America's major occupations in the years ahead.

Underlying any expansion of our educational system must be a philosophy of education that meets the need of the people in it to achieve an independent position in adult life and to distinguish between sentimental fairy tales about America and current realities. Such an educational philosophy would enable us to produce people who could read, write, understand arithmetic, have ideas, and who would be emancipated from the sort of tribal attitudes that have turned Birmingham, Alabama, into a fratricidal society. It would also help produce a nation that can improve itself and anticipate change instead of simply starting violently whenever something jolts the status quo. It would help generate a social and political atmosphere in which people consider technological and social and political changes as promises or opportunities instead of "menaces," "threats," and "impending catastrophes." We would gradually condition ourselves to the point where we would shed our old skins as soon as they ceased to fit, instead of enduring them until the itching drove us crazy.

We might recognize more generally the fact that the misuse or disuse of human beings is caused by miscalculations and poor education and not by immutable economic "laws." If we wish to write off the Negro "problem," as it is called, as insoluble because we think Negroes are generally disqualified by lack of education and the attendant lack of incentive, we also have a responsibility to provide an educational system that is able, among other things, to deal with the causes of these misfortunes. If, in contrast, we consider that racial discrimination against Negroes is responsible for a great deal of their joblessness, an educational system should be able to handle that situation, too. If we view somebody without a job as a casualty of a mindless technology, we can set about the task of putting a mind back into the technology.

Apparently the only way of getting Americans to think seriously about education is to frighten them into it. This should not be difficult in the atmosphere of today's Negro discontent. There is no question that racial tensions are eventually going to make life impossible for all of us unless we develop an educational program that enables the Negro to enter our society and the white man to place a high value on his entry. It should be fairly obvious that education is the only method by which we can overcome our institutionalized system of cheating Negroes, halt the growth of a public welfare community, and slow down the emergence of a new group of aliens, the teen-age school dropouts. We are either going to broaden the boundaries of America to include the exiles, or most of us are going to be joining them.

Part 2 — The First Order of Business

IN ADDITION to undermining a feudal social order, the nonviolent movement to desegregate the South has produced some problems for the civil rights movement elsewhere. Northern integration leaders, with a history of association with both the Negro and white communities, reacted defensively to the growth of a dramatic Southern movement based almost entirely on the Negro, especially when it seemed as if Martin Luther King and the other Southern militants might dominate the integration struggle and attract financial support that might otherwise go to the older civil rights groups in the North. Some Northern integration leaders for a while even attempted to discredit King's motives and belittle his efforts. However, the most enduring and unfortunate result of their defensiveness was an apparent decision that they had to compete with King by imitating him, by reconstructing the atmosphere of the Southern revolt in a Northern setting.

The effect of the Northern groups' resolution to be aggressively and spectacularly militant has been that in city after city, from Portland, Oregon, to Boston, civil rights campaigns have often tended to obscure or ignore the major problems of the Northern Negro and the causes of his special difficulties. Demonstrations seem to have been based mainly on the assumption that for every injustice there is a guilty party and that once the culprits are disposed of, the problem is solved. The assumption is far more realistic in Mississippi than it is in New York City, but it explains why civil rights groups have freely charged that the educational problems of the city's Negroes are mainly the result of a Board of Education that is deliberately segregating the school system along racial lines. Pinning the blame on someone for a situation may make it easier to organize a picket line and issue releases, but in many cases the operation has turned out to be a waste of time and energy that might have been spent on developing workable programs to get the urban Negro out of the slum, into a job, and onto a voting list.

Picketing, protest, and pressure are obviously necessary to the civil rights movement. Direct action should certainly not be de-emphasized, but it could be applied more selectively so that well-meaning people are not sent out to lie down on highways because a city's park department hasn't hired enough Negroes. In both South and North the demonstrations have, in somewhat different ways, spearheaded the drive for racial justice. Aimed at the construction unions, discriminatory landlords and employers, and ineffective public officials, direct action has cracked a number of Northern roadblocks to theoretical equality for the Negro. The fact remains that real equality depends on his achieving political and economic power. In the North the biggest and most intractable obstacle to gaining that power is no longer racial discrimination; it is a general crisis of unemployment and a breakdown of our system of public education. This fact explains why, unless conditions are changed, relatively few Negroes have benefited or will benefit in their lifetime from the civil rights victories that are being won. At present the Negro "revolution" is not a revolution

at all: it is a limited action carried on within the framework of a stagnating economic and political system that is incapable of letting the Negro live like a free man even when it finally recognizes his right to do so.

What is the Negro's situation today, nine years after the Supreme Court's ruling on school desegregation? For one thing, he is steadily losing ground to the white man in terms of annual income. In 1950 the average Negro family income was $1,519 less than the white, while in 1961 the gap had increased to $2,662. More than 75 per cent of Negro families earn less than the $5,981 average annual income of whites, and 60 per cent of Negro families earn less than $4,000 per year. Employment prospects of Negroes are declining at an accelerating rate because of educational difficulties and the spread of automation. Factory and service jobs, the Negro's chief source of employment, are being automated out of existence at rates estimated to be anywhere from 17,000 to 40,000 a week. Despite token integration of the schools in the South and a slowly growing awareness of the Negro's educational needs in the North, the school system in which most Negro children are caught is just about as inadequate and black as it was before "separate but equal" schools were called unconstitutional. The probability is that the schools are even worse, because of the increasing shortage of classrooms and teachers, and the growth in school population.

A particularly disturbing development is the growth of an enormous colony of unemployed adolescents in our large cities. Thomas J. Watson, chairman of the board of International Business Machines, gives this thumbnail sketch of the problem:

> The United States today has 800,000 teen-agers out of school and out of work—a number approximately equal to the population of San Francisco. Many of these are Negroes, who, in addition to youth and lack of skill, have the further burden of racial discrimination to bear in their search for work—a burden which helps make their rate of joblessness double the national average.
>
> To continue this kind of discrimination is eventually to invite violence, such as we have witnessed in Birmingham and Nashville in recent weeks, and not only in the cities of the South, but in the slums of the North. And to continue to permit unemployment to grow among all teen-agers is to risk disillusionment at best and an explosion of violence at worst. If present trends continue, by 1970 the United States will have in its cities more than a million and a half young people untrained, unemployed, and frustrated to the point of danger. This fact constitutes an indictment of our society—we have somehow failed in our educational responsibilities.

There are other ominous facts. Unemployment, poor education, and hopelessness have seriously interfered with efforts to activate the Negro politically. The *Wall Street Journal* recently reported that Southern integration leaders feel that voter registration drives are having almost as much trouble with Negro apathy as they are with institutionalized white resistance. The problem is not confined to the South. A confidential study of Negroes in an Eastern state, made by John Kraft, Inc., one of the country's leading public opinion research organizations, has found that at least 30 per cent are not registered and that 50 per cent will probably not vote in the next national election. The finding is especially significant since half of the Negroes in the sample have incomes of more than $5,000, as compared to a national average for Negroes of $3,000. In New York City it is estimated that as many as half a million Negroes who are eligible to vote do not do so. The problem, of course, only begins with apathy. Even when the Negro does register and vote, South or North, he is forced to choose between two parties that have shown either a remarkable indifference to him or downright hostility.

IT would seem from all this that the Negro in the black Northern slum needs a new kind of leadership that will stand much closer to him than his traditional leadership has done, and broaden the attack on the immediate causes of his discontents and frustrations. He needs a leadership that will work out a national policy on education, a national policy for rehabilitating our economy, and a national political program to force changes in the structure and standards of both political parties. If the Negro is ever to live like a free man, it is time to turn the rebellion into a revolution and open up a second front in his war of independence.

The most likely place to broaden the attack is in education. What are some of the needs here? More and more emphasis should be placed on guidance in and out of school to create greater incentive and motivation among teen-agers so that they would do more than simply inhabit schoolrooms until discharged. Guidance should also attempt to give the student a far better idea about the special paths open to him. More should be done to provide him with information about specific career opportunities and where and how he could obtain financial support for post-high school education and prepare himself for these careers.

Our emphasis on vocational training programs in the high schools themselves should not be increased; if anything, it should be de-emphasized in order to concentrate much more heavily on the general intellectual development of the child and on his reading, writing, and mathematical skills. The miserable failure of so many job-training programs out of school can be directly traced to the trainees' inability to read and write. Expansion of guidance work should supplement the general curriculum, and should give additional meaning and hope to the child whose economic background is such that he is constantly laboring against pressures to become a drop-out.

PERHAPS the greatest educational need is more intensive and specialized reading programs both in and out of schools. There are some developments taking place rather quietly in this area of education that may suggest new ways of helping the Negro child of the slums to help himself. The Northern Student Movement, originally organized at Yale, has put hundreds of college undergraduates into the slums of Detroit, Chicago, and New York, where they have set up reading centers for Negro children, during both the regular school year and the summer vacation. Last summer 200 of the students worked in Harlem. The Associated Community Teams, a federally sponsored Domestic Peace Corps group, is also giving Negro children extra educational training with success. A reading center for drop-outs established by the government's Mobilization for Youth on the Lower East Side of New York has enabled many teen-agers to achieve the reading skills necessary to get a job. The New York City Board of Education has announced that it will establish 232 after-school reading centers to supplement the regular school programs of the slum areas.

The federal government ought to do far more to extend the educational life of the child in the school system. It could initiate a national program to encourage young people to prepare themselves after high school for elementary and secondary school teaching, nursing, social work, and government service, and for advanced training for science, law, medicine, and university teaching. The government is justified in making a serious financial investment in an educational program for these professions because it would not only open up employment opportunities to people who otherwise will end up looking for non-existent factory or white-collar jobs, but it would also provide badly needed trained personnel. It should also be pointed out that a shortage of highly trained persons is one of the main obstructions to an increase in our economic growth. There is no reason why, through a system of free tuition and scholarships for teachers, nurses, and social workers,

for instance, the government shouldn't emulate our largest corporations, most of which have their own job-training programs. Such programs would have the advantage that, unlike the advanced professions of law and medicine, the student would not necessarily need to take graduate work after college. If a training program were available to the Negro teen-agers in New York City, for example, and there were sufficient personnel who could maintain their interest in education, it would be possible to direct large numbers of them into "community service professions." In my interviews with Negro teen-agers, I have found that many of them are thinking of these professions as a preferred career, rather than employment in a factory, in business, or in trades. It might be pointed out that the period of post-high school training for the "community service" professions would be nowhere as long as the apprenticeship training periods in most trade unions.

A PROPOSAL for a new type of federally backed job training program, supported by an argument that might even interest Harry Byrd, has been advanced by James S. Coleman of Johns Hopkins. Pointing out that two-thirds of our trainees are preparing for blue-collar occupations where unemployment is getting worse all the time, he recommends the experimental high school for dropouts conducted by Encyclopedia Britannica in Chicago and suggests that the federal government invest in such "educational entrepreneurs" throughout the country. These entrepreneurs would "take the culls of the system and teach to get results (not, as in many high schools at present, merely to maintain discipline)." Mr. Coleman explains: "If paid according to results, with students tested by government examiners, I suspect that capitalist enterprise would produce some remarkable successes. The government, in turn, would not be spending its money unwisely, but would be investing in a profit-making enterprise, since every successful student would mean removing a person from a status of dependence on society, and allowing him to move into a high-demand sector of the economy, where he would pay back in taxes and in contributions to economic growth many times the money invested in him in his youth."

Without attending to education as the first order of business, it is useless to discuss anything else. On the assumption that we do attend to it, what are some of the other areas of necessary and unfinished business? There is the matter of conserving and expanding our natural resources before they are wasted away in the manner we are wasting human beings. The business at hand may return no financial profits to anybody in particular—if properly undertaken it may deprive some people of profits—but it advances the future economic welfare and productive capacity of this nation and means useful employment for hundreds of thousands of Americans. Reforestation, soil conservation, flood control, park and recreation area development, urban and rural redevelopment, creation of new water resources, the elimination of air, sea, and river pollution, the supervision of private operations in the public domain, and the improvement of agricultural techniques are all areas in which the public interest has had little voice and little effect. Much of the work could be done by people who have become superfluous in those urban areas where factory and service work is declining or disappearing. The establishment of small, racially integrated population centers to carry on this work could be, literally, a new frontier for volunteers who have been stranded in our congested cities without work and without decent housing. There is no reason why America cannot create its own version of the kibbutz, especially since our technology is making present population patterns obsolete.

The "frontier" would also offer the Negro a chance to break out of the big city—Dr. Martin Luther King's "airtight cage of poverty"—and thereby take the first significant step in becoming integrated with the rest of America. Despite the commotion about integration outside the South, the low-income Negro's mobility in the city has been generally restricted to moving from one slum to another, or into a public housing project. The patterns of *de facto* segregation remain the same. Meanwhile, the concentrations of Negroes and other minority groups in the metropolitan centers intensify and the white populations diminish. If meaningful integration does not proceed outside the great cities, the possibility exists that the large cities may take on the political coloration of the race as well as of an economic group. The prospect of political confrontations between black cities and white towns and suburbs is not promising for our country, especially when one considers the animosities that already exist between city and "up-State" even without the "poor versus rich" or "black versus white" identification.

OF course any government-sponsored proposals for a large program of work in the public interest will be described as socialistic and statist by a great majority of newspaper editors and the Congressmen who read their papers. What is proposed is aimed at preserving human and natural resources that are currently being destroyed and neglected, and unless we find constructive ways for people to support themselves, we can be sure that an increasing body of Americans, and their children after them, numbering in the millions, may very well become lifelong inhabitants of a "poorhouse state."

For those who wish to be briefed on the benefits a welfare-ridden society brings to our republic, Harry Caudill, an Eastern Kentucky lawyer, offers this description of what has taken place in his part of America:

> In most Kentucky Mountain counties the population is so impoverished that between one-third and two-thirds of the people are on the commodity dole and receive public assistance checks. Thus they are charges of the government and dependent upon the government for their daily bread.
>
> In effect the federal government provides the money and the state and local officials deliver the benefits to the people. Local political machines of immense power and efficiency have been organized by and sustained by almost endless amounts of federal money. With the increase in automation and mechanization additional millions of Americans are likely to be reduced to these tragic circumstances. The question arises as to how well democracy can function when the democratic government becomes the custodian and guardian of a majority of the people in a region.

I think it is probably true, from what I heard in interviews in preparation of a study of a section of the West Side of Manhattan, that there has been a tendency to overestimate the extent to which racial discrimination has lessened the employment opportunities of the low-income Negro. His difficulties in getting work seem to result mainly from the fact that, because of a lack of education and of work skills, he is not able to find job opportunities. His educational disadvantages are multiplied by the fact that technology's impact upon factory and service work, where the majority of Negroes are employed, has been especially severe: the jobs themselves are disappearing. His situation deteriorates at a faster and faster rate as a result. This is not to say that discrimination has not played a great part in depriving him of employment. First, the educational disadvantages he suffers occurred largely because of racial discrimination. Second, there is little question that qualified low-income Negroes are often written off as prospective employees by major business institutions the minute they walk in the door; some New York banks are among the worst offenders. Third, the craft unions have in the past closed, and continue to close, their ranks to Negro apprentices for a variety of reasons, some of which have a racist smell about them. Fourth, the Negro who does present educational and professional qualifications for higher-paying jobs invariably finds it difficult to gain employment in financial institu-

tions, publishing, and many other professional areas. His troubles are increased by the fact that a heavy majority of employment agencies throughout the country discriminate against him, according to a recent survey by the American Jewish Congress.

The fact remains that a large proportion of Negroes cannot get far enough in the hiring process to find out if discriminatory considerations are at work, simply because jobs are getting scarce. Stanley Sheinbaum, an economist on the staff of the Center for the Study of Democratic Institutions, writes: "As long as the general unemployment remains acute, all talk about the race issue is as if in a vacuum. Equality in employment will only be achieved in a full employment situation; we all know how discriminatory the labor unions are, the more so the higher the level of unemployment. Both the union members and their officials will protect their own first, and to hell with the race problem. Therefore, as long as unemployment remains high, the minorities are not going to be able to get a fair shake at jobs. The removal of unemployment is absolutely a necessary condition for the resolution of this aspect of the race issue."

SHEINBAUM is also critical of government inactivity. "There is no sign," he writes, "that either the administration or the Congress is interested in doing anything about the job problem. Only recently the Federal Reserve raised the discount rate to one-half per cent, which will further restrict monetary demand. Even if the President's tax proposal does pass, it is far from sufficient to affect the unemployment problem, which fact is a reflection of the administration's lack of interest in the problem. Certainly the Congress has manifested no concern to the extent of taking action." The same theme is voiced by Robert Theobald in *Free Men and Free Markets*.

Joel Seldin, labor specialist for the New York *Herald Tribune*, put it this way in a recent conversation: "You talk to people in vocational rehabilitation or training guidance and ask: Will these programs solve the problems of youth employment? And they say frankly no, they won't. Obviously the problem of youth employment is a segment of the over-all problem of employment in this country. Nobody really has come up yet with a brilliant answer to the problem of unemployment in this country. The best the President is proposing at the moment is a tax cut, which he says is going to stimulate the economy. Last year he tried to do it with allowances for new machinery, which were supposed to stimulate all kinds of things. There was no demonstrable effect. The people in the field tell you the problem is not going to be solved without some over-all approach to the total economic problem of the country. But even if we did come up with such a total solution to the economic problem of the country, you would still need a counseling and guidance and retraining program to make underprivileged kids in the city of New York employable. If employers were begging for help you would still have to produce kids who can read, you would still have to teach them something about work habits and how to apply for a job in order to get them employed."

Seldin's comment is characteristic of him. A labor reporter, he usually ends by talking about education.

Another important and neglected aspect of unemployment is the state of mind of the people undergoing the experience. It is extremely important to know something about this because, whether their ideas are right or wrong—and in many cases they are based on a lack of understanding—the views of the unemployed are going to have a determining effect on the political, social, and economic climate of this country if unemployment isn't checked. Herbert Harris, the labor historian, thinks that the unemployed may someday be the biggest voting bloc in the country and that they will include not just ex-factory hands but also most of the ex-white collar workers, whom he calls the "Casper Milquetoast isolates," I cannot report generally about the attitudes of the unemployed, but I have conducted many interviews with unemployed Negroes in my West Side study, and have consulted with investigators working in other parts of the city.

ONE thing that is significant is that the unemployed Negro is resistant to the idea that automation is a major cause of his difficulties. He feels that this is a "dodge" presented by those people in the white power structure of the country to cover up built-in, reflexive hiring practices based on racial bias. He acknowledges the fact that he is handicapped desperately through educational background in a quest for the secure and steady and better-paying jobs, but he doesn't think this explains his difficulties. He has experienced situations in which he has applied over and over for jobs which he knows he can perform—simple unskilled construction jobs, for instance—and has been told no job is available, only to discover that others who are white have been hired subsequently. His attitude toward unions has been increasingly unfriendly because their apprenticeship programs have been closed to him as a rule and because nondiscriminating unions show an indifference to him because of his low earning capacity. He has support for his suspicions even inside union officialdom: a recent publication of the Center for the Study of Democratic Institutions, entitled *Labor Looks at Labor*, quotes United Auto Workers officials as saying that the low-salaried worker and the unemployed worker are neglected by the union movement. One executive declares, "We have been forgetting the guy way down below, who is really getting kicked in the face. Nobody is doing anything about him except Hoffa." It happens that a great percentage of these "guys down below" are Negroes.

Nor does the Negro feel grateful to the educational system that presumably prepared him for a special trade, when he finds after leaving a vocational high school that he cannot pass the tests to quality for employment. He compares the obsolete equipment in his vocational school with that used on the outside. He also learns quickly that he has been the victim of obsolete methods of instruction. This experience, plus many others, underlines his distrust of almost all training programs. The Negro who is approached with an offer to retrain for some unseen job reacts with disinterest and cynicism.

A sociologist who has been studying Negro attitudes in the Bedford-Stuyvesant area of Brooklyn offered me this conclusion: "I found little variation between Negroes in their feeling that the common explanations of unemployment are not real as far as Negroes are concerned. I found an alienation, a feeling that the country's unwillingness to get training programs off the ground was due to the fact that the 'wrong group' of people were unemployed. And I am finding, for the first time, a greater degree of unification among Negroes and more of a feeling of disassociation from the body politic than ever before. Sometimes this feeling also hits out at the traditional leadership of the Negro movement, especially if this leadership seems to have come about with white support."

There may be some argument as to how justified these attitudes of the unemployed Negro are. I happen to feel that there is some sophistication in their conclusions because, even though the economic reasoning may be unsound, there is an air of pragmatism in them. Groundless or not, the attitudes are there and they influence action. Perhaps some knowledge of these attitudes and the manner in which they are expressed even to a random interviewer would convince a few Congressmen that the Negro is not inclined to accept any excuses from a society that has left him jobless. He is not going to be permanently counted out of anybody's plans for a future America. Nor are the 40,000,000 or more whites who are also members of our steadily growing and integrated race of the poor. They have the numerical capacity to overturn the American establishment. Whether they will use their power remains to be seen.

Federal aid fight will test Nixon

Congress, the House Rules Committee willing, will soon be asked to put up or shut up on federal aid to education.

A massive 5-year $20 billion program to keep property taxes down and pump more and more money into grade school and high school education is about to get congressional approval. Or disapproval.

Republicans want a two-year extension and an opportunity to put their own brand on the elementary and secondary education act — a shining star of the Johnson administration days, which finally found a way to break the church-state impasse.

School bond issues have been turned down at the rate of 55 percent during the past year, as compared to a rejection rate of 25 percent in earlier years. So warned former Secretary of Health, Education and Welfare Wilbur Cohen in his parting shot before the House Labor and Education Committee, only five days before Washington greeted the new Nixon regime.

Mr. Nixon's task force on education had some sharp words to say to the new President:

"Speaking candidly, we do not believe that President-elect Nixon, with all his varied and high qualifications for office, would at present by most Americans be considered to have the kind of special concern for education the times require." Strong words—especially from your own task force. And Mr. Nixon candidly mentioned it during a televised press conference.

Will education be put above politics? Will school programs and money become political footballs? Only time can tell. And the fate of the ESEA bill this year will tell a lot about the direction the Nixon White House and Democratic-controlled Congress will follow this year and next.

Mr. Nixon's choice for commissioner of education, James Allen, former New York State education commissioner, was hailed as a hopeful sign for the future of excellence. Nixon's HEW Secretary, Robert Finch, is generally regarded as a humane friend of education, although he's gotten into a real legal tangle on school desegregation.

The fight for the federal dollar is a constant drama in Washington, and while the Johnson years did more for education than any other administration from the beginning of the Republic, Congress saw fit to cut back more than half of what Congress authorized.

For instance, the 1969 fiscal authorization for federal aid came to $3.8 billion, plus another $600 million for impacted aid. Congress cut the money on this back to $1.4 billion for federal aid and $500 million for impacted aid. A total of $4.4 billion was authorized for elementary and secondary school children—but only $1.9 billion was actually voted in money to back up the magnificent program approved by Congress.

A three month long hearing and a total of 2,986 pages of testimony, charts, graphs, reports, statements, and resolutions is now resting on the desks of 435 members of the House of Representatives awaiting some kind of action.

The supporters for a 5-year program argue that school districts need plenty of long range planning to chart their needs. Last minute programs rarely give school districts enough time to use federal money wisely.

The Urban Coalition's stinging report on America's educational failures in the black ghettos of our big cities makes the point that nobody, but nobody has the surefire answer to the nation's school shortcomings. The real thrust of the federal school bill was to pump money into schools with

'Education in the slums and ghettos is a failure.'

One Year Later

An assessment of urban schools on the first anniversary of the Kerner Commission report

HUGE, TROUBLESOME problems beset every large city school system, demanding the best and without any retreat.

"Inner-city schools are not only overcrowded, they also tend to be the oldest and most poorly equipped," reported the Commission. Teaching materials are scarce and "poorly adapted to the life-experiences of the students." Behind most of these deficiencies, the Commission said, is the fact that "our society spends less money educating ghetto children than children of suburban families." It cited a Civil Rights Commission study of state aid in 12 metropolitan areas in 1950 and 1964. In two the same amount per pupil went to central city and suburbs, and in six the suburbs got significantly more. Priorities were inverse to need.

The Commission found an atmosphere of increasing hostility around the schools of the slums and ghettos. They "often appear to be unresponsive to the community, communication has broken down, and parents are distrustful of education. . . . Since the needs and concerns of the ghetto community are rarely reflected in educational policy formulated on a citywide basis, the schools are often seen by ghetto youth as irrelevant." The sense of isolation from the making of school policy, the Commission said, "is adding to the polarization of the community."

ONE YEAR LATER

The indictment of failure passed on education in the slums and ghettos is just as valid and even more familiar. But the ferment stirred by the two earlier education reports and accelerated by the Commission report has increased to the point where it is rocking—in some instances, even toppling—the educational establishment. Unlike other drives for change in the schools, this one looks as if it will not end with talk: There is a discernible shift to action—clarification of strategies, heightened conflict, perhaps the beginnings of genuine change.

Not all of the turmoil is progress. Frustration has taken its toll, and any remedy that offers the glimmer of reaching the disadvantaged is seized upon. As in the larger society of which the schools are part, the dilemma is whether changes that accentuate, rather than mitigate, polarization are a necessary prelude to coming together on an equal footing—indeed, whether there is any choice.

At present the dilemma centers on community control of schools, raised by blacks in the slums and ghettos to an urgency well beyond the Commission's careful treatment of "decentralization." The major battleground, of course, was in New York City, where experiments in community control have unleashed a bitter power struggle and surfaced a nightmare of ethnic and racial hatreds.

REID

BELL

(Continued from page 1)

children from poverty-stricken families. But Congress so watered-down the formula for Title I grants to poor school districts, that many wealthy children got windfalls of help from the bill.

The Urban Coalition points out that **"a billion dollars a year sounds like a healthy sum, but it comes down to $108 per assisted pupil—not very much considering that it goes to schools that have been systematically under-funded and to children whose needs are overwhelming. The per-capita amount is actually declining, partly because the number of children benefitting has been going up, partly because the money is spread around to several million children that no one would call disadvantaged."**

So should the formula be changed? Are the Republicans on the right track in asking for delays, less ambitious programs, and more time to reshuffle programs and ideas in the massive school programs now percolating out of Washington?

What do Congressmen Ogden Reid of New York and Alphonzo Bell of California, two moderate Republicans, who favor the 5-year bill, say about this? They warn:

"We would most strongly caution against any attempts to change the formula for distribution of funds to the states or within the states under Title I. The work of a generation went into devising the current formula to insure that all disadvantaged children, regardless of where they live or what school they attend, will receive the aid to which they are entitled."

And they further warn: **"Any tampering with the Title I formula runs a number of serious risks. One is the aggravation of existing distribution patterns with states which al-**

TEACHERS' PAY GAINS vs. INCREASES FOR OTHER GROUPS

	Average Pay 1966	Average Pay 1968	Increase In Two Years
Grade-school teacher (9-10 month school year)	$6,620	$7,675	16%
High-school teacher (9-10 month school year)	$7,110	$8,160	15%
Mathematician	$12,300	$15,000	22%
Physicist	$10,600	$12,600	19%
Chemist	$10,500	$12,000	14%
Psychologist	$11,000	$11,800	7%
Linguist	$6,800	$9,000	32%
Federal worker	$7,900	$8,930	13%
Auto worker	$7,675	$8,740	14%
Construction worker	$7,625	$8,505	12%
Mailman	$6,435	$7,320	14%
Bus driver (local)	$5,860	$6,460	10%
Factory hand	$5,855	$6,385	9%
Store clerk	$3,870	$3,900	1%

NOTE: Pay for mathematician, physicist, chemist, psychologist and linguist is rate reported for men with bachelor's degrees plus a few years' experience.

STARTING PAY IN TEACHING, COMPARED WITH OTHER CAREERS

	Average Starting Salary Per Year for Graduates With Bachelor's Degrees
Teachers (9-10 month school year)	$5,940
Engineers	$9,310
Physicists	$8,915
Chemists	$8,520
Accountants	$8,425
Economists	$7,800
Sales-marketing specialists	$7,620
Business-administration trainees	$7,560
Liberal-arts graduates	$7,370
Policemen (no degree needed)*	$6,555
Firemen (no degree needed)*	$6,200

*As of Jan. 1, 1968, in cities of 500,000 or more population.

U. S. NEWS & WORLD REPORT, March 3, 1969

TEACHERS ARE NOT ABLE TO KEEP PACE with other professional groups. They are gaining, but America can and must do better for those who teach its young. We ask much of the teacher, we ought to be willing to pay for it.

Don't tamper with Title I formula, warn two moderate Republicans. A $5 billion a year spending level for America's children is sought in the face of threats to slash $360 million from federal aid to schools.

(Continued from page 2)

ready tend to slight the special financial problems of urban education. . . . Another equally important risk is the reopening of the church-state debate which was only narrowly avoided when this legislation was last extended 2 years ago."

In the nervous years after the Russians sent a rocket around the world, the American educational establishment engaged in a crash program to spur the study of mathematics and foreign language. We stubbornly avoided a forthright embrace of federal aid during those benumbed Eisenhower years. What the federal government did for grade school and high school youngsters was done in the name of "defense." Now we are more bold. But still the formula and the legislative embroidery delicately avoids any frontal assault on spending money for kids, all kids rich and poor, white and black, urban and rural.

A $5 billion a year level of spending for children in high school and younger, would represent a little more than ½ of 1 percent of the $861 billion gross national product for 1968 and less than ½ of 1 percent of the estimated $921 billion GNP for 1969.

One in four Americans is either a student or teacher, the Nixon task forces emphasizes. Educational spending is growing by leaps and bounds (it went from $28 billion in 1963 to $48 billion in 1968, almost doubling in three short years). The dollars and cents needs for more classrooms, higher teacher salaries, and more teaching equipment grows just as immensely.

What about the property tax? Is there any way to keep it down or within reasonable bounds?

Every school district is different. But The U.S. Statistical Abstract for 1968 tells a story which gives something of an answer to the rising property tax quandary.

In 1954—when President Eisenhower led the country—$4.5 billion for public schools (which was 58.1 percent of the total spent) came from intermediate and local sources (mostly property taxes). But in 1966, a preliminary report shows that intermediate and local revenue has gone up to $13.5 billion—a four times increase in dollars—while the percentage of revenue from local sources was 53 percent.

Thus, the burden on the local taxpayer was eased by only 5 percent, but the actual tax bite was increased by four times.

Surely a great nation can afford more than ½ of 1 percent of its gross national product for educational opportunity to its young. We spent roughly $25.4 billion for elementary and secondary education in 1966 (counting $2 billion federal, $9.8 billion state, and $13.5 billion local) which was only 3 percent of our gross national product of $743 billion for that year.

Congress must decide this year what to do. Vote for a 5-year $20 billion program to ease the property tax burden and grapple with the educational deficiencies of the nation. Or nitpick and slash and retreat from the bold thrusts of recent years.

"Like the Bourbons of old, the Republicans will have learned nothing and forgotten nothing. If this kind of penny wisdom and dollar foolishness is allowed to characterize the next four years, our schools, our children, and the parents and taxpayers who support them are in for a bad time."

—JIM O'HARA, last week warning against 10 percent Republican cuts in federal aid to education.

WEEKEND WRAPUP

Congress is finally heading into a confrontation with the Nixon administration. The fate of the federal aid to schools bill may tell us a lot about other domestic programs now moving toward votes in the House of Representatives. . . . **President Nixon has some crackjack good people** charting his course on education (Education Commissioner Allen and HEW Secretary Finch). But as Congressman Jim O'Hara warns, the 10 percent meat-axe edict issued by the Bureau of the Budget would whack $360 million out of the bill. We need every dollar we can find for our children. . . . **Ogden Reid and Alphonzo Bell** stated very well why tampering with the school bill could send the whole program into a meat-grinder that could well destroy the whole school bill. . . . **Tea bags to Congress**—that's a dramatic way of expressing the taxpayer's revolt mood of the country. Several congressmen report they are getting tea bags in their mail, and they get the message. If that 10 percent surtax

---

The political nit-pickers on Capitol Hill will play their games during the forthcoming weeks. They will raise all kinds of questions which deserve answers. The real trouble would seem to be that Congress generally is unwilling to give education the same kind of urgent priority which the defense and space programs get.

It is hard to measure educational success. The HEW "Toward a Social Report" document's section on "learning, science, and art" points out:

"The standard sources of educational statistics give us hundreds of pages on the resources used for schooling, but almost no information at all on the extent to which these resources have achieved their purposes." And the report continues to state that **"groups that suffer social and economic deprivation systematically learn less than those who have more comfortable backgrounds."**

---

was a hard bite to take, reach into your cupboard for a tea bag and send it to your favority congressman. . . .It is almost a cliche to talk about **the "quality" of our life** these days. How do you measure quality? One good attempt has been made by a booklet called "Toward A Social Report" issued in the waning days of the Johnson administration which asks: Are we becoming healthier?; How much opportunity is there?; Are conditions of our phsyical environment improving?; Are we better off income-wise?; What is the impact of crime in our lives?; How much is learning, science and art enriching society?; and What do we need to learn about participation and alienation in our lives? Weighty questions, certainly. But they tell a lot about what's happening to us. We have one or two stray copies of this HEW booklet left for the first who write for them.

"What we must all realize is that the consequences of inferior education—unemployment, poverty, crime stemming from social despair—respect no political boundaries. The suburbs will eventually suffer from the disease of the cities; they have an important stake in helping to cure it through adequate education for the children of the ghettoes."

—HAROLD HOWE

Liberal Democrats warn of education cuts; urge full funding of federal aid bill.

Congressman James G. O'Hara of Michigan, a leader of the House liberal bloc, said budget cuts in school aid, unless reversed, will confirm Democrats' worst fears about President Nixon.

O'Hara, a member of the Education and Labor Committee and recent chairman of the Democratic Study Group (DSG), an organization of liberal Democrats in the House, cited published reports that the Nixon Administration tentatively has approved a 10 per cent cut in former President Johnson's education budget.

The cut, O'Hara said, would amount to about $360 million and would "undercut" school aid programs established by law after long debate. It reportedly would be applied against such popular programs as impact area aid and assistance to elementary and secondary schools.

The cuts, dictated by the Budget Bureau under a general economy directive from President Nixon, are said to await a final okay by the President himself.

"If this decision is final," O'Hara said in a statement, **"if the administration does not reconsider, it will confirm the worst fear and confound the fondest hopes many of us have had for the new administration.**

"Like the Bourbons of old, the Republicans will have learned nothing and forgotten nothing. If this kind of penny wisdom and dollar foolishness is allowed to characterize the next four years, our schools, our children, and the parents and taxpayers who support them are in for a bad time."

O'Hara noted that the Education and Labor Committee, without benefit of specific recommendations from Nixon, already has approved a five-year extension of the Elementary and Secondary School Aid program. The House will consider this soon after it returns from a current Easter recess.

New York: The School Lunch Syndrome

* * *

By STEPHEN MACDONALD

NEW YORK—If you have a child in public school here, this might be what he calls lunch: Cold frankfurter, no ketchup, no mustard. Thin tomato-rice soup, lukewarm. Canned peaches. One-half pint of milk, served at room temperature, no cup, no straw.

Although some people here find the curriculum no more appetizing than the cuisine, the big school uproar last year was fed less by these conditions than by the parents' unwillingness to remain impotent over them. If your children attend a private school you can express your dissatisfaction in a number of ways, the most extreme being to send them elsewhere. In a smaller community, you can band together and storm the PTA. But in New York, and no doubt in other large cities as well, you take what you are given. Teachers and administrators are accountable upward, through a classically ossified bureaucracy, not downward to their clients.

Parental hope for reversing this power flow lies in dismantling the bureaucracy and distributing most of its authority to neighborhood-sized districts, as if New York City were a confederation of small towns. "Decentralization," as this restructuring is called, is popular with the electorate, and as a result the state legislature passed in April a reorganization of the school system. But since any real redistribution that gave the parents more power would by definition give someone else less, and since the someone else in this case includes deeply entrenched and politically healthy labor unions, many parents think the current law, when it is fully implemented, will be revealed as a sop. If this is so, the school uproar will probably start all over again. Parents are organizing, and they are not in a mood for easy compromise. Not even on lunch.

* * *

"WE ARE FED UP WITH BAD SCHOOL LUNCHES," proclaims the heading on a mimeographed list of "demands" ("The Central Kitchen Must Be Closed At Once! . . . Our Questions About the Frozen Food Kitchens Must Be Answered! . . . The Jail-Like Conditions in All Lunchrooms Must End At Once! . . .") that looks far more fierce than the young lady distributing it. In fact, seated around the long oval table in the red-carpeted conference room of the Board of Education headquarters, these forty or so ladies and a man or two look anything but militant. They are members of United Bronx Parents Inc., a community agency that trains parents, especially poor parents, to deal with school problems. The problem that brings them to this room today is that the government-subsidized an inconspicuous seat behind and to one side of the board president.

At the other end of the table Mrs. Juanita Hernandez, who is to lead the parents' part of the discussion, rises and complains that a third official was supposed to be present. "This is the way the Board of Education always treats us," she says. Then she explains briefly that the parents, who represent a half-dozen schools, will speak in rotation.

As they do, what emerges is a fragmented, informal, sometimes emotional but nevertheless well documented assertion that many school lunches simply aren't fit to eat, either because the food itself is poor or because lunchroom conditions are unhealthy. Although hardly an aspect of the school lunch program escapes the ladies' criticism, the gross offender turns out to be a central kitchen in Queens, where soup-and-sandwich lunches are prepared in the predawn hours and delivered by truck to more than half the city's 900 schools. Because the menus are unappealing and repetitious and because Puerto Rican pupils consider the food foreign, the garbage cans are always full even if the children aren't. The parents know the city is experimenting with a plan to phase out the central kitchen and phase in a frozen-food service, but they don't want that either. What they want is decentralization: Each neighborhood cooking for its own children. In addition, they voice what might be called a procedural complaint: In months of struggling to improve the lunches, they have had very little cooperation from Mr. Howard's Bureau of School Lunches. They say their letters asking questions about reports they know exist and about current and future costs and policies have not been answered.

But this all comes into focus only after an hour or so of the recitation.

"I have four daughters, and at least twice a week one of them was throwing up. I took her to the doctor, and he said it was that greasy soup and spoiled milk."

"They give you a peanut butter sandwich with nothing else on it. The parents can't get into the lunchroom to see what's going on."

"My kids come home and cry because they're so hungry. My son begs me to let him take his breakfast to school with him."

"Last year my daughter used to get a headache or an upset stomach because of those lunches, sometimes just thinking about them. That wasn't just once in a while or twice a week, that was every day. Now I have my six-year-old there, and it's the same thing."

"We've had lots of meetings with lots of people, but it hasn't done any good. We're

* * *

self, Mrs. Hernandez cuts it off. "Now," she announces, "we will hear what Mr. Monserrat has to say."

The board president consults his notes, then begins to talk in a voice that is slightly raspy. His manner is patient. He speaks first in English, then pauses to provide an interlinear Spanish translation.

"First of all," he says, "I'd like to thank you for coming down here, and for your concern and interest. I think this is important and necessary. For a long time it was said that there is no interest, but I'm glad to see there is.

"At this moment, as you know, the board is very much involved in decentralization. One very important part of this is the school lunch program, and the current law provides for it. The reality of the matter is that local school boards will soon be in complete charge of the lunches within their own districts.

"Nobody likes the central kitchen. Nobody is satisfied with it, not even the people who run it. But I'm not here to tell you nice words, I'm here to try to solve the problem and to give you some perspective. The truth is that we have 900 schools, and if we dismantled the central kitchen overnight many of them would have no lunch at all. We are also limited by laws and regulations, but to the extent that we can bend them to your wishes, we'll try to do it.

"The idea, as I see it, about the frozen food kitchens, does not mean they can't serve ethnic food. We have all kinds of frozen Spanish foods. If you have been to Puerto Rico you know they have frozen food of every kind there, and we could get it here. The fact that this has not happened doesn't mean we can't find someone to provide it. You will be able to make any kind of contract you want, with any company you want."

At this point Mr. Howard decides to speak up in defense of the frozen foods. He says that a committee of food-industry experts assembled the program, that it is being tested quite successfully in a pilot program in the city and that many schools are demanding it.

But the parents did not come all the way from the Bronx to be talked into the frozen-food program, and they are quick to reply.

"Your committee's kids won't be eating the frozen food. Ours will, and we don't want it."

"Can you give us a list of the schools that are 'demanding' frozen food? I'd like to see that." (Mr. Howard says he came to the meeting on short notice and doesn't have the list with him, but he will get it later.)

community agency that trains parents, especially poor parents, to deal with school problems. The problem that brings them to this room today is that the government-subsidized lunch served free to children in poverty areas (others pay 40 to 50 cents) is not the hot, nutritious meal the law says they need.

The parents are meeting with Joseph Monserrat, president of the Board of Education, in a confrontation that culminates a year of study and protest. During that time the agency has paraded city, state and Federal officials through the schools, cooked its own model lunches in an attempt to demonstrate that other methods would be both cheaper and better, and petitioned, picketed and met a number of school officials down the ladder from Mr. Monserrat—all without much satisfaction.

The man they came to see, who has just entered with one of these lesser officials, is more simpatico than his predecessors and others in the bureaucracy, at least to this delegation dominated by Negroes and Puerto Ricans. Mr. Monserrat was born in Puerto Rico and grew up in New York, where he attended public schools and Columbia University. He worked in Puerto Rican affairs for the Federal Government before taking his present post, in May. He is 45 years old, has wavy steel-gray hair and wears black-rimmed glasses. This is either a working meeting for him or is meant to appear so: He is coatless, and the sleeves of his broad-striped gray and white shirt are rolled up to the elbow. He places a yellow legal pad and pencil on the table, hunches down into his seat, lights a cigaret and glances around the room. No smile. No talk. His associate, Kevin Howard, director of the Bureau of School Lunches, moves to

my six-year-old there, and it's the same thing."

"We've had lots of meetings with lots of people, but it hasn't done any good. We're going to keep on fighting for our kids to have a decent lunch."

"We're tired of making demands that are not heard."

"There is more garbage than food."

"That lunchroom is so dirty and dark, I don't think they ever clean it. They must have about one 30-watt light bulb in there, if it's that. The kids have to eat with their coats on, because there's no place to hang them up."

"I asked one man at the Board of Education why don't they give the children a knife and fork to eat with. And he told me if they did those Negroes and Puerto Ricans might stab each other. Can you imagine? We try to teach our kids good manners at home and then they go to school and it's worse than anything."

"We may be poor, but we're clean and we're proud. If I kept my home like that and cooked like that my husband would throw me out."

"At my school some parents go and take a lunch and feed their own children themselves. I think the parents ought to have some say-so about what their children eat."

"I can see no reason for the frozen food. The situation will remain the same. Nothing replaces a fresh meal. It is also the cheapest."

"Junior high school students are not infants, but they are served infant portions."

"Frozen food is the same as central kitchen food, tasteless. It will be wasted just the same."

When the presentation begins to repeat it-

that. (Mr. Howard says he came to the meeting on short notice and doesn't have the list with him, but he will get it later.)

"You're going to spend millions of dollars installing this special frozen-food equipment—we know you've already budgeted $12 million—and we're going to be stuck with it. How can we get rid of it?"

"Why not take the money and use it to install kitchens in the schools that aren't properly equipped? This would be cheaper in the long run."

"Who will get that $12 million for this equipment? We know there's a report on this, but we can't get Mr. Howard to give it to us."

"They say frozen food will save money. The big savings will come in labor, by laying off people. Who will be laid off? Blacks and Puerto Ricans. Let us hire these people in our own communities."

Finally Evelina Antonetty, executive director of United Bronx Parents, who has apparently known Mr. Monserrat for some time and has been hovering over him the last few minutes, says, "Look, Joe, why couldn't we have a pilot project, with just four schools? It would be a satellite lunch plan. Two schools that are fairly new and have good equipment could cook for themselves and also for two others nearby that are getting central kitchen lunches. Parents would take the responsibility and they'd hire people from the neighborhood. They'd do a good job, because it would be their own children. I'm sure it wouldn't cost any more."

"All you're telling me," replies Mr. Monserrat, "is that you have an idea. Great. But that's not the same as a *plan*. What you must do is work out a plan, give me something on paper and let me see it. If it turns out to be possible, I would like very much to do it."

Having plunked the ball neatly back in the parents' court, Mr. Monserrat tries to conclude the meeting with a summary. But by now some of the parents are up, putting on their coats. They must get a bus up to the Bronx in time to pick up their children, who will soon be dismissed from school for the day. Other parents want a last word with Mr. Monserrat, and soon the summary is overwhelmed by a rising bilingual cacophony. Mr. Monserrat promises to visit at least one school ("If I visited one a day it would take three years to see them all"), and now he too is on his feet, headed for a side door.

A mother across the room remembers that she does not trust Mr. Howard. "Those reports, and the answers to all our questions, will you see that we get them?" she shouts. Mr. Monserrat turns toward her and his lips move, but the reply is lost. Then with a smile and a little wave he is gone.

* * *

Afterward one participant offers a private evaluation. "He's a good man," she says, "but his hands are tied as much as ours. At least he sat there and listened to us for two hours. That's something new."

A Reappraisal of the Most Controversial Educational Document of Our Time

By CHRISTOPHER JENCKS

THREE years have passed since James Coleman and his colleagues issued their now famous report on "Equality of Educational Opportunity." Virtually unnoticed at the time of its publication, this 737-page monograph has since become the best-known and most controversial piece of educational research of our time.

Like a veritable Bible, the "Coleman Report" is cited today on almost every side of every major educational controversy, usually by people who have not read it and almost always by people who have not understood what the authors meant when they wrote it. It has been used to support arguments for increasing integration in the schools—and to buttress the position of those who would accept segregated schools with community control. It has been cited as evidence that what black children need is good teachers—and as proof that such increases in per pupil expenditure will not close the educational gap between black and white.

The report has also inspired a growing body of scholarly exegesis, interpretation and criticism, so that anyone who wants to know what the report "really" proves must now plow through not only the baffling charts and tables of the original document but dozens of subsequent critiques and reanalyses, most of which are available only in mimeographed form to the cognoscenti. The time has clearly come for a reappraisal.

THE Coleman Report was a political football from its very inception. Like much American social science, it was initiated in order to avoid confronting a difficult political problem. In the summer of 1964 Congress had decided to pass a civil-rights law which was expected to end *de jure* school segregation in the South by cutting off Federal funds from segregated systems. The question inevitably arose: what about *de facto* segregation in the North? The expedient answer was that the Commissioner of Education should investigate the problem and report back in two years.

After nearly a year of bureaucratic squabbling and indecision in the U.S. Office of Education, Commissioner Frank Keppel decided to conduct an "Equality of Educational Opportunity" survey. The survey, theoretically covering nearly a million pupils in 6,000 different schools across the nation, was carried out in the fall of 1965. Prime responsibility for planning and analyzing it fell on James Coleman, a distinguished sociologist from Johns Hopkins University with a long record of interest in both education and survey research.

Coleman expected the survey to demonstrate three rather conventional propositions:

1. Nonwhite pupils, North and South, usually attend different schools from white pupils.

2. Nonwhite schools usually have less adequate facilities, inferior curriculums and worse teachers, as well as less affluent and academically adept student bodies.

3. Because they attend those inferior schools, nonwhite pupils learn less than white pupils.

The survey confirmed the first proposition. Black and white pupils are seldom in the same schools, even in the North. Not only that, but the black pupils do learn much less than the white pupils, at least judging by standardized tests of verbal and nonverbal skill, reading comprehension, arithmetic skill and general information. The typical black first grader scores below about 85 per cent of white first graders. This relative disparity persists throughout elementary and secondary school, and thus the absolute difference between black and white children grows wider as they grow older. A 6-year-old who scores below 85 per cent of his classmates is about one year behind, while a 16-year-old is more than two years behind.

The survey did *not* support the second proposition, that black schools spend significantly less money per pupil than white ones, have substantially larger classes, get worse trained and less experienced teachers, operate in more antiquated and crowded facilities, rely on less adequate textbooks and equipment and so forth. On the contrary, the survey uncovered only one major measurable difference in these items between black and white schools: the black schools had more black teachers. This means that the black children's teachers

CHRISTOPHER JENCKS is co-author with David Riesman of "The Academic Revolution."

The report points out plain truths often overlooked. For example: "In most cities, the black schools get short-changed . . . but most white Americans live in smaller and poorer places where schools leave almost as much to be desired as in the ghetto."

also come from poorer homes and do worse on tests of academic ability Black schools in the urban North also tended to have somewhat older buildings and smaller play areas. In other respects, however, black and white schools proved surprisingly similar. Later analyses, while largely confined to Northern urban elementary schools, have shown that schools which serve rich and poor children also have quite similar facilities, curriculums and teachers.

How could the conventional wisdom have been so wrong? The apparent answer is that claims of discrimination have usually been based on the obvious contrast between Northern ghetto schools and white schools in a few affluent nearby suburbs or in the city itself. In most (but not all) cities, the black schools get short-changed. What all such comparisons evidently ignore, however, is the fact that most white Americans live in smaller (and poorer) cities and towns, where the school facilities, curriculum and teachers evidently leave almost as much to be desired as they do in the big-city ghettos, where most blacks live.

MORE important, even, was the report's conclusion on the third proposition, the expected cause-and-effect relationship between inadequate school resources and low student achievement. In fact, neither black nor white children of a given family background did significantly better in schools with high expenditures, large libraries, accelerated curriculums and so forth. Coleman and his colleagues believed that pupils did slightly better in schools with experienced and articulate teachers, but even this difference was surprisingly small—and the evidence supporting their belief has subsequently proved to be rather shaky.

The report suggests—though it does not state in so many words—that black children clearly get less satisfactory schooling than white children in only one major respect. If a child happens to have a black skin, the odds are very strong that he or she will end up with classmates from impoverished homes and a plethora of learning and behavior problems. A child who attends such a school may be short-changed even if it has first-rate facilities and teachers. Most black sixth-graders, for example, attend schools in which the majority of their classmates are reading at the fourth- or fifth-grade level. This means that even if a black child has the ability to read at sixth-grade level, he will probably not be pushed to do so. The instruction in his classroom will be aimed not at him but at the laggard majority. Furthermore, there is reason to believe that children learn more from one another than from their teachers. If black children attend schools where this "informal curriculum" is based on a vocabulary half as large and on concepts far less abstract than in a white school, their chance of developing academic skills is reduced.

Coleman and his colleagues were extremely anxious to determine whether individual achievement was dependent on a school's social composition. After analyzing their data, they concluded that it was, but that a child was influenced by his classmates' social class background and aspirations rather than by their race. This implied that a poor black child would *not* benefit from attending school with poor white children, but that he *would* benefit from attending with middle-class children, black or white. Coleman and his colleagues also tentatively concluded that black children were more sensitive to peer influences than white children. This implied that a black child would benefit substantially from integration, while a white child would suffer very little. The apparent effects of integration were always small, however, relative to over-all differences in achievement between races, socio-economic groups and individuals.

If differences between schools do not account for most of the observed differences in achievement, what does? By far the most important factor measured in the survey was the ethnic and socio-economic background of the individual child. In addition, there is a strong association between children's achievement levels and their attitudes. Among black children in particular, there is a marked relationship between their achievement and their personal sense of control over their own destinies. Yet even when family background and attitudes are taken into account, more than half the variations in individual achievement remain completely unexplained. Whether this

"If improved student achievement is our goal, the report's implication is obvious: We must alter the whole social environment in which a child grows up rather than just tinker with the schools."

reflects unmeasured genetic differences in aptitude or unmeasured differences in environmental influence is a matter for speculation. One thing it did not seem to represent, however, was unmeasured effects of differences between school environments. The survey showed that the differences between the best and the worst pupils in the same school are invariably far larger than the differences between the best and the worst schools. Indeed, eliminating all school-to-school differences would only reduce the total variation in achievement by about 20 per cent. This does not definitely prove that schools have no role in generating inequality, since there could theoretically be systematic discrimination against certain kinds of pupils within most schools. Still, it is hard to believe that within-school differences play a large role in inequality when between-school differences play such a small role. Coleman and his colleagues therefore concluded that the major reasons for unequal academic achievement must lie outside the school.

THIS brief summary of the Coleman Report's major findings hardly does justice to the voluminous text, but it does suggest why the report became a major focus of political debate. The report was published at a time when America was vacillating between two different strategies for helping the disadvantaged. Some people advocated racial and socio-economic integration of the schools—and of the larger society. Others argued that integration was unattainable, undesirable or both; the only realistic strategy was to accept segregation and make black schools as good as white ones. The Coleman Report implied—though it did not say explicitly—that *neither* strategy would help achievement much. But insofar as anything was likely to work, the report seemed to indicate that integration was a better bet than what had come to be called "compensatory" education. Yet at the same time the finding that parental interest and pupil attitudes were strongly associated with achievement seemed to give oblique support to those who believed that parental participation and/or control over all-black schools might make a critical difference to student achievement.

"Teachers in schools for the disadvantaged are probably right in feeling that what their children need first is not academic skill but such 'middle-class' virtues as self-discipline and self-respect."

The report's conclusions were inevitably subjected to stringent and sometimes extravagant criticism. The report had been prepared in great haste to meet the Congressional deadline, and the authors had had no time to examine many obvious objections to their tentative conclusions. Skeptics have been able to offer a variety of speculative reasons why the report's conclusions might be wrong, and those who have political reasons for wanting to discredit or ignore the report have naturally found such speculations very persuasive. For the past two years I have been part of a group of Harvard social scientists trying to determine whether any of the hypothetical objections to the report's conclusions are actually correct. My judgment is that the report's broad conclusions were sound, even though many of its specific methods and findings were wrong.

One common criticism of the survey has been that more than 10 per cent of the school districts in the original sample refused to cooperate, including such major cities as Chicago and Los Angeles. Some districts evidently feared that the Federal Government would use the survey to prove they were discriminating against minority groups. Other districts—especially those being sued for *de facto* segregation—feared that minority groups would get hold of the survey results and use them in court or in the press. Some districts also feared that simply asking questions about sensitive racial issues might stir up trouble in the schools. In addition, many schools in nominally cooperative districts failed to return data because it was too much bother or perhaps—a more serious matter—because they had something to hide. As a result, complete returns were received from only about 60 per cent of the schools in the original sample.

There were clearly some small differences between participating and nonparticipating schools, and selective participation may well have led to a slight underestimate of the qualitative differences between black and white schools. But there is no reason to suppose that nonparticipation led to an underestimate of the relationship between school quality and student achievement. It hardly seems likely, for example, that the dynamics of education in Chicago and Los Angeles, which refused to participate, differ significantly from Detroit and San Francisco, which agreed to do so. On the contrary, the dynamics of education are probably much the same in one big city as in another. The problem of nonparticipation is therefore probably a nonproblem.

A second criticism of the survey has been that the information provided by the superintendents, principals, teachers and pupils in the sample schools may not have been accurate. This criticism arose largely because of doubt that black children's teachers and facilities could really be the equal of those given white children. Since the Office of Education made no site visits to check up on the accuracy of replies given by principals and teachers, no definite answer to this charge is possible. Data supplied by state departments of education suggest, however, that the principals' replies about facilities were probably fairly accurate. Direct interviewing of parents in two communities likewise showed that most (though not all) of the pupils' responses were reasonably accurate. And the replies of principals, teachers and students to similar questions show a fairly high level of internal consistency for most "objective" items. On the other hand, questions which involved subjective judgment of any kind did *not* elicit internally consistent answers. The results of such subjective "attitude" questions must therefore be treated with great caution.

A THIRD criticism of the report has been that the authors should not have concentrated on the determinants of verbal ability to the exclusion of reading, mathematics and general information. Those who believe that black people are peculiarly "nonverbal" have even argued that the decision to stress verbal ability was fundamentally racist. Unfortunately, black children did as badly on the tests of other abilities as on the verbal tests. Furthermore, while some individual children did well on one test and badly on another, schools as a whole either did well on them all or badly on them all. A Northern urban elementary school's mean verbal score, for example, correlated almost perfectly with its mean reading and math scores. Under these circumstances it hardly matters which test we use to measure over-all school achievement.

A fourth line of attack on the report has been more technical. The authors of the report employed a number of dubious statistical techniques and made a variety of mechanical errors in handling and labeling their data. But they also recognized that such errors were likely, given the extreme haste with which they worked, and they were generous in helping others reanalyze the data more meticulously These analyses have shown that while the report's broadest conclusions were correct, many important details were wrong. In particular, and contrary to what some critics have argued, the net effect of the report's various errors was to *under*-estimate the importance of family background and *over*-estimate the importance of school in determining achievement.

A fifth criticism of the report has been that the authors made unwarranted causal inferences from their one-shot survey, which by its very nature could reveal only patterns of association rather than prove causation. Two examples illustrate the problem.

The report uncovered a strong association between teacher verbal ability and student achievement in secondary schools. Though they listed a number of qualifications, the authors concluded that able high school teachers probably boosted student achievement. Yet the report's data could equally well lead to the conclusion that school systems were assigning able students to schools with able teachers, or that they were assigning able teachers to schools with able pupils. Since we know from experience that both practices are widespread at the secondary level, it seems rash to assume that there need be any direct causal link between teacher ability and student achievement to explain the observed association between the two.

Fortunately, these problems are far less serious at the elementary level. Students are allocated to elementary schools largely on the basis of residence, race and social status, all of which were measured in the survey. With luck and ingenuity the effects of such allocation can be discounted and the effects of various school characteristics can then be estimated. Since there is little evidence that student transfers at the elementary school level are based on ability (as distinct from family background), the mean achievement of first graders entering a given elementary school can also be used to estimate the mean initial ability of sixth graders in the same school. With these precautions, causal inferences are considerably safer than at the secondary level; and when these precautions are taken, it turns out that facilities, curriculum and teacher characteristics are even less important than Coleman and his colleagues supposed. A student's peers may, however, have a modest effect on his achievement.

Another instance of ambiguous causation was the association between attitudes and achievement. The survey showed, for example, that students who did well on achievement tests were more likely to say that their parents expected them to go to college. The authors concluded that parental expectations probably had an important influence on children's achievement. Yet it would be equally reasonable to conclude that children's achievement had an important influence on their parents' expectations. Most parents know that if their child cannot read competently, he is unlikely to attend college, and the child is likely to be aware of this attitude and report it when asked. This same difficulty arises with all the report's inferences about the effects of attitudes on achievement.

WHAT, then, is the present consensus about the policy implications of Coleman's survey? The answer is that no consensus exists, even among experts. My own judgments are as follows:

(1) The resources—both fiscal and human—devoted to black and white children's schooling are not dramatically different, except perhaps in certain parts of the South. Nor do we devote substantially greater resources to educating middle-class children than to educating lower-class children.

(2) Variations in schools' fiscal and human resources have very little effect on student achievement — probably even less than the Coleman Report originally implied.

(3) The report's assertion that peers have a consistent effect on achievement may or may not be correct. My guess, based on available data, is that peers *do* have an effect, but that it is relatively small.

None of this denies that unusually dedicated and talented individuals can create schools in which initially disadvantaged children learn a remarkable amount. But it does deny that the achieve-

"Coleman and his colleagues concluded that a child was influenced by his classmates' social class, background and aspirations rather than by their race."

"There is reason to believe that children learn mainly from one another instead of from their teachers."

ment levels of large numbers of disadvantaged children can be appreciably enhanced by spending more money, hiring better teachers, buying new textbooks or making any of the other changes that reformers normally advocate.

If improved student achievement is our goal, the Coleman Report's implication is obvious: we must alter the whole social system rather than just tinker with the schools. There is plenty of evidence that major changes in a child's social and cultural environment will affect his intellectual development, often dramatically. Bruno Bettelheim and others have chronicled the impact of the Israeli kibbutz on hitherto deprived North African and Yemenite Jews. Here in America we know that children raised on Long Island do far better, even in first grade, than those raised in Appalachia. Similarly, children raised in Jewish homes do better than those raised in Christian homes, even in the same city. And the World War II draftees who grew up in the America of 1917-1941 did far better on standard tests than the World War I draftees who grew up in the America of 1900-1917. Intellectual skills are, therefore, not just a function of genetic differences. But neither are they a function of school differences. If the Coleman survey convinces us of that basic truth, it will have served its purpose.

"The common assumption is that academic achievement is the most important objective of schooling. . . . Yet there is little evidence that it is critically important to adults in most walks of life."

Does this mean that we should simply let inferior schools rot? I think not. Good schools *can* make a difference —if we know what kind of a difference we want them to make.

Underlying the comments of most people who discuss the Coleman Report is the assumption that academic achievement is the most important objective of schooling, and that if school reform does not affect achievement, it is worthless. Yet despite much popular rhetoric, there is little evidence that academic competence is critically important to adults in most walks of life. If you ask employers why they won't hire dropouts, for example, or why they promote certain kinds of people and not others, they seldom complain that dropouts can't read. Instead, they complain that dropouts don't get to work on time, can't be counted on to do a careful job, don't get along with others in the plant or office, can't be trusted to keep their hands out of the till and so on. Nor do the available survey data suggest that the adult success of people from disadvantaged backgrounds depends primarily on their intellectual skills. If you compare black men who do well on the Armed Forces Qualifications Test to those who do badly, for example, you find that a black man who scores as high as the average white still earns only about two-thirds what the average white earns. Not only that, he hardly earns more than the average black. Even for whites, the mental abilities measured by the A.F.Q.T. account for less than a tenth of the variation in earnings.

WITH these observations in mind, go visit a slum school and ask yourself what the school is actually doing. You will usually find that it seems to share the employers' priorities. It devotes very little time to academic skills. Instead, the teachers spend their days in a vain effort to teach the children to behave in what they (and probably most employers) regard as the proper way. The teachers' ideas about proper behavior are silly in some respects. Nonetheless, they are probably right in feeling that what their children need first and foremost is not academic skill but such "middle-class" virtues as self-discipline and self-respect. It is the school's failure to develop these personal characteristics, not its failure to teach history or physics or verbal skill, that lies behind the present upheavals in the schools. And it is this failure to which reformers should be addressing themselves.

From this perspective the best index of a school's success or failure may not be reading scores but the number of rocks thrown through its windows in an average month. The Coleman survey does not speak to this question. ■

A Word to Black Students

Dissent

This is Mr. Rustin's adaptation of a commencement address he gave at the Tuskegee Institute on May 31, 1970. He is the executive director of the A. Philip Randolph Institute.

Nov - Dec - 1970

YOUR GENERATION has lived through a period of unprecedented upheaval. Most of you were only five years old when the Supreme Court declared school segregation unconstitutional. You were seven when a young black preacher named Martin Luther King emerged as the leader of the Montgomery bus protest. At eleven you witnessed the beginning of the sit-in movement in Greensboro, North Carolina, and for the next ten years—your adolescent years that were to shape the perspective with which you now look out on the world—you lived through a period in black American history more eventful than any other decade, including the decade of the Civil War. The March on Washington, the outbreak of large-scale violence in hundreds of Negro communities, and the rise of the Black Power movement—these events no doubt had their precedents in the March on Washington movement of 1941, the race riots of 1919 and 1943, and the black nationalist Garvey movement in the 1920s. But in the 1960s they occurred with a driving momentum that made the race problem the central issue in our national politics.

It is difficult to judge precisely what the effect of this experience with uninterrupted social protest has been on your generation (I am referring here to young whites as well as to young blacks). But I would not doubt that it has made the political consciousness of this generation sensitive primarily to what we may call *the upward arc of historical movement.* The problem is that such a consciousness finds it hard to come to grips with the reality that history consists of alternating periods of movement and stagnation, of action and reaction, of tremendous hope and enthusiasm, which can be followed by cynicism and exhaustion. I am not suggesting that this process is inevitable, though to a certain extent it does seem to contain an internal dynamic that operates independently of human will. What I am suggesting is that we must understand this process if we are to be in a position to influence it.

What we must first understand is that the pendulum of history has *already* begun to swing downward. It is impossible now to gauge the extent of this reaction. My own feeling is that the drift to the Right in American politics can be reversed if we do the correct thing. But we cannot escape the conclusion that, for the present at least, the conservatives have made important and ominous gains. They control the White House and, through the power of presidential appointment, have gained a majority on the Supreme Court.

WHAT IS HAPPENING today is not very different from what happened in the 1870s. At that time, the country had been through a period as turbulent as the one we have just experienced. The Civil War and its aftermath left the North with a moral

(Continued on page 581)

government to provide equal employment opportunities for blacks, and Malcolm, towards the end of his life, called for electoral political action as a means to correct unjust conditions.

THE LIKELIHOOD is that the force of reality will have its effect on today's young nationalists as well. The simple fact that masses of blacks are involved in the struggle for equality should temper whatever nationalist tendencies exist, because the need to deal with reality—finding allies in the white community, electing public officials sympathetic to the Negro cause, fighting for new laws and programs—will counteract the impulse to indulge in fantasy. Draper is entirely correct in pointing out that it is still too early to assess the real strength of the present black nationalist movement. "The returns are far from all in," he writes, "and it would be well to wait another five years before making any judgment on what black Americans really want. . . ." My own feeling is that despite the agonizing pressures under which so many blacks live, Negroes as a whole are too *sensible,* too concerned with their own self-interest, to reject realistic political strategies for the flamboyant and self-destructive activities of such groups as the Black Panthers. In the end, Negroes are like other Americans in that they desire simply a better life for themselves, "a place in the sun," as Malcolm put it, and such a goal can only be achieved if Negroes enter *and influence* the mainstream of American political life.

A WORD TO BLACK STUDENTS *(continued from page 496)*

burden it simply could not bear. It was far more interested in pursuing its own commercial interests than in advancing the welfare of Negroes in the South and, of course, the North also suffered from the disease of racism. All hope for black equality collapsed when Northern Republicans worked out a compromise with Southern Democrats in the disputed election of 1876. The Southern Whigs agreed to let the Republicans retain control of the White House, in return for which federal troops were withdrawn from the South and large subsidies were provided for the construction of the Southern railroad system. The Compromise of 1876 initiated the darkest period in the history of American Negroes. The system of Jim Crow was established and lynchings and terrorism became commonplace as poor Southern whites, embittered by poverty, were encouraged to unleash their wrath upon Negroes.

Things have not yet reached that stage today, but the parallels are frightening. The Southern strategy of the Nixon administration is based upon the same principle as the Compromise of 1876: namely, that Northern Republicans and Southern conservatives share common interests and together can rule this nation. I do not think it is possible to condemn too harshly what the President has done in the South in order to form this alliance. Indeed, I can think of no recent President who has more blatantly sacrificed the ideals of equality and racial justice for his own political ends. Nor is Nixon simply riding the wave of reaction. He is encouraging that reaction, for he knows that he became President because of divisions in the society, and that it is in his interest that these divisions grow wider. More specifically, he wants to see another antiblack Wallace vote in 1972, only this time he wants it cast for himself. This is the prime motivation behind the President's opposition to the extension of the 1965 Voting Rights Act, his nominations of Haynsworth and Carswell to the Supreme Court, and his clear message to Southern segregationists that the federal government will not oppose any efforts to roll back whatever advances had been made in school integration. By means of such acts he has helped foster a mood of confrontationism and racial hostility. He has profoundly and perhaps permanently alienated blacks, he has put the white moderates of the South on the defensive, and he has given a go-ahead signal to the reactionaries.

What worries me most about the present situation is that there has been a decline in the effectiveness of some of the forces that have traditionally held reaction at

PAGINATION INCORRECT

bay. In the case of the South, we have already seen how the federal government, formerly an ally in our struggle, has contributed to the resurgence of conservatism. Nationally, the progressive coalition of blacks, liberals, and the trade-union movement, which has been responsible for the major social advances since the New Deal, is now weakened by internal divisions. In part this is due to conflict between blacks and lower-middle-class whites. This conflict has probably been exaggerated in the press, but a disturbing amount of it *does* exist, primarily because of economic competition between the two groups. Such competition can be reduced to a minimum if an expanding economy provides enough opportunities for everybody. But today, partly as a result of the Nixon administration's disastrous economic policies, we are in a recession. Consequently, the likelihood is that there will be an increase in racial tension which will further eat away at the unity of the progressive coalition.

Finally, the dramatic events of the last few years seem to have totally disoriented a sizable portion of the liberal community. Many liberals have lost a sense of purpose and direction. The traditional goals of integration and the expansion of the welfare state are no longer thought to be feasible or even desirable. But they have found no goals to replace the ones they have cast aside, with the result that they have become politically immobile. A number of theories have been created to give this mood a forward-looking image, but it is really little more than an accommodation to the new conservatism.

BY NO MEANS do I want to give the impression that the situation is hopeless. There is a tendency today to anticipate the apocalypse. Such ideas are sheer indulgence, because even if there were any truth to them—and I do not believe there is—it would be our duty to act so as to prevent the worst from happening rather than to enable the fulfillment of our prophesies. Such moods can be harmful, for, as George Orwell has pointed out, "an effect can become a cause, reinforcing the original cause and producing the same effect in an intensified form, and so on indefinitely. A man may take to drink because he feels himself to be a failure, and then fail all the more completely because he drinks." Our struggle is too important, there is still so much that remains unaccomplished, that it would be a grave error were we to indulge in this "end-of-the-world" chatter.

The situation is not hopeless. There are progressive forces at work in American society that did not exist in 1876. There is, first of all, the militant desire for racial justice, which is shared by countless numbers of young blacks like yourselves. In the words of the civil-rights song, I don't think that anybody is going to turn you 'round—not now, not after we have come so far. Then there is the black vote, which in both the North and the South has become a major new factor in American politics. This vote has increased not only in numbers but also in sophistication, and in addition to the gains it has already won for blacks, it exercises a restraining influence on the scope and effectiveness of anti-Negro forces. The problems George Wallace had in the Alabama primaries should make this point eminently clear.

Last, there is the trade-union movement which, though much maligned from both Right and Left, remains the strongest bulwark against reaction. Let us be very clear that the civil-rights forces alone could not have defeated Haynsworth and Carswell. They succeeded only because they were allied with the trade-union movement, and it is this alliance, based upon mutual interest between blacks and labor, which offers hope for future progress.

Thus, there are factors working both for and against the achievement of full racial equality. In a very real sense, we are at a crossroads. If Mr. Nixon succeeds in carrying out his Southern strategy, then the commitment to equality, on which America defaulted almost 100 years ago, will again be deferred to some future

time. And if he fails, then we will be provided with an opportunity to resolve once and for all a central dilemma of American life—the relationship of blacks to American society and, in an even more profound sense, their relationship with themselves. Our task is to see to it that he fails.

If we are to have any hope of accomplishing this task, it is essential that we make an important distinction between issues of politics and problems in psychology. We should see this as a distinction between what we do in order to influence the political and economic relations in the society and what, in a more personal way, we do to achieve self-knowledge and identity. Now I do not think that these are hard and fast categories that totally exclude one another. A just society certainly encourages a healthy psychology, and individuals can find personal fulfillment through political involvement. But I think we must make this distinction, because in periods of great social upheaval—and we are living through such a period—there is a tendency to politicize all things, including scholarship, art, friendship, and love. The most extreme form of this total politicization is totalitarianism, a stage we have not yet reached. But even a moderate form of it can be dangerous since it can lead to a politics so preoccupied with psychological issues that the goals of political action are obscured and even rendered unobtainable.

AS YOU WELL KNOW, a great cultural revolt is taking place among many young black Americans. Young blacks are striking down the traditional symbols of racism. They are taking new pride in their cultural heritage and are demanding to be accepted as full and equal human beings. I think this is an exciting and creative social phenomenon, but it raises three political problems, which we must analyze carefully.

•The first is that in some instances the cultural revolt includes a demand for racial separatism, which is entirely self-defeating from a political standpoint. Translated into political terms, the cultural revolt too often expresses itself as a desire for self-determination. Now this is a very complex issue, with which A. Philip Randolph tried to deal almost 30 years ago. At that time, he acknowledged that "the Negro and the other darker races must look to themselves for freedom. Salvation for a race, nation, or a class must come from within. Freedom is never granted; it is won. Justice is never given, it is exacted." But Mr. Randolph did not mean that blacks should isolate themselves from broader political movements in the society. He followed that statement with these words of caution: "But Negroes must not fight for their liberation alone. They must join sound, broad, liberal, social movements that seek to preserve American democracy and advance the cause of social and religious freedom."

This should indicate a political principle that we must never forget. As long as blacks constitute only 11 percent of the population, any go-it-alone strategy is bound to fail. Separatism can only aid Nixon's Southern strategy which is designed to build a conservative majority on the basis of hostility to blacks. In this sense separatism is the opposite of self-determination, because it can lead only to the continued subjection of blacks. Real self-determination can only be achieved by a unified black movement joining with other progressive social forces to form a coalition that represents a majority of the population. We must keep this in mind, if we are to prevent the black cultural revolt from playing into the hands of white conservatives and segregationists who are the very worst enemies we have.

•A second problem is that the cultural revolt has been accompanied by a growing tendency to justify, and sometimes engage in, violence as a form of political struggle. A clear distinction must, of course, be drawn between the violence of the oppressor and the reactive violence of the oppressed. Morally, the former is more

reprehensible than the latter. But we must also judge the use of violence by the oppressed from a *political* standpoint. The question here is whether violence is an effective form of political struggle.

I think it can be demonstrated that for a racial minority the use of violence is not only politically ineffective but counterproductive and even suicidal. Who benefits when blacks engage in violence? Do blacks benefit, or do George Wallace, Spiro Agnew, John Mitchell, and Richard Nixon? I ask this question rhetorically, since it should be clear that violence can do nothing more than produce a reaction against blacks that will strengthen our enemies and thereby make it impossible to achieve the things we so badly need. In the end it is not the black community that stands to gain from some of the more extreme activities of the Black Panthers and similar groups; it is the people who call for more police and less social spending. The problem is not only that violence obstructs the achievements of social change by strengthening the Right; it also obscures the very meaning of social change by offering the desperate adventures of a few "revolutionaries" as an alternative to the mobilization of political majorities, and by making it appear that killing a cop is a serious alternative to full employment. I am not here discussing the motives of young blacks who preach violence. But I do call into question the effects of their actions. If we are to think strategically about eliminating racial injustice, then we should not be satisfied with an approach that results in aggravating our problems.

•Finally, the third problem raised by the cultural revolt is that it has been exclusively preoccupied with racial issues and has thus tended to ignore other issues that are also vitally important. Ralph Ellison has written of his "struggle to stare down the deadly and hypnotic temptation to interpret the world and all its devices in terms of race." He wrote this as an artist who has devoted his life to portraying human reality in all its complexity. I would like, if I may, to apply Ellison's idea to the economic situation of black Americans today.

It goes without saying that Negroes are brutalized by racial prejudice and discrimination. What is not often remembered, however, is that were we to eliminate racism today we would have solved only part of the problem, and perhaps not even the major part. The fact is that we live in a society that not only tolerates a relatively high level of unemployment, but is willing to increase that rate in order to combat inflation. Automation is eliminating thousands of jobs that were held by both whites and blacks. This problem does not spring from blackness but from a technological revolution that has affected all poor people regardless of their race. We might psychoanalyze racism out of all the prejudiced white people in the country, but until we are willing to accept the principle that every able-bodied man or woman has the right to a decent and well-paying job, we shall not have begun to attack the economic roots of racial injustice. We need a social and economic program that will wipe out poverty, and we need that far more than we need pure white hearts. I do not mean to disparage the attack on racism, but if we do only that, we shall provide an out for those whites who are far more interested in "giving a damn" about impoverished blacks than in doing the economically more uncomfortable things that could eliminate hunger and deprivation.

I emphasize these economic problems for a special reason. You are part of an intellectual elite among blacks. As such, it is extraordinarily important that you not lose touch with the problems and aspirations of the great mass of blacks who are not part of this elite. In order to do this you must guard against the possibility of becoming concerned only with intellectual, cultural, and racial issues while the problems of lower- and working-class blacks remain economic. These millions of black people do not have the choice of withdrawing into the kind of concerns, sometimes mere fantasies, which are now prevalent among certain elements of the black intel-

ligentsia, and until they do have that choice, it is your responsibility to fight for programs that will enable them to achieve full economic justice.

I think it is also your responsibility, especially those of you who will go on to graduate work and university teaching, to protect the intellectual integrity of the university. In *The Souls of Black Folks,* W. E. B. DuBois wrote that the function of the university is above all "to be the organ of that fine adjustment between real life and the growing knowledge of life, an adjustment which forms the secret of civilization." You must help it perform that function, particularly in the controversial field of black studies. The study of the black experience in America is so vital to an understanding of our country and our people that it must attract scholars of the very highest intellectual eminence. We must not permit this promising area of study to become a refuge for charlatans more skilled at intellectual intimidation than investigation. For this reason it is essential that those students and faculty members who are committed to upholding the scholarly standards of black studies firmly refuse to accommodate anyone who would debase them.

WE ARE LIVING in a time of such rapid change that we must continuously redefine our terms and reassert those principles which seem to hold some truth. I do not regard as radical or progressive any black person who does anything that strengthens the forces of conservatism. I therefore do not regard as radical those who talk of separatism, however loud may be their words and however militant and controversial their actions. For all practical purposes, they stand with the opponents of our struggle. I do not regard as radical those who advocate violence only to bring about repression. I do not regard as radical those who moralize about the evils of white society, if at the same time they do not present a program that can solve the problems of black society. Nor are they radical who assume a revolutionary posture, but who then propose nothing more than an escape from American political reality and from the grinding social struggles that we must participate in. The real radical is that person who has a vision of equality and is willing to do those things that will bring reality closer to that vision. And by equality I do not mean "separate but equal," a phrase created by segregationists in order to prevent the attainment of equality. I mean equality based upon an integrated social order in which black people, proud of their race and their heritage, shall have no door closed to them.

In such a social order there will no longer be walls, representing fear and insecurity, to separate people from one another. Such walls, whether constructed by whites or by blacks, are built to oppress and repress, but never to liberate. I admit that most likely we will not achieve such equality next month, or next year, or even in this decade. But it is a goal that we must hold ever before us, even in the darkest of times, for it not only confers dignity upon our struggle, but it should indicate to us how we must act toward one another today if we are to preserve for tomorrow the possibility of a just society.

EDUCATIONAL RESOURCES CENTER OF MISSISSIPPI

Southern Regional Council

EDUCATIONAL RESOURCES CENTER OF MISSISSIPPI

ABSTRACT OF PROPOSAL

This is a proposal for the refunding of the Educational Resources Center of Mississippi Program. The funds are sought for the continuation of the effort to deliver a systematic approach of educational assistance to those persons, groups, organizations and institutions in the state of Mississippi.

The work program is designed to respond to educational problems peculiar to indigeneous Mississippi communities by fashioning solutions and giving meaningful insight towards resolving conflicts therein. It is a program to utilize an expertise in the identification and resolution of educational conflicts and to introduce the benefits, responsibilities and protections guaranteed by that system of laws inherent in the United States Constitution. To be sure, it is a planning, resources, information, assisting, organizing, technical assistance type of educational program.

The beneficiaries of a relevant educational resources program will be: Mississippi students, parents, persons, teachers, groups and administrators. The community, the towns, cities, counties and ultimately the nation will benefit. This proposal is for funding in the amount of $500,000.00 for a two year period, beginning June 1972 as follows:

1st year	$225,000.00
2nd year	$275,000.00

General Background

Mississippi has, for years been stereotyped as a backward, racist society. Though exceptions to this could always be found the stereotype was well earned. Professor James Silver wrote a book of considerable notoriety, entitled Mississippi: The Closed Society, which lists hundreds of specific incidents that reflect this understanding of the state.

In its past history, Mississippi has typically elected public officials who reflect the "Old South" image and rhetoric. This image and rhetoric has usually been backed by specific programs. For instance, although Mississippi now receives about $3 in Federal monies for every $2 that go out of the State, the hostility toward "Federal intervention and proposed takeover" has been manifested by such things as the fact that practically every OEO program in the State during the administration of Governor John Bell Williams was vetoed by the Governer, and required an agency override to be funded. This was true of the North Mississippi Rural Legal Services program and Statewide Head Start Program among others. Meanwhile, there has been general receptivity and support of things (apparently considered more "patriotic") such as military bases, the NASA test site, and the ship building industry on the coast which manufactures nuclear submarines and destoryers.

During his first term as Governor of Mississippi (1916), Theodore Bilbo created the Mississippi Illiteracy Commission, purportedly for the honorable purpose of raising the litaracy rate of the general citizenry. However, according to A. B. Lewis, elderly sage of the NAACP, the MIC was used through the years as

one more move in a series of moves to devise standards which would prevent black citizens from qualifying to register to vote. While absolute interpretations are not possible, it is noteworthy that "tests" were devised for black registrants requiring such impossible things as quoting lengthy portions of the State constitution, in order to be allowed to register. Mr. Lewis notes that tests for white registrants were required also, but the "meaning" of the consitution was sufficient for a white to pass. As recently as the early 1960's, Governor Ross Barnett reinforced this way of thinking in his nationally televised statement, "The right to vote is a great privilege, not to be intrusted to people who do not understand the importance of what they are doing."

Educational TV was allowed into the State only after much deliberation in the State Legislature. Chief objections to ETV centered around "Sesame Street" and the general feeling that ETV was subversive in nature. The issues continued until May 1970. (ETV has operated since 1968) In March 1972, it appears the State Legislature will again inhibit the growth of ETV by substantially decreasing the budget.

The 1970-71 school year was the first full year of school operation under a Federal mandate to desegregate totally. While the ensuing traumas did move many of the State's 150 school districts to a reasonably equitable ratio of desegregation, there was still massive resistance in various forms. Often the whites resisted desegregation and found diverse means of getting around the intent of the desegregation plan for their particular school districts. Blacks also were found resisting-sometimes they were resisting

the white resistence; sometimes they protested the Federal Court order or HEW plan which was discovered to have serious flaws. By the time of this writing, the reports of black teacher demotions and dismissals, abuse of Title I funds, curtailing of extracurricular activities in public schools, white flight to private schools and continuing white control of school districts are legendary.

In terms of minority citizens in Mississippi, about 40% of the State is minority (black, Choctaw Indian and others), which is the largest minority percentage of any state in the Union. The Choctaw Indian community of about 3,800 is located primarily in Neshoba County. There is a paucity of Chicano and Oriental people in the State. Most of the minority population is black, and the heaviest concentration of blacks is in the "Delta" (western part of the State, adjacent to the Mississippi River) and in the central part of the State. For instance, minority population percentages in Delta counties include: Tunica (80%), Wilkinson (71%), Coahoma (68%), Bolivar (68%), Washington (55%), Sunflower (64%), Sharkey (70%), Issaquena (67%), Clairborne (76%), Yazoo (60%). Of the State's 82 counties, 29 have over 50% black population, and an additional 19 counties have 40 to 50% minority population.

There is an increasing concern and awareness within the black community in Mississippi for education problems and ways to deal with them. While there are some organizations and leadership scattered throughout the State, there exists no unified effort to coordinate or communicate on a statewide level. Local groups often pursue their objectives without the benefit of the thinking and/or resources of other groups in the State which are faced or have been

faced with the same problems. While we can point to outstanding, and in some instances, sophisticated minority leadership throughout the State, the sphere of influence tends to be localized. (There would, of course, be a few exceptions to this, but they would be mainly political exceptions.)

THE PROBLEMS OF SCHOOL DESEGREGATION AS IT EFFECTS THE BLACK COMMUNITY

With the implementation of school desegregation orders in January, 1970, certain patterns began to develop that created new problems for Black people. Most of these arose out of the circumstances whereby all-white school boards and administrators were making the day to day decisions, while the Black community was still isolated from the decision-making process.

The prime problem is illustrated by the often expressed attitude of school officials in the Courts that the feelings of Whites must be taken into consideration in both the plan and implementation of desegregation to prevent their disillusionment with the system of public schooling. There has been a general feeling expressed that White dissatisfaction could lead to White withdrawal from the schools and a lessening of the public support for the system. Conversely, it has been assumed that Black people would live with whatever happened as they had no place to flee to. Because of these attitudes, several problems have arisen in the porcess of desegregation that Black people view as critical.

A. Bi-racial committees seem to represent poor Black people who have been excluded from policy-making in the past, while having Whites that are throughly familiar with the proceedures. It is also felt that the White members have the expertise of the school officials at their disposal. This has tended to polarize the committees (both those set up for school desegregation and those set up for Title I, ESEA).

For instance, one county school district was allocated $200,000 for Title I school programs. Of this, $160,000 was used for salaries. Ninety percent of the Title I coordinators in the State are White. Minorities are rarely well represented on local Title I advisory committees, and are generally not well informed as to what the issues are. A frequent experience by Black committee members (who sometimes are rather unsophisticated and unacquainted with such proceedings) is that the committee meetings are merely the time when a school official makes a report; their "advice" as committee members is not sought. In other words, their role is reduced to that of hearing announcements about what somebody else has already decided.

Bi-racial Committees have usually been rather ineffective in dealing with minority student and teacher problems. Reasons vary in different communities. Often the minority members of those committees are not truly representative of the minority community and are sometimes found to be as insensitive to minority student needs as White members.

Therefore, there is a great need for the development of means of the Black members to be able to acquire the expertise needed to make their presence on such committees viable.

B. Black people traditionally have had to rely on the press for their information on school matters. Most school boards have met on desegregation matters in executive session, and the Black community is unable to gain the necessary information to have any effect on the decisions. Therefore, there is a need for an agency that can gather and disseminate information to the Black community relative to their school system's status.

C. Black people have been alienated from the schools due to the desegregation process. Many schools have dropped extra-curricular activities, including those (such as P.T.A.) in which the whole community has tradition-

ally been involved. The school which had been somewhat a center of activity and infromation in the Black community then becomes a part of that alien White world. Therefore, there is a need to assist the Black community to become truly integrated into the school system, for it is only when they can come to share the feeling that the school is theirs can true education take place.

Minority people are in need of information and assistance in order to deal with the inequities of the educational establishment.

D. Many Black schools have been closed, and are not in use. Therefore, there is a need to enable the Black community to gain an input into the decisions that lead to school closings, and to gain a voice in the use of such buildings if they are closed.

E. Ability grouping (tracking) has resulted in resegregated classes in many integrated districts. Many Black students are tracked into vocational curricula, because of poor counseling services. Student Counseling Services often discriminate against minority students who are interested in college prep courses.

F. Black students are feeling the brunt of White hostilities in some instances. There have been some fights and there have been numerous misunderstandings of the cultural expression of Black students. Therefore, Black students need to find ways of developing for themselves coherent ways in which they can integrate a school without losing their identity as Black people and yet cope with the hostilities present in the political climate that now exists.

G. Curricular changes to accommodate Black students entering into the White system are not evident. Curriculum is typically unresponsive to minority student's needs. Revision is badly needed. Rhetoric on the part of most Blacks and White, without comprehension of the possibility

of well integrated multi-ethnic curriculum. There is a need for Black people to understand the curricular possibilities and for them to develop ways of bringing these into the structure of the school system.

H. Typically, even in school districts which have become virtually all-Black (such as Wilkinson County), the school board and top school officials remain White. The minority community experiences not only the insult of this situation, but also the unresponsiveness of Whites to the particular needs of Black students and teachers.

Black leadership in public schools is disappearing. Black teachers and administrators have been demoted, fired, or otherwise displaced in the desegregation process. As with student problems, teachers and administrative problems are endless in variety. See Appendix A for statistics related to teacher firings and demotions.

There have been numerous dismissals (or non-renewals of contracts) of Black teachers. (A number of Whites have left the public schools, also, but many of these have gone to the private academies or quit rather than teach Black children). Whether these teachers were dismissed by objective or subjective criteria is not the main issue. The overall effect on the morale of the community is poor. Teachers need to find ways to get together and sort out their problems, including ways to come up to the new standards, so that the school system can be truly inter-racial.

I. <u>White Flight to Private Academies</u>

While a cursory examination of this phenomenon may indicate only that it lessons the burdens on public schools, in Mississippi, State school officials have declared that State owned school books "follow the student," whether in public or private schools. While this is perhaps not inherently destructive, ERC has known of some instances where students in public schools did not have all their textbooks, while students in a nearby academy had a full supply of new, State provided, books.

J. Drop-outs

The drop-outs rate in public schools is averaging about 18,000 students per year for the past three years. This is not counting white flight to private academies or those who never attend school. See Appendix B.

K. Teachers Are Usually Unprepared to Deal With Integrated Classes.

In particular, White teachers often either ignore or display open hostility toward minority students in the classrooms. This is probably a result of traditional racial isolation which produces lack of understanding and lack of desire to understand.

L. Minority Students are Often Victimized by unfamiliar rules, insensitive White teachers and school officials, dual disciplinary standards, assignments to previously all-white schools where White school traditions continue, etc. The results include a disproportionate number of suspensions, disciplinary measures and expulsions. Of course, these outward, visible problems do not fully reflect the inward traumas suffered by the victims. Rarely is the minority student in a position of fully participating either in the system as it is, or in the determination of his own destiny in terms of how school will benefit him. Often, most or all extracurricular activities are discontinued in the "desegregated" setting, for the apparent purpose of minimizing inter-racial mixing of students.

II. THE STATE OF MISSISSIPPI HAS HAD EDUCATIONAL PROBLEMS ASIDE FROM DESEGREGATION

A. Several studies have shown that the status of Mississippi education is not up to the general standards across the country. The Booz, Allen, Hamilton Report of 1967 pinpointed many of the problems and indicated some of the immediate quantitative means of improving the situation. Although that report was the impetus for a large raise in teacher salaries, it did not effect much overall change in the educational system.

B. Mississippi remains on the bottom of the scale in most educational catagories, even today. It is further losing many of its finer teachers to other areas of the nation. A State Department of Education study released this year showed that over half of the education graduates from State Universities leave the state. Few teachers trained elsewhere come into the state. This is especially true of Black teachers. Thus, there has been a certain ingrownness and isolation of education in Mississippi that goes beyond the statistical problems.

C. Mississippi schools are further torn asunder by the general societal problems of race. This has lead to many systems trying to "professionalize" the school system, excluding the community from its natural role. While this avoids some of the confrontations, it inhibits the system from responding to the needs of all segments of the community.

D. Resistance to change has been evident in numerous ways. For instance, immediately following the 1954 Supreme Court decision (Brown vs. Topeka Board of Education), the Mississippi State Legislature repealed the compulsory school attendance law. To this day, there is no compulsory school attendance law in the state. At $534.00 per pupil per year, Mississippi spends less per pupil on education than any other state, except Alabama. Mississippi also receives 22.1% of its public school budget from the Federal Government, which is a greater percentage than any other state. Meanwhile, spokesmen for what appears to be

the majority of the White community have manifested severe hostility toward the Federal Government's "outside intervention" into educational affairs of the State. A positive and hopeful development, however, is the new administration of Governor Bill Waller and Lieutenant Governor William Winter. The Governor has stated that he hopes to "move Mississippi into the mainstream of American life."

III. THE EDUCATIONAL RESOURCES CENTER

Following the order of the U.S. Supreme Court on October 29, 1969, a meeting of people historically concerned about school desegregation was called under the auspices of the Mississippi Council on Human Relations and the American Friends Service Committee. Those in attendance felt that there were two crucial problems that must be dealth with: (1) maintaining White confidence in the public system; (2) maintaining Black integrity in the process of desegregation. As one result the sponsors of the meeting, along with many of the participants, held subsequent meetings that resulted in the formation of the Educational Resources Center.

The need for the Center was agreed upon by all concerned, but the concepts went through a long series of negotiations before a structure emerged. At base was the difficulty in negotiating a coalition take out among groups of teachers, parents and students that would be acceptable to all and that would not be weighed down by a cumbersome mechanism. After several months, a sturcture was arrived at and a board elected (see attached initial proposal of the Educational Resources Center to private sources).

The Educational Resources Center was established as a coalition of groups with an historical interest in school desegregation. It is a non-profit association of such groups, and is an agency that is not attempting to create new constituencies for itself. It has sought funds from private sources to begin operation. Funds have been forthcoming from Field Foundation, Aaron Norman Fund, Southern Education Foundation, and the Joint Foundation support. The Educational Resources Center relied upon such groups as the Mississippi Council on Human Relations, the American Friends Service Committee, The Washington Research Project, and

the National Council of Churches. With this support it was able to hire an initial staff and begin operation.

On April 1, 1971, ERC obtained a $105,000 grant from the Office of Education (ESAP). This grant allowed ERC to expand its service and increases its staff to include: One (1) secretary, One (1) research assistance, two (2) staff members, a Xerox copy machine and a state wide WATS line.

With four staff members. ERC was able to cover more school districts and service more groups throughout the state. See Appendix C for a comprehensive report of activities.

IV. BACKGROUND OF THE CONSTITUENT GROUPS:

Mississippi Teachers Association: This predominately Black professional association worked to achieve a merger (and intergration) with the predominately White Mississippi Education Association. However, despite their efforts and those of the National Education Association the merger could not be culminated. As a result the MTA is the only nationally recognized teacher organization in Mississippi. It represents the interests of 8,000 teachers.

The Delta Ministry: This agency of the National Council of Churches has had an educational program in the state for six years. It is a non-profit, non-membership, agency doing community service. It has worked in supportive roles in the community for facilitating freedom of choice, providing tutorial assistance, and helping organize people for the protection of their human rights. It played a large role in the uncovering of the maladministration of Title I, ESEA funds in Mississippi and has provided technical assistance to community groups on educational issues.

Mississippi Action for Progress: This agency has worked to develop local leadership in the Black community for three years. Working in majority Black areas of the state, it has given educational and technical assistance to the community as it tried to come to grips with its local problems.

NAACP: This organization is the oldest supporter of school desegregation in the State and has chapters in almost every county. From its membership has come many of the plaintiffs that have brought school cases to the federal courts.

In addition to these organizations, there are other agencies with which the ERC is associated. These agencies are relied upon for their

community contacts, their advice, and their technical assistance. Among them are several poverty programs, principally, Community Education Extension of Mary Holmes College, and Systematic Training and Redevelopment (STAR). All the major legal groups that have been involved in school matters have accepted on advisory role to the ERC: NAACP Legal Defense Fund, Lawyers Constitutional Defense Committee, North Mississippi Rural Legal Services, Lawyers Committee for Civil Rights Under Law.

V. BOARD OF DIRECTORS OF ERC

(Black) Robert Clark, House of Representative, two terms (5 years), Lexington, MS, Chairman of Board of Directors

(Black) Dave Rice, Director of Community Education Extension of Mary Holmes College (17 county area), Jackson, MS

(Black) Quentill Gipson, teacher, 10 years, Holly Springs, MS

(Black) W.A. Reed, Jr., Ex-teacher, Board of Directors of Mississippi Teacher Association, Meridian, MS

(Black) E.T. Hawkins, Ex-principal, 20 years, Board of Directors Mississippi Teachers Association, Forest, MS

(Black) Jake Ayers, Delta Ministry, Active in community organizing for 10 years, Glenn Allen, MS

(White) Rev. Rims Barber, Delta Ministry, Educational Coordinator for the organization for 6 years, Greenville, MS

(Black) Howard Gunn, Mary Holmes Junior College, Director of Extension Programs, 10 years in community involvement, Okolona, MS

(Black) C.J. Duckworth, Executive Secretary for Mississippi Teachers Association, 25 years involvement in education, Jackson, MS

(Black) H.M. Thompson, Prsident of MTA-NEA, 25 years in education, Jackson, MS

(Black) Richard Polk, Director, Tuff University Medical Center, 10 years in community organizing, Mound Bayou, MS

(Black) Alex Waites, Ex-Exectuive Secretary of State NAACP, 6 years, Jackson, MS

VI. RATIONALE

There has been good, but scattered, work done by local minority groups and leaders in the State, toward solving education-related problems. This is true for a variety of reasons, chielfly-lack of information, lack of resources, and lack of effective community organization. The result, with a few exceptions, is that either things just "happen to" the minority community, or local people find themselves in the midst of raw protest, and then call the Justice Department, hoping somebody will "make the man do right". Minority participation, it seems to us, must be stressed in order to deter this contemporary version of paternalism.

Good, solid minority leadership does exist throughout the State. But it is so fragmented and isolated that overall strength is dissipated. Consequently, problems continue in wide variety, and disenchantment with the system grows. It is no secret that by this point in history minority community has little faith in governmental agencies as a problem solvers and/or enforcers of the law (the court order, the Singleton Ratio for teachers, etc.) New solutions are being sought. We see this as a positive factor, moving toward a more independent posture in the minority community. Nevertheless, frustration within the minority community increases.

There are also problems with agencies in the State that deal with community and education-related problems. North Mississippi Rural Legal Services can operate only within the bounds of the Northern Judicial District. Community Legal Services can operate only within the boundaries of Hinds County. No such service exists in the Southern Judicial District (except Hinds County). Mississippi

Teachers Association has developed beyond their central office in Jackson, to five regional offices in the State, under what is called the Uni-Serv system. But focus is strictly on teacher problems.

It should be noted that even with strong minority leadership, little is known about the processes of negotiation. We know of instances where student and adult leaders have approached school officials with a view toward getting student demands heard. Initial frustration leads to threats, and often the result is embarrassment on the part of the demanding group, because they did not have access to such things as the court order, the Singleton Ratio, or other basic equipment (homework) that would have put them in a position of strength to negotiate.

Finally, we have discovered that minority leaders and communities are out of touch with each other. In effect, this means that the expertise of one is not available to the other; and common problems are rarely shared.

A communications and resources network would be a logical outgrowth of the type of involvement which ERC has had in Mississippi. A statewide constituency which was developed as a result of ERC's activities would be served by a network of resource agencies rather than by two or three ERC field representatives. Based on its past successes, ERC is the ideal agency to sponsor an effort to bring together minority constituencies and resource agencies in the State.

ERC has a professional staff which includes expertise in the areas of educational research and community organization. (See Appendix D for resumes) The Center provides field services of

negotiation, organization, concilation and technical assistance to local groups and serves as a clearinghouse of information.

Contacts with minority community throughout the State indicate an expressed interest in and need for a central resource center which increasingly coordinate various local, state and federal resources, act as a clearinghouse on educational information and provide technical assistance on education related problems to the minority community on a statewide basis.

The resources center which will be strengthened and supported by constituency and resource agencies will continue to provide services such as monitoring, information dissimination, referral, crisis, response, and conciliation in an effort to further develop this statewide network. The center will also provide a base in Jackson from which efforts can be coordinated to establish a working relationship with the State planning agencies and the State Department of Education.

VII. PURPOSE

To provide an information and support mechanism that will enable Black people to come into unitary school systems with integrity as contributors to the total education of the community.

To provide a mechanism of technical assistance so that the Black community can be better able to participate in decisions that affect the schools.

To provide a mechanism that will enable community people to respond to emergency situations, involving the schools.

To work for unifying efforts for educational change by facilitating communication and centralizing information within the Black community.

To carry out a program of education reform which will relate to and resolve problems having an impact on large numbers of persons.

To build better human relations and consistently and responsibly educate persons groups and communities relative to their human and cicil rights.

VIII. GOALS

A. To provide a mechanism through which consultant services and technical assistance can be made available to local community groups. To this end a wide range of consultants will be sought out and secured for conferences, institutes, and individual consultation. These services will upgrade the technical ability of local persons, heretofore isolated from the decision-making process, as well as provide the needed cross-fertilization to overcome a certain provincialism in both the community of the poor and the official educational community (especially in rural districts).

B. To develop State-wide coordinated network among those who are moving for educational change. To this end various coordinated activities will be developed for the dispersal of information and the exchange of ideas throughout the state. These services will enable a more conprehensive approach to the problems of integrating the school systems of the state with a respect for the integrity of both races.

C. To provide private alternatives to resources previously held in a monopoly by local and state educational agencies. To this end the total program will enable many persons to increase their

technical abilities, to establish independent channels of communication, and to break their dependencies on single sources of information and services.

D. To devleop models of coordination and cooperation that will strenthen the educational structures of this largely rural state. To this end it is hoped to strengthen community (parent) groups, teacher groups, and student groups, to the end that they can participate with the officials of their schools system in establishing models of good relations and involvement on a broad based level.

IX. OBJECTIVES AND PRIORITIES

A. To assist parent and community representatives on Bi-racial committees.

B. To provide information and training for community persons.

C. To develop models of programming and means of implementing models.

D. To monitor the implementation of desegregation as it effects the integrity of persons (as well as technically), providing linkage with official agencies for correction or improvement of methods of implementation.

E. To do research into educational change and ascertain the viability of concepts in the Mississippi situation.

F. To research and interpret new programs and policies of both state and federal educational agencies.

G. To provide teacher training from a Black and community perspective.

H. To assist teachers with problems of job security and competence.

I. To develop curricular ideas from a Black and community perspective.

J. To assist students to find ways of maintaining their personal and racial integrity within the context developing models of legal and peaceful relations within the unitary system.

K. To strengthen the relationships between the implementation of plans for a unitary school system and other programs. (principally those such as the poverty programs.)

X. PRINCIPAL ACTIVITIES

The activities to achieve the above stated goals and objectives will be divided into two major phases. Phases I will concern itself with establishing statewide networks of constituency and resources agencies. The constituencies and resources will be identified, selected and carefully prepared for participation in a workshop at which the resource agencies will address themselves to the problems of the statewide constituents. As a result of this process a network will be established by which actural services and assistance will be provided to the constituents on an ongoing bases.

Through the expanded staff of ERC Phase II will concern itself with the coordination of resource agencies towards better serving the statewide constitutents. This will be accomplished through the implementation of several major perfect activities (these

project activities are listed in Phase II).

These two phases can be better understood by viewing the following process chart.

PHASE I

(1) Develop a Constituency of minority leadership which can best represent the minority community within various areas of the and who will become a supporting constituency for the Resources Center.

Strategies

1. Educational Resources Center will identify local leadership which can best represent the minority constituency on education related issues and concerns.
2. Develop new contacts through community groups in selected areas of the State, not previously contacted, to futher identify grassroot groups and leadership to be involved in this process.
3. Selection of local leadership which can best represent constituents at a statewide workshop, and work toward the objective of being part of a statewide network or coalition of minority constituents by:
    a. Assisting prime contacts in each area of community to set up area meetings to explore educational problems;
    b. meeting with these groups and assisting them in identifying and recording their problems, educational concerns, and what resources they have already tapped in an effort to solve their problems;

c. Explain the education program concept and solicit feedback regarding a proposed statewide workshop;

d. Encourage the assembled groups to select one or two representatives to attend a statewide workshop.

4. Prepare these selected representatives for attendance at the statewide workshop, and their continuing role and responsibilities following the workshop. Arrange followup conferences with each of the representatives for the purpose of orienting the leaders to the function of the workshop and helping them articulate their communities' needs, in order that they might become active participants at the workshop.

(2) Assist resource organizations on the state and local level, concerned with minority problems in education, to form an alliance or coalition which can become a network of resources for ERC to channel to various local constituent groups.

Strategies

1. Identify various resources within the State which have specific programs and a sphere of expertise and services to offer constituents by:

a. Re-establishing contact by phone and/or personal visit with community resource groups and organizations in the State.

(Most of these organizations presently offer services only in a localized area. Such resources would include established organizations, ad hoc organizations, 10% ESAP groups, funded community groups, and of course, State and local resources, which would not

be part of the ultimate coalition sought.) Among those to be contacted are the following:

NAACP	CEE	Star, Inc.
MTA*	NAP	Central Mississippi, Inc.
TTC*	FOC	Prairie Opportunities
BEO*		

Delta Ministeries
Lauderdale Economic Assistance Program (Meridian)
Tri-County Community Center (Hinds, Madison, and Rankin Counties)
Choctaw Tribal Council (Philadelphia).

And seversl orgsnizations which recently received 10% ESAP funds:

Community Coalition for Public Schools (Jackson)
Jackson Education Task Force
Tougaloo College
Jackson State College
Coahoma Opportunitiew, Inc. (Clarksdale)
Meridian Student (Meridian)
Greenwood Community Project
Tombigbee Council on Human Relations
(State College/West Point)
Greenville Committee for the Support of Public Schools
Harrison County Community Action Agency
(Gulfport)

b. Ascertaining types of services offered by each group, and scope of activities and influence. (Many of these are already known.)

c. Ascertaining interest of various groups in being a part of a statewide network or coalition of resources, and of participating in a statewide workshop on educational problems.

2. Select those groups whose expertise and programs could be valuable to a wider base of constituents if it were made possible, and get them to participate in the statewide workshop. Review problem areas of the State, both as to geographical location and types of problems, and select service groups

who have had successful experiences in dealing with these types of problems, or will at least select groups that have had experience, positive or negative, in dealing with particular types of problems (students rights, dropouts, Title I violations, seregated classroom, failure to comply with Singleton Ratio in teacher hirings, etc.)

3. Prepare these resource organizations to attend the statewide workshop bv:

   a. Sharing data regarding specific problems and needs in various areas of the State, so that each participating organization can be prepared to address specific problems.

   b. Share survey data with State and Federal resources such as State Department of Education, Titles I (Compensatory Education), IV (Equal Education Opportunity), CRD, Office for Civi Rights, HEW, etc.

   C. Hold a planning meeting, ideally to include all participating service organizations, prior to the statwide workshop. This will allow for two way input-ERCM to the organizations, and the organizations to help plan the workshop.

(3) Conduct a statewide workshop which will bring together minority constituents and resources with a view toward establishing and maintaining a strengthened resources center, which will serve as a clearinghouse of information and technical assistance to the minority community statewide.

Strategies

1. Obtain consultant resources and regional and national education specialists to assist in conducting the workshop.
2. Encourage and assist participating resource organizations from within the State to form an alliance or coalition whose services can be made available statewide on a continuing basis.
3. Encourage and assist participating constituency representatives, following the workshop, so that they can become a viable network of communication and influence and help support the Resources Center.
4. Follow up after the workshop by encouraging and assisting resource and constituent organizations to stay in contact with each other and exchange information and ideas.

PHASE II

(A) Information Dissemination. Office staff will be developing research into the various programs and functions of school systems, and putting them into the form and language most readily understandable by the groups to be served. The field staff will be developing a network of local persons through which such information can be supplied to the areas of need. Materials will be dispersed by several methods: workshops and conferences, consultations, in-depth institutes, newsletters, pamphlets, and brochures. (See appendix E for further description of information dissemination.)

(B) Leadership Development. One of the prime objectives of the program during the initial grant period will be the development of those involved in the information network so that they can provide

educational leadership within their communities. This will be carried on through in-service training, workshops, etc. Such development of informed and responsible leadership will work for the long range stabilization of the unitary nature of the school system. (See appendix C for further description of leadership development activities.)

(C) Conferences-CRS Involved. One day conferences will be developed in consultation with community based organizations. Some of these conferences will be broad based for the purpose of providing information and linkage among persons faced with similar problems. Others will be on specific problem areas of concern to a limited category of persons, but state-wide in nature (i.e. Black High School students in majority White schools, teachers with integrated classes in history, parents on bi-racial committees, etc.). Such conferences will draw upon resources both within and without the school system, within and without the state. Primary costs for such conferences will be the travel and food of participants. (See appendix C for further description of conference activities.)

(D) Institutes and Workshops. The problems of adjusting to the newly integrated schools require a more in depth approach than just conferences. Therefore, week-end workshops and vacation period institutes will be developed for small groups. Such activities will focus on narrow issues such as curriculum development, teacher training, community relations, student rights and responsibilities, etc. It is assumed that an initial series of workshops will be held on a regional basis for members of bi-racial committees to strengthen their role. The primary costs of such activities will

be travel, housing and food for participants. Highly qualified consultants will be recruited for the leadership of these activities. (See appendix C for further description of institutes and workshops activities.)

(E) Consultations. Field staff will be assigned geographically and principally function as consultants to community groups within their areas. When specific problems arise outside consultants will be brought in to assist in such consultations. It is felt that this individualized method will be of the highest specific importance to community groups. (See appendix C)

(F) To continue to engage in research and work in pertinent areas connected with the educational needs of the poor. To improve both community and family living, special attention will be given to the problem of schools that expel students who become pregnant or demand they attend a special school for expectant mothers. An organized effort will be made to educate and inform students, parents, friends, ministers, counselors and school officials of the latest court decisions and model school board policies on this matter. The needs of early childhood education (Home Start) will be examined and explored. This same effort will be applied to areas engaged in high drop out and suspension activities. It is estimated that approximately 18,000. students will either be drop outs, suspended or pushed out of school. Further breakdown reveals that:

1. Black students leave at a rate of over 3 to 1 over students of Caucasian racial stock.
2. Students who project a sense of direction and leadership by speaking out for their rights and the rights of others are among

the first to go.

3. Students singled out as regular trouble makers are also among the first to be pushed out.

4. Student attitudes, devoiced from their academic work are factors in their ability to remain in school.

5. Student push outs and drop outs have developed into a major problem facing minority people and pregnant students in Mississippi.

6. Unmeaningful archaic curriculum, unjust treatment, bad teacher attitudes, home conditions, unfair grades, and economic overkill reflect other reasons for high drop outs and high push out rates.

(G) Students Rights Center to be established within ERC.

Propose

A. To inform students of their rights under law.

B. To organize a state-wide student organization.

C. To work on the prevention of student drop out.

D. To establish an on going newsletter for student involvement in education.

E. To study school codes and provide for changes in dress codes and rigid disciplinary rules.

(H) ERC will engage in a job bank. Special attention will be given teacher employment, and teacher termination problems. An organized effort will be made to educate, inform and secure jobs for teachers through the establishment of a job bank. An equal effort will be applied to school administrators and school boards to make them sensitive to the existing aims, and objectives of the job bank, and aid them in becoming more competent and legally aware to handle the problem of jobless teachers.

ADDENDUM TO PROPOSAL

The Educational Resources Center of Mississippi

PRINCIPAL ACTIVITIES

A. Information Dissemination

1. Types of information and materials to be disseminated.

a. Community Title I (ESEA) Manual - This is already developed but will be revised to include new regulations.

b. Teachers Rights Manual - This will be a cooperative enterprise of the National Education Association.

c. Students Rights Manual - This will be developed from most recent court rulings on codes of conduct and dress, as well as experiences from recent analysis of school problems in the state.

d. Bi-racial Advisory Committee Manual - This will be developed recognizing the current court order provisions and HEW regulations, and will include provisional models of operation.

e. School System Analysis - This will include desecriptive information on the operational structures of Mississippi school systems, incuding law and custom.

f. School Finances Manual - This will assist the laymen to understand the state, local and federal sources of income for schools, as well as regulations for catagorization of expenditures.

g. Models of Desegregation - We wish to locate particularly good systems where there are models that other districts could follow.

h. Models of Community Participation - We wish to uncover districts in which communities have had the best participation in the desegregation process, so that others can follow the example.

i. Curriculum Suggestions - This will be a compilation of curricular suggestions most appropriate to assisting school desegregation, written for both professionals and community laymen.

j. Analyses of Specific School Districts - On request of local groups we will investigate special districts, provide an analysis, so that people can better understand the problems of their district and begin to find solutions.

k. Legislative Changes - We will analyse the 1971 legislative session so that local persons can understand the changes that school legislation will make on their districts.

2. Means of Dissemination.

a. Field Staff Consultation - As materials are available, community leaders and groups will be apprised of their availability, and may request field staff to help them understand and take action based upon such materials.

b. Field Staff Presentation - As materials become available, staff will make presentations to organizations with which we have a relationship at either their staff or constituency meetings. Follow up consultations may then result.

c. Community Network - Materials will be made available on a regular basis to selected persons in communities. Mailings and phone communications will be maintained.

d. Conferences - (see 'C')

e. Workshops - (see 'D")

f. Institutes - (see'E')

B. Leadership Development

1. Identification

a. ERC has been in operation under private funding with a skeleton staff and has been identifying districts and persons of leadership within those communities throughout the fall term of this year.

b. Principal means of identification have been:

- County structures of the Mississippi Teachers Association;
- Staff and Boards of poverty programs;
- Community groups associated with civil rights oriented agencies associated with ERC (i.e. NAACP, Delta Ministry, MACE, etc.);
- Through list of advisory committees on ESAP and Title I applications.

c. With an expanded staff we will develop a network of persons, keyed to their interests and the peculiar situations of their districts. Such a keyed list will facilitate communication and development of leadership patterns in which persons can find others of like mind and grow through sharing their experiences.

2. Community Workers

a. Some community workers will be selected for short term development around specific trouble spots. They will be engaged to develop fully a basic approach to the problems of their district in the hopes of building models for the solution of similar problems. These workers will receive in-service training of a concentrated nature from the field staff for the period necessary.

b. Local Research and Analysis Projects - Some community workers will be engaged to develop long term models that will enable the community to better research and analyse their problems. These persons will receive technical assistance and in-service training in their special field (i.e. Title I, School Finance, etc.). When a particularly good model appears, we will engage persons to analyse that model from a community perspective, in the hopes that they can become effective communicators of their own model.

c. Policy Development Projects - As one of the goals of ERC is to promote a greater participation in policy matters by Black teachers, parents and students we will engage community workers in districts where field staff has identified the greatest possibility of success for the building of models. Community workers will perform the on the scene organizational tasks to give the greatest continuity to the effort.

3. Field Staff Consultations (see'F')

4. Conferences, Workshops and Institutes

a. Conferences will be held to provide educational experiences for community persons on issues relevant to their school situations. Such issues orientation will help refine community approaches so that local groups can escape the mere protest syndrom.

b. Workshops will be held for identified leadership persons to provide an arena for cross-fertilization of their ideas and to further develop their expertise for positive participation in the affairs of their communities and schools.

c. Institutes will be held on a selective basis at the end of the 1970-71 school year to assess the results of the school term and to facilitate the move into year two of total desegregation through the maximum intelligent participation of community persons. It is expected that those participating in the Institutes

can provide a strong base for leadership from the community for sometime to come.

C. Conferences

1. Types of Conferences

a. Soon after receipt of funding we will call a Conference to bring together the widest possible range of persons for an assessment of the first semester of total desegregation;

b. Student affairs conference will be held to clarify for a broad based group the rights and responsibilities of students in the new school environment, as well as begin to link persons of similar situations (i.e. persons on integrated student governments, Black students in minority situations, students on bi-racial committees, etc.);

c. At the end of the 1971 State legislative session a conference will be held to apprise community persons of the changes in Mississippi law and its effect on their school districts.

d. A general conference on Professional Rights and responsibilities will be held for teachers.

e. A special conference will be attempted for those teachers who have been terminated, to discuss various alternatives open to them;

f. A conference on new approaches to curriculum and teaching (including the community relations aspect

of teacher-aids) will hopefully spotlight some of the new innovations now being tried and supplement such system sponsored efforts with a development of community support for a general upgrading of educational levels.

2. Structure

   a. Generally the conferences will be called State-wide, held in a central location (preferably Jackson) and be one day in duration. Conferences on education called by groups such as the Council on Human Relations have attracted from 200 to 500 participants. As some of our conferences will be limited in the scope of their interest, we would predict an average of 200 participants. Participants will be provided lunch (or reimbursement for lunch meal).

   b. General format will include one or two presentations of a formal nature (use of consultants), small caucuses or working groups (staff assisting), and plenary sessions with full discussions, panels of participants and possible resolutions.

3. Consultants

   a. Non-paid consultants will be drawn from the ranks of those who are working with us from day to day (i.e. lawyers, agency representatives) and from State and Federal offices.

   b. Paid consultants will be drawn, as the subject matter is applicable, from a wide range of persons knowledgeable in the field.

c. Some persons who serve as non-paid consultants will have their travel and expenses reimbursed.

D. Workshops

1. Types of Workshops

a. We currently are planning a workshop for Black school Board members, to provide information of their responsibilities and the law, as well as give them guidance as to the creative conduct of their only recently acquired office.

b. Bi-racial committee members are in special need of assistance. It is our purpose to first bring as many members together to share their experiences, to clarify the roles set down by the courts, and to make creative suggestions for building community support for schools, improving inter-racial education, and for establishing relationships with LEAs for greater community input.

c. Curriculum development is of prime importance in the new inter-racial situation. We intend to being students, teachers and parents together to develop ideas for progressive curriculums and strategies for implementation of such ideas.

d. Students are beset with new rules and regulations due to the actions of school boards following school desegregation. We hope to bring students together to strengthen their understanding of students rights and responsibilities, and to seek ways to bridge the gaps between students of both races.

e. It is imperative that we bring students, teachers, and parents closer together during this time period. Therefore we propose to have workshops that put combinations together that will enable these groups to find new relationships with one another, thus strengthening the educational process.

2. Structure - Each of the four regions will be alloted three workshops during the project period. Field staff, in consultation with the communities they serve and the director will make the decisions as to timing and structure of the workshops within their region. Meeting places will be found within the region for the workshops expected to last two days. Participants will be selectively invited from across the region, with each workshop to be of small enough size that all can receive the opportunity for maximum learning. Their expenses, including one over night will be covered by this project.

3. Consultants - Each workshop will be administered by a member of the field staff, with either the Director or his assistant in attendance as evaluator and observer. A primary resource person (consultant) will be engaged for the session. Such consultant will have to be knowledgeable in his subject matter, as well as being able to communicate with grassroots people.

E. Institutes

1. Types of Institutes

a. Teacher Enrichment - Teachers who demonstrate particular

potential at leadership ability within their profession, and appear to be in a position to help the transition period be more meaningful will be selected. The particular nature of the subject matter at the institute will be determined at a later date.

b. Student Leadership - Students who have shown special leadership capacity among their peer group will be selected. These students will receive intensive training so that their role within the school they attend will be strengthened. Priority will be given to the students on bi-racial committees and student councils.

c. Parent Involvement - Parents who have developed their leadership in community participation during the school year will be selected. Such community leaders will receive intensive training in matters relating to school policies, educational advancements, and community organization.

2. Structure - These Institutes will be of one week duration, either held simultaneously for the best utilization of consultants or separately for more in depth use of ERC staff. Each will be comprised of thirty leaders. The institutes will be held on a college campus, or similar facilities. All expenses will be covered by the program.

3. Consultants - Consultants will be engaged to hold seminars classes for the full week session to which they are assigned. It is anticipated that two consultants will be needed per

institute if held separately, but fewer if held simultaneously. The Director of the Project will be charged with prime responsibility for development and administration of this phase of the program.

F. Staff Consultations

1. Assignment of Field Staff

a. Indigenous persons will be recruited for the field positions, with an emphasis on their familiarity with the region, the people, experience in school matters and understanding of the goals of the program.

b. The State will be divided into four regions on a geographic basis. A preliminary division of the region is:

- The Eastern and Northeastern area (centered in Starkville, Columbus, West Point area) with 23 Counties. This has been an area in which teacher discrimination and tracking problems have been most severe.
- The Southeastern portion of the State with twenty counties, centered in the Hattiesburg, Laurel area, but stretching from Meridian to the gulf coast. This area contains the fastest growing municipalities.

- Central and Southwest Mississippi, comprised of 18 counties. It contains the largest district (Jackson), several majority Black districts, as well as some districts with peculiar problems due to their unusual desegregation plans.

2. Staff Competence and Division of Function

   a. One staff person will relate primarily to teachers and teacher organizations. He will, whenever possible, be an ex-teacher in the Mississippi schools. He will either have or obtain the knowledge necessary to assist teachers with problems of discrimination, curriculum, and relationships with both administration and community.

   b. One staff person in each region will relate primarily to parents and community groups. Whenever possible he will be recruited from the ranks of community leadership, with particular experience in organizations relating to educational programs. His principal function will be to assist community groups so that they can better function in roles vis-a-vis the administration of the schools to the end that the school-community gulf is bridged.

   c. One staff person in each region will relate primarily to students. This person must be young and have the ability to establish a trust relationship with students. He will be called upon to assist young people in developing their own sense of

identity, their own programs for improvement of their education, and in organizing to gain their full recognition of rights and responsibilities.

d. Together the three staff members in each region will form a team that will make collective decisions (in consultation with community persons and the director) so that the program becomes a complimentary one in which the divergent forces lead toward common goals.

3. Basis of Relationships with Local Communities

a. A principal means of developing relationships is through existing programs and agencies that operate on a State-wide basis. We are working with persons within such agencies, and will provide services as called upon by them or by their local constituencies directly.

b. We have developed a relationship with other potential grantees of emergency school assistance community projects, which leads us to believe that such relationships will continue. As they do we will provide services to compliment their programs as called upon.

c. Local leaders and groups have called upon the ERC for services as they have come upon situations with which they were having difficulty dealing. We anticipate that such "trouble shooting" at the request of local persons will continue and that it will develop into a more consistent longe-range pattern.

4. Types of Services

a. Trouble Shooting - Responding to complaints by local persons with services that include analysis, organizational assistance for the development of policy, and referral for specific problems to proper agencies if no solution is readily available.

b. Organizational - Assistance to local groups to strenthen their organization in both substance of their policy concerns and in ability to maintain cohesive efforts to bring about positive change.

c. Technical Assistance - Beginning with analysis of educational problems and school structures, we will provide the kinds of technical assistance that local groups need to enable them to more effectively cope with their individual situation.

d. Speaking - When called upon, staff will speak at various organizational functions to interpret both the models and the approaches to problems uncovered.

APPENDIX A

FOREWORD

The problems of Black people during the process of school desegregation brought together the Mississippi Teachers Association and several community groups to form the Educational Resources Center. Joining together we have worked to build integrity and maintain the humanity of everyone during this crisis for Mississippi schools, aided by the support of private foundations. As the problems defy superficial short-range solutions, our aim is that we can be equiped in the skills for the work of overcoming the problems brought out in this report.

This report is the product of our initial work to assess the problems we face and to seek ways for people to overcome the dehumanizing difficulties. The report relies heavily on the observations of our staff (and others who worked with us in their communities) during the early months of the school year, as well as on reports made by school officials to the Courts and HEW. We are most thankful for the guiding hand of Rims Barber, our chief consultant for this project. We present this report in conjunction with the larger South-wide analysis (in the preparation of which we participated) as a complimentary piece.

While our report zeroes in on the basic statistics of discrimination our concern is with the attitudes what they reflect. Racism is a disease that is stunting the growth of young people as they seek to fulfill themselves as a part of the human family. We here attempt to diagnose that disease by describing the external symptoms and relating some feelings of the pain inside children, where the real learning is taking place.

RACISM AND THE DESEGREGATION PROCESS

The system of public education in Mississippi was developed and nurtured by interests that served racism and economic exploitation. That system provided for absolute White control of separate and unequal schools, that prepared certain Whites for becoming "cultured" managers of plantations and businesses while training Blacks for cotton chopping and fleeing to Chicago. Desegregation is forcing some external changes in that system, but its heart is where it always has been.

This study attempts to point out some of the factual data demonstrating that racism has not died just because a court ordered school desegregation. Most of what is presented is statistical in nature, for only that sort of racist behavior can be tabulated. Such data is indicative of the underlying attitudes toward children and learning held by those who control the schools.

The tables of statistics are of value only if we see behind them the people whom the schools are supposed to serve. For them, the realities that we find are:

- there is still a dual school system, with forty percent of the Black students attending separate and inferior classes;
- there is more White visible control as principalships are taken from Blacks and given to Whites;
- Black teachers are falling under increasing scrutiny causing some to have lost their jobs and others to maintain themselves fearfully and cautiously at the expense of their teaching creativity;
- young Black people (who have grown up in a new world because of the civil rights movement) are less likely to find teaching jobs as districts give preference to White applicants;
- the integrity of Black students is compromised by rigidity of discipline and by the loss of the symbols which once indicated that they and the school belonged to each other;

- the lessening of concern by public school officials who send their children to all-White private schools;
- the lowering of financial support for schools;
- the frustration of parents who feel isolated from schools, finding the fate of their children controlled by processes in the courts and in HEW from which they are excluded.

These realities are crippling the minds of children within institutions that should be opening minds to new freedom of creative thought.

LARGE REMNANTS OF RACIAL ISOLATION

In the Spring semester of the 1969-70 school year the first "massive" integration of schools took place. There was no adequate policing of the violations of the court orders and resegregation occurred in virtually every district. Two motions for contempt were filed, but no hearings were held, and the year ended with most Black children still getting separate education.

As the 1970-71 term opened, President Nixon boasted that 97% of the schools districts in the South were desegregated. All 150 districts in Mississippi were under orders to completely desegregate. No citizens' group can take the role of the federal government to police violations. However, we have found that over 100,000 Black children are still segregated. According to our latest figure 118,101 Black students are in classes that are more than 90% Black. We feel safe in claiming (based on this partial survey and allowing for a maximum error) that over 40% of the State's 270,000 Black students are in such circumstances. The Tables that follow list school districts in which we know practices exist to segregate students. In some we have the exact figures. In others we know of the practice but have only approximations, rounded to the nearest hundred (taken from observations and previous enrollment and average daily attendance figures).

Some seven thousand students are re-segregated by U. S. Government approved provisions in desegregation plans that allow for free choice either by everyone or by Whites only (called "minority to minority transfer"). In such districts Whites are clustered in "their" schools, leaving no change in the Black schools.

Over thirty-three thousand remain in segregated schools because of zoning provisions contained in the orders to desegregate. Despite Administration rhetoric, most of these 25 school districts would not require <u>any</u> additional busing to accomplish full desegregation. (Most are small towns or rural areas that bus most of their students anyway).

White flight has caused a number of districts to become virtually all Black, while all but two retain total White control of the decision-making process. As Whites flee to private academies, they establish a new dual school system (public and private) both controlled by the same people.

The final element is one of tracking, or in some cases, arbitrary segregation within the school buildings. This type of segregation is the most difficult to uncover, but it is the most damaging to those who see the demeaning aspects staring them in the face all day long. Unfortunately we feel that the discovered districts represent a growing pattern that relegates many Black children to inferior classroom situations.

These isolated students represent 44% of the State's 270,000 Black students. Giving a reasonable margin of error on approximations, and on slipage from the 90% standard this represents in excess of 40%.

Mississippi also has 260,000 White students in its public schools, as well as 40,000 or more in private segregated schools. The segregation cuts two ways, with many Whites isolated from the fullness of Mississippi's society.

VISIBLE CONTROL OF SCHOOLS

Most Black students formerly attended schools that were all-Black and that had Black persons as principals. To Black students they provided a symbol of leadership, of accomplishment. Moreover, they allowed Black children to grow up without facing White control everyday (although almost all of the institutions of their society are controlled by the White community), giving an opportunity for growth at an emotional distance from the discriminators.

As the school districts complied with the school desegregation orders, many Black schools were closed, putting Black students into formerly White schools. This tendency is most pronounced in areas that were trying hard to keep their White students enrolled. As a further bow to the prejudices of the White community, Black principals were removed from the positions of symbolic leadership, and Whites were installed in their place.

The Tables that follow show that half the districts surveyed have no Black principals at all, and that only 43 of the remaining 206 principals are Black. It is only in the districts that are overwhelmingly Black (over 80%) that we find more Black principals than White. It appears that the State has lost about half of its visible Black leadership from the public schools, and that most Black children will now grow up in a visibly White-controlled world. (An HEW/OCR report confirms, giving 52.9% loss of Black principals in their onsight compliance reviews).

THE INSTITUTIONAL POINT OF CONTACT: TEACHERS

The treatment of teachers under the new desegregation plans give key indications as to the manner in which education is regarded and transmitted to students. Teachers have historically been in pivotal point of the educational system.

Under the old segregated system of education teachers were recruited by the principals of the schools, both Black and White. Black principals had their own recruiting system in the all-Black colleges; Whites had theirs. According to a State Department of Education publication Teacher Supply and Demand, 1969 the Black colleges in Mississippi supplied 897 new teachers and the White colleges supplies 903 new teachers. These teachers were recruited by principals for the schools of their perspective races and merely approved by the Superintendents and Boards. Similarly, the principals at the end of each school year passed to the Superintendent the list of persons he wished to have retained for the following year, and contracts were issued.

The control of teacher recruitment and placement, as well as the determination of contract renewal, is now in the hands of the Superintendent. His actions are presumably governed by the Court orders and compliance agreements under which his district is desegregating. The standard provisions in both court orders and compliance agreements are:

> "the district shall assign the staff so that the ratio of Negro to White teachers in each school, and the ratio of other staff in each, are substantially the same as each such ratio is to the teachers and other staff, respectively, in the entire school system.....the school board will develop or require the development of non-racial objective criteria to be used in selecting staff ... staff members will be hired, assigned, promoted, paid, demoted, dismissed, and otherwise treated without regard to race, color or national origin."

In our survey of districts, we found that those school districts which have over 90% Black students are in a category by themselves. In these areas, most White teachers have left, although a few have remained (a number of these

remaining White teachers have their children in private schools, which calls into question their commitment to public schools and to the children they purport to be teaching). Most of these districts had increases in the number of Black teachers, and heavy losses in White teachers. Their faculties averaged 74% Black before desegregation and now average 86% Black. Only one has an all Black faculty.

We also found that those districts that had under 20% Black students were peculiar in nature. Only one of them hired any new Black teachers. All had a smaller percentage of Black teachers than of students. The systems were almost entirely White, being very selective about their Black employees.

The major portion of our survey, therefore, concentrated on those districts that had from 20 to 90 percent Black students. We looked for statistics on:

a- loss of Black teachers;

b- how many Black teachers left the school system and how many were hired new;

c- how many White teachers left the system and how many were hired new;

d- the relationship of Black to White in school districts;

e- the relationship of Black teachers to Black students.

On the average, from our cross section, there was a loss of 11.3% of the Black teaching force. In 43 districts with 1,839 Black teachers in 1969-70, there were only 1,630 in 1970-71. That is a net loss of 209. In thirty-three of those districts, for which we have full figures, 237 Black teachers left the employ of the district and 161 Black were hired new. This is a net loss of 76 teaching positions (32%) of Black people.

Analysis to eliminate the districts which either gained Black faculty or lost White faculty, yields 17 districts which gained 282 White teachers while losing 90 Black teaching positions.

Nine districts hired more Blacks than they let go, while 24 districts eliminated 107 of the 193 slots vacated by Black teachers. In the nine districts that gained Black teachers (31) there was a gain of 78 White teachers.

Seven districts lost White teachers (58), Gulfport absorbing half of those losses. The corresponding districts lost 17 Black teachers. Not counting Gulfport, the losses were proportional to the racial ratios of the districts. The losses by those districts mean that the other 26 districts actually gained 360 White positions.

Seven districts failed to hire any Black teachers, while no district failed to hire some Whites. Even in the majority Black districts there was a loss of Black teaching positions (43) while there was a White gain (8).

There is a differential between the racial make-up of the student body and the racial make-up of the faculty. In majority Black districts the percentage of Black teachers in every case is less than the percentage of Black students. The differential ranges from 1% to 29%, with eight of the 13 having a differential of over 10%. A similar differential of 10% appears in districts from 34 to 49 percent Black students. In the under one-third Black districts there appears the only one district that has the same percentage of students as teachers, and the only one that has a higher percentage of Black teachers than of Black students. If we were to add enough Black teachers in these districts to make the ratio of Black teachers to Black students the same as the overall pupil-teacher ratio we would have to hire 487 teachers, or an additional 29% to the already existing 1,691 Black teachers.

Beyond these factors, we found several strong tendencies:

- In districts with schools that are racially indentifyable, Black teachers are assigned to Black schools out of proportion to their district-wide ratio;
- In districts with tracking Black teachers are isolated in all-Black and lower tracks branding them (as well as their students) as "inferior";

- Evaluation standards and racial prejudice tend to make Junior High faculties less highly rated than Senior Highs. They also tend to make Junior Highs more Black in faculty composition than High Schools. (A survey of 13 districts showed High Schools with 29% Black faculties and Junior Highs with 40% Black faculties.
- Several of the reports appear to have listed Black substitutes teachers in their racial breakdown of faculties.
- When White teachers refuse to transfer to formerly all-Black schools they are not forced to do so, either changing the ratios in the formerly Black schools, or enabling districts to employ Black substitutes in positions they are holding open for White applicants.

* on the following tables, some districts did not have 1969-70 figures available, and 1968-69 were used in their place.

Poverty Focus Rapped For Special School Aid

WASHINGTON (UPI) — Sending out federal money for the disadvantaged in education on the basis only of poverty figures is going wide of the mark, Rep. Albert H. Quie, R-Minn., said.

In the text of a Chicago speech for the American Association of Colleges for Teacher Education, which Quie released in advance in Washington, he said, "Many children who need services are not getting them, because the distribution formula assigns federal aid on the basis of figures which measure a poor substitute for educational need, and then compounds the error by using 14-year-old figures."

He said one study showed only 21 per cent of the children doing badly in reading are in families making less than $3,000. About 44 per cent were in families making $3,000 to $6,000 and the remaining 35 per cent were in families making above $6,000 Quie said the study showed.

In math, the distribution is quite similar, Quie said. "We are probably not even reaching the minimum figure . . . of 21 per cent of the children with deficiencies in reading and mathematics."

QUIE SAID he will introduce legislation next week to change the Elementary and Secondary Education Act to target the $1.6 billion for the "educationally disadvantaegd" on the basis of a system of testing. Giving tests to a nationwide sampling of children would "establish relative needs among the states" and show where the most money should go, he said

1-WAY STOP

Youth Slain In Gun Battle In School Hall

RICHMOND, Va. (AP) — A 17-year-old boy was killed and a 14-year-old girl wounded today when caught in a gun battle between two youths in a high school corridor, police said.

Authorities said the shooting started during a quarrel between two youths just before classes were to have begun at Armstrong High School.

Police said the dead pupil, Wayne Phillips, 17, had been struck by a bullet in the back of his neck.

Felita Julia Gardner, 14, was struck in the left leg but was not believed seriously wounded. She was taken to a hospital.

Witnesses told police that the gunfire began after two black youths, believed to be pupils, became embroiled in a quarrel just inside the entrance to the predominantly black school.

Authorities said the youths — one standing just inside the school door, the other 15 feet away in the corridor — suddenly drew pistols and began firing.

Police said as many as five or six shots may have been exchanged. Frightened students scurried out of the hallways.

Witnesses said the two youths responsible for the shootings then fled out the school's main entrance. They were being sought.

Police said Phillips, a white pupil, was standing near the entrance and may have been hit by more than one bullet. He was dead when officers arrived.

The Gardner girl, a black, reportedly was walking in the hallway about 25 feet from Phillips when she was hit.

Classes began as scheduled, although some parents came to the school to withdraw their children temporarily.

BEING IN THE MINORITY

The increase in visible control by Whites and the assimulation of Black students into schools that are majority White, poses problems for many Black children across the State.

Many students merely find themselves in a new world with no Black anchors to hang onto, as they try to adjust. They are faced with new standards, new teachers, new rules, new curriculums. Even if the Whites are non-racist in their treatment, Black students have a hard time adjusting.

For many the adjustment is made more difficult by other losses. Student leaders are by-passed. Black students can participate only as minority members in activities that have a White tradition. In some cases, they are even excluded as new rules keep them from participation in extra-curricular activities. For others, they must learn to sing "Dixie" (both actually and symbolically) if they wish to participate in what they consider a normal part of school life.

For most students the discipline is tighter, as almost all districts used new discipline regulations as part of their sales pitch to Whites, whom they hoped to keep in the public schools. Such measures materially change the educational atmosphere.

In a different sense, there are Whites that are now in the minority in schools. It is a hopeful sign that numbers of poor Whites, unable to attend private schools, are now going to schools that are eighty and ninety percent Black. While this offers some long range hope, there are current problems for these students. They must face an adjustment to their new world, knowing that while they are White they have no direct representation on governing bodies. (Our survey uncovered no poor Whites on bi-racial committees; no parents of students attending 90% Black schools on school boards).

FINANCIAL SUPPORT

While there is no overwhelming pattern we found that many school districts in which White flight was taking place also were lowering their local taxes for schools. Millage rates dropped in most majority Black districts, with Wilkinson County dropping the most (9 mills) making it the lowest in the State. However, the State provides most funds for current expenditures. It appears that schools will have to rely more and more on State and Federal funds for their continued support. In the long run this shift in financial support can do little else than cause schools to become a low priority with the average tax-paying citizen.

SOME CONCLUDING OBSERVATIONS

- It is not enough to find that Superintendents of schools are not acting with affirmative good faith to create schools where all have their integrity preserved and their common humanity enhanced so that Black and White children may grow together;
- It is not enough to find that the Federal establishment has done material damage to the minds and spirits of children (both Black and White) by conspiring to put off the possibilities of such learning;
- It is not enough to condemn the court system for its failure to deal forthrightly with failures to meet a constitutional standard of law and justice in a manner that would insure the rights of all.

We therefore make the following recommendation:

1. That a rule of law be established that no device may be employed by any district that allows schools or classrooms to vary more than 10% from district-wide student ratios;
2. That no school or teaching level may vary in its ratio of teachers from the district-wide student ratio;
3. That conditions of employment and advancement be subjected to EEOC regulations, and that a Philadelphia Plan for educational employees be enacted;
4. That students rights to participate meaningfully in the decisions affecting their education be legally recognized and enforced;
5. That new procedures be developed to insure that all unrepresented groups have their share in the affairs of the schools (not merely given advisory status) so that the schools can belong to and serve the total community.
6. That both the Courts and HEW treat school officials as "civily guilty" and require payment of their debt to society in strong affirmative actions;

Ed Cobb

Dear Glenda and Patt:

On behalf of the education coalition please accept our thanks for editing "It's Not Over in the South". We appreciate your efforts in undertaking this assignment given the difficult constraints of time.

We are getting request for the report and have mailed out over 1,000 copies in this first week. We are very pleased with the printing job and are grateful to you for your efforts which helped make this such an attractive looking report.

Again our thanks.

Sincerely,

Winifred Green, Director
Southeastern Public Education Program

JUL 10 1972

Dear Emory:

Here, finally, is the manuscript I promised to send you. After I talked to you, saying that it only needed re-typing, I grew unhappy with what I had and ended up revising it extensively.

I passed along to Elijah your request that he not rush into print until you have a chance to make suggestions. I shall appreciate being saved from any boners.

If you hear of anyone who wants to buy the movie rights, just let me know.

Best regards to Margaret and David.

Sincerely,

Ed

MEMORANDUM

TO : Education Coalition

FROM : Cindy Brown

RE : ESAP II Continuing Resolution

JUL 2 1972

Congress, at the request of HEW, has voted a continuing resolution from July 1 through August 18 for ESAP II. HEW tells me between $12 and $14 million will be available for extending both LEA and Community Group (CG) programs which run out prior to January 31, 1973. All ESAP II projects are eligible as long as they don't or won't have any money left when their grant expires. They all should have received telegrams informing them of this. This money will be available only for personnel and minimal operating expenses. LEAs and CGs must submit new amendments to their old project applications by July 28. Time is so short because OE must have the money obligated by August 18. (There may be another Continuing Resolution, but they can't operate on that assumption.)

George Rhodes told me that this extended funding is a pretty technical procedure. All projects should get more money as long as they clearly are out of money and there has been no prior move by OE to suspend or terminate their funds. There will be a review panel consisting of two program officers and a grants management office.

There is one snag which you will see in paragraph (2) on the first page of the enclosed material. Grants which have gone beyond their ending date (and this probably includes those ending June 30) are eligible for continued funding but will be hard put to justify continue paying for its staff. Seems a bit contradictory and confusing so we will have to see how they interpret it.

Enclosed is a copy of the OE stuff sent to all the Regional Commissioners. This should be a fairly routine affair. Let us know right away if it isn't.

Enclosure

MEMORANDUM

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE
OFFICE OF EDUCATION

TO: Regional Commissioners DATE:

THRU: Assistant Commissioner
Regional Office Coordination

FROM: Herman R. Goldberg
Associate Commissioner, Equal Educational Opportunity

SUBJECT: Program Policies and Procedures for Continued Funding of ESAP II Projects under the Continuing Resolution (H.J. Res. 1234)

Background. Congress at the request of the President has provided for continued funding of ESAP II projects. The purpose of the funding is to conserve valuable staff personnel and program momentum that could otherwise be lost before these grantees could be considered under the new ESAA program.

Eligibility. Only ESAP II projects that have not been legally terminated are eligible. The Continuing Resolution does not authorize any new activities. Those ESAP II projects that have gone beyond their ending date, i.e., a six-month project started in December 1971, are eligible but the criteria for continued funding of on-board ESAP II staff would be difficult to satisfy in these cases.

Compliance. The regulations and assurances of ESAP II still apply and are binding on requests for amendment. OCR will have a signoff requirement for all applications.

Need for Assistance. Applications for amendment shall be reviewed to determine the need for additional Federal funds. The extent to which grantees utilized funds to achieve their stated objectives in 1971-72 school year should be carefully considered. The Regional Commissioner shall be responsible to insure that these amendment funds are not being used to supplant other sources of funding.

Authorized Activities. The Notice for the Federal Register especially the quote from the committee report accompanying H.J. Res. 1234 should be reviewed. The intention of this amendment procedure is to provide continuity of ESAP II staff personnel through January 31, 1973. Only existing staff and those existing essential operating expenses that are necessary to properly utilize those continued personnel will be considered for funding. Regional Commissioners should assure themselves that the grantee does not have any residual funds to continue the project prior to recommending the granting of FY 1973 funds. Any questionable expense should be resolved in favor of the minimum expenditure of FY 1973 funds.

Application. Grantees should be encouraged to submit applications as soon as possible. The application instruction booklet encourages them to submit prior to July 28, 1972. Because of the shortness of time, no specific cut-off date should be set. You are urged to process any application received in time to allow you to have it in OE/Washington by COB, Thursday, August 10, 1972. A checkoff list of all ESAP II grantees should be used to record those that have applied. Those grantees that have not applied by July 28, 1972, should be contacted and indication made on the list of their status. A copy of this list should be submitted to OE/Washington by COB August 10, 1972.

Handling Procedures

1. Five copies of application received by Regional Office Control Unit (ROCU)

2. ROCU does following:

   a. Checks for original signature

   b. Marks off grantee on receipt list

   c. Assigns ESAP II project number with "-A"

   d. Distributes copies

      (1) Case file

      (2) Regional Contracting Officer (w/signature)

      (3) EEO Program Office Review Member

      (4) EEO Program Office Review Member

      (5) To SPO for later signature by Regional Commissioner and transmittal to OE/Washington

3. OCR shall provide the SPO with a list of all ESAP II grantees in the region. This list shall be marked for each grantee whether in compliance or not. This list shall be delivered as soon as possible, but no later than COB Monday, August 7, 1972. Any changes after that date shall be made to OCR/Washington for transmittal to OE/Washington.

4. A review panel, composed of, as a minimum, a representative of the Regional Contracting Office and two EEO Program Officers, shall review each application for amendment. This review panel shall agree on a common

budget figure for the grantee. By such procedure as the Regional Commissioner sets, this common budget figure shall be forwarded to the Regional Commissioner.

5. The Regional Commissioner shall deliver to OE/Washington before COB, Thursday, August 10, 1972, the following:

   a. A checkoff list of all ESAP II grantees (see above)

   b. A copy of the OCR compliance/noncompliance list

   c. A copy of each application with the recommended budget figure and the Regional Commissioner's signature (only pages 1 and 2)

   d. A summary list by State of the recommended funding amounts. This list shall include:

      (1) Name of applicant

      (2) Dollars recommended

      (3) Number of full-time employees covered

      (4) Recommended dollars per employee

      (5) Summaries of items (2), (3), and (4) for each State

   e. PGIS forms as indicated below.

6. Two copies of PGIS Form 688 will be supplied to the Regional Offices prior to August 1, 1972. The Regional Office is required to correct the three items starred on the attached sample form (hand printing is satisfactory):

   a. Date received

   b. Starting and ending date requested

   c. Amount requested

   The form with these three items will accompany the package to OE/Washington no later than August 10, 1972.

7. The Regional Commissioner shall forward, by phone, to OE/Washington no later than Monday, August 7, 1972, the projected amount of funds needed for each State. OE/Washington will transfer funds to cover those projections during that week.

8. OE/Washington will notify the Regional Offices of the decision on approval of the Regional Commissioner's recommended funding levels by COB Monday, August 14, 1972.

9. The Regional Commissioner will be responsible for Congressional Notification and notification to the applicants of the action taken on their application. The Regional Contracting Officer should have the funds obligated prior to August 18, 1972.

10. During the week of August 21, 1972, the second PGIS Form 688 shall be sent to OE/Washington with the following information (x-ed items on attached sample):

    a. Amount of grant award

    b. CAN number

    c. Approval starting and ending date

    This information may be hand printed as was the first PGIS form.

SUBJECT: General Notice for the Continuation of Emergency School Assistance Program FY 1972 (ESAP II)
ACTION MEMORANDUM

Enclosed is a proposed General Notice for the Federal Register that will provide for the continued funding of currently operating ESAP II projects under H.J. Res. 1234, the Continuing Resolution.

Two program limitations are set forth in the notice:

1. Only ESAP II projects (those funded in fiscal year 1972) will be eligible for continuation funding. (450 LEA's, 140 community groups)

2. Only minimum funding will be approved, primarily personnel, to carry the project from its expiration date until January 31, 1973, through the first semester.

TAB B

Discussion. On June 29, Congress passed H.J. Res. 1234 to allow continuation funding of ESAP II projects in existence in FY 1972. We interpret Congressional intent as consistent with the statement in the General Notice that only those ESAP projects funded in FY 1972, i.e., ESAP II, will be continued. The ESAP I (FY 1971) projects that still have active grants due to delays and extensions (no additional funds in FY 1972) will not be eligible.

The grantee's request for an amendment will be reviewed by the Regional Office with clearance by OCR and forwarded to Washington with a funding level recommendation

by the Regional Commissioner of Education. Present projected expenditures are less than $18 million; how much less will depend on the financial status of the ESAP II grants at the end of the 71-72 school year. Expectations are that funds will be available in the ESAP II grants as originally issued due to inability to immediately go to full staffing levels last fall and winter. These "extra" funds will be used to extend the grantee before any new FY 1973 Continuing Resolution funds are obligated.

The Continuing Resolution expires August 18, 1972. Even though an extension is likely, continuation grants under the resolution will be completed prior to that date in an effort to ease the uncertainty of the personnel situation.

Because of the tight time frame in which we are operating, public participation in the formulation of the rules in the Notice is deemed impracticable.

Recommendation: It is recommended that you sign the attached General Notice and that it be placed in the Federal Register as soon as possible.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Office of Education

Notice of Continuation Funding Under the

Emergency School Assistance Program

The Commissioner of Education hereby gives notice to local educational agencies and community groups which were awarded grants under the Emergency School Assistance Program (ESAP) in Fiscal Year 1972 that, pursuant to the authority under P.L. 92-334(H.J. Res. 1234 (July 1, 1972)), and in accordance with the regulations in 45 CFR Part 181, the Commissioner will consider applications for amendments to such grants to support program activities through January 31, 1973.

During fiscal year 1972, the Commissioner carried out a program of assistance to desegregating local educational agencies to assist such agencies to meet special needs during the 1971-72 academic year incident to the elimination of racial segregation and discrimination among students and faculty in elementary and secondary schools (45 CFR 181.2). If local educational agencies and community groups receiving

ESAP grants in fiscal year 1972 were unable to continue projects during the period prior to the implementation of the Emergency School Aid Act (ESAA (Title VII of P.L. 92-318), valuable staff personnel and program momentum would be lost before consideration could be given to continuation of these projects under the new legislation. Moreover, the critical need of these agencies (and related groups) for ESAP assistance will continue during the interim period. Commenting on the general responsibility of administrators under the Continuing Resolution, the committee report accompanying H.J. Res. 1234 stated:

> Officials having responsibility for managing programs during such interim periods are not - certainly should not be - unaware that the whole thrust behind these measures is to do only the minimum necessary for orderly continuation of activities . . . Continuing resolutions have by design always been drawn rather broadly, counting heavily on administrators to follow a prudent and cautious course . . .

(see 118 Cong. Rec. H. 6184, daily edition, June 27, 1972).

Assistance under the resolution will be limited to local educational agencies and community groups which received ESAP grants in FY 1972 pursuant to 45 CFR Part 181 for projects which will expire prior to a reasonable opportunity for consideration of applications for the continuation

of such activities under the new legislation. Applications for project amendments should be focused on essential project components involving staff continuation needs.

Applications for amendments will be processed in the order in which received. The continuing resolution expires on August 18, 1972; accordingly those wishing to continue such activities should submit applications therefor as far in advance of that date as possible in order to be assured of consideration.

In view of the necessity to consider and process applications for assistance prior to August 18, 1972, public participation in the development of this notice is considered impracticable within the meaning of 5 U.S.C. section 553(b).

Effective date. This notice shall be effective 30 days after publication in the Federal Register.

Dated: July 10, 1972

U.S. Commissioner of Education

Approved: July 10, 1972

EMERGENCY SCHOOL ASSISTANCE PROGRAM

Instructions for Submitting Project Amendments to the Fiscal Year 1972 Emergency School Assistance Programs

July 1972

Local Educational Agencies
Community Groups

U.S. Department of Health, Education, and Welfare
Office of Education

July 11, 1972

Title VI of the Civil Rights Act of 1964 states that "No person in the United States shall, on the grounds of race, color, or national origin, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance."

INTRODUCTION

At the President's request, Congress has passed a Continuing Resolution for continuation funding of the fiscal year 1972 Emergency School Assistance Program (ESAP II). This action will allow the U.S. Office of Education to amend those ESAP II projects, both LEA and community group, that were funded in the 1971-72 school year. Under the Continuing Resolution those ESAP II grantees whose projects expire prior to January 31, 1973, may apply for an amendment to allow continuation of those minimum essential needs in existing ESAP II programs until January 31, 1973.

The funds available under the ESAP II Continuing Resolution are not to be confused with the funds expected to be available under the new Emergency School Aid Act (ESAA). Money has not yet been appropriated for ESAA.

Activities funded under this ESAP II Continuing Resolution will focus on retaining present ESAP II staff personnel and those existing essential operating expenses that are necessary for proper utilization of those staff personnel. New activities, additional staff, capital outlay, and use of consultants will not be funded under this Resolution.

ESAP II grantees desiring to submit a request for an amendment should submit five (5) copies of the application to the Regional Office as soon as possible and no later than July 28, 1972. Applications received after July 28, 1972, may not have sufficent time for complete processing by USOE prior to the expiration date for the Continuing Resolution.

Applicants are reminded that this is an amendment to their original ESAP II grant; it is not a new program. As such the regulations and assurances that applied to the original program are still in effect. These regulations and assurances are considered binding on these amended programs.

These amendment funds are intended to conserve valuable staff and program momentum that would be lost before the ESAP II

projects could apply for projects under the new ESAA legislation. An applicant should not feel that requesting or failure to request this amendment will have any bearing on his eligibility for consideration under the new ESAA program. Nor should an applicant expect that approval of this ESAP amendment request is any indication of an intent to fund that applicant under ESAA. ESAA is a new program with new regulations and new criteria for application review.

Amendment forms and other materials are available to ESAP II grantees upon request from your nearest Regional Office:

SECTION I APPLICANT INFORMATION

The application represents a request for funds and must be certified by the Superintendent of Schools or his authorized representative; or, in the case of community groups, the authorized official of the eligible sponsoring agency. This official is responsible for the accuracy and completeness of the information contained in the application.

Item 1. Enter grant number assigned by Regional Contracting Officer in initial ESAP II grant.

Item 2. Enter the legal name of the applicant agency (Local Education Agency) (Community Organization).

Item 10. The contact person is that person designated by the applicant agency to serve as liaison in negotiating the request for Federal funds.

Item 12. Enter the amount of funds requested in this amendment, not the initial ESAP II request.

Item 13. Starting date will normally be the date of the day following the expiration date of your current approved ESAP II project as it has been extended in prior negotiations with the Regional Office. Ending date will be no later than January 31, 1973.

Item 14. Enter date that your agency sent a copy of this amendment request to the State Education Agency. This must be done by both LEA's and community groups. This is for information only to SEA's about amendments to already funded ESAP II projects. Approval of amendments is the responsibility of the U.S. Office of Education.

Item 15. Review by Advisory Committee. Advisory Committees for both LEA's and community groups shall be given ample opportunity to comment on these amendment requests. Comments shall be attached. If the Advisory Committee refuses to supply comments, the authorized official signing in Item 17 shall attach a statement explaining why, and stating the number of days that the Committee had available for comment.

Item 19. Full-time employees are as defined by the individual applying agency.

SECTION II AMENDMENT NARRATIVE

Top priority for amendment funds will be given to continuation of staff presently employed under ESAP II projects. Essential operating expenses that are necessary to properly utilize continued staff personnel will be considered next. It is in this section, the Amendment Narrative, that the applicant must justify these latter expenses. Activities by the continued staff directly involving LEA students will be the focus of this area. Applicants are cautioned that the Office of Education views these amendment funds as extremely narrow in scope, therefore, the applicant should arrange the items in this narrative in order of the applicant's priority.

The amendment narrative will be reviewed by USOE Program Officers and Contract Officers. The narrative must be limited to no more than two (2) pages.

SECTION III BUDGET PREPARATION

Section III of the amendment form contains a program activity budget outline which presents a summary of amendment requests stated in terms of general cost categories and activities.

Timely completion of successful budget negotiations and issuance of an amendment award document will depend, in large part, upon the adequacy and clarity of the grantee's individual cost items and amounts. This must cover every negotiable line item in the most recently approved project budget.

Section III is divided into two subsections. Subsection A is for local educational agencies. Subsection B is for community groups.

Subsection A (LEA)

LEA's should complete the summary budget page for the sum requested in this amendment.

The cost categories listed along the left side of the Budget Outline are taken from Handbook II, Financial Accounting for Local and State School Systems (OE-22017). Applicants are advised to refer to Handbook II in developing their budget breakouts.

Each of the seven activities across the top of the Budget Outline for which funds are being requested should have a separate breakout of the expenditures in the various cost categories. Those accounts that have expenditures falling in more than one program activity should prorate the costs. Detailed breakouts should be provided for each cost category. These breakouts should be on the forms provided.

The budget breakout forms provided are to be submitted on each program activity (those seven (7) general areas across the top of the budget outline page) that has a presently authorized figure. Note that this will require preparation of lines on some items for which an amendment is not being requested but this is necessary for USOE to properly evaluate the total additional funds that will be required to carry the approved items until January 31, 1973.

Subsection B (CG)

The community groups should list the sums requested in this amendment following the same guidelines used in the original ESAP II request. Detail breakout of these sums should be on the forms provided (see following comments).

Budget Breakout Forms (LEA and CG)

Both LEA's and CG's should fill out the detail budget breakout sheets.

Activity. Complete the blank with the name of the activity from the ESAP II budget page. Example: Special Community Program or Facilities Rental. Use separate sheets per activity. Where necessary, continue on other sheets, totaling only activity totals. On a final sheet, summarize the activity totals.

Column I Budget Line Item. List the account number, noun name, and line items. Example:

200 Instruction
213 2 Teachers
214 5 Teacher Aides
Instructional Supplies

List items in the same order as previously submitted and approved.

Column II Current Approved Budget Amount. List opposite the appropriate line items the latest figures approved by the regional contracting officer. All items must be accounted for as the total of Column II must equal the 1972 ESAP II grant award.

Column III Unencumbered Funds Balance As of 6-30-72. List opposite the appropriate line items the unencumbered funds (funds not spent or obligated) as of the above date. For salaried personnel, list only funds spent as of 6-30-72.

Column IV Total Funds Required to Carry Line Item to End of Presently Approved Grant Period. Estimate the total funds per line item that will be necessary to complete the activities in the present grant period.

Column V Balance Anticipated at End of Grant Period. List per line item the anticipated balance of unencumbered funds at the end of the present grant period. Minus figures should be in parentheses. Example: (125.00)

Column VI Total Needed to Carry Line Item from End of Grant Period to 1-31-72. List the cost per line item to carry program activities desired through the above date. Minus figures should be in parentheses.

Column VII Requested Supplement. Subtract Column V from Column VI and record the difference. Minus figures should be in parentheses. The total of Column VII should equal the total of Column V from the total of Column VI and be the same as the amendment funds stated as requested on page 1, Section I, Number 12 of the application.

UNIONS and COMMUNITY COLLEGES

RWDSU

Vol. 26 #2 2/73

By ALEX BILANOW

Trade unions are playing a growing role in the nation's community, or two-year, colleges.

Craft unions in Coos Bay, Oregon, for example, got together and founded Southwestern Community College to remedy a shortage of skilled workers in that area.

Genese Community College in Flint and Macomb County Community College in Warren, both in Michigan, are now operating apprenticeship training programs in cooperation with the United Auto Workers.

The International Association of Machinists has close ties with City College of Chicago. IAM officials serve on the college's advisory board and a number of skilled IAM craftsmen serve on the faculty.

At Coolidge, Arizona, Central Arizona Community College offers training courses for heavy equipment operators. The school uses members of the Operating Engineers to teach them.

In Los Angeles, that city's trade union council works closely with LA Technical College, providing curriculum know-how and instructors for courses in carpentry, painting, masonry and other construction crafts.

In other cities across the country members of the Teamsters, American Federation of State, County and Municipal Employees, Painters and many other unions are involved, in one form or another, with the community colleges in their areas.

If the involvement is not by having union leaders serve on the colleges' advisory boards, or having members of the unions working as instructors, then it is by enrolling union members themselves, as well as their sons and daughters.

Of the 2.7 million students enrolled currently in the nation's 1,120 community colleges, the bulk come from the families of workers. These young people are striving for a better way of life by "going to college." Usually, their parents are unable to pay charges at four-year institutions.

Most community colleges charge $250 to $350 per year tuition and in some states, like California, tuition is free.

At the same time, the two-year institutions provide an open door into the four-year colleges. The American Association of Community and Junior Colleges (AACJC), based in Washington, D.C., estimates that about one-third of the students who graduate from a two-year college go on to enroll in a four year university.

Labor Involvement Encouraged

The AACJC, whose membership includes nearly all public and private two-year colleges, wants to see more labor involvement.

"When you think of unions representing working people, you can say that community colleges serve the working man. We have that in common with unions," said Andrew Korim, an occupational education specialist with the association.

"There is a definite role for unions to play in the training and education programs of community colleges, and we would encourage labor to expand that role," he added.

Another AACJC official, William Harper, pointed out that community colleges stand today as the fastest-growing part of the nation's educational establishment. An estimated 20 to 30 new community colleges will be founded during this year. The Carnegie Commission on Higher Education estimates that at least 230 more two-year colleges will be needed by 1980.

"With that kind of growth on the drawing boards, we'll be needing all the help we can get from unions and union members," Harper said.

"That help can take many forms—duty with college advisory boards, technical assistance in setting up training and apprenticeship programs, helping enrollments through establishing trade union scholarships, and even, as voters, in supporting bond issues to finance the colleges," Harper explained.

The two-year college, he noted, is an American invention. It is hardly new, having been around since the turn of the century. But for years, it languished in the shadows of the four-year universities. In rank, it hardly stood taller than the average high school.

The first public community college, according to AACJC historical records, was organized in 1901-02 in Joliet, Ill. Joliet College was built on the campus of the University of Chicago.

Educators at the University of California, meanwhile, were promoting a new educational reform—establishment of post-graduate studies in public high schools. This was gradually carried out. However, rather than stressing technical education and training, the schools tended to focus on liberal arts.

The community college movement grew slowly until the 1950's and 1960's. In 1920, there were 207 such institutions operating, only 70 of them publicly-supported. The total grew to 673 in 1960, with an enrollment of 660,216. In 1965 there were 771 community colleges, enrolling 1,292,753 students. Five years later there were 1,091 community colleges with a combined enrollment of 2,499,837. While the explosive pace of the growth has ended, the growth is nevertheless continuing, although at a slower rate.

Community colleges are now located in every state. In a number of states, like California, Kentucky and Florida, they are the keystone of the state's higher education systems.

Florida Adds Something New

California now has 93 community colleges. Florida has 27 and Kentucky 22. In Florida, something new was added several years ago—a two-year college offering a student his third and fourth years of schooling.

Florida now has four so-called "senior" colleges. Another 26 have been established in other states.

Community colleges pride themselves on their open enrollment—anyone is allowed to enter, usually with or without the "good grades" from high school that most colleges make an entry requirement.

"We feel that if a kid goofed off in high school—perhaps he was more attentive to playing football than he was to studying—then he deserves a chance for another try, if he's got the stuff," Harper said.

The institution also makes it a point to be a "part of the community" in which it is located. It tries to sink roots deep among the local populace.

If a group of citizens approaches their local community college and asks that a certain course be set up, like welding, or auto mechanics, or art or even cooking, then it can usually be done, and in a reasonably short time, too, say AACJC officials.

One North Carolina community college president recently set up a program of classes in remedial reading and writing when a local poverty agency asked for help in reaching out to some town residents who had never been to school.

"We brought in one of the people from the community to teach the class. He knew the people and their problems, and they trusted him. It was an enriching experience for all of us," he said.

Some community college leaders urge that such colleges be established within a commuting bus ride of any resident in a city. That is one of the goals of the AACJC. With the help of the Higher Education Act recently passed by the Congress, the goal may become a reality.

The Act authorizes $275 million in Federal grants to community colleges over the next three years to start new institutions and enable existing ones to expand. It is the first time community colleges have been targeted for such a large chunk of aid. It is perhaps recognition by Congress, at last, of the crucial role community colleges are playing in opening opportunity's door to plain, ordinary people.

That's more reason why more labor organizations, and union families—both parents as well as children—should get "involved" in their local community college. It is union-brand democracy in action.

U.S. OFFICE of ED

THE NEW YORK TIMES, WEDNESDAY MARCH 7, 1973

Nominee as U.S. Education Head

John Renaldo Ottina

By EVAN JENKINS

The man nominated by President Nixon yesterday to be United States Commissioner of Education has a reputation among those who know him and his work well as a good manager, an honest boss and a decisive executive.

He is also considered, by detractors and at least some admirers, to be lacking in the kind of knowledge about education and grasp of its major issues traditionally associated with the commissioner's role as a spokesman for learning.

Man in the News

The nominee, 41-year-old Dr. John R. Ottina, has been acting commissioner since his predecessor and enthusiastic supporter, Dr. Sidney P. Marland, was made assistant secretary for education in the Department of Health, Education and Welfare last year. Dr. Ottina's appointment as commissioner, which requires Senate confirmation, has been expected.

Except for two years as a teacher in the public schools of his native Los Angeles, Dr. Ottina was not directly involved in education before he went to Washington as a deputy commissioner in December, 1970.

Educational Background

His own education is reflected in bachelor's and master's degrees from the University of California, Los Angeles, and a doctorate in educational psychology from the University of Southern California.

After the teaching stint, he worked for a time as a mathematical analyst for the Lockheed Aircraft Corporation and later for the Systems Development Corporation, a nonprofit research concern in Santa Monica.

Puts stress on his "on-the-job training."

His last post before he joined the Office of Education was board chairman and president of Worldwide Information Systems, a subsidiary of the King Resources Company of Los Angeles.

That background, distinctly different from the careers in education that have been typical of Federal commissioners, produced antagonism toward Dr. Ottina's expected appointment among education interest groups such as the National Education Association.

An associate who in general applauded the nomination had a similar reservation.

"We're in need in the nation today of an advocate for education," the source said. "I don't think he's an education statesman, and he doesn't have the contacts in the educational community that commissioners have usually had."

The associate praised Dr. Ottina, though, as a quiet, effective executive, "not afraid to bite the bullet" in difficult decisions, and one who "doesn't try to pass himself off as having any strengths but the ones he has —in research and management."

The source used a phrase that cropped up in several interviews about Dr. Ottina —"good manager." He added that the appointment seemed excellent to him at a time when Administration shifts and cuts in education spending required managerial skills in an agency whose record in that regard has been spotty.

Dr. Ottina's own response to the criticism about his lack of experience in professional education is that he finds it understandable. But he points to his early work as a teacher and to his research background, much of it related to educational concerns.

'On-the-Job Training'

"I guess the most positive thing I can add," he said, "is that I've had two and a half years of on-the-job training."

If he is confirmed in the $36,000-a-year post, Dr. Ottina will preside—under Dr. Marland and Caspar W. Weinberger, Secretary of Health, Education and Welfare—over an agency with a staff of 2,700 and a budget of more than $5-billion.

John Renaldo Ottina (pronounced Oh-TEEN-uh) was born Nov. 5, 1931, to Louis and Mary Maga Ottina, who still live in Los Angeles. He attended public school there before entering U.C.L.A.

His wife, whom he met after graduation from high school and married while they were college classmates, is also a former teacher.

The Ottinas live with their son—John Michael, 11; James Laurence, 10; and David Louis Lee, 8—in a four-bedroom, split-level home on a acre in Reston, Va. Mrs. Ottina described her husband as easygoing, an assessment shared by his colleagues, and handy enough around the house to partition the basement and finish part of it off as a poolroom.

Firm Finds New Quarters Give It Added Responsibility

NEWARK, N. Y. (AP)—Some 4,000 geese a day are getting a free food handout, thanks to a company that inadvertently found itself playing host to the birds.

When Sarah Coventry built its new headquarters here two lagoons were included in the landscaping. The following winter, officials discovered they were in the middle of a north-south flyway for Canadian geese.

Asa a result the company provides more than 10 tons of birdseed per year for the geese, which congregate in the lagoons for a rest period before continuing their southern flight.

(The hidden agenda)

This report does not touch on a number of important areas, such as the ~~in~~ the implications of the increasing polularity ~~o/f~~ of systems of alternative education; or the widespread presence of school boards and school officials ~~more sympathetic to private schools than to~~ whose alliegance is to private seg. ~~ac~~ academies rather than to the public schools (now all Black) they serve; or texts and curriculum that do not recognize Black history ~~and/non-western/civilization/and/contributions/~~ and contributions of Black civilizations and individuals (this ommission is greater in school ~~sch~~ that have achieved a racial balance, in most urban areas, since the majority then is white); or the implications of permitting cross-district transfers. Maybe many of these are rural phenomena, rather than urban.

Minority history in such a way [illegible]

~~As~~ Also, one wonders if the conclusions really can be documented, or if they are merely what we'd <u>like</u> for them to be. Do they plan to include specifics?

~~OF THE TWO SECTIONS MOST DIRECTLY ABOUT DISCRIMINATION WITHIN THE SCHOOLS, SECTIONS 7 and 8, DON'TREALLY~~

SECTION 8 IS PARTICULARLY NON-SPECIFIC IN THE SOURCE TO WHICH THE RECOMMENDATION IS DIRECTED, AND IT IS ONE OF THE ONLY TWO ~~RECOMMENDATIONS PERTAINING TO~~ SECTIONS PERTAINING TO DISCRIMINATION IN THE SCHOOLS.

Of a number of things I wonder about, apart from the proposed recommendations I attached, this seems most important: "In none of the districts included in this survey were the myths and fears about 'busing' found to have much foundation. The primary problem is one of inconvenience." Is this taking into account Black fears about busing, in urban areas in which Black people constitute a minority, that are based more on the implications of racial balancing than they are on the bus trip? (Under section 3.)

I don't supposed it should be noted under Section 6, on "ability grouping", that even the Brooke-Mondale ~~ES~~ ESAQIE bill now being killed in Congressional conference would permit "bona fide ability grouping"; whereas, if ESAP's assurances has be enforced these past two years, <u>no</u> grouping that results in separation of Black and white students <u>for</u> a substantial portion of the day would have been permitted. "Bona fide," of course, will would be given loose interpretation by many schools.

~~Under 8, on discipline, they recommend a promulgated statement~~

In various references to the desirability of racial balance in all schools, I wonder if ~~what/is/a~~ the meaning--desegregating Black schools on the same basis as white schools--comes across. And I wonder if <u>racial balance</u> is really what we desire, considering what this does <u>to schools in</u> urban areas that are majority white. Wouldn't standards defining substantial integration, applied equally to all schools in an urban area, but which would permit some majority Black some majority white schools be fairer than all majority white schools? Can they really ~~prove~~ prove that racial balances have resulted in more successful desegregaiton?

I would like very much to see this addition to the Recommendations:

Under No. 7

We recommend that HEW establish an office and make staff available on a continuing basis for the express purpose of soliciting, receiving, and investigating complaints directly from students who experience racial discrimination within desegregated schools and that, when investigation proves students have been discriminated against because of race by school officials, in school practices, or in school procedures (including disciplinary sanctions), Title VI be enforced.

(The idea, of course, is to protect students from acts of prejudice other than those present in school procedures--from the personal acts against minority students, such as the principal who displays a gun and guard dog. Both employment and voting rights for minorities are protected, ostensibly, beyond the initial stages of opening up jobs and registration, into the day to day assurance of observance of these rights, by a specific federal watchdog agency; why shouldn't the student's right not to be discriminated against be protected beyond mere placement in a desegregated school, also by a specific federal watchdog agency?)

Also under No. 7, I would like to see this addition to the Recommendations:

We recommend that school districts be required as a part of their plan for desegregation to institute in each secondary school (OR IN EACH SCHOOL DISTRICT, LEON?) a bi-racial committee of students, much as school districts now must establish adult bi-racial committees as part of the desegregation plan. School districts would be required to insure that these student bi-racial committees be representative of the student body, of equal racial proportions in composition, that they be active, and that they be constituted so as to serve as a channel for the expression of student grievances and and as a vehicle through which students can offer their opinion about fair school procedures and policies.

REPORT ON THE EMERGENCY SCHOOL ASSISTANCE PROGRAM

The Emergency School Assistance Program (ESAP) has, through the nature of its flexibility, provided diversified approaches attempting to identify and devise solutions to problems arising from desegregation.

The original funding of $1,150,989.00 was divided into general categories established in the proposal, e.g., Community Relations, Pupil Personnel Services, Special Curriculum Revision. The funds in each category were then apportioned to schools based on three groupings (A, B, and C) dependent upon the amount of integration of the student body which had taken place during the 1969-70 school year and projected for 1970-71.

Community Involvement

Each school in the system received $525 to be used in community relations and parental involvement. Eighty-five schools have proposed some type of action to include members of the community. The approach has often been an indirect one to get people working together on a problem of common interest. These programs have involved such diverse activities as get-togethers, workshops on community beautification or the new math, and the employment of a person to work door to door answering questions and combating rumors.

Special Pupil Personnel Services

Four dollars for each first grade child in the group A and B schools were provided for behavior modification. In addition, some schools asked to utilize funds originally allocated to Supplies and Materials to assist in behavior modification. Various techniques were proposed in 16 schools. Two workshops in behavior modification techniques were held using consultants from the Georgia Mental Health Institute for a period of six weeks. In the Area V Workshop, two-thirds of the teachers were new white teachers teaching in predominantly black schools, and one-third of the group was black teachers teaching in predominantly white schools. All had expressed dissatisfaction with their

teaching because of disciplinary problems. The second workshop was held by teacher in-service training in the spring, whereby 55 additional teachers were released to work on improvement of classroom management in the integrated classroom.

Special Curriculum Revision

Each of the 12 schools in group A and the 25 schools in group B were provided funds for the improvement of communication, in addition each high school in the system received funds to help devise courses dealing with problems of desegregation, and further, all schools received a sum to be used to purchase materials and supplies and equipment for the lower academic one-third of the student body. The latter ranged from $166 for the smallest of the C elementary schools to $6,480 for the largest A high school.

The heaviest concentration of expenditure by schools has been in the purchasing of materials, supplies, and equipment. One hundred twenty-five of one hundred fifty-seven schools have utilized their funds primarily in the purchase of material items to enhance Communication Skills Laboratories, individual instruction, and provide multi-ethnic books.

Experimental work in curriculum development and individualization of instruction based on the Duluth Model will be carried out in several schools this fall.

Teacher Preparation Program

Some funds in this category were allocated to all schools and most often the funds were used to supplement usage of funds in other categories.

Teacher preparation projects have been planned in 59 of 157 schools. In 24 schools, students' services have been employed in connection with various project plans such as helping new teachers become acquainted with the school community via walking tours. A citywide Communication Skills Laboratory

workshop has recently been completed.

To develop teaching teams and improvement of instruction through the use of team teaching across ethnic lines, five schools are holding a workshop which started in June and will continue into August.

A special citywide workshop for teachers new to the system has been planned for late summer.

Seven schools in Area IV participated in the Instructional Development Institute Workshop. This is a system of instructional development in which the first stage is to define the problem and identify it, analyze the setting, and organize the management process. The second stage of development incorporates identifying objectives, specifying methods and constructing prototypes. The third stage is evaluation, calling for teaching prototypes, analyzing results and implementing and recycling where necessary.

Dr. Robert Waggoner, Coordinator of Music, has planned a city wide workshop for music teachers in late August to emphasize the background materials for black studies in music, whereby black music will be studied in more diversity than just "spiritual" and "blues" music.

Special Student To Student

There were 16 proposals establishing direct student-to-student tutoring programs. Often these tutorial programs were conducted by high school students with their feeder elementary schools in order to establish better rapport and quell rumor and fear in the community. The major portion of the activities of the ESAP team during May was expended in the establishment of the Sky Lake Camp project as a student-to-student activity.

This modular, problem solving, fourth-quarter course of which the camp community experiment is an integral part, calls for two days in which the class

meets in their respective middle or high schools. The classes of twenty students, accompanied by their teacher, then go to Sky Lake by chartered transportation for a ten-day period in a controlled environment, after which they return to their respective schools to further refine the solutions they proposed for the problems relating to the desegregation process. Parents are encouraged to join into the community for the weekend their son or daughter is in camp. Of the 29 middle and secondary schools, all but three are participating in the program.

The structure of the program in the controlled environment calls for classes in human relations, leadership, problem solving techniques, problems across ethnic lines and individual school problems. Other classes in science, art and swimming are also provided. Physical activities such as canoeing, tennis, softball, basketball, volley ball and table tennis are also provided. Provisions for teacher training in value identification and problem solving techniques are built into the program while the students are involved in their classes with the camp staff and the teacher is "free".

Adjustments were found to be necessary in curriculum on almost a day-to-day basis to deal with needs reflected by the camp population. The effectiveness of the program will not be immediately measurable, but problem areas are being identified and correction made. Feedback from the sessions has provided the basis of a continually revision so that each session has proceeded somewhat smoother than those preceding it. Discipline problems which some adults had originally feared, have not materialized.

Follow-up on the schools participating in the program will continue through the summer and into the fall.

The lack of lead-time provided by the government for the establishment of the fourth-quarter course proved a serious defect. Selection of a corps of camp staff personnel highly qualified in their respective areas, and provisions

for the logistical support for the camp was accomplished only by the cooperation of the Purchasing, Personnel and Administrative Services Departments.

Problems of Voc. Ed.

VOCATIONAL EDUCATION AND INSTITUTIONAL BIAS IN ARKANSAS

"As far as blacks are concerned, the vo-tech schools in Arkansas are just about where public schools in general are. They are run by whites, with no blacks at the higher levels. They are at the point of meeting guidelines rather than educating kids. Blacks who wish to attend them must be willing not only to go to what is essentially a 'white' school, but also to 'become white' -- to adopt the standards, values, and mores of white, middle class culture."

The quoted observer, who asked not to be identified, is a black intellectual, a professional man, decidedly not the angry, embittered sort which comes to the minds of many whites when they hear the word "militant." He spoke quietly, sadly. He is familiar with Arkansas's education enterprise, both academic and vocational.

What he was describing is commonly called "institutional racism." For the purposes of this report we choose to designate it "institutional bias," a term less threatening and perhaps more accurate.

For the built-in discrimination we have discerned in the vocational education set-up in Arkansas, while it is <u>always</u> racial, is not <u>purely</u> racial. Rather, it is a bias against all persons, black and white, who do not fit the white middle class norm. It might be called inertial bias, because it is a systemic perpetuation of discriminations historically conscious and overt, but now continued with or without additional thrust from any individual's current, personal prejudice.

"Institutional bias," with reference to education, means that individual teachers and administrators may be as fair and even-handed as they can be, working within the institution, yet students still are the victims of prejudice. The trouble is that the educators are working in the context of a system that is weighted against both "non-whites" (a significant designation) and whites who, because of cultural or economic background, are not academically inclined and proficient. White is one part of the norm and middle class is the other part of the norm. Blacks may measure up partially, but never fully. Whites may measure up fully, but may also be prejudicially disqualified.

Ready for more than you are saying?

?

A History of Racial Segregation

The General Assembly's Act 328 of 1957 designated the State Board for Vocational Education, with the same membership as the State Board of Education, as "the agency of state government to receive and administer any and all federal funds made available to this State for the purpose of assisting the State and/or local school districts in providing for the extension of vocational education...." The act specified vocational-technical education of less than college grade and for persons sixteen years of age and over.

Thirteen post-secondary, area vo-tech schools have been built and equipped. In addition operation of Little Rock Vo-Tech has been taken over by the State Board at the request of the Little Rock school board, and technical divisions have been established at Westark Junior College in Ft. Smith and Phillips County Junior College in Helena. The value of fixed

assets exceeds $12 million. As of March 17, 1972, 5,731 students were being served "on campus," including day and night students, but not those taking extension courses.

Act 328 of 1957 included the following provision, which was not repealed until 1965:

> Section 2. The Board is hereby empowered to make such plans, rules and regulations as are necessary in order for the State to meet requirements of any law enacted by the Congress of the United States or any supplementary Federal regulations pertaining to such legislation, provided the federal statute and/or supplementary regulations do not conflict with the Constitution and/or statutes of the State. It is the specific intention of this Act to prohibit the State from accepting Federal vocational funds under conditions which make it mandatory that the State and/or local school districts integrate the races as a condition for the receipt of such funds. Area Vocational-Technical and Adult Education schools established as a result of this Act shall operate under the same policies with reference to white and Negro students as practiced by the local public school board in the district in which said schools are located.

Nevertheless a few black students were admitted to the first area vo-tech school, at Pine Bluff, as early as 1963. In 1965 both of the schools then in operation reported some black students. Petit Jean Vo-Tech indicated that there were ten Negroes among 224 students, and Pines said only that "a number" among their 246 day students and 60 in night school were Negroes. [1]

The Civil Rights Act of 1964 was passed by Congress in July of that year, and the Arkansas General Assembly repealed the Section of Act 328 quoted above in January, 1965. When repeal legislation was before the legislature Representative John Bethell, who sponsored both Act 328 and repeal of Section 2,

said that he had no objection to the repeal, because he had only introduced Act 328 just as it had been written by the staff of the State Board of Education. They had written in the prohibition of integration, he said, and it was all right with him if they wanted it taken out. [2]

Black Students: Admission Without Acceptance

Enrollment figures as of March 17, 1972, indicate that non-white enrollment in the 13 operating vo-tech schools (one was still under construction) and the technical divisions of the two junior colleges is roughly proportionate to the non-white population of the state. They indicate, further, that with notable exceptions the non-white enrollment in each school approximates the proportion of non-white population in the county in which it is located. (See Appendix A.)

In some instances the percentage of non-white students reported was even higher than the ratio of non-whites to whites in the county. Delta Vocational-Technical School at Marked Tree, for example, had a student body that was 12% non-white, while the population of Poinsett County is only 8.8% non-white. Foothills Vo-Tech at Searcy enrolled 16% non-whites, but the non-white population of White County is only 3.5%. Ouachita Vo-Tech at Malvern and Little Rock Vo-Tech also reported larger percentages of non-whites in their student bodies than in the counties in which the schools are located. The schools do not, of course, serve only the counties in which they are situated, so the percentage-of-population figures for those counties only suggest the racial composition of the area.

The most notably low percentages of non-whites are at Southwest Technical Institute, Petit Jean Vo-Tech, and the technical divisions at Westark and Phillips County Junior Colleges. Southwest Technical Institute draws students from all over the state and is the only vo-tech school which houses them. It offers more advanced courses and courses in more sophisticated technical subjects than the other schools do, and it offers an associate degree in those subjects. It is the only one of the schools with courses in advertising and commercial art, aviation mechanics, instrumentation, and accounting. Petit Jean Vo-Tech is a more advanced institution also, it being the only area school to offer surveying, carpentry, or landscaping, the only one besides Red River to offer heavy equipment operation, and the only one other than Southwest Technical Institute to offer civil drafting.

The low non-white enrollments in schools offering more sophisticated courses raise a question about the meaning of the relatively good non-white percentages at the other schools. In interviews black vocational students and black community leaders asserted that black enrollees frequently are steered toward occupations in which blacks have traditionally been acceptable in the South, away from those traditionally reserved for whites. They also said that stricter standards of student performance are applied to blacks than to whites in training for traditionally white occupations, so that all but "super blacks" are weeded out.

Observation at several schools during a typical day reveals a number of blacks in classes in office practices, radio and TV

electronics, and practical nursing, as well as in auto mechanics, body repair, welding, diesel mechanics, cooking, and the like. It is apparent that some blacks are admitted to any course offered.

On the other hand, blacks report a consistent pattern of "delays" on admission of black applicants to certain courses and discouraging treatment of those who are admitted. One black young lady, described by her counselor as "very bright," tried for two years to enroll as a Licensed Practical Nurse candidate before she was admitted. Another student who was thoroughly tested by the Employment Security Division and approved for an L.P.N. course reports that vo-tech school personnel tried to get her to switch to a nurse's aide program or to cooking. The cooking course, with a black instructor, had only two whites in a class of about twenty. (Testing and screening of applicants for admission to the vo-tech schools is done by the Employment Security Division. Most blacks consider the E.S.D. racially discriminatory, and therefore that no black person would be approved for a course unless he or she were unquestionably qualified.)

A young black woman, one of three blacks out of 33 students in an L.P.N. class, came home discouraged and wanting to drop out almost every day. Only the constant urging of her family kept her from withdrawing, and she was the only black to survive the course.

Five blacks enrolled in an office practices course. One, a young man, had to withdraw because of too many absences. A young woman attended faithfully and did well in her work, but

got a bad evaluation on her dress. Her instructors said her skirts were too short, that she was "sloppy," that she could "do more for her hair," etc. She became discouraged and dropped out. The remaining three are so disheartened that they are kept from withdrawing only by constant emotional support from a former teacher who had urged them to enroll. They are scrupulously well groomed, the more so in view of the criticism of their companion, but report that whites get away with tabus like wearing tennis shoes. The instructor answers questions from white students, they aver, but blacks are usually referred to the textbook. Whites are not reprimanded for tardiness, they allege, while blacks are. One black girl was sent home and "docked" two days for wearing a short skirt while another was sent home for wearing a "maxi," and nothing at all was said to a rather stout white girl in a "mini."

In at least one situation blacks in the community vigorously question enrollment figures reported by the local vo-tech school. Pines Vo-Tech reported that, as of March 17, 1972 (near the beginning of a quarter), 199 out of 601 students were black. Even that percentage is a little low, being 33% black in a county that is 41% black. But blacks familiar with the school insist that black enrollment is not that high. "They may have admitted that many," one person said, "but, if they did, they proceeded to eliminate a great many of them. I just don't believe there are that many black students at Pines -- not for long."

Charges of this kind are easily denied, of course, and difficult to substantiate. Statistical data are insufficient,

naturally, to cause less obvious forms of prejudicial treatment to show up in compliance reviews. Nevertheless, it is a fact that many black students feel that they are discriminated against.

The nature of the complaints strongly suggests that the instructors are evaluating students on the basis of assumptions and criteria of the white middle class to which they, the teachers, belong. In doing so they may not be motivated by conscious, personal prejudice. They may see themselves as acting in the best interest of their black students. Vestiges of insouciance about clocks will not be tolerated by a white middle class employer. Flamboyance, even mild non-conformity, in a secretary's grooming is not acceptable to most white businessmen and their customers. In Arkansas a black woman is more apt to be employed as a nurse's aide than as an L.P.N.

The instructors, still with good intentions, may enforce the white middle class virtues more strictly with black students than with whites, knowing that their biological distance from the "ideal" makes the acquirable virtues doubly important for blacks.

Black students see this, of course, as the racism it is and react with anger, frequently heightened to helpless rage by the impersonal quality of it. The teacher personifies the system's racism, whether it is his own or not, and becomes the object of this hostility.

Black Instructors: Employed on the Fringes

A complaint about the vo-tech schools heard universally from blacks is that the schools employ few of their race as teachers or administrators.

Last fall the Arkansas Council on Human Relations sent a brief questionnaire to the vo-tech schools, asking the approximate number of teaching personnel employed, the number of administrative officers, and the number of blacks employed in each category. There was also a question about problems in recruiting black personnel.

Eight of the schools responded. The results are charted in Appendix B. For the schools responding only 5% of the teachers and 10% of the administrators are black. We may assume that the percentages are not better, and probably are lower, at those schools not responding.

As with the reported figures on black enrollment, the statistics on black teachers and administrators are subject to question. Pines Vo-Tech, for example, reported two black instructors and one black administrator. Local black leaders familiar with Pines were aware of only one black instructor, who teaches cooking. They knew of no black administrator at Pines. Crowley Ridge Vo-Tech at Forrest City reported two black instructors and one black administrator. In reality there are only two blacks in jobs other than menial ones at Crowley Ridge. One is Supervisor of Special Programs, which means, he says, "that I work with the disadvantaged." The other black works on the road in charge of a mobile machine shop, one of the special programs. So one of the instructors and the one black administrator at Crowley Ridge are the same man.

Delta Vo-Tech, which employs only one black among 20 instructors and administrators, reported that they had "no problems thus far" in recruiting black personnel. Most of the others

listed "lack of qualified applicants" or "insufficient salary scale" or both as problems in recruiting staff personnel, black or white. The response from Southwest Technical Institute, which employs no blacks on its professional staff, had the following statement attached:

> Southwest Technical Institute requires instructional staff members with a high degree of technical training and experience. These people are difficult to find in either the white or black community. So far we have had to depend upon retired military service personnel or people retired from industrial jobs. We cannot compete with industry and business on our pay scale for the services of technical people.
>
> ...We would like to employ black instructors if they are qualified to do the job....

The salary scale is doubtlessly a problem. Starting salary for vo-tech teachers is a little over $600 per month. The lowest grade instructor must have at least a high school diploma, two years of advanced training, and four years of experience in the field or vocation to be taught. All administrators must have a Bachelor's degree and three years of experience in vocational education. In most cases a person qualified to teach in the vocational or technical fields can make 50% more money practicing his skill instead of teaching it. It is not at all uncommon for graduates of the vo-tech schools to earn more than their instructors their first year on the job.

And, if the salary scale is so low that vo-tech schools have to recruit retired persons, most of the teachers will be white. Given our history of employment discrimination, how many black skilled workers and technicians will have reached retirement age in the 1970's? Thus, historic bias gets institutionalized and perpetuated.

These explanations are unconvincing to many blacks. If white instructors are found, blacks reason, whether from among retired people or from among those with a bent and dedication for teaching, black instructors can also be found, if they are really wanted. One black observer, upon hearing the "no qualified applicants" explanation, said simply, "That's a dodge."

One of the most important roles of any teacher is as a model. Probably more important than what he says or transmits verbally is what he is. What the society wants modeled are the values, attitudes, dress, speech patterns, and all other behaviors of the white middle class. It follows that the paucity of black teachers in new vocational schools, like the reduction of black teachers in desegregated academic schools, is not accidental but deliberate and functional. If the law requires hiring some blacks, a few who most nearly approximate the middle class norm (except, of course, for skin color), are hired to teach cooking or to be directors of "special programs."

All Students: Training for the Marginal Middle Class

As we have suggested, the malignant effect of institutional bias in vocational education in Arkansas is not limited to blacks. Black students are in double jeopardy, to be sure, but "socioeconomically handicapped" whites are also in jeopardy.

"The problem," says Calvin Dellefield, executive director of the National Advisory Council on Vocational Education, "is that vocational education is for someone else's children." [3] The average citizen, when he thinks of vocational education, is likely to recall makeshift buildings out behind the local high

school in which "manual training" and "home economics" were offered to "the dummies." As the Arkansas Advisory Council for Vocational-Technical Education has said,

> ...No change can be effected which will upgrade the quality and quantity of vocational programs under the present system. As long as vocational education remains subservient to the academic disciplines, we will make no progress. The time is now for vocational education to be recognized as honorable, worthwhile, and as demanding of one's intellect as are academic programs.[4]

Our national mania for upward mobility, "upward" toward the white middle class, prescribes an academic career, leading preferrably to a professional, managerial, or entrepreneural career, for all youth who want "to amount to something." The nation puts $14 in public money into higher education for every $1 it invests in vocational training of any kind.[5] Yet, of students now in high school, only three out of ten will go on to academic college work, and one of those three will not be graduated from college. Therefore, eight out of ten students now in high school should have occupational training, but only two of those eight are in fact getting such training.[6] In Arkansas, not only do 60% of all high school students receive no vocational training, only 5.8% are being trained in skills other than agriculture and home economics.[7]

In the 1970-71 fiscal year, $49 million of state funds alone was spent for higher education. $239 million in state and local funds was spent for the public school system. But only $4 million in federal, state, and local money was spent for vocational training at any level.[8]

The State Department of Education ~~has~~ had a ~~total annual~~ 1971-72 budget of about $120 million. Of this only $6 million ~~is~~ was allocated to

the Division of Vocational, Technical and Adult Education. Less than one-third of that $6 million ~~is~~ was for vocational education in the public school system.[9] Thus only about 1.7% of the total funds available at the state level for public school education are devoted to preparing high school students to enter the world of work. More than 70% of those students will go directly from secondary school into the job market, military service, or home making. Some 45% (20,000 dropouts each year) will enter that world of work without a high school diploma. The vast majority of public school students in Arkansas, then, get at best only rudimentary career preparation and marginal economic benefit from a system which spends 98 percent of its money on higher education, elementary and secondary schooling aimed principally at preparing its charges for further schooling, and efforts by the system to remedy its own failures.

Clearly the children of the more affluent and culturally privileged families, who can forego earning an income for longer periods of time and who have more chance of succeeding in academic pursuits, are receiving far and away the largest slice of the educational pie. That is not discrimination against skin color alone, but against the poor and against any variety of talent, intelligence, life style, and value system which differs from a mythical "ideal" assumed by the educational system. Its victims are all of those of whatever race who do not fit in fact or in prospect the affluent, white, verbal, abstract-conceptualizing model.

This anti-vocational bias appears to be blindness -- although, as we shall see, it may not be blindness at all. Fifty

percent of the jobs that will open up in the 1970's will require training beyond high school, but not a college degree. Meanwhile there is a glut of Ph.D.'s looking for jobs, and perhaps 65,000 engineers in the United States are out of work -- while each daily newspaper lists column after column of sub-professional and technical jobs available and going begging.

The nation is expected to be short 400,000 sub-professional health workers, trained or not, by 1980. 1.5 million more secretaries will be needed in the next four years.[10] Only half of entry-level jobs available each year are being filled by the products of public vocational training programs; the other half are filled by job seekers with no occupational training of any kind. Nationally, only 35 percent of the need in technical fields, such as computer programming and laser technology, is being met by public vocational training programs.[11] The rest of that need is filled, apparently, by proprietary schools, for those who can afford to attend them, or by companies willing to provide in-service training for unprepared personnel.

We have high, stubborn unemployment rates even while the gross national product is increasing and technical jobs go unfilled. "It is increasingly clear," observes Grant Venn, "that no attainable rate of growth can in and of itself solve this nation's employment problems....The unemployed are the under-educated and underskilled, and in the years ahead economic growth, increasingly a creature of technological advance, will not substantially increase the number of jobs for such people."[12]

"What this means in terms of educational needs is obvious," said former Secretary of Labor Willard Wirtz:

> We simply cannot any longer afford to let boys and girls leave the educational system unprepared to use their minds as well as their muscles. We must, in one way or another, see to it that they have what today's -- and tomorrow's -- labor market requires. The margin for educational error or failure, which is what the unskilled jobs in the old work force constituted, has been taken up by the machine. [13]

One part of Wirtz's statement should be underscored: "We simply cannot any longer afford to let boys and girls leave the educational system unprepared...." In point of fact, 22% of Arkansas's children leave the educational system prior to the ninth grade, and 44% never complete high school. More than 20,000 Arkansas youths, undereducated and unskilled, must be absorbed into the labor market each year. And that rate of educational failure is projected to continue and increase. [14]

Arkansas's post-secondary system of vo-tech schools does virtually nothing for these drop-outs. A profile of the student body at Pines Vo-Tech revealed that 80% of the students were high school graduates. Pines enrolls more college dropouts than high school dropouts -- 25% of the students have had some college work. 31% of Pines' students are veterans of military service. 43% are 21-29 years of age and 20% are over 30. Such figures are not readily available for the other vo-tech schools, but these seem fairly typical. At Crowley Ridge, for example, 70% of the students are high school graduates.

At the same time, except at Southwest Technical Institute, where enrollment has been improving but is still below capacity,

the course offerings of the vo-tech schools are more vocational than technical. The students are post-secondary, but the curriculum, by and large, is not. The area schools principally serve some of the one-tenth of high school students who get a diploma and then try for college and don't quite make it, plus those who, having finished high school, have the stamina, resources, and commitment to the values assumed by the school system to take another year or two to get what high school could have provided, but did not.

Arkansas's Advisory Council for Vocational-Technical Education has contended, rightly we think, that vocational subjects which can be taught at the high school level should not be delayed to the post-secondary level.

> ...We feel that any postponement of vocational programs that can be taught in high school to a post-secondary institution simply means an added expense to the student as well as a year or two of foregone earnings. Furthermore, the lack of such programs in the high schools contributes to the dropout problem as many students are unable to see the relevance of formal academic education and how it relates to their earning a living as adults. It is therefore a continuing thesis of the Council that a sound and extensive vocational education program in our secondary school system, coupled with orientation, familiarization, and exploration in our elementary and junior high schools, is essential if the people of Arkansas are to realize their full potential.[15]

For every dollar spent for vocational education at the <u>secondary</u> level in Arkansas, ten dollars are spent for <u>post-</u>secondary training in the area schools, MDTA programs, and other programs essentially remedial in nature. About $4 million goes for high school vocational training each year, while $40 million is spent on such remedial programs.[16] By devoting the bulk of available funds to these programs and doing so little

yes as var. of stanch (preferred)

to staunch the flow of educational failure at the secondary level, we allow the need for remedial programs to be increased by the resources they drain.

Moreover, although there clearly is a need for true post-secondary technical training, neglect of vocational preparation in junior high and high school makes it next to impossible for the area schools to function at a genuine post-secondary level. "Just as higher education complements a much more massive effort at the secondary level," the Advisory Council reasons, "post-secondary vocational courses should be an extension of the same effort at the secondary level. Post-secondary education of any kind cannot supplant secondary education." [17] "Consequently," says the Council, "these agencies, other than Southwest Technical Institute, are giving instruction in vocational training which could be offered at the secondary level, and which leaves the area vocational-technical schools anything but post-secondary technical institutions." [18]

The State Board for Vocational Education has, in effect, steered a course precisely between the crying need for advanced technical training on one side and the equally urgent need for minimally adequate career preparation in the public schools on the other -- with the result that neither need is being met.

On the one hand, the needs of the "socioeconomically handicapped" are not being met. The controversial 1969 report of the Upjohn Institute stated that Negroes are not attending the vo-tech schools in numbers that reflect the population ratio, and should be more avidly recruited. It also pointed out "a definite need" for high school equivalency testing and educational make-up

programs for those attending vo-tech schools who have not completed high school. There also should be remedial education, according to the report, for adults excluded from the area vo-tech schools because of educational deficiencies.[19]

On the other hand, the area schools cannot offer sophisticated technical training of the kind the future jobs will demand, not only because of the inadequate high school background of many Arkansas young people and low faculty salaries, but also because of relatively unsophisticated demands of job openings currently available in the state and a failure to turn out vocational and technical teachers.

As Venn has pointed out, the problem of gearing vocational and technical programs to both the present and the future world of work is vexing:

> On the one hand, the choice among occupational offerings is in the hands of local boards and administrators, who are under pressure to tailor the program to the more immediate manpower needs of local (tax-paying) industry. On the other hand, the industrial complex of the nation is being made and re-made so swiftly, and plant and worker mobility are so high that narrow, local training may have short relevance for the new worker. This again points to the importance of a more broadly based vocational-technical education, one consonant with long-term regional and national manpower demands.[20]

One of the most pressing needs is for training of vocational teachers. The colleges and universities of Arkansas are not training an adequate number and variety to meet the expanding and changing demand. Nationally, 35,000 new vocational teachers will be needed in the next five years, and about 7,000 of them should be industrial-technical teachers. The greatest needs are in electricity and electronic technology, power mechanics, automotive and diesel technology, drafting and design technology,

wood technology, data processing, air conditioning technology, industrial plastics, welding, equipment repair, metals technology, civil technology, industrial technology, educational media, audio-visual media maintenance, and medical technology.

But the University of Arkansas, the school with the most comprehensive vocational teacher training program in the state, offers only agriculture education, business education, distributive education, home economics, and industrial education.[21]

There is reason to suspect that Arkansas's vocational education scheme is not planned, either on the basis of immediate and long-range needs of the state's young people or even on the long-term requirements of industrial development, but simply follows the paths of least political and economic resistance. As of the end of 1971 the State Board of Education had heard presentations from about 100 delegations from communities seeking one of the area vo-tech schools. Many delegations were led by members of the General Assembly from the area. In reply to the 1969 Upjohn Institute report, which called among other things for more vocational education in high schools, J. C. Ruppert, Coordinator of Area Vocational-Technical Schools, said that Economic Development Administration funds were available to build additional post-secondary schools and not for vo-tech training in high schools. Besides, he added, post-secondary schools are what the state legislature provided for.[22] At the same time the Legislative Council voted to keep the present system on grounds that there is "no concrete evidence" that the approach is wrong and, besides, "this is what there is federal money available for."[23]

How are we to make sense of this strange allocation of resources, this educational drift? Peculiar behavior, of institutions as of individuals, usually makes sense, if one can get into the operative frame of reference.

An able anthropologist and educator, looking at America's schools, has this insight:

> We say that the schools educate. But if we forget what we say, and look at what we do, we see that the schools have much more important and much more pervasive functions than educating....
>
> The schools are the major institution in this society for the selection of individuals (and groups) for entry into the middle-class, and for training in the values and behaviors of the middle class. We are the screening mechanism in this society. It is we who determine, more than any other institution, who moves up and who stays back.
>
> ...It is our function...with each new generation... to ensure that those too greatly different from the middle-class norm will be rejected, and those who have enough similarity, biological and acquired, will be admitted.
>
> This is what the dropout is all about. The dropout is the major means, in this society, of telling an individual that he has not conformed, or cannot conform enough to our ideals to make it into the middle-class....[24]

In the light of that insight, Arkansas's area vocational-technical school system makes sense as a modest refinement in -- and not a change of -- the class-training function of the academic school system. It is designed to serve only the most middle-class-oriented blacks and only those whites who are marginally middle-class-oriented. It is not designed to affect the dropout rate, because the dropout is functional -- is necessary. The vo-tech schools give some of the "poorer" white students and some of the "better" black students one last chance at entry into the favored middle class.

Let it be stressed again that this is not necessarily the conscious intent of administrators and teachers in the system. Indeed, nearly every one of them we interviewed lamented that the bane of vocational-technical education is the public's attitude toward it. The insight seems to be generally lacking, however, that the public bias is reinforced by the system within which they work and that they are, therefore, working against themselves.

15 Which attitude? Worth it to be invisible close or seeing as dropping grand

Obviously the needed changes would be radical and would involve the whole system of public education -- not just the vo-tech schools. Those changes would be expensive, as well as extensive, and inevitably would meet strong resistance from the tax-paying electorate, which invariably demands of educators not the optimum result but the minimum expenditure.

In the long run, however, whether you approach the matter from the standpoint of education quality or human rights and human relations, the existing system is ruinously expensive. We must choose to be investors in a program of comprehensive education which includes -- for all youth -- the vocational and technical training required to equip them for work in the modern world, or else we shall have chosen by default to be consumers -- at terrible cost -- of unemployment, alienation, welfare dependency, and all of the other "sins" we so decry.

A system that brands 45% of its students as failures and labels another 35% as second-rate is creating attitudes and patterns of failure with which they do not deserve to be burdened and which the society cannot afford.

? vs. exciting, experimental quality!

Recommendations:

1. A program of required vocational exploration should be instituted in junior high schools. Seventh or eighth grade students might be given brief, rudimentary courses in commercial art, drafting, electronics, distributive education, auto mechanics, etc.

2. Planners of elementary and secondary curricula should seek to relate subject matter more clearly to occupational concerns.

3. A full program of vocational training should be made available to all high school students in a system of comprehensive career education. A reasonable goal would be to establish one vocational training center in each county to serve high school students in the county. Metropolitan High School in Little Rock and Sequoyah Technical High School in Fayetteville are examples.

4 to comprehensive school.

4. A program of in-service retraining of high school guidance counselors, to familiarize them with vocational-technical needs and opportunities, should be given high priority.

5. The University of Arkansas and other teacher training institutions of the state should expand their programs for preparing vocational and technical teachers.

the problem of needs to be stated Legis

6. The General Assembly should provide for a salary scale for instructors in the vocational-technical schools commensurate with the required qualifications.

7. A vigorous effort to recruit non-white administrators and instructors for the vo-tech schools should be instituted.

8. More black persons should be appointed to the State Board of Education (there is only one black on the Board at present), and black representation at all administrative levels of the whole education enterprise should approximate the population ratio.

9. Special training should be given teachers in the existing vo-tech schools to enable them to relate more effectively to non-middle class students in general and those of the racial minority in particular.

and for Teacher Training Insts. Therefore.

10. Until more adequate vocational exploration and training are available at the secondary level, the area vo-tech schools should have exploratory programs in cooperation with high schools in the vicinity. Mobile units, such as the traveling machine shop in use by Crowley Ridge Vo-Tech, might be utilized.

11. The area vo-tech schools should have their own testing and screening facilities and personnel, and that function should be removed from the Employment Security Division.

yet this might be devoted to keep Vo-Tech job related. and does testing itself need to be reviewed

12. Until the post-secondary program is adequately backed by vocational training at the secondary level, remedial education should be provided for adult enrollees whose high school background is deficient.

13. As the level of student ability is increased course offerings at the post-secondary schools should be determined in the light of national needs, as well as in-state needs, and job placement efforts should extend beyond the borders of Arkansas. Equipment of young people for fulfillment of their potential should be the goal, not meeting immediate needs of local industries.

Why conditioned by this

School Pushouts

Wash. Post - 4/17/72

A Commentary

By Nicholas von Hoffman

The black kid who can make it onto the school bus, dodge the Humphreys and the Wallaces, shoot through the legs of the Justice Department, squiggle out of the hands of the protesting pickets and sprint to his classroom seat still hasn't passed go. Getting to school is one thing; staying there is another. He may get kicked out.

Information being developed by the Southern Regional Council indicates that black kids are being suspended and expelled by the thousands. A survey of 127 school districts in 11 southern states shows 11,146 suspended or expelled this year alone. All told there are more than 2,000 school districts so the total number of "pushouts" as these students are being called, could be crushingly large.

These aren't easy figures to compile. The authorities are hardly likely to help, but the Council did do another survey of school incidents reported in the southern press last year, and it shows more than 4,000 students expelled in a mere 48 incidents. The numbers of pushouts and scholastic refugees who may be involved are so high you can't really focus your eyeballs on them, but Boyd Bosma, assistant director for Civil Liberties and Inter-group Relations of the National Education Association, writes that, "The estimates vary, but anywhere from 50,000 to 100,000 southern black students each year are being and, in the absence of effective remedial and preventive action, will continue to be gone from the public schools."

Your average pushout, so far as anyone can tell, is male, of course, 17 years old, and has just started his senior year in high school. From all reports he tends to be a leader, or just the kind of kid who we keep saying can most benefit from school. For that reason the National Education Association has sent out a circular letter to college and university heads asking if there isn't some way they can get these poor but promising students in their institutions on some kind of an early matriculation program.

For skeptics who can't bring themselves to believe that teachers, educators could do this to students, even if they are black, it's worth recalling what's happened to black faculty in southern schools. A recent U.S. Office of Education internal memo on that situation declares that "between the 1967-68 and 1970-71 school years more than 6,000 black educators have been displaced. Of the more than 1,870 educators who have been displaced during the current school year ('71-'72) 909 were dismissed and the remainder were either demoted, assigned out of the field or unsatisfactorily placed."

How these black teachers and school administrators get the boot is illustrated by a mimeographed flyer being circulated among white teachers in Mississippi and Alabama. Its authenticity can't be absolutely validated, but the names and telephone numbers on the bottom check out. These people hang up when they hear a Yankee accent on the long distance phone from Washington, D.C., but staff people at the Education Resource Center in Jackson, Miss., believe it's for real and claim to know one teacher who had been victimized by it.

The flyer reads in part: "$500 will be awarded to any White woman responsible for the permanent elimination of Black males from our public schools. NEEDLESS TO SAY THAT YOU MUST TAKE CARE IN NOT ALLOWING THESE PEOPLE TO LEARN OF THIS PROJECT ALTHOUGH THERE IS LITTLE THEY CAN DO TO PREVENT ITS SUCCESS. OUR ORGANIZATION HAS PUT UP $10,000 FOR THIS PROJECT AND $500 HAS ALREADY BEEN AWARDED ONE YOUNG LADY.

"RECOMMENDED PROCEDURE: Maneuver a black male into a compromising position; arrange with a friend to witness the affair. Be sure there are no other witnesses; it will not be necessary for you to participate in anything illicit, but once you have them in position, protest and run; do not call the police but go at once and report the incident to one of the persons listed below . . . When the black that you have accused is permanently discharged—teacher or principal—or expelled—student—or fired—custodian or other—your check will be put in the mail to you."

Even with the best will in the world the bringing together of people who have been separate so long couldn't be easy. When the problem is attacked with malice, it's impossible. Yet there are some ironies about this. One is that in creating this "atmosphere of terror," as Don Sutton of the Educational Resource Center describes it, the whites are giving themselves the business at the same time. They're destroying their own schools.

Last year there were six killings that we know of in these schools, eight gunfire incidents, 87 fights ranging from two people to riots involving hundreds, 41 fires and 34 bomb threats. Nice places to read Shakespeare in.

And all of this, mind you, in the public school system which was established to make nice, non-violent, non-criminal, punctual middle-class people out of dangerous lower class ruffians. Oh, the trouble we store up for ourselves.

1972 Reports

Youths Sentenced In School Incidents

Atl. Journal 1/23/73

By JOE LEDLIE

A "get-tough" policy toward campus disturbances has turned school days into court days in DeKalb County.

Moves by the county's top educators last fall to shift hard-core discipline problems from the principal's office to the courtroom have resulted in criminal cases against scores of youngsters, students and nonstudents alike.

The hard-line policy, formulated during the administration of former school superintendent Jim Cherry, hit a peak Monday when two State Court judges in DeKalb ordered stiff penalties for five defendants in three school disturbances.

The sentences ranged from six months in the county rehabilitation center for trespassing to a $100 fine for a youth charged with "affray" (fighting) on school grounds.

COURT OFFICIALS estimate upward of three dozen such cases, involving seven high schools, have been disposed of or docketed since Cherry issued his "crackdown" memo four months ago.

At that time, Cherry aides denied the memo represented a policy shift on discipline problems.

But within a few weeks, officials at Walker High School in South DeKalb signed warrants that resulted in the arrest of 30 students for their alleged role in an interracial brawl Sept. 14.

In the weeks that followed, according to the same officials, school administrators brought cases against nonstudents and dropouts at other high schools, including Clarkston, Gordon, Columbia, Peachtree, Stone Mountain and Towers.

In addition, principals and other school officials began providing details of the disturbances to the press, in contrast to earlier disruptions in which such details often were kept under cover or discounted by school spokesmen.

"You can bet plenty of parents are going to be giving warnings to their kids to stay out of trouble at school," said one court official Monday.

His comemnt followed a busy court day:

—Three nonstudents given six months "to serve" in the county rehabilitation center for "failure to leave a school campus when properly directed."

Sentenced under the new state law on complaints brought by Towers High School officials were Frank Hubbard Boykin, of 1445 Colony Hill Court, Stone Mountain; Gary Lee Nelson, of 2035 Copperfield Drive, Decatur, and James Pat Burns, 3490 Pinchill Drive, Decatur.

Another nonstudent, Barry Steven Merritt, of 1932 Austin Drive, Decatur, got an identical sentence on the same charge earlier this month.

All are 17.

ALSO MONDAY, Dennis J. Fifield, 17, of 1938 Willa Drive, Decatur, was fined $100 and given 12 months probation for "affray" at Columbia High School on Oct. 30.

Another youth charged in an incident at Columbia on the same day, Robert Charles Wade, 17, of 2384 Cresnole Circle, Decatur, had his case continued in the absence of his lawyer.

The same charge against James Owen Stallworth, 17, of 3900 Memorial Drive, was dropped.

Another nonstudent, Randolph Rivers, 20, of 2225 Bradley Ave. SE, drew a $500 fine and two years probation on criminal trespass and battery charges from Judge J. Oscar Mitchell.

THE CHARGES stemmed from an Oct. 27 incident at Walker High School in which Rivers and an unidentified companion allegedly attacked assistant principal Jamie H. Overton and coach Robert Buchler after the youths were ordered from the school and Overton attempted to get their license number.

Charges against six other youths in connection with disturbances at Walker, Clarkston and Stone Mountain are expected to be heard later this month.

Board Talks School Discipline; 'Consequences' Should Be Known

By SAM L. ZIMMERMAN

A student's conduct is a personal matter he should keep within reasonable bounds that apply equally to all members of the community, according to a policy statement by trustees of Greenville County School Board.

However, the board warned that "students, both individually and in groups, shall recognize the authority of teachers.

"Disobedience or open defiance of the teacher's authority shall constitute sufficient cause for disciplinary action and may result in suspension or expulsion from school," said the statement.

The policy statement on student conduct was issued Tuesday at the board's monthly meeting with "intent to establish a rational position between freedom for each individual and the necessity for sufficient order to permit operation of the instructional program."

Turning again to student rights, the board said students "should have freedom and encouragement to express individuality in any way so long as their conduct does not intrude upon and endanger freedom of others.

"Especially the freedom of their peers to receive instruction," continued the statement.

The board said "respect for the individuality of pupils argues against attempts by the school to force pupil behavior into a common mold.

"Our board approved statement of school goals emphasizes the schools' responsibility for helping each pupil develop his unique abilities to the maximum."

The board called for "sensitive, tolerant, intelligent action" on the part of the school staff in implementing the policy.

It urged that emphasis be placed on growth of the student in ability to discipline himself in instances where school district employes act to "help a student conduct himself properly.

"All students, on the other hand, should recognize the consequences of their conduct," it again warned. "This refers to actions toward each other, their language, dress and manners."

It asked that teachers report at once to the principal when their authority to conduct meaningful instruction in a classroom is challenged through disruptive acts, abusive language, or threats or bodily harm.

The board also approved plans involving the shift of several thousand students next fall in drawing new attendance lines to accommodate Riverside and Mauldin high schools, now under construction.

Half the number of students involved would normally move from elementary to middle and from middle schools to high schools in the area, according to Dr. Harold Patterson, associate superintendent for program development.

All district schools will be closer to the 80-20 black-white ratio as a result of new attendance lines, he said.

Schools affected by the change include Hillcrest, Wade Hampton, J. L. Mann and Eastside high schools, along with Bryson Center.

Completions of additions and alterations at Travelers Rest High School will find county schools "operating at capacity inside the buildings," Patterson said, noting that portables will then no longer be needed for classrooms.

By JIM JEFFERSON

A Greenville woman surprised an apparent intruder Tuesday afternoon in the process of entering her home.

Mrs. R. D. Lunsford of Rt. 3, Greenville, told sheriff's deputies she was home alone about 2:15 p.m. shen she heard a car drive up. She was washing dishes and waiting for the doorbell to ring, when a youth opened the door to the kitchen and started in, she told deputies.

She said the startled youth saw her, ran up the driveway to the parked car and sped away.

She told officers she did not recognize the youth.

Crime clock for Tuesday:

7:25 a.m. — Carl Mathis, 118 Irene Circle, reported the theft of a tape player and 12 tapes.

8 a.m. — L. C. Ayers, 2 Cedar Lane Road, reported to sheriff's deputies that an office had been ransacked and a radio was missing.

8:19 a.m. — George Tide, 22 Third St., Judson, reported the theft of a tape player, three speakers and six tapes from his auto.

10:30 a.m. — Bailey Johnson, Rt. 2, Campobello, reported the theft of a tape player and 10 tapes from his auto.

10:45 a.m. — Control Systems, Inc., 22 Santuck St., reported that two offices had been ransacked and $35 in currency and a Speed Graphic camera valued at $400 taken.

2 p.m. — Mrs. Lylton Patterson, 105 Old Augusta Road, reported the theft of a stereo from her residence. Entry was gained through a window.

5:15 p.m. — Mrs. Ross Gilstrap, Motorboat Club Road, reported that a window had been opened in her home. An inventory is being conducted to ascertain if anything is missing.

5:44 p.m. — Doris Rochester, 140 Buist Ave., reported the theft of a bicycle from her yard.

6:42 p.m. — W. A. Farr of Blackberry Road reported that a house of his that is empty was ransacked. Nothing was taken.

9:30 p.m. — T. V. Howie, 14 Ponderosa Road, reported the theft of four hubcaps from his auto.

Legislators Honor Fewell

Dr. John M. Fewell, a Greenville physician, Tuesday was honored in Columbia by the General Assembly.

He was made a member emeritus of the South Carolina Mental Health Commission in

SUBJECT:

Please let me have your comments on Clayton Braddock's push-out report. If at all possible, I would like to have your reactions and suggestions by the end of the day, Monday, April 16.

Many thanks.

THE PUSHOUT--1

For Southern Regional Council
Clayton Braddock
1393 Whiting St.
Memphis, Tenn. 38117

"Section 1. Be it enacted by the legislature, that every parent, guardian or other person having control or charge of any child or children between the ages of seven and fourteen years shall be required to send such child or children to a public school or to a private, denominational or parochial school."

--Compulsory attendance law, 1918

"Good discipline within a school is necessary to insure a proper learning situation. It is the responsibility of the Board of Education, the administrative staff and school personnel to take those measures necessary to provide the proper atmosphere for the instruction of pupils. Fostering good citizenship is one of the major functions of education."

--Official school board policy (revised, 1973)

"The directors of any school district may suspend any person from school for immorality, refractory conduct, insubordination, infectious disease, habitual uncleanliness or other conduct that would tend to impair the discipline of the school, or harm the other pupils."

--Arkansas State law, 1931

"Local boards of education have the authority for a program of instruction without disruption, therefore, the local board would have the complete discretion in the event a person or persons interfered with or disrupted the public school instructional program."

--Assistant state superintendent of schools, Georgia, 1973

"The rules don't make sense."

--A student

"The rules are OK, but they only apply to blacks."

--A black student

"We used to sit in the back of the room...We used to pass the (wine) bottle...I didn't care too much for it (school). I didn't feel like doing my work or anything. I wanted to go to work." [1]

--A dropout

(INSERT HERE A QUOTE FROM A STATE LAW SETTING LEGAL AGE STUDENTS CAN DROP OUT OF SCHOOL)

"Student rights!"

--A high school demonstrator

* * *

In the wide chasm between these extremes, there is a battleground where tradition fights change, race and culture confronts race and culture, youth challenges age, society presses the individual against the wall, and the law overwhelms deep emotion, anguish and frustration. Most of the casualties are on one side--the students, the young people whom the law has placed in school with little else but a requirement that they be there between the ages of 6 and 16 and a fading promise of opportunity.

The law--legislation, statute, ordinance or official policy--tells the student when he must first enroll in school and sets the minimum age he must reach before he can leave school short of graduation. In between, the law also broadly defines acceptable societal habits and behavior, thereby becoming the arbiter and defender of majority class morals and values. Opportunities to be provided by the school are left up to educational philosophers, economics, tradition and custom, the voting public, and those they elect. But the law then becomes a weapon with which to reject and banish many students who can't succeed, who can't or won't conform, including an increasing number of blacks who offend the status quo when thrust into a white majority or any school setting where the white culture dominates.

dominates. Thus, a new category of classroom exile -- the "push out" is created.

Each year in American schools, hundreds of thousands of students will give up the long uphill struggle for an elusive goal which they never saw too clearly from the outset, a goal which someone else, society, set for them--a high school diploma. They are dropouts in the race for the great American dream. A high percentage of them will give up near the summit, an act passively permitted by state laws just as clear and valid as those which compel them to attend until they reach the age limit.

A lesser number, but still in the tens of thousands, will not drop out but will be pushed out of the school system, suspended or expelled, some for just reasons, some for questionable reasons, some for no bona fide cause, all because law or policy permits this official and active step of severing contact with the student. For many of the students, the break is permanent and terminal.

"Too frequently, the school, caught between the vortex of compulsory school attendance and defiant, uninterested, hostile youth, seeks a quick and ready solution to its problem," observed Daniel Schreiber, a former dropout project director for the National Education Association. "The solution is obvious and patently simple, expeditious and painless: namely, get rid of him, regardless of his age or competence, through expulsion or suspension from school. Propelled unceremoniously, and without skills, into

the world of work, alienated youth finds that there is no place for him there either. A game of volleyball ensues--with the alienated youth as the ball." [2]

The seldom challenged, almost unquestioned authority and legal power to cast students from the schools is already being questioned, disputed and resisted by parents and students and challenged in the courts, not because of the absence of legal authority but because of the over-striding of authority, the sometimes subtle and often flagrant misuse of power in the eyes of many students, teachers and community leaders, particularly among blacks. There are strong indications that powers of suspension and expulsion have been used as weapons of discrimination, especially during times of increased integration and in some instances during protests for more general students' rights.

Always looming large in any inquiry into the disciplinary power of the schools is the often justifiable and always deeply traditional stance of most school officials and the society which generally supports them. Most observers acknowledge the need for rules and the power to enforce them. The pragmatic observer will concede that there are those individual students who finally will not or cannot conform to societal standards and instructional goals and will cut intractably or violently across the fabric of the school society just as older citizens seek to rend the fabric of the larger society of man. But what to do with the classroom incorrigible? What constitutes defiance in the school setting? Intracti-

ability? Who will decide what degree of apathy is enough to let the student slip away or how much incorrigibility is enough to cast out the perpetrator? What are the alternatives? Are they being pursued energetically? How often do racial, cultural and generation differences cloud the judgement and actions of students, teachers and administrators and make the law a dim illusion rather than a clear guide?

The Southern Regional Council, with the help of field reporters, examined the problem in four states--Georgia, South Carolina, Louisiana and Arkansas--gathering state and representative district figures on the numbers and causes of suspensions and expulsions, state and district laws, policies and practices and talking with school officials and community leaders.

The survey was never intended to produce a scientific analysis or finished study of the total problem. This would have been impossible, because, if for no other reason, complete and reliable statistics are not available in most states and most of those which have tabulated them have only begun their efforts in recent months. SRC's objective was to get a substantial glimpse of at least a portion of the problem, with the view that the size of a few of the tiger's teeth will indicate the size, nature, power and appetite of the whole beast.

Absence of statistical data itself is something of an indicator that too few school officials have opened their eyes to the importance, dimensions and nature of this particular tiger. Some administrators were cooperative with field reporters

while others were more suspicous and reticent. Those more cooperative schoolmen were generally those in districts where statistical dimensions had been measured by in-house studies initiated by the schools and where some attempts had been made to establish positive alternative solutions to the problem.

xx

The most common element in the whole issue is the totality of state and local laws which bear upon nearly every facet of the student 's physical, social and moral life. The laws read like a montage of dozens of criminal codes, the aim of the total effect appearing to be the sealing of any possible --even the most minute-- loophole for misconduct. They paint a picture of the glaring eye of society, tracking the quarry down the hallway, into the restroom and even into the labyrinth of his mind.

Louisiana state law is a good example. It states that "every teacher is authorized to hold every pupil to a strict accountability for any disorderly conduct in school or on the playgrounds of the school, on the street or road while going to or returning from school, or during intermission or recess. School principals may suspend from school any pupil who is guilty of willful disobedience; who treats with intentional disrespect a teacher, principal, superintendent...; who makes against any one of them an unfounded charge; who uses unchaste or profane language; who is guilty of immoral or vicious practices...; who uses tobacco or alcoholic beverages in any form in school buildings or on school property; who disturbs the school and habitually violates any rule; who cuts, defaces or

injures any part of public school buildings...; or who writes any profane or obscene language or draws obscene pictures in or on any school material or on any public school premises; or who is found carrying firearms, knives or other implements which can be used as weapons; or who throws missiles on the school grounds liable to injure other pupils or who instigates or participates in fights while under school supervision; or who leaves the school premises without permission; or who is habitually tardy or absent; or who commits any other serious offense."

The intent of such laws are all too clear if not cmomplete without at least several hundred other offenses which are possible for students to commit. But some points are cloudy, debatable, spacious in their room for interpretation and powerful misuse:

*"Strict accountability"--which means what? And is there another ledger for the accountant?

* "Willful disobedience" and "intentional disrespect"--lese majesty was abolished with the Louisiana Purchase.

* "Unchaste language"--chastity was mortally wounded in the first battle of the sexual revolution.

* "Profane or obscene language"--Even legislatures and high courts are struggling with definitions of obscenity, if not profanity.

* "Disturbs the school"-- One teacher's disturbance is another's intellectual ferment.

* "Other implements which can be used as weapons"--How about sharpened pencils?

* "Missiles on the school grounds"--Baseballs? Footballs? Javelins?

* "Participates in fights"--self defense is accepted in courts of law.

* "Any other serious offense"--Don't breathe until a test court case has reached the Supreme Court.

Although other state laws may not embrace such detail, they generally have the same tone, intent and direction. Most of them are the essence of Mosaic law, carried intact to Plymouth Rock and hammered into a schoolmaster's plowshare in the last days of 19th Century America. The seeds of learning shall be sown -- or else! Wild oats and noxious weeds shall be uprooted and the harvest shall be good.

The weeding out process has been effective in the gardens of learning, including a heavily disproportionate number of black students suspended and expelled. The law, which grew out of the traditions of a white-dominated culture, seemed ready made for the insurgency of blacks into the school sector of that culture.

Two of the most flagrant cases of racial disproportion are in Arkansas, in Little Rock and North Little Rock. It should be pointed out, however, that one reason why these cases stand out is because school officials are concerned enough about the problem to gather statistics as a first step toward solving it. The data only shows suspensions. The term

expulsion is not used because, as one top administrator said, of "the stigma and psychological weight of the word."

In 1968-69, when there was little desegregation in Little Rock's secondary schools, there were 1,329 suspensions, including 829 black students. Blacks accounted for 62.4 per cent of the total suspended, yet the system-wide secondary population was only 28 per cent black in high schools and 35 per cent in junior highs.

The following year, when there was limited student desegregation but considerable faculty integration, the number of suspensions rose to 1,643 students, of which 1,136 (69.1 per cent) were black.

~~By 1970-71, the black percentage of secondary enrollment had risen to~~

Suspensions dropped some in 1970-71, but the black percentage continued to increase. That was the year the 10th grade was racially balanced. The total number of suspensions was 1,525, of which 1,119 (73.4 per cent) were black.

Last year, 1971-72, the secondary school population had become 33.4 per cent black in high schools and 42.1 per cent ~~in junior highs. But the suspensions jumped back up~~ in junior highs. That year marked the first year of total racial balance and massive busing at the secondary level, which put many students into new schools. There were 1,881 suspensions, including 1,504 blacks, who accounted for 79.9 per cent of the total.

No figures on the current school year were available at the time of the SRC survey, but administrators speculated that the total number of suspensions for 1972-73 would be 200-300 fewer students. However, total enrollment this year is also ~~smaller than last year.~~

smaller than last year. The black percentage of the secondary population rose to 37.5 at the upper level and 42.5 at the junior high level and the system appears headed for a black-dominated enrollment in a few years.

Out of the 1968-69 to 1971-72 figures, one fact is inescapable: the number of white students suspended fell from 500 to 377 while the number of blacks suspended rose from 829 to 1,505. The black percentage of the suspensions increased from a segregated 62.4 to a desegregated 79.9, while the black percentage of enrollment changed only slightly, from an average of 31 per cent to an average of 37.7 per cent during the same period.

In North Little Rock schools (a separate school district) last year--two years after integration was completed at the secondary level--junior-senior high enrollment was about 20 per cent black. Yet there were 611 black students suspended and 574 whites. This year, through the winter holidays, figures show 167 suspensions involving whites and 174 involving blacks, still more than 50 per cent of the total.

Elsewhere in Arkansas, statistics are not gathered or are incomplete. In Pulaski County school district, which encompasses those parts of the county which are not part of either Little Rock or North Little Rock, data gathering began this year, but the figures were not available at the time of SRC's survey. Homer L. Cox, appointed this year to the post of director of pupil personnel, was suspicious of the reporter's purposes and was reluctant to talk about race as a factor in suspensions or

expulsions, as are many other school officials who do not keep records on them. In Pulaski County School District, a separate designation for the more severe penalty is used.

Cox said there was an increase in suspensions last year as a result of greater desegregation, but he said there had been a slacking off this year. There were large-scale suspensions over the past two years but also this year, notably in October, 1972, when 71 students, black and white, were suspended in two days as a result of interracial fighting at two secondary schools. Six black and two white students were expelled, but two blacks have since been readmitted. In 1972, the school census included 22,200 whites (81.5 per cent) and 4,300 non-whites (18.5 per cent),

Cox said the average number of suspensions in senior high schools is between 15 and 25 a month and one or two expulsions. He said the number of blacks suspended was in proportion to their numbers in the system, but he could show no figures to support this. He said he made a count over a one-month period but kept no record of his findings.

Suspensions and expulsions are a serious problem in Louisiana, it is acknowledged by many school officials and state leaders, although statewide or even district records are not kept. But the problem has led to authorization by the legislature of a special task force to investigate and make recommendations.

Tens of thousands of students are suspended or expelled each year, thousands of them twice, three, four, five even six times in a single school year. In spite of the absence of

statistics, many school officials acknowledge that a larger percentage of blacks are suspended, because, as one administrator put it, "our schools are basically middle class schools with middle class rules and the black students have had a difficult time fitting in."

The most serious problem in the state, especially where the racial overtones stand out, is in the New Orleans school district, the largest in the state. In New Orleans, the student population is 70 per cent black but nearly 80 per cent of the suspensions are meted out to blacks. Out of the total of more than 46,000 students in middle, junior and senior high schools, nearly 10 per cent of them were suspended at least once in the first four months of this school year. More than 600 students were expelled in the same period.

Most damaging of all are reports from around the state which show that most students expelled never return to the classroom.

In Lafayette Parish, which has an enrollment of 28,000 students, more than 1,700 of them were suspended in the 1971-72 school year. Many were repeaters, including 19 who were suspended six times, 35 suspended five times, 71 ousted four times, 167 three times and 354 twice. The tempo is about the same this year.

~~The problem has been greater in St. Landry Parish, where there are about 28,000 students~~

~~Yet the school officials across the state, with the exception of the New Orleans area, report~~

~~Yet there are signs that the number of suspensions and expulsions might be dropping as school officials across the state report that black-white student clashes,~~

When integration first began in many Louisiana schools, suspensions increased and the percentage of blacks were far out of proportion to their numbers. "In 1969, when we in St. Landry Parish first integrated, blacks suspended from school outnumbered whites three to one," said one school system administrator.

Yet there are signs that the number of suspensions and expulsions may be dropping as school officials across the state report that black-white student clashes, a major spark for mass expulsions, have decreased sharply this year. There are, however, still frequent reports of large-scale suspensions of protesting black students in Baton Rouge, New Orleans, New Iberia, Jeanerette, Abbeville, Shreveport and other cities.

In Georgia, meaningful statistics are almost non-existant. There are some scant figures on the statewide problem but local school districts seldom keep any records. Very often, those who assemble any figures discard them at the end of the school year, leaving the numerical story to speculation or rumor. But perhaps the most significant statewide figures reveal what happens to the students who are suspended or otherwise cutoff from the schools by administrative action. The results are predictable.

In 1968-69, the number of students suspended or expelled who dropped out was 595. By 1969-70 the number was 760. The following year, the number reached 1,125 and there was a slight decrease by 1971-72 when the total number of "pushouts" was 1,017. This is only a portion of the total impact of the problem, but it indicates the severity

and the permanence of removal from the influence of the school environment. (GET INSERT "A")

Reporters attempting to measure the situation in many Georgia counties must first deal with a wide discrepancy in figures. There are some partial documented figures combined with others which local officials can only remember. These must be compared with other data from both the U. S. Department of Health, Education and Welfare and the Office of Civil Rights. Different reporting forms are used and different figures are reported. The result is confusion and guesswork. But some figures come through the cloud, although they are compiled by unofficial sources and can be challenged.

An official of the Urban League of Columbus, Ga., said he visited 5 of the 17 junior and senior high schools and had tabulated 6,000 suspensions in that city during 1971-72. Officials in Columbus, one of the state's largest cities destroy data gathered each year, but the Urban League official said the number is on the increase.

In the Chatham County (Savannah) School District, one official estimate of suspensions was between 5,000 and 6,000 for 1971-72 and 3,000 to 4,000 so far this year. One junior high school was reported to have suspended 691 youngsters this year. One administrator conceded that about 60-70 per cent of the suspensions were black students.

An Emergency School Aid Act (ESAA) proposal for Atlanta schools charted the suspensions for 1971-72 and halfway through the 1972-73 school year for five high schools. In 1971-72,

there were 1,209 suspensions in Bass, East Atlanta, Murphy, Roosevelt and Smith high schools. Of these, 994 were black and 215 were white. This year, there have been 810 blacks suspended and 169 white students.

In neighboring South Carolina, statistics are more available in some districts. In Richland County School District 1 (Columbia), in the first half of the 1972-73 school year, about six per cent of the district student population was suspended, losing a total of 5,208 days of school, an average of 2.6 days for each suspension.

Of the total, 1,519 of the suspended students were black and only 445 white. Blacks accounted for 77 per cent of the suspensions while whites made up only 23 percent of the total.

← Might add enrollment % days lost.

And in South Carolina, the suspension-expulsion route continues to be a well-travelled, one-way road away from the influence of the schools and the benefits of education. At the beginning of the 1972 school year, 10,761 were listed as dropouts from the previous year, including 6,339 white students and 4,422 blacks. Of the combined total, (_____ (see

~~In Charleston County, there were 923 dropouts from last year, including 390 blacks and 533 whites. Of the combined total, 136 left school because they were expelled.~~

→ blurred figure on copy of Zimmerman's narrative) were expelled.

Verify, Please!

In Charleston County, there were 923 dropouts from last year, including 390 blacks and 533 whites. Of the combined total, 136 left school because they were expelled.

Richland County reported 664 students dropped out of school, including 314 blacks. Twenty students were expelled outright. Spartanburg County School District recorded 44 expelled students out of a total of 546 who dropped out, including 188 blacks. York County School District reported 67 who quit school as a result of being expelled, out of a total of 646 dropouts, including 254 blacks.

School officials and community leaders outside the walls of schools and administrative offices often have widely different explanations for suspensions and expulsions and disparity between the numbers of blacks and whites. Yet, sometimes they agree. And sometimes, the official viewpoint reveals more than the words the administrators speak.

The official reasons, the immediate causes given for most suspensions or expulsions are common in every state and school district and are echoed in the words of nearly every school official. The reason most often assigned is given a number of different labels--disrespect for authority, insubordination, disobedience. But other reasons listed are fighting, gambling, possession of weapons, use of intoxicants, smoking, truancy, habitual violation of rules, and excessive tardiness. The list of other, more specific official reasons is seemingly endless.

But what lies behind the immediate spark which often sends the student home, out onto the streets and perhaps out of school forever?

Discipline--an emotional, often political issue in itself--is woven throughout the fabric of the problem. Don R. Roberts, assistant superintendent of administrative services in Little Rock schools, said that believers in strict discipline--teachers, parents and others in the community--were "losing faith in the schools" because they see the eruption of misbehavior without seeing the often traumatic causes behind it.

Roberts and ~~others~~ some other Little Rock ~~schools~~ officials were sensitive to the varity of ~~the~~ root causes that might lead to a student's misbehavior, citing examples such as:

* A youngster deprived of breakfast each morning because his parents ~~are~~ were at work and an older brother, who, instead of preparing the younger boy's meal, ate "everything in the house."

* A 15-year-old girl who was forced to have sexual intercourse with her stepfather. [GET INSERT "B"]

~~Racial confrontation, its fires stoked by increased integration, is an outstanding cauldron in which disruptions are heated.~~

When integration at the secondary level in North Little Rock schools was completed three years ago, suspensions for "defiance" and "disrespect" shot up along with the number of black students suspended, said Doyle Crownover, assistant superintendent for administration.

"When desegregation first occurred at the secondary level," he said, "blacks were put into a predominately white ~~a~~ setting where there were entirely different attitudes toward schedules, promptness, and so on. The segregated schools which black students had been attending were not as oriented toward time

~~[illegible] the black students ran into~~

schedules. The black students ran into different expectations (at desegregated schools). Tardiness was a major violation.

"The black students got the idea that the regulations had been instituted to persecute blacks. It took a couple of years for them to realize that the rules had existed before and for the blacks to adapt to the stricter regulations.

Crownover said that much of the problem stemmed from black students being told to expect discrimination which led to their arrival at newly integrated schools anticipating mistreatment. Although he said he didn't observe deliberate bias in white teachers, equal fault lay with their lack of experience in working with blacks, which led to teachers' failure to see and teach blacks as individuals.

The administrator also said that busing and the resulting disjointed attendance zones had contributed to disciplinary problems by weakening the relationship between the child and his school. However, he said, white students are accepting the authority of black teachers and administrators more than black pupils are accepting white authority.

"I guess they (black students) have had so much crammed down their throats that when they get a little breathing space, they tend to over breathe," he added.

Phil Kaplan, a Little Rock lawyer active in civil rights cases, has a different view.

Kaplan said there are patterns of discrimination in suspensions throughout the state. Blacks are frequently dismissed from school when they are involved in an offense, he said, whereas whites are not. He said that black students have

been expelled for "sexual reasons" (illigitimate pregnancies, marriage), for being disrespectful and questioning a teacher's authority. Dress codes, he said, are widespread, in spite of court rulings against them and that some blacks have been suspended for wearing Afro-type hair styles. A survey showed that there are no such codes in the the Little Rock-area, but Helena uses a dress code drawn up by a student-faculty committee and approved by the students. Kaplan also charged that the threat of corporal punishment is used to intimidate black students, but school officials reply that students are given a choice between a paddling or being sent home. They said that the "licks" are chosen, often with the support of parents.

The attorney charged that school administrators over-react to incidents involving black students instead of becoming more sensitive to the needs of students. "If an administrator's response is the same to both violence and 'an approach' to a white girl, then the 'crime' and the punishment will be out of proportion."

Where blacks are present in the schools in any numbers, Kaplan said, there is a strong impetus behind efforts to get them out of the schools. When the proportion of blacks is below 15 per cent, he said, the problem is less severe. It appears to be worse when the percentage is 30-40, because blacks represent a threat without being numerous enough to wield power.

The superintendent and the influence he brings to bear, Kaplan added, makes the biggest difference in how districts deal with desegregation problems. He said he had never heard of a school board reversing a superintendent's decision on an expulsion, leaving the superintendent in the all-important position in any specific case and in the eyes of the community.

Although there is strong evidence of discrimination in Louisiana, some school officials are also aware that racial conflict clouds the arena in which teachers and administrators must make important decisions in the spotlight of community opinion. Being disrespectful to teachers and principals has led to more student suspensions than any other single violation.

"The disrespect white teachers read into the actions of black students may not have been that at all," said Dr. Joseph Kite, superintendent of Vermilion Parish in southern Louisiana. He is a widely respected educator in the state and region.

"But the students are often suspended for being disrespectful anyway. And the same thing happens to white students with black teachers, said Dr. Kite. He recalled the first year Vermilion Parish schools were integrated, a time when he said teachers spent 30 per cent of every school day trying to keep order in the classroom.

However, as he searched for causes for the dilemma, he also slipped into stereotype reasoning similar to those used by administrators and others with less understanding. He

suggested that one reason blacks were more often dealt suspensions for disrespect is "because black students are less inhibited than the whites." Without thinking, he was only one step away from saying that blacks also "sing and dance well".

Whites may be more accustomed to an authoritarian atmosphere, Dr. Kite continued. When a white student is told by a teacher to do something, he is accustomed to doing it without asking why, while the black pupil often challenged the teacher's authority and got in trouble for it.

Mrs. Maxine Copeland of New Orleans, organizer for the Movement to Obtain Reform in Education (MORE), says the problem of suspensions in the Crescent City is not entirely racial.

"It crosses all color, sex and age lines," she said. But MORE reports that suspension punishment is being used increasingly since schools in the state have begun to integrate.

"Before, it (suspension or expulsion) was only for serious offenses," Mrs. Copeland commented. "But now it's for the least little thing and the terminology often does have racial overtones."

Racial overtones are an excuse and a smokescreen to one official in Candler County, Ga. _____ Samples((get his first name from Keating)), director of visiting teachers there, said that "race was just an excuse and all the discussion of race was just riding it to death." He said he felt that the problems sprang from the home environment, that the students were "acting up" in school and that the actions were symptoms of this background.

The main reasons for suspensions in Candler County, Samples said, is "a refusal of the child to accept (corporal) punishment for minor offenses. He also said a major change in policy to improve the situation, put into practice last year, was from the choice between a paddling and suspension to a choice between corporal punishment and chores for the school. Most choose punishment, because the in-school labors are in force over a long period of time. Repeated suspensions for some students have been caused by the student's failure "to co-operate" or being "disruptive in class," Mr. Samples said. While racial tension has been a cause for suspensions in the past, that has been replaced by "disruption," the visiting teacher official said.

An opposition viewpoint came from Harold Boston, a longtime resident of the area and a director of an ESAA program to aid desegregation. In most incidents, teachers and administrators choose to place heavy blame on black students. "Teachers always side with the white kids and blame the blacks." Rapport between most students and teachers is non-existant, he said, even black teachers, many of whom assume a stance with the school system. "There is increased discouragement of black kids who feel that even black teachers are against them," he explained.

In Columbus, this view was echoed by Jesse Taylor, of the Columbus Urban League, who said that many black teachers make black students "feel inferior." When confrontations occur, often the teachers, black and white, blame the black and exempt the whites. "Fighting, discipline and disrespect" are the chief reasons given by school officials for suspensions,

but he said the root causes for increased suspensions are a lack of teacher-student communication and a lack of official understanding of the great variety of deeper reasons, racial and other.

The Rev. Jim Hooten, a clergyman in Savannah, said excessive emphasis of the authoritarian concept have led to most troubles, including suspensions and expulsions. "Schools try to keep the lid on, keep order and keep discipline," he said. He cited five schools in Chatham County, only one of which was led by a principal who exercised a moderate approach to discipline.

Suspensions are a method of communicating with parents, said Lee Forehand, superintendent of rural, middle-Georgia Pike County schools. "Suspensions are a good influence on kids," he said. "The courts have locked schools in and tied our hands by eliminating corporal punishment. Suspension provides direct involvement with the parents," he added. Apparently, more communication is on the way. " More suspensions will be coming," Mr. Forehand predicted.

Conflict with authority and discipline may be a sign of many things--racial rout step, age and cultural differences, rapidly changing social values. But it's heavy emphasis ignites many young people, black and white.

"Man I ran into problems with disciplinarians," said one student in South Carolina. "I kept gittin' sent to the office and home for nothin'." But discipline, like race, as a factor cuts across all boundaries and bears on many incidents, sometimes subtlety, sometimes harshly. It

is lost in the tangle of other official reasons and causes.

It has been discovered in Richland County, S. C., such as those recorded where the main causes of suspensions was said to be cutting class, fighting, disrupting and disrespect, with smoking and leaving school grounds being reported as more minor violations.

Supt. Henry C. Cole, chief administrator of Greenwood School District No. 50 in South Carolina told the Greenwood Rotary Club in January that discipline is the number one problem in the school system.

There is no evidence and only a little speculation that points to any kind of trend in the South and elsewhere in the tempo of suspensions and expulsions as weapons against school youth in general and black students in particular. Out of SRC's survey, only a few comments from school officials and a few other community leaders showed some hope of a trend toward improvement.

Most of the schoolmen said that the number of suspensions and expulsions rose with increased desegregation in the past few years, including an increase in both physical and verbal confrontation. But some saw slight signs of a levelling off of conflict. Doyle Crownover, North Little Rock's assistant superintendent, said suspensions were now "on the decline" and that "time will calm black resentment of whites in authority." Pulaski County's pupil personnel director said there was a "slacking off" this year.

T. E. Patterson, assistant executive director of the Arkansas Education Association, lent some credence to this feeling. Patterson is the AEA's director for human relations and the only black member of the Little Rock board of education.

The situation was worse two or three years ago, he said, when school systems, including Little Rock's, would suspend black students on any pretext. Now, he said, "overt discriminatory acts have ceased." Arkansas is "one of the better states" in this respect, he added.

Phil Kaplan, the Little Rock attorney associated with civil rights causes, said, however, that it might be too early to tell, but conceded that racial conditions in Little Rock appeared to be smooth on the surface.

But trends and hopes may be a weak foundation for the future. Reforms arising from a closer community investigation of state laws and local school regulations may provide a more substantial base. Of even greater significance may be the educational alternatives exercised for the benefit of all students, especially those who wind up on the brink of disaster, where an official push will send them plunging to the social and economic rocks below.

Most school regulations and school board policies, like the state laws which give them their authority, are similar. Nearly complete discretion is given to keep order and maintain an undisrupted environment for

learning. Immediate authority varies from district to district and state to state, but usually the principal or the superintendent has the power to rule on individual cases. The right of appeal is common in many districts, including the right to take the appeal to the school board. In one, the way is open to carry the appeal to a district court, but too often parents are intimidated by the expense of hiring an attorney. Law and local regulations permit expulsion or suspension from one day to an indefinite period. In Arkansas, the law limits suspension to "the current term", which is generally interpreted to mean the semester. Most districts have some provision for involving the parents, either sending the student home with a suspension notice or a requirement for a conference.

Two of the more detailed examples of school requirements for some kind of due process are in Arkansas and Louisiana.

Suspension procedures in Little Rock schools appear to have been designed more carefully than those in other districts in the state. In Arkansas and elsewhere, the principal has the final word on most suspensions. By contrast, Little Rock administrators require that officials from outside the school be called in on a suspension case from the beginning.

Suspension is a last resort, said Asst. Supt. Roberts, and the individual school is given the responsibility of exhausting all other courses of action before that decision is made. This includes sending students home with notice to parents, followed by a conference with parents, teachers, deans or

vice principal to determine mitigating circumstances or other in-school solutions to a student's problems. Few principals suspend a student in the first instance of misconduct except for serious infractions such as threats of violence to a teacher, Roberts said.

If suspension is ordered, students are usually sent to Gateway School, established especially for suspended students, for both additional counselling or "corrective measures." Roberts described Gateway as a "short-term adjustment center" and not a place for punishment. Students are required to bring books and to continue a study program while they are there.

If a brief stay at Gateway doesn't help the student's "adjustment" to school, he is referred to Leonard L. Thalmueller, assistant superintendent for pupil services, who can extend the student's assignment to Gateway for up to two weeks, 10 school days. Principals ordinarily suspend students for an indefinite period, leaving it up to Gateway officials to decide when a student is ready to return to regular classes within that two-week period. If there are no positive results during that time, Thalmueller can suspend the student for the remainder of the semester--but only with the superintendent's approval. Students and parents have the right to appeal to the superintendent. If a second suspension occurs, the principal must decide if another trip to Gateway would be beneficial. If the special school is not viewed as a solution, the case is referred to the school's pupil personnel director who can make a decision or refer it on to Thalmueller. At this point, if the student is not benefitting from Gateway or other resources, he may be referred

to other agencies such as juvenile court.

The Little Rock District also operates the Opportunity School, primarily for students with learning and family problems rather than behavior problems.

In North Little Rock, procedures for handling suspensions (as in Little Rock, the term "expulsion" is not used) are more restrictive than in the capital city. The power to suspend for brief periods--usually three or four days--is in the principal's hands with few limitations. Conferences with parents are optional with the principal, but in serious offenses, he may require parents to meet with Crownover, the assistant superintendent. Crownover makes a decision to suspend or not before the conference, but if the student is allowed to remain in school, parents receive a stern letter "laying it on the line" about improvement in the student's actions or attitudes.

There is the right of appeal in suspension cases, but there is no requirement that a principal notify a student's parents of their right to appeal to Crownover, the superintendent or the school board. Crownover conceded that a student could be indefinitely suspended without being aware of his right to appeal, but he said that this is theoretical and has never happened.

North Little Rock schools offer no counselling or other services for students under suspension and the school board, in 1971, voted down a proposal for a school similar to Gateway in Little Rock. Crownover said such a school could

not be justified, because there were never enough students under suspension at any one time--usually 10 days or less--to warrant it. He added that most suspension offenses were not the type which required counselling and other services normally offered by such special schools.

In Louisiana, the state law provides the official due process. It states:

"Notice in writing of the suspension and the reasons therefor shall be given to the parent or parents of the pupil suspended. Any parent of a pupil suspened shall have the right to appeal to the parish superintendent of schools, who shall conduct a hearing on the merits. The decision of the superintendent of schools on the merit of the case, as well as the term of suspension, shall be final, reserving the right to the superintendent to remit any portion of the time of suspension. A pupil suspended for damages to any property belonging to the school system shall not be readmitted until payment in full has been made for such damage or until directed by the superintendent."

The law also provides that any student, after being suspended for a third time in a single year, shall, on committing a fourth violation, be expelled for the remainder of the school year. "But it is not always done," said Dudley Auzenne, a member of the supervisory staff of St. Landry Parish schools.

State law also provides due process to appeal up to a district court.

Students, parents, and community leaders are raising their voices in Louisiana and elsewhere to more firmly establish

due process, by either demanding enforcement of existing state laws and local policies or ~~to change~~ changing the laws to give more protection.

In Jeanerette, La., a rural community, 27 of 40 black students expelled in the fall for homecoming disturbances, filed suit in federal district court, claiming they were expelled by the principal, instead of the superintendent, and that they were expelled without a hearing. The expulsions were ruled illegal and ~~ordered~~ readmission of all 40 students ordered until separate hearings could be held for each one.

Last year, a group of black legislators attempted to amend state law which states that conviction of any student of a felony or incarceration of a student in a juvenile institution for reasons which would have constituted a felony for an adult shall be cause for expulsion.

Some black lawmakers, such as Mrs. Dorothy Taylor, state representative from New Orleans, want to change state law permitting expulsion after a fourth violation, particularly in cases where a student could be suspended for the remainder of the year for profanity or being tardy a few minutes.

What might have been viewed as a reasonably relaxed legislative change was resisted as political motivations were injected. Allen Bares, a white legislator from Lafayette Parish, said: "What they (blacks) were trying to do was take away some of the powers of school principals. The committee didn't think this was a good idea."

The black solons were not successful in bringing about immediate change, but their testimony about mounting

suspension problems in the state and off alleged abuses of the law by principals in the New Orleans area stirred up widespread concern. This concern led directly to approval of the statewide task force.

Student protests have been flaring up briefly for several years, but now court cases are being filed more frequently and may soon begin to have a more permanent impact on due process. In 1971, a Little Rock suit was filed, claiming that suspension of students charged with felonies was being applied to blacks only. Another suit alleged discrimination in Brinkley, Ark., schools, claiming that corporal punishment is routinely administered to black students while whites were given only reprimands. In the East Arkansas town of Hazen, a suit involved a dress code.

Perhaps the most significant court action has come in the form of a ruling in March by U. S. District Court Judge Robert Hemphill. The ruling came out of a incident in which five students at Anderson County's T. L. Hanna High School were suspended following racial disturbances.

Judge Hemphill ordered Anderson County School District No. 5 to readmit the students to school, arrangements for the students, all boys, to take examinations with books and tutoring provided by the board of education, and provisions for the students to transfer to adult education classes if they fail the exams.

With an eye to the future, the judge's order also listed four requirements for an expulsion hearing:

~~Advance notice of the hearing.~~

* Students should be given advance notice of hearings.

* Students may not be entitled to cross examine witnesses, but they should be given names of witnesses and a summary of testimony from them.

* Students should have a right to be heard in their own defense and to present evidence.

* No serious disciplinary action can be taken without substantial evidence.

The ruling is an admonition to the school boards "to be fair," said John Bishop, lawyer for the students, who hailed the ruling as "highly significant." He said the court decision assured that "a witness can no longer say 'so and so told me you did it'."

Under the new ruling, a student has the right to appear before school boards with an attorney and defense witnesses. "Before, it was largely left up to the discretion of the school boards as to whether such action was permitted or not," said Bishop. Judge Hemphill's decision "puts the onus on the school boards...to come up with valid evidence and proper proceedings or their action will be thrown out," the youthful attorney said.

The ruling may reach out into other schools in other states. Bishop predicted that "we are sort of on the edge of a new frontier with regard to student rights."

Although the impact of community and court concern over due process will be felt everywhere, there are many school and community leaders who feel that the final and best solution to the problem lies in the classroom with effective

educational alternatives to exclusion and exile for students.

One rather self-serving motive to turn in this direction may be an appeal to the personal and governmental pocketbooks of citizens and elected officials. Supt. Henry C. Cole told a group of Greenwood, S.C. community leaders that suspensions and expulsions also cause a serious financial problem, reminding them that the days the students are missing from school because of suspensions reduce the Average Daily Attendance (ADA) figures and reduce the amount of state financial aid. It is obvious that the hundreds of thousands of students expelled or removed for even a few days will result in the loss of millions of dollars in sorely needed state funds to meet pressing demands for services in the South.

There is a disparity between school districts in providing alternatives.

In Marianna, Ark., where there was a large-scale boycott of schools by black students in 1972, suspended students are sent to Rebound School, funded under Title I of the Elementary and Secondary Education Act, now in its second year. In a a school district which is predominantly black, the director of Rebound School is black and he decides when the student is ready to return to classes.

Officials in Pulaski County School District, where there have been large numbers of suspensions following racial fights, have explored the possibility of a school similar to Little Rock's Gateway, but they said it was not practical because students are drawn from a widely scattered areas of the county.

Good schools and alternative programs do not always provide the solution for blacks in danger of continuing discrimination.

Little Rock attorney Kaplan pointed to two examples which fit this discription from his viewpoint. The Brinkley district, he said, had drained black students from the main high school, sending them to a special school at a former state training school and thus reducing the black enrollment at the main high school. Athletes, however, had been allowed to stay in the regular program until the end of the athletic season.

In Little Rock, he said, blacks who were good achievers have been kept out of accelerated programs under the influence of guidance counsellors. Even worse, he said, are many districts which employ no black counsellors only white counsellors who are not familiar with college recruiting programs for non-athletes black students. Generally, there is a shortage of counsellors throughout the state. In spite of a need for about 1,500 counsellors, there are only about 450 in Arkansas. Nationally, the shortage of qualified counsellors is an acknowledged educational deficiency in all schools.

INSERT "C"

There is mounting support in Louisiana for more and better educational alternatives which would help many students, particularly those who might become dropouts or pushouts.

A career education concept, started at an early age, could help, said Dr. Kite, the Vermilion Parish superintendent whose voice is heard and respected in Louisiana. Education in the state, he said, has too long been generally

aimed at the college-bound student, causing the low-achiever to lose interest in school and eventually fall into the group of "potential suspensions." The career education concept would benefit these students by providing them with areas of training in which they might excell.

This approach has the support of Gov. Edwin Edwards, State Supt. of Education Louis Michot, the Public Affairs Research Council and other groups. In spite of this backing, a more somber reflections come from many educators who say that vocational education will not solve the future problems of poor and black youth in times when the economy or society cannot redeem the promise of social planners. "What" Arthur Pearl once wrote about the poor may be applicable to the push-out prone student: "They don't suffer from a lack of future orientation...they suffer from a lack of future."

But few disagree with the need to press the search for educational solutions. Dr. Gene A. Geisert, New Orleans superintendent, has some ideas he feels are worth serious consideration.

Dr. Geisert, a man with innovative ideas on the problems of suspensions and expulsions, offers this suggestion: preventive programs such as the Conflict Intervention Team, now in operation at Abramson High School, the scene of frequent black-white student confrontations. The team works with students on individual problems without suspensions. He also suggested redefining the role of school guidance counsellors. "I would like to seem them become advocates of the students when problems arise," he said. He said other educational alternatives

for students who cannot function well in a more traditional setting could include the concepts of "schools without walls" or "street academies."

Another concept favored by both Dr. Geisert and Dr. Kite is home-school co-ordination, designed to bring together the parent, the student and the education process.

Two of the reasons for the growing number of student problems today are crowded schools and the lack of sufficient professional staff members to set up school-home programs, said Dr. Kite.

"Often the problem student is one who is not happy at home," Dr. Kite said in a long interview. "Unless you can work with this student at home and the school, your problems with him will continue. Everything the teacher does at school is forgotten by the student when he gets home."

Sometimes, problems are more easily solved in small-town or rural schools where school officials often know many of the parents personally, and an easier rapport can be established. This is more difficult in the more crowded and impersonal urban areas.

In such programs as these, the emphassis is mostly on the student rather than the educational system which is often removed from the world of the youngster burdened with disturbing personal problems. Many educators and other observers feel that the only avenue possible for success with the dropout or the pushout-prone student is a more personal approach to the individual student.

Dr. Geisert and others who share his vision may be ~~the ones who first find a way out of the tangle of~~ the ones who write the peace treaty -- or cease fire agreement-- in the suspension-expulsion war between students and the schools. Suspensions are not the answer to the school problems, he says. Adjusting the curriculum to make it meet human needs may be the answer, he believes.

"We need to review the curriculum and make it more relevant to the students' needs."

THE PUSHOUT--15-A I-N-S-E-R-T-A

Insert after "school environment" , top of pagex 15

Even when some statistics are available, reporting accuracy is so varied that nearly all figures are questionable. But some information sheds light on the official frame of mind if not the numerical view of the problem. Too often, the suspended or expelled student is written off as a responsibility of the school system. As one assistant superintendent said, "We don't use the word expulsion around here. We call them dropouts."

(((Pick up next graf, "Reporters attempting...")))

THE PUSHOUT--18 INSERT "B"

Insert after "...with her stepfather" at mid-page 18

Immediate reasons leading to a student's removal from school are often born of deeper, more complicated human factors and conditions such as racial bias, poverty, family disruptions, physical and psychological disorders, and cultural separation, both among students groups and between students and faculty, ~~and poverty~~.

Little Rock administrators have no data on income levels of suspended students, but one said there is "no question" that suspended students are concentrated in lower-income families and segments of the community. Often, he said, a small number of families contribute a disporportionate share of the students who are suspended. In some instances, several students from the same family may be caught in a web of disciplinary problems at the same time.

Student-teacher conflict, although it may be one of the major causes leading directly to a suspension, is also one which is open to interpretation as to exactly what constitutes insubordination and disrespect. This is especially true if school discipline is founded in a traditional philosphy and is supported by the full weight of the community, state law, local policy, a strong superintendent who backs his principals and a strong principal who backs his teachers to "maintain a proper learning environment." The issue of "disrespect for authority" --the brother of "law and order"--becomes explosive in the emotional heat of racial conflict.

((pick up with "When integration...")))

THE PUSHOUT--35 -- I-N-S-E-R-T (C)

Insert after graf ending "...deficiency in all schools."

ESAA director Harold Boston in Metter, Ga., echoed this complaint, saying that there are no educational programs for students out of school and that there is a critical need for counselling, especially black professionals in the field. There is no PTA in any of the three schools, he said, hampering the communications process and often leaving the parents "lost because they just don't know where to go or who to turn to."

Mr. Samples, the Candler County, Ga., administrator said there were no programs for suspended or expelled students except a reasonable amount of time to finish the work they missed after they return to school."

Mr. Taylor, an observer of the Columbus, Ga., schools also complained that there is no special education program provided for suspended students. Similar conditions were charged by officials and observers in other Georgia school systems.

THE PUSHOUT--35 INSERT C CONTINUED

Judicial recognition of the principal of educational alternatives was made by Judge Hemphill in the Anderson County, S. C., decision.

"Every effort should be made, by plaintiffs and defendants, in co-operation, to heal the wounds, to complete the educational process," the ruling stated. "Time is of the essence," Judge Hemphill wrote, adding that students may not be able to complete their education because of the time lost in their suspension. "Expulsion jeopardized the educational potential of the plaintiffs," he added.

To: Esser, Bowie, Hall, Samuels, Whittington, Crosland, Via

From: Lucy

After consulting with Harry and considering schedules, we have come up with the ~~xxxxx~~ following schedule of working out what remains to be done before the Thursday meeting in Washington on the push-out study:

3:30 - 4:15 <u>this afternoon</u> -- meeting in the conference room to discuss conclusions and recommendations only. Please go through the introduction and draft sent to Kennedy last night, and be prepared with tightly written suggestions.

Tomorrow, probably late morning -- meeting in the conference room to discuss the joint documents. Please review the original Kennedy outline and documents along with the new blue-covered supplement that came in this morning. We will need to consider what gaps there are and what still remains to be done, and by whom.

Thursday morning -- George, Harry, and Leon will be meeting with the Kennedy people in Washington. Leon will take with him our conclusions and recommendations, as well as our recommendations for completing the joint document.

There are three copies of the original Kennedy document, three copies of the new blue supplement, and ~~xxxxx~~ three of our draft and introduction. Please see me in the conference room for copies to read, and return all copies to me as soon as you have read them.

MAY 1973

The New Word is "PUSHOUT"

"This place is prison, man, this place is prison prison, prison, prison."

By Lawrence Wright

A new word has been coined—Pushout. The word still lacks a precise definition, but it is drawing increased attention to a wide-ranging problem. In the broadest sense a pushout is a student who has been prohibited from achieving his academic potential through a deliberate denial of opportunity.

At first, pushout was used to describe only the expelled or suspended student—strictly a discipline term. Now, however, it has accrued additional meaning. Pushouts include the non-English-speaking child who founders in class and repeatedly fails tests written in English; the student who was placed on a lower "learning track" in the first grade that will keep him in second-rate classes until he graduates—if he graduates; the child who is never given the opportunity to read something that is pertinent to his situation; the child who is neglected by his teachers because he is of a different race; and the student who is alienated from the school environment because of racial hostility. Dropouts and expulsions merely culminate a history of rejection of the students' needs on the part of the schools. According to the pushout premise, poor test scores, acting up in class, disaffection from school, and severe behavioral problems don't generate each other. They are just stops on the way for a child being forced out of school—symptons caused by much deeper problems rooted in the school systems.

The Robert F. Kennedy Memorial and the Southern Regional Council are studying the occurance of pushouts in the South. The National Education Association (NEA) recently held a conference in Washington to promote its currency. No one in these organizations knows precisely where the line is drawn between a pushout and a dropout. David Levin of the Robert F. Kennedy Memorial admits that even though his organization is studying the problem, they have not been able to distinguish with precision just who is a pushout. "We know what we're dealing with," he says, "but how do you define it?"

Even without a functional definition, the word is becoming popular to describe a problem of increasing concern to minorities—the distance between integration and equal education. Someday there may be a vocabulary to deal with the sophisticated nuances involved in this problem; now there is only pushout, which is less a definable word than it is a slogan.

There is a philosophy behind the usuage of this word, inspired by the liberal humanist notion that individual failings are socially determined—i.e., it is the schools which are failing the students, not the students who are failing in the schools. Dr. Arthur E. Thomas, director of the Center for the Study of Student Citizenship in Dayton, Ohio, and Ms. Mary Faber, who is compiling a report for the NEA on pushouts, agree that the following statements describe their understanding of the pushout philosophy:

- There is a common and predictable trend in each of the problems connoted by the term. In other words, if there is a high suspension rate, one can also expect a high rate of absenteeism and low academic achievement.
- These problems are to some extent ulterior to the process of desegregation, and yet one of the side effects of desegregation seems to be a rise in pushouts.
- Most dropouts are in fact pushouts.
- Most pushouts are minority students.
- The problems that constitute the term "pushout" are a bundle of symptoms that do not cause each other (low academic achievement does not *cause* a high suspension rate or vice versa); rather the root causes of pushouts are societal in origin—racism, alienation, etc.

In an April, 1972 press release, the NEA outlined the dimensions of the problem, referring to "shocking evidence of illegal student suspensions, racial intimidation, physical violence and even murder of students in an 11-state area in the South." The release also pointed to "student walk-outs, boycotts or demonstrations," and the clos-

PAGINATION INCORRECT

ing of previously black schools that "forced children into the hostile and sometimes dangerous environment of formerly white schools." All these factors create an atmopshere of tension, which is one of the forces which pushes children out of the education process, says the NEA.

An examination of the school systems in three cities in the U. S.—Boston, San Francisco, and Mobile—indicates that the problems in the schools are correlated as the NEA suggests. The relationship of the pushout phenomenon to desegregation is unclear because of the multiple ways communities desegregate their schools. However, pushouts can be more directly associated with the degree of minority influence in shaping educational policy decisions. In other words, if a child is pushed out of school, the chances are his parents have been pushed out of the school boards, too.

The three Cities: Boston, San Francisco, Mobile

In Boston recently a federal administrative judge found the school department guilty of operating a de jure *segregated system, in violation of the 1964 Civil Rights Act, and ruled the city ineligible for $8 million in federal aid. The NAACP has brought suit against the Boston School Committee for violation of the 14th Amendment by failing to provide equal education opportunities to blacks. And the State Board of Education has found the Boston schools to be out of compliance with the state's Racial Imbalance Law, and is freezing $50 million in state funds until the committee comes up with an acceptable desegregation plan.*

San Francisco is in its second year of court-ordered desegregation of its elementary schools. It is operating under one of the most stringent school plans in the country—one which calls for each school to reflect the over-all racial composition of the system, which is 29 per cent white, 30 per cent black, 14 per cent Spanish-speaking, 15 per cent Chinese, with another 12 per cent composed of Japanese, Koreans, Filipinos, American Indians, and others. The elementary schools were divided into two groups. "Primary" schools accommodate kindergarten through the third grade, and "intermediate" schools house grades four through six. Every child in the system will be bused for part of his elementary school career. The community boasts that its elementary schools look "just like the United Nations."

The turbulence that accompanied integration in Mobile, Ala., two years ago has diminished considerably. There is reason to believe, in fact, that white students who fled to private schools are finding their way back into the public school system. The reason for this trend, according to Supt. Harold Collins, is that the system has "stabilized." Collins attributes this turn of events to the diligent efforts of his teachers and the community, and to good fortune. He refuses to discuss, however, the disproportionate numbers of black children who are being expelled or suspended.

Each of these systems purports to be at a different level of integration. In fact the variety of community responses, judicial decisions, and racial compositions of students prevents comparisons of integration. Integration in San Francisco is qualitatively different than in Mobile, where the racial imbalance of the schools more closely resembles the "segregated" system in Boston. In each city, however, minorities are realizing that integration is merely the first step toward achieving equality of education—and that successive steps may prove as arduous as the first.

In an all-black junior high school in Boston named after Martin Luther King, two youngsters are sitting in the principal's office waiting to go home. They have just been suspended, for 10 days, they claim (the maximum allowable in that city is three days). "Sure," says one, "I'm glad to get out of here. Shiiit. Doors locked, bars on the windows . . . this place is prison, man, this place is prison. Prison, prison, prison. . . ." The other child joins in the chant: "Prison, prison, this place is prison."

On the streets of Boston are large numbers of Puerto Rican children out of school—young children who never enrolled or dropped out early in their school careers. These children are visible to everyone except the school department's attendance officers, who count only 11 children not attending school (one black and 10 whites), according to the figures they gave the federal government.

This figure is embarrassing even to school officials, who privately estimate the number of school-age Puerto Rican children not in school to be between 500 and 1,500. Several community groups have conducted independent surveys, which place the numbers of Puerto Rican children not attending school much higher—between 3,000 and 8,000. One survey found 42.6 per cent of the children surveyed out of school, another placed the figure at 31.2 per cent. The Boston School Department has made some efforts to deal with the problem through the institution of bilingual programs, which in Massachusetts it is legally bound to do anyway. As a result of these efforts, last year 63 Puerto Ricans graduated from high school—not an impressive figure, perhaps, but the year before there were only ten. The year before that there were three. The surveys also reported that nearly half of all Puerto Rican children are one year or more behind their expected grade level.

Reporting School Violence and Bribing with a 'B'

During the first year of integration in San Francisco, suspensions in the sixth grade (for which a racial breakdown is available) rose from 491 prior to integration to 795. Of this number, 604 were black (71.2 per cent). Only 6.1 per cent of these suspensions were Spanish-

speaking and just nine students (1.8 per cent) were Asian. In the third grade 81.6 per cent of the 179 suspensions were black. However, according to a report of the Student Placement Guidance Center, suspensions have fallen by nearly half for the fall term of this year. Racial breakdowns are no longer available. In order to treat students with behavioral problems, the San Francisco system has introduced the Guidance Service Center. Presently, 101 students attend the center; 96 are black. All of the staff is white.

Dr. Lee Dolson, a commissioner of the San Francisco Board of Education and Chairman of the Department of Social Sciences of City College of San Francisco, calls the reports of diminished school violence and discipline problems "an absolutely stupid whitewash." To back up his claim he displays the school incident reports that come to his office. Many of the schools failed to report incidents at all, and Dolson considers other reports spurious. "A school administrator who neglects to send in his incident report has a tendency to play down his suspensions. By that I mean he would not report them. Also, the administrators convey to their teachers that they don't want suspensions. So, a number of teachers suspend kids in a very devious way. They bribe the child with a 'B' so he won't come back to class. Thus, we tend to promote our social problems. The message isn't lost on the kids—they use this phenomenon to get thrown out of class."

Expulsions, Receptacle Schools and Reading Scores

However, many of the San Francisco elementary school principals and teachers are encouraged by the second year of integration. For instance, last year Leonard Flynn, principal of the Le Conte School, suspended more students than any other principal in the system. This semester he has suspended less than half a dozen. He agrees firmly with the assessment of the San Francisco American Federation of Teachers president, Jim Ballard: "It's working." In fact, Flynn and some of the parents of his students have devised a plan to extend integration into the secondary schools next year. He believes integration can correlate positively with academic achievement and student behavior if the community is stirred to participate and the school board to respond.

In Boston last year there was only one expulsion. In San Francisco so far this year there have been four, all for knife attacks against other students. In Mobile last year, 67 blacks and 17 whites were expelled. The actual number of students excluded from the school system is much larger, because in Mobile a student may be suspended indefinitely—a process many lawyers believe violates the student's rights of due process. As of March 30 this year, 125 students have been indefinitely suspended. The school department would not reveal how many of those were black.

Like San Francisco, Mobile has a receptacle school to catch students considered to be misfits. According to Henry Rembert, a community critic of the schools, only one child of the 60 attending this Continuous Learning Center is white. Rembert also thinks the official figures for indefinite suspensions are inaccurate. He would put the figure closer to 500. In some cases in which authorities feel suspension or expulsion to be insufficient punishment, the children are arrested in the school, arraigned, tried, and sentenced to periods of up to six months hard labor.

In San Francisco the dropout rate (including "left without transfers") in 1971-72 was 11.5 per cent, a decrease of .9 per cent from the previous year. However, the rates are higher for some groups than for others: Spanish-speaking males dropped out at a rate of 17.4 per cent, black males at a rate of 17.1 per cent, compared to white males at a rate of 12.9 per cent. The rates for females is about one percentage point less in each case. Chinese males dropped out at a 3.8 per cent rate.

In Boston, current figures on dropouts are not available, but Dr. Geraldine Gillis in the Student Guidance Department estimates the dropout rate to be about 10 per cent in the high schools. Although she could not say what percentage was black, she hinted that perhaps a great many dropouts are. Nor did she know how many were Puerto Rican, but the last time anybody looked (1970), 90 per cent of the Puerto Rican students had dropped out by the time they reached high school.

Authorities in Mobile declined to release dropout figures, saying: a) Such figures are not kept, and b) If such figures were kept, their disclosure would serve no useful purpose.

The figures for dropout rates and suspensions seem definitely to be correlated with academic achievement—especially reading ability. An official study by the school department in San Francisco conducted in May, 1972, revealed that the average black child in the second grade was reading over three months behind the norm for the district, and nearly a full grade behind his white contemporary. What is disturbing to many blacks is that their children read less well than groups usually identified as having language problems—Spanish-speakers scored higher than blacks, and Asians scored much higher. These two groups include immigrant children. By the time he reaches the sixth grade, the average black child in San Francisco is reading on a mid-fourth grade level—over two and a half years behind the national norm and a full year behind the district norm. The average white child at that grade is already reading on a seventh grade level; the Spanish-speaker is reading just at the fifth grade level; the Chinese student is reading at a high-sixth grade level, almost at the national norm. The lowest quarter of black children in the sixth grade reads at a mid-third grade level, while the highest quarter of whites reads at a high-eighth grade level. Theoretically, the average sixth grade teacher in San Francisco must accommodate children whose reading ability ranges across five grade levels.

In Reading: Mobile is Behind, Boston is "Abysmal"

In Boston recently reading scores were released for every school in the system. Although they were not broken down by race, in almost every instance racially identifiable black schools did the poorest. However, the scores were analyzed and graphed according to four factors: pupil absence, pupil mobility (transcience), teacher experience, and teacher educational level. Each of these factors showed a definite correlation with reading achievement. The average child in a ghetto school in Boston is more often absent than his counterpart in a white school. He changes schools more frequently. His teachers are less experienced and have less education. Not surprisingly, he does poorly on reading tests. If there is any consolation for the poor black youngster in Boston, it is probably the knowledge that white schools' scores, though better, are almost all below the national norm. The average child in the Boston schools falls further behind the national norms every year he stays in school. When he finishes the ninth grade, the average child reads at a low eighth grade level—a year and a half behind the national norm.

> *The average fourth grader in Mobile is already a year and half behind the national norm in reading—a deficiency that increases to two years by the time he reaches the eighth grade. (Since different tests were used in each city, comparisons between cities are only approximate.) Statistics are not available in that city by school or race. Prior to integration, reading scores for the eighth grade in Mobile ran about a year behind national norms, dropping a full year upon desegregation—a phenomenon generally attributed to the exodus of the "cream of the crop" to private schools.*

When he released the reading scores to school administrators and the press, Supt. Leary of the Boston schools listed some of the factors that, in his opinion, contributed to "these less than satisfactory results." Later he called them "abysmal." "Various studies corroborate the general observation of negative correlation between reading achievement and such factors as pupil mobility, absenteeism, excessive teacher turnover, lower socioeconomic level, hidden or neglected health problems, and the psychological and emotional stresses that are part of the syndrome," said Leary. "These factors are intensified in the recent history of our city by the tremendous influx of young families who lack educational opportunities elsewhere [i.e. Southern blacks] or who are non-English speaking."

School administrators and minority community leaders in each city agree that suspensions, dropouts, and poor tests results are part of the same fabric. As Leary said, "In all too common progression, academic insufficiency leads to frustration, unhappiness, dislike for school, discipline problems, and frequently, withdrawal from school." Many blacks feel that the high proportion of black suspensions and dropouts, and the indications of low academic achievement expose systematic racial discrimination against their children—or, at the very least, a brutal insensitivity to the problems of the minority child.

Although no one solution has been found, there are programs that can ameliorate the problems of minorities in the schools: teacher aides, improved facilities, new curricula, ungraded schools—the list of remedies is endless. Schools that have implemented some of these measures seem to do somewhat better than other schools in comparable situations.

Two Schools in Boston: The "Best" and the "Worst"

For instance, in Roxbury, the black section of Boston, the community is served in part by two schools, each of which could serve as a prototype of all that is good or bad with a school. William Lloyd Garrison School is old and dismal, with an all-black student body, but only three black teachers out of 30. The principal, Paul Keane, suspends about one child per day. He complains that his materials are outdated and admits that the teaching methods in the school are dull and stodgy. The children are disinterested and distracted. Twelve per cent of the students are absent every day. The school is overcrowded, and Keane has just gotten the school department to build partitions in the auditorium for the three classes that are conducted in that room. Vandalism is evident everywhere.

Nearby is the William Monroe Trotter School, an experimental school, one of the most innovative in structure and philosophy in the nation. Its building excites the eye. It is divided into four "nodes," each composed of six classrooms facing a central "Learning Laboratory" stocked with audio-visual equipment and independent study carrels. There is wall-to-wall carpeting. The building sparkles with art—murals on the walls, *papier-máché* sculptures, and drawings. The teachers are all volunteers, extremely professional, who develop their own curricula. Every teacher has an aide, and parents from the community regularly volunteer their services. The children are engaged in their work, seem bright, happy, and inquisitive. The school has one of the best records in the city for pupil attendance. Arch MacDonald, the principal, has suspended only three children all year. The school is 43 per cent white, all of whom are voluntarily bused. About one-third of the teaching staff is black.

It is considered a "magnet" school: the best Boston has to offer. And yet, fifth graders at Trotter read on a fourth grade level, a year and eight months beind the national norm. Their comrades at Garrison do worse—reading at a mid-third grade level. There is a difference —a significant one to be sure—and yet the difference between what is called the best and what could pass for the worst school is six months. The only thing these two schools have in common is the community they serve—

with the exception of the 43 per cent white population at Trotter. The characteristics of that community are that it is poor and black—and these criteria, of course, are the point of departure for much of the ideology and research in American public education. Whether it turns out to be race or impoverished background that hinders black children's achievement will make little difference to the poor black child in Roxbury. He can do as much about one as he can the other. Like the whites in Boston and Mobile who have not yet conceded their intellectual inferiority to San Francisco whites (much less to San Francisco Japanese, who outscored everybody), blacks hold the schools accountable for the learning that is not taking place in Roxbury.

Highland Park Free School, Muhammed's University of Islam

There are two alternative schools in Roxbury blacks have turned to: The Highland Park Free School and Muhammed's University of Islam, a Black Muslim school. According to officials of these schools, their students do better than their comrades in public schools, although the officials would not release corroborating reading scores. Parents at Highland Park run the school entirely. They design the curricula and select the teaching staff. Octavius Rowe, director of the Muslim school, attributes the alleged success of his school to seven factors: getting a child early (Muslim students begin school at three years of age); superior course content; carefully selected and supervised teachers; no physical education courses to interrupt basic course work; no discrimination problems (the children are all black); no worry about the problems of discipline or drugs; and the "fantastic leadership of Elijah Muhammed." Rowe maintains that fifth graders at his school read on the average at an eighth grade level, and that many of them read at a ninth grade level.

In San Francisco, some blacks are pressing for the establishment of classes in Black English within the province of the Bilingual Department. In Boston, Supt. Leary announced his intentions to beef up the reading program in general, through the institution of a department of reading which would develop a reading curriculum, the construction of reading laboratories in the secondary schools, the avid pursuit of aid from local universities and the development of a monitoring system of pupil progress. In Mobile, the psychologist for the school system, Floyd Replogle, said that the textbooks must be simplified. This comment bothered the editors of the Mobile *Register*, who suggested that the emphasis should be on bringing the students to the level of the textbooks, rather than vice versa.

"The American people spend vast volumes of dollars on education each year, as they should and must in this age," said the *Register*. "But it is plain beyond all reasonable doubt that the nation is falling far short of receiving a 100 per cent return in education on the investment.

"The whole institution of public education may require a rather drastic overhaul job to bring the return closer to the level of the investment. Unless this is done, many education dollars will be lost as unproductive."

Parents, especially poor and minority parents, feel they have more invested in education than dollars and they would like to influence education policy decisions in their community. And yet, as one black parent said, "Everywhere we look, we see doors closing."

While over-represented in the public schools, minority groups are under-represented on school boards. Blacks in San Francisco constitute 13.4 per cent of the total population, yet account for 30 per cent of public school students. In Boston, blacks are 16.3 per cent of the city's population, but make up 33 per cent of the students in public schools. In Mobile, which is 35.4 per cent black, 46 per cent of the public school students are black. Only in San Francisco is there a black on the school board.

There has never been a minority member of the Boston School Committee, whose five officials run at large in a city that is 60 per cent Irish Catholic. All five members of the committee are Irish Catholics.

In Mobile the five white school board commissioners have experienced virtually no challenge to their authority from the black community. Recently, however, the suburb of Prichard, which is a part of the Mobile County school system, elected a black mayor, A. J. Cooper, who was an attorney for the plaintiffs in the Mobile School desegregation suit.

In San Francisco, where minorities constitute a plurality, there is one black and one Mexican-American (the chairman) on the school board. Black community leaders there say that the reason there are not more minority members on the school board is that coalitions have been stymied by the disparity of demands from the incredibly diverse population (elementary children in that city represent households in which 63 different languages are spoken).

A voluntary dispersal of power on the part of the school boards in order to accommodate minority representation, or a referendum to that effect in Boston and Mobile seems improbable—particularly now in Boston where the busing controversy is so prominent. The constituency of elected school boards has always been the voters, not school children, and the interests of the two are not always the same. In Boston, for instance, Committeeman John Kerrigan admitted that he has given little consideration to remedying the reading problems of children because so much of his attention is directed toward countering busing proposals.

Questions: Who Runs Schools? Who has Rights?

In the past several years there has been a spate of litigation concerning student rights in such matters as dress, corporal punishment, freedom of expression, and proce-

dural due process which has mollified discipline codes in Boston, San Francisco and Mobile. Recently, in San Francisco, a suit was filed against the school department on behalf of a child who graduated from high school a functional illiterate (i.e., he reads on a fifth grade level or below). Lawyers at the Center for Law and Education at Harvard are watching the suit carefully and may attempt a similar suit in Boston. However, in light of the Supreme Court's ruling that education is not a right guaranteed by the Constitution, minority groups seeking to affect the policies of school boards in their communities will probably have to turn elsewhere than the courts.

On the face of it, it seems that public education is paralyzed by an inability to reform itself and the failure of innovation. Many educators and administrators attribute the failure to the children served, not the schools themselves. Increasingly, parents and organizations like the NEA which promulgate the term "pushout" believe that the "all too common progression" noted by Supt. Leary—frustration, unhappiness, dislike for school, discipline problems, and withdrawl from school—is symptomatic of an insensitivity that denies the needs of the students at every turn. Their solution to these problems is greater community control of education.

The pushout controversy does not exist in a vacuum. It raises economic, political, and social issues which are at the core of education philosophy in this country. How much power should be allocated to government, school boards, principals, teachers, parents and the students themselves? Who determines the goals of education? And whose schools are they anyway? The taxpayers' or the children's? If they belong to the taxpayers, do they belong to all the taxpayers or just the white majority of taxpayers? If they belong to the children, who has the authority to bar them from that right?

TO: Investigative Reporters on Student Push-Out Problem

FROM: Emory F. Via, Southern Regional Council

Enclosed are the Following:

1. Copies of questionnaires given to a selection of teachers and students which may assist you in understanding our interest in student push-outs.

2. Suggested contacts in your state. Use as they appear useful to you. You certainly should not limit yourself to these contacts.

3. Informations we now have that relates to push-outs in your state. This may be just a "lead" that needs checking.

4. A working definition of "push-out" for the purposes of this phase of our investigation.

<u>What we are after</u>. We are seeking a balanced, objective, representative report of why students are out of school. For this phase of our investigation we are asking you to focus expecially on problems related to expulsions and suspensions. However, we encourage feedback in terms of (a) sophisticated

analysis (administration, student, teacher, community leader, scholar) as to other reasons why students are out of schools, (b) official or unofficial studies regarding drop-outs, push-outs, discipline, (e) factual information, and (d) human interest material.

For the current phase you should be securing the following kinds of information:

1. What does state law and administrative practice provide regarding compulsory school attendance, the use of expulsion, use of indefinite suspensions, repeat suspensions, due process for students who are disciplined, corporal punishment? Of course, most of these items apply to local districts as well as to the state.

2. Does the state department of education have figures on expulsions suspensions. If so, are they available? If no such figures, why not? Where figures exist is there a racial breakdown?

3. Has the state education agency conducted a study of drop-outs, suspensions, expulsions, discipline, etc.? When? Is it available?

4. In state and local figures we would like 1971-1972 school year <u>plus</u> 1972-1973 school year to date. Undoubtedly you will have to settle for a cut-off date for this year, but be certain that we know what that date is.

5. We would like to know the numbers of students suspended and expelled (do not lump the two together unless the figures are not available in any other form). What percentage of the student body do the figures represent? What is the racial breakdown? Sex breakdown?

6. Is there a way to determine if students of a given income level are more often suspended/ expelled than others?

7. What are the causes for suspensions and expulsions? Official view? Other views?

8. Are particular categories of students being suspended such as student leaders, "militants," trouble makers," etc.? What kind of militant, how militant and whose definition? The same for trouble makers. Are black student leaders especially singled out?

9. What trends are occuring? Are the numbers, proportion black, etc. going up or down? Are the causes of suspensions and expulsions changing? Did a particular system hit a peak this year, last year, year before? How does it seem to relate to desegregation? What role played by ineptness on part of school officials, bad community climate, bad in-school climate because of way desegregation issues were handled?

10. Are there cycles or ups and downs in suspensions and expulsions? Do these occur at school opening, student elections, extra curricular activities, Black History Week, etc.?

11. Are you able to discern any urban/rural differences?

12. What factors at school contribute to disciplinary problems? In what ways, if any, is discrimination manifested?

13. Are there places in the state where expulsions and suspensions are particularly high?

14. Are there places where the numbers or rate are low? Are there affirmative programs by schools or school systems to find constructive answers to school discipline problems?

15. Are there special schools for those suspended or expelled? If so, how can they be characterized? Are they a constructive contribution towards a solution?

16. Have there been cases, especially <u>this</u> school year, of mass suspensions, expulsions, student demonstrations or upsets followed by disciplinary action?

You will need to assess your state, how many systems you feel you can get reliable information on, and select a small group that you feel will be representative for the state.

After you have done your initial exploring, picked up leads and answers, made a tentative selection of school districts, run into snags, etc., please be back in touch with me so we can talk it over and you can begin to fill me in.

We are not asking for a final polished draft of a narrative so much as we are seeking the information requested. But a narrative form for your evaluations and summaries will be helpful (rough draft will do).

We are asking that you not make public use of your material until we are ready to release the whole body of material. At that time we should be able to arrange so that you can release a local story if you care to and make use of the broader study for comparative purposes and/or as a separate story.

D R A F T

PROPOSAL FOR THE ESTABLISHMENT OF A REGIONAL INSTITUTE IN SUPPORT OF QUALITY AND EQUALITY IN THE PUBLIC SCHOOLS

This proposal is to assist in the consideration of the establishment of an institute designed to facilitate the attainment of quality education for all the South's children on a basis of equality and through the public schools.

1. The institute would be regional.
2. The institute would be associated with a college or university (in all probability a predominantly black institution) but would be independent in policy making.
3. Policies of the institute would be set by a small board (probably 12 to 15 persons) who would be selected by those who join in submitting the proposal for an institute. The board would include persons actively involved in school desegregation programs.
4. Where appropriate the institute would provide supportive services such as information, materials, and technical assistance to persons active in the field. Some such persons would be employed by the institute from time to time.
5. The institute would be financed by federal funds--these funds would come from research and development funds of the Office of Education, and not from the funds for non-profit agencies provided in the emergency legislation.

The institute would be established to provide technical assistance to those working for equality of educational opportunity, to provide training opportunities, to equip others to assume duties in the changing educational picture, to evaluate selected programs designed to implement desegregation policies or otherwise improve public education, and to provde information relative to these processes to selected leaders and the general public. These areas of interest will lead to activities such as the following:

1. Support of field programs where possible in such ways and in such places as are requested as well as draw heavily on guidance from their staff for programs and priorities.
2. Consideration of establishing statewide citizens groups in all or some of those states where these groups do not now exist.
3. By invitation the institute would provide supportive services to those statewide citizens groups--such as in Mississippi and South Carolina--formed to support and push further school desegregation.
4. To identify other local groups and provide assistance for them.
5. Evaluate the results of the use of the $75 million emergency fund now to be spent through the Office of Education by state and local school bodies and make recommendations on the use of additional funds, if available.
6. Provide consultation to local school systems where feasible.
7. Consider providing materials, studies, and perhaps institutes on curriculum, the roles of teachers and administrators, the role of in-school student committees and the like.
8. Consider a publications program in the areas above.

9. Establish an intern program of such quality as to provide additional technical assistance to local groups and to provide realistic training for persons entering the field of educational transition.

10. Study methods that will reflect community need, ideas, desires, and ultimate goals in local school systems.

MR. EMORY VIA
DIRECTOR, RESOURCES
DEVELOPMENT CENTER
SOUTHERN REGIONAL COUNCIL
5 FORSYTH ST.
ATLANTA, GEORGIA

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE
OFFICE OF EDUCATION
WASHINGTON, D.C. 20202

10/6

Mr. Emory Via

Dear Mr. Via:

We were very pleased and grateful to learn that the Southern Regional Council has agreed - on especially short notice - to provide five leaders for the State meetings scheduled at our conference in Atlanta this Thursday. As you know, the conference begins at 9:00 a.m. on the 8th; State discussion groups are scheduled from 1:00 - 2:30 that afternoon.

I will arrive at the Cabana late Wednesday afternoon and look forward to hearing from you in regard to "briefing" the discussion leaders.

with thanks,

W. Lee Pierson

SOUTHERN REGIONAL TASK FORCE ON RURAL DEVELOPMENT

IF "YES," IDENTIFY:

LOCATION - CITY_____ COUNTY_____ STATE_____

TYPE OF PROJECT/PROGRAM NEEDED (DESCRIBE BRIEFLY)_____

6. DO YOU ANTICIPATE THE NEED TO MEET WITH A PARTICULAR PARTICIPATING AGENCY (OTHER THAN REGULAR MONTHLY MEETINGS) REGARDING SIMILAR ACTIVITIES AND/OR PROGRAM GOALS? YES [ ] NO [X] Unless a participating agency is interested in the successful process used at the conference described above.

IF "YES," WHAT AGENCY_____

APPROX. DATE OF DESIRED MEETING_____ TIME_____

7. DO YOU HAVE ANY PRINTED MATERIAL WHICH YOU MIGHT LIKE TO SHARE WITH PARTICIPATING AGENCIES? YES [X] NO [ ]

IF "YES," KINDLY ENCLOSE THEM WHEN YOU RETURN YOUR QUESTIONNAIRE.

FOR YOUR INFORMATION--SCHOOL CRISIS IN MISSISSIPPI

Since September 1969, the number of all-white private schools have increased from 35 to 100 in Mississippi.

In Holmes County, 1600 white children were attending the public schools in November, 1969. There are now 900 whites in the public school system and more leave as private schools become available.

In Canton, Miss., more than 1200 of the 1300 whites formerly in the public school system attend the new private school. It is housed in an unheated former tent factory donated by Canton Mayor Jones.

In Macon, Miss., 4,000 Negro students are boycotting the public school system because of a modification of the desegregation plan allowed by the courts.

In Tunica, Miss., white enrollment in public schools has now declined to zero. The population of Tunica County is 7 to 1 with the blacks in majority. Four years ago 800 whites were enrolled in the public schools. During the first semester of the current school year, there were 441 whites and 3,039 Negroes with each going to their own separate schools. During registration on Thursday and Friday, January 29 and 30, two whites registered for classes at Dundee Attendance Center with 750 blacks. On Monday, Feb. 2, when classes were begun, not even these two showed up at the school, and as of now there are no whites in the public school system. The white students are either attending or preparing to attend a 12 grade private school in Tunica.

In Indianola, Miss., on Monday, Feb. 2, the public school system had turned "all black." The student enrollment last semester was 2,800 blacks and 911 whites. White students have all fled to private schools.

In Holly Springs, Miss., registration was started on Monday, Feb. 2. Many of the white pupils are expected to enroll in Marshall Academy, a private school. Plans are presently underway to open at least two other private schools in the county.

In Hollandale, Miss., all of the white students have withdrawn to enter three of the private schools in the area.

In Clarksdale, Miss., schools opened for regualr classes on Tuesday, February 4. That part of the desegregation plan which combined the formerly Negro and white junior high schools has brought the major reaction from the white community. On Monday, February 2, only 11 of some 300 white 7th and 8th graders were on hand at Higgins, formerly all black school, for Monday's orientation activities.

In West Point, Miss., the desegregation plan called for the closing of all Negro schools. Plant facilities at one black junior high school were fairly new and in excellent condition. The closing of these schools has meant the implementation of a dual shift at the formerly all white school. The method calls for approximately half of the enrollment to attend the early sessions from 7:45 a.m. to 12:40 p.m. The rest attend the late session from 1:55 p.m. until 6:00 p.m. The school has no bus transportation system. Bus service is available to most of the students but they must pay for their own transportation. This works a hardship on Negro students in the poor communities because they will not be able to afford bus fare and many, therefore, will have to walk.

daylight if they are attending the early session and walk home after dark if they are attending the late session.

In Adams County (Natchez, Miss.), expansion plans for a new shcool building for the Adams County Private School which will increase the capacity from the present 500 pupils to a proposed 1500 were announced this week by the school board. The planned new building will be located on a 29 acre site of land just north of the Natchez city limits.

At Brookhaven, Miss., Whitworth College (Methodist) has opened its doors and made facilities available to the Brookhaven Academy. It now appears that Brookhaven Academy will attract all white students in the system. Students began enjoying the facilities at Whitworth College last week. In order not to interrupt the operation of the college, many of the classes are being held at night. Dr. B. S. Gerald, president of Whitworth, announced that the facilities of the college had been opened to Brookhaven Academy in order to train young people for Christian lives of services. Oddly enough, an extracurricular activity in which students and faculty are showing much interest in a class in karate.

In Meadville, Miss., Franklin Christian Academy opened its doors Monday to 240 white students wishing to escape the desegregated schools.

In Alcorn County, the black high school was lowered to a junior high school. The imminently qualified black principal was moved and given a position as Title 1 Coordinator.

In Clarke County, Shirley Owens High School will be reduced to a junior high school. The principal, well qualified, has been asked to accept a position as an elementary principal for the remainder of the year, after which he is to be terminated in that county.

In Clay County, the Fifth Street High School has been reduced to a junior high school and now has a white man as principal.

In Covington County, the high school has been reduced to a junior high school. The imminently qualified black principal has been asked to accept the position of County Coordinator (whatever that title means).

In Franklin County, the Lillie Bryant Elementary School has already been taken over by a white principal.

In Hancock County (Bay St. Louis), the high school was discontinued and only two of the ten high school teachers were retained.

In Pass Christian, the Randolph High School was discontinued. Most of the teachers remained.

In Itawamba County, black schools have been discontinued. No blacks have been kept as principals.

In Monroe County, the Shivers High School has been degraded to a one through eighth schoo. A white has replaced a black as principal.

In Noxubee County, an elementary principal has been replaced with a white principal.

In Lauderdale County (Meridian), East End Elementary School now has a white principal.

In Lee County, all five black high schools were either discontinued or principalships given to whites.

In Prentiss County, all black high schools have been discontinued and white principals have replaced Negro principals over grades 7 and 8.

In Tishomingo County, the Carter School has been discontinued and black teachers are scattered.

In Marion County, the names of the black high schools have been changed. White men have replaced black men as principals for the second semester.

INTRODUCTION

The Emergency School Assistance Program is designed to provide financial assistance for Local Educational Agencies (the local school system, hereafter called LEA's) and to public and private non-profit organizations other than LEA's to achieve and maintain a desegregated school system. Eligibility criteria limit projects to areas where the LEA is beginning, or has begun within the last two years, the terminal phase of an approved desegregation plan. Therefore, projects must support the implementation of the desegregation plan. The funds are to be used to meet the special needs of students, teachers, school administrators, and the community-at-large during the process of school desegregation.

The total amount available to the 1229 LEA's eligible as of September 1, 1970, under the Emergency School Assistance Program is 75 million dollars. Ninety per cent of this amount, or 67.5 million dollars, is for grants to LEA's. The remaining ten per cent, or 7.5 million dollars, is for grants to public and private non-profit organizations other than the LEA. Organizations such as community groups, colleges, and universities, and other local, regional, or national organizations would be eligible. This handbook is for the use of public and private non-profit organizations (hereafter called "non-LEA's") applying for the 7.5 million dollars set aside under the Emergency School Assistance Program.

Funds are provided for non-LEA's both in recognition of the important role these organizations play in the success or failure of the desegregation effort, and because to be fully effective, the desegregation process requires community support and participation. Further, it is recognized that in some communities, organizations other than the LEA may be in a better position to carry-out some types of activities essential to a successful desegregation effort.

ELIGIBILITY

In order to be eligible for funds, the applicant must

(1) Be a public or private non-profit organization, and

(2) The project must serve only areas where the LEA has either:

(a) Submitted an acceptable plan to the Department of Health, Education and Welfare, and which began the terminal phase in school year 1968-69, 1969-70, or 1970-71. or

(b) Has received a final court order to desegregate from a State or Federal court, and which began the terminal phase in school year 1968-69, 1969-70, or 1970-71.

A list of these eligible LEA's is included in this information package. Additional lists are available from the Office of Equal Educational Opportunity, Office of Education, at your Regional HEW Office, or from Washington, D.C.

The fact that an LEA has not subscribed to the assurances required by ESAP regulations (181.6(a)), does not, in and of itself, disqualify another public or private non-profit agency from receiving funds under the program to aid the desegregation process in the school district of that LEA. The public or private non-profit agency may not, however, serve as a conduit for funds to the disqualified LEA. In other words, the project to be conducted must be genuinely that of the public or private non-profit agency, and not that of the LEA. In order to determine whether the public or private non-profit agency is serving as a conduit for the disqualified LEA, it will be necessary to examine the proposed project in the context of services that would normally be provided by the LEA.

PROGRAM PRIORITIES

Since there are many more organizations than can be funded under the 7.5 million dollars, some funding priorities have been developed and are described below:

(1) Priority will be given to those projects which are either inter-racial or inter-cultural and have a clear and direct relationship to successful desegregation. As is clearly described in the regulations, the thrust of this program, and of the program for LEA's, is to foster quality desegregated education.

(2) Priority consideration will be given to proposals which demonstrate the unique capabilities of community groups to assist in the desegregation effort, and which can provide models for other community groups which seek to make a contribution to desegregation efforts.

(3) Priority consideration will be given proposals from organizations which have demonstrated their ability to help achieve or maintain a desegregated school system, or have experience in improving the quality of education during the desegregation process. New organizations will be funded where there are individuals who have demonstrated experience and competence, or where the innovative character of the proposal requires the formation of a new organization.

AUTHORIZED ACTIVITIES

Two types of projects will be funded: (1) Type A - a group of 20 to 30 model projects, and (2) Type B - a larger number of smaller projects typically relating to a single LEA's desegregation plan, or for projects operating on a relatively inexpensive scale.

Type A Projects

Model projects should either (1) demonstrate the value of a particular service or technique in achieving school desegregation, or (2) apply techniques developed in previous desegregation efforts, thereby testing their value in more than one situation, or (3) coordinate existing efforts and provide technical assistance to communities experiencing desegregation. These Type A projects would ordinarily serve more than one LEA. If they relate only to one LEA's desegregation plan, they should be of high innovative potential and especially good design. Regional or multi-district groups would have the advantage of being able to demonstrate the value of a particular technique or service in more than one LEA.

Type A projects should be sufficiently focussed upon clear and limited objectives to enable in-depth evaluation as models, rather than seeking to accomplish a broad range of generally defined goals. Potential applicants should recognize that Federal officials will maintain close relationships with the projects, so that lessons can be drawn from the experience. Technical assistance from a specially selected group of consultants and institutions will also be available.

TYPE B

Type B projects will ordinarily operate within a single LEA, or would involve community relations activities of a relatively inexpensive nature. In designing the project, organizations should set goals and objectives that can be realized. Mechanisms for measuring progress must be established so that those directing the project, and those served by the project have a sense of what has been accomplished. Broad generalizations of direction and purpose lead to confusion and misunderstanding. Organizations should design the project so that it can be evaluated objectively both by the target community and by Federal officials.

Project Activities - Type A and Type B

Project activities must support the implementation of the desegregation process of the LRA, and must contribute to a lasting and educationally sound desegregated school system. Generally, projects operated by non-LEA's will be in program areas not covered by the LEA's operations or scope of direct responsibility, rather than duplicating the work of the schools.

The kinds of project activities which might be funded are described below.

1) Community Relations and Information Projects: Under this broad heading, a variety of activities operating in support of desegregation plans could be undertaken. Such activities could include, as specified in the regulations, community information programs, school-home visitation programs, and special parent programs. Publications, speakers' bureaus, films, media presentations, bilingual presentations and materials, and other information activities could be designed in conjunction with local educational agencies as a means of disseminating information which would increase mutual understanding on the part of those participating in or affected by the implementation of a desegregation plan.

2) Compensatory/Remedial: Remedial programs outside the school setting with a strong community base, or with the assistance of colleges in the region, will provide essential support for student achievement within the newly desegregated classroom. These programs should be operated on an inter-racial basis. Most typically, perhaps, these projects would include after-school tutorial programs, some of which may operate on a bi-lingual basis for students learning English as a second language. Secondary students and students of colleges and universities in or near the desegregating districts could participate in such programs.

3) Parent Involvement: The value of involving parents of students in in school-related activities to reinforce student achievement has been demonstrated in pre-school settings. The major thrust of projects under

this activity should be to get minority and non-minority parents cooperating to improve the quality of their children's education. Expansion of existing parents' organizations or establishment of new groups are allowable under this activity.

4) Student and Youth Projects: A special effort will be made, in line with the regulations requirement for student advisory committees, to solicit and provide technical assistance for programs operated by students and youth. Projects could be either curricular or extra-curricular in nature. Such projects could be aimed at conflict resolution, or could be designed to develop and implement acceptable student codes. In addition, special efforts should be made throughout the program to involve students, as the most directly affected participants in the planning and operating of all types of allowable projects.

5) Inter-racial education: For many students, the school and home environments are predominantly racially and culturally isolated. For these students, special inter-racial or inter-cultural programs should be developed. These programs would not fall under other project categories, such as compensatory or student projects. Such courses would typically be taught outside school hours under the auspices of community groups. They may involve special interest courses, for example, in the arts or academic courses not offered to these particular students in their schools, such as special science activities. The emphasis should be on innovative activities designed to promote inter-racial and inter-cultural cooperation and understanding.

6) Training and Technical Assistance: Some projects might usefully focus primarily upon training community groups to contribute effectively to desegregation planning. Such training activities could include seminars on the issues involved in desegregation, conferences featuring speakers familiar with both educational and community problems, or dissemination of information on innovative approaches to desegregation used in other communities. Technical assistance activities may be developed to respond to short-term needs of individual districts or community groups, including crisis intervention, rumor control activities, and curriculum and textbook review.

7) Activities Linked to Comprehensive Educational Planning: The regulations make clear that special comprehensive planning designed to assist in implementing desegregation planning is an allowable activity. While educational planning is primarily the function of the LEA, other agencies such as community action agencies, councils of government, or city demonstration agencies are also involved in educational planning

or in planning for programs such as housing or relocation for areas affected by the desegregation plan. Additional administrative personnel who would concentrate on desegregation problems, or programs operated by these agencies in support of desegregation would be allowable activities. The main objective of such planning efforts would be to link more closely the on-going educational planning and program activities of these non-LEA agencies to the desegregation activities of the LEA.

While many community projects will need information about the LEA's desegregation plan and implementation efforts in order to design a successful project, the Office of Education will not fund proposals which monitor LEA performance in carrying out the desegregation plan. Several agencies including the Office of Civil Rights, the Office of Equal Educational Opportunity and the Office of Program Planning and Evaluation will have the responsibility for monitoring and evaluating LEA performance.

RELATIONSHIP TO THE LEA

Projects will be much more effective in furthering the desegregation process if there is close cooperation and a two-way flow of information between the LEA and the community organization. Lack of cooperation may, in fact, hamper desegregation. For example, a community group funded for a parent involvement project will need basic information about class distribution and size, extracurricular activities, and teacher training, so that parents can participate as fruitfully as possible in school activities. Similarily, the community organization needs to be aware of LEA activities, so that projects will expand the effectiveness of the LEA's implementation of the desegregation process, rather than proposing to operate duplicate program activities. Finally, since the LEA will have an opportunity to comment on the non-LEA proposal, it is to the advantage of the applicant to seek cooperation before official LEA comment is solicited from Washington.

Therefore, applicants should consult with the LEA regarding the development of the program and its relationship to the implementation of the desegregation plan. They should seek to review the LEA's desegregation plan with the LEA staff, and should arrange for periodic discussions on the LEA's progress in desegregating. In turn, the community group should keep the LEA apprised of the project's activities and progress. The Office of Education will request LEA's to cooperate in this process.

The application should include a description of the relationship between the applicant and the LEA, including whether the LEA has agreed to consultation, and whether the LEA has permitted the applicant to review the desegregation plan.

REVIEW BY THE LEA

The Office of Education will provide the LEA an opportunity to comment on the project proposal, and on the consultation process with the non-LEA. Where a project serves a substantial number of LEA's, it will not be possible to solicit comments from each LEA. In such instances, the comments of the state educational agency (agencies) will serve this purpose.

In some cases, it will be impossible for the project to be implemented without the close cooperation of the LEA. Activities requiring the use of school property, or the presence of school personnel or students during school hours, must of practical necessity be endorsed by the LEA(s).

Review by the State Educational Agency

Most state educational agencies will also be providing services to LEA's which are desegregating. In order to insure cooperation and the coordination of these activities, state agency officials need to be aware of the project activities. Therefore, the Office of Education will provide the state educational agency an opportunity to review and comment on the project application. Applicants are encouraged, however, to inform state agency officials of their interest and where appropriate to involve them in the development of the application.

Review by the Office of the Governor

Under the Office of Economic Opportunity's authorizing legislation (section 242) used in the Emergency School Assistance Program, the Governors' offices must be afforded an opportunity to review proposals. This clearance will be the responsibility of the Office of Education. (It should be noted that this review does not apply to institutions of higher education in existence before August 20, 1964.)

Community Involvement

The success or failure of the desegregation plan is an extremely important event in the life of any community. If the project is to help in achieving and maintaining a desegregated school system, it is important that members of the target community have an opportunity to participate in and comment on the development of the program. This is particularly true if the program is an innovative one, if the techniques or services will be unfamiliar to the target population, or if the project seeks to expand community awareness of a desegregation plan. Where other activities have been undertaken by non-LEA's in helping to achieve school desegregation, an applicant should seek to develop a program which is consistent with and does not duplicate ongoing community activities.

Advisory Committee

Each project funded should have an advisory committee or board which includes representatives of the persons who are to be served by the project, and which has representatives of minority and non-minority groups. Secondary students should be represented on all such committees. (Students serving on both committees must be selected by the secondary school students served by the project.) In some cases, the applicant will need to organize such a committee. In others, existing LEA advisory committees will fulfill this function. Where a bi-racial advisory committee exists but is not the non-LEA advisory group, a communication link between the two should be developed. Each project application must include either (1) a list of the persons on the advisory committee and the means by which they were selected or (2) plans for organizing such a committee within 30 days of the receipt of the grant award.

Public Disclosure

The grantee is responsible for assuring that the community has an opportunity to participate in the development of the project. Therefore, ESAP regulations require all grantees (LEA's and non-LEA's) to:

(1) Make available within 30 days of receipt of the grant the details of the project for publication in a newspaper of general circulation, (bilingually where appropriate).

(2) Make information about the project available to the general public.

The chief elected official of the city or town affected by the project will also be notified by the Office of Education when the grant is approved.

A PROPOSAL TO THE OFFICE OF EDUCATION, DEPARTMENT OF HEALTH, EDUCATION AND WELFARE, WASHINGTON, D. C. TO ORGANIZE COMMUNITIES FOR CREATIVE RESPONSE TO PUBLIC SCHOOL DESEGREGATION IN MISSISSIPPI.

SUBMITTED BY: The Greater Jackson Area Committee

BACKGROUND:

In 1954 the U.S. Supreme Court ruled illegal the concept of "separate but equal" public education. The ruling, intended to achieve quality public schooling by opening the doors of the schools to children of all races, touched off organizational efforts to achieve school integration in many Mississippi communities by Negroes. Black communities throughout Mississippi -- from Yazoo City in the Delta to Gulfport on the Gulf Coast -- formed committees and petitioned school boards for the implementation of the new court ruling.

In reaction to these fledgling attempts by Blacks, racist Whites quickly moved to quash these efforts, and to organize against Black integration efforts. In May, 1954, almost immediately after the court ruling, the White Citizens Council was organized in the Delta, with chapters springing up in virtually every Delta community, and many communities throughout the state outside the Delta. By 1957 the Citizens Council movement had become so powerful that every institution, public and private, was influenced by it. Repression descended in even greater strength on Mississippi -- not only upon those Blacks who attempted integration, but also upon those whites

that attempted to support them. Blacks, who were members of the NAACP, or who supported integration, were murdered, beaten, or driven from their homes and businesses. Whites, who historically had befriended Blacks, were now subjected to intimidation, and many left Mississippi permanently. Where some churches and universities had taken tentative steps toward integration, individuals in these institutions were subjected to reprisals of all kinds, such as wiretaps, the interception of their mail, threatening telephone calls, loss of jobs, evictions and harassment from public officials. Through the application of sheer terror, school integration in Mississippi was postponed until the late 1960's, when "token" integration was achieved in more moderate areas of Mississippi.

At that time, several steps were underway to prepare both races for the integration of the schools. In the White community, liberals and those progressives who feared the destruction of the public schools, formed "save the schools" committees in many communiteis in Mississippi, and undertook a campaign of public education through the mass media. This campaign emphasized not the value of integrated public education, but rather the necessity of preserving public schools if Mississippi was to end its social, economic and political backwardness.

In the Black community, sponsored by the civil rights movement, anti-poverty groups such as the Child Development Group of Mississippi (CDGM) opened HEAD START centers throughout Mississippi, to prepare disadvantaged rural Black pre-school

children for the integration of the public schools. (At that time, due to the continuing atmosphere of terror in the state, no local White children attended these centers.)

Attending these events was the rise of the Council Schools -- and other private, racist "academies" throughout Mississippi. These "academies", of course, preclude the enrollment of Negroes. Further, they deepen class divisions among Whites (they are called "academies", and instead of "principals" they are administered by "headmasters") since attendance costs up to $600 per "semester" per child. Over 65 such academies were organized since last September; altogether more than 100 are operating now and others have announced plans to open later this year. There has been a decrease of 41,156 students enrolled in public schools between September 1968 and September 1969.

Meanwhile, Whites in the South, especially poor Whites, have been almost totally overlooked by the civil rights movement. National sympathy has been aroused over the plight of Mississippi Black people and massive support in programs, money, and skilled personnel has been pumped into the Black community. Poor Whites, however, in almost the same situation, have not had the same attention, and are easy prey for the Klan and other hate groups. Even the young middle-class Mississippians, the high school and college kids, have been lumped into the category of "red-necks" and "crackers", and so have found it impossible to join forces with the movement for social change.

This situation must be changed. If Mississippi is ever to be an open society with a sane attitude towards race relations

and public education both Black and White will have to be involved in making it so. It is our view that there is a crying need now in the White community, especially among low income Whites, students, and moderate and liberal segments.

Poor White Mississippians reject school desegregation in almost the same words as our leading state elected officials. They have been told that the Black man is the cause of their problems. They fail to see the advantage of joining with Blacks to work for democratically controlled schools which might be more responsive to the needs of his children. Poor Whites traditionally have not fought for democratic control of their schools because as one lady in Jackson put it "It's a waste of time." But just as massive outreach work was required to convince Black Southerners to take advantage of their political rights, the same massive effort is required to convince poor Whites of their right to participate in the decision-making bodies which affect their public schools. A Jackson White parent observed that: "when the school board, or whoever, draws up those lines, they never consult with the people who live here. They just told my daughter to come and pick up her report card and they gave her a piece of paper telling her where she can go to school and that was it."

School boards throughout the state are similar to the one in Jackson which consists of four businessmen and one PTA leader whose husband is a successful businessman. Hardly ever does one find a Black or poor White board member. Many school boards

convene in private, and rarely are the meetings or decisions noted in the press. In those places where meetings are public the board makes clear its preference for privacy and often goes into executive sessions. School desegregation questions are almost universally discussed in executive session. The superintendent and the school board regard the schools as "theirs."

Unlike the North where many large school districts can afford to attract expert out-of-state educators as superintendents, most Mississippi districts are small and rural and hire a superintendent who obtained his graduate degrees in the state and is very close to the mores and customs of the middle class constituency he feels accountable to. He distrusts the outside community and tries to stay on the best of terms with his board.

High school principals are, as often as not, former gym coaches who are concerned first with discipline and order, and try to make sure the local PTA doesn't get too involved about the operation of "his" school. Young teachers quickly learn the necessity of survival and realize they will suffer bitter ostracism if they raise "unnecessary questions". They know that until their principal, superintendent and school board deal with the question of school desegregation honestly and openly, their jobs are on the line.

The local Title I advisory committees established throughout the country concerned with "a comprehensive compensatory education program" with at least half the members composed of parents of disadvantaged children, have generally failed through-

out Mississippi. Their members are hopelessly unprepared to act agressively vis-a-vis the school superintendent; generally because they are handpicked by him -- not elected by the people -- therefore they have become nothing more than rubber stamps in most school districts, and nobody, not even the press pays them any attention.

The PTAs in most states have been impotent and irrelevant to the fundamental issues of education. As Hayes Mizell, a South Carolina observer puts it:

> The PTA usually excels in its assigned role of having bake sales, discussing how to stop smoking in the rest rooms, and sponsoring the seventh grade fashion show to raise money to buy books for the school library. They never ask why they must raise the money to buy books . . (New South, Winter, 1969).

Since the desegregation orders, many PTAs no longer meet or meet rarely. One rural Hinds county group met once last semester and the meeting lasted for 15 minutes.

The desegregation decisions made by the school boards reflect a class bias against poor Whites. In school district after school district poor Whites are zoned into schools with Black majorities while affluent Whites are zoned into schools with a white majority. For example, in Northeast Jackson and new South-west Jackson, the most affluent parts of town, there are six all White elementary schools which were allowed in a recent desegregation plan, while most poor Whites in mixed neighborhoods had their children assigned to majority, and in some cases 90% Black schools. Very often upper income school board members who implement court ordered public school desegre-

gation, send their children to private academies. National television demonstrated this last semester in a story about the Woodville, Mississippi school situation.

Poor whites who must send their children across town to predominately Black schools are often faced with a lack of transportation for their children in cities like Jackson, Greenwood, Hattiesburg, Meridian and Biloxi where no transportation is provided for students who live inside the city limits. One Jackson parent said: "I couldn't take my daughter to school, because I have to work and if she had to walk it would have been about seven blocks... right through colored all the way." She was not against sending her child to a desegregated school but kept her out for lack of transportation.

There is a terrible lack of support, emotional as well as financial, for parents such as those who feel caught in a terrible vise. Black leadership, understandably, has little interest in begging or persuading poor Whites to remain in the public schools and in many cases, poor Whites are seen as conspirators with the white power structure by the Blacks. Who then, can help humanize this situation so that poor Whites and Blacks can begin to relate to one another from a nonracist orientation?

For considerations such as these a state-wide consultation was held on November 22, 1968, by eighty Mississippians to seek out some possible solutions. Out of this consultation a consensus was reached to help local, Mississippi White people build progressive structures of their own to affect the politi-

cal and social climate in the state, and particularly the city of Jackson. An organization with this purpose formally emerged in January of 1969 and named itself the Greater Jackson Area Committee (GJAC). A partial list of GJAC members' affiliations include: Mississippi Council on Human Relations, Church organizations, Millsaps College, League of Women Voters, National Welfare Rights Organization (WRO), Mississippi Freedom Democratic Party (FDP), Mississippi College, Tougaloo College, Jackson State College, American Civil Liberties Union (ACLU), Commission of the Delta Ministry, Loyalist Democrats, Community Service Association (CSA), Systematic Training and Redevelopment, Inc. (STAR), Friends of the Children of Mississippi (FCM), Mississippi Action for Progress, Inc. (MAP), Hinds County Head Start, Southern Patriot, National Federation of Settlement Houses, Hinds County Legal Services and the federal court appointed Bi-racial committee on the Jackson public schools.

GJAC stated as its ultimate goal, a coalition with Black people but emphasized its "present thrust will be in the White community with those of low and middle-income, and with students... We hope that our project in the Jackson area will be a model which can be used in other areas of the state."

GJAC raised funds from several private foundations and church groups and hired staff, spon-off several projects in the White community including community centers, newsletters, local and state-wide conferences and workshops. Soundings of intent were made and some steps taken to break the almost

universal myth that the racism of Southern Whites precludes their organizing towards constructive, non-racist ends, and aligning with Blacks on issues of common concern. GJAC has met continuously ever since its funding almost two years ago. One of its projects which began last January has surveyed White and Black students and parents in several key school districts across the state including Jackson, Vicksburg, Canton, Lexington, Hattiesburg, Yazoo City and Greenville. Supplement I is a summary of the Educational Survey Group.

We have contacts and strong working relationships with other activists in the four areas of the state where we plan to concentrate. The proposed structure of this new statewide project will be called "Mississippians for Creative Public Education." We admittedly lack the funds, the experience, and the backlog of information necessary to adequately deal with the problems of poor whites involved in school desegregation. With sufficient help we believe we can make a significant start in this direction.

GOALS AND PLANS OF OPERATION:

1. M.C.P.E. proposes to focus on four areas (see map). These four areas are tentatively defined as:

   1. Hinds, Jefferson, Claiborne, Amite and Pike Counties and (other counties in S.W. Mississippi).

   2. Washington, Bolivar, Sunflower, Coahoma and other Delta Counties.

3. Forest, Jones, Jasper Counties (and other counties S.E. Mississippi).

4. Oktibbeha, Kemper, Noxubee (and other counties in Mid-East Mississippi).

In all four areas M.C.P.E. has local contacts involved or ready to be involved in quality school desegregation concerns.

We plan to recruit and train a cadre of persons in each area who will make this their first concern. We plan to concentrate in selected school districts where the white exodus had left fewer than 1/2 of their children in public schools, and in school districts where neighborhood zoning isolates minority whites in majority black schools.

2. M.C.P.E. plans to identify leadership in the white communities among those parents: who can't afford to send their children to private schools, parents who are actually keeping their children out of schools altogether, those who refuse to bow to pressures to keep their children out of public schools, and if possible those who are concerned with quality public education but have placed their children in private schools. We have already surveyed attitudes and reactions to the school crisis this past year in key school districts across the state. (See attachment on Education Survey Group.) We now plan to lay more ground work for sympathetic communication with some of these people who feel caught in the "vise" and who feel threatened by the black community. M.C.P.E. will encourage them to participate in public meetings of school boards, Parent Teachers Associations, the bi-racial Title I Advisory

Committee appointed by the court to over see public school integration ---- to discuss openly and honestly, public and private fears about school desegregation.

3. We plan to work intensively in the above mentioned four districts to develop projects involving five or six key schools in each area. Special emphasis will be placed on rural school districts which have lost a large portion of white participation in the last year. These rural areas are characterized by extreme poverty of both blacks and whites. The extreme poverty and the large white exodus leads us to the assumption that many whites in rural areas are not attending schools at all. (Mississippi has no compulsory school attendance legislation). Many whites are actually "cutting of their noses to spite their faces". It is entirely possible that rural Mississippi may raise yet another generation of uneducated people --- food for the system that now oppresses their parents.

4. Traditional educational associations, (PTA's Teacher Associations, etc.) in the South until very recently have been segregated and desegregation has not come by choice, but necessity. Attitudes exist that tend to polarize the white and black teachers, parents, students and other community people. We plan to develop parential involvement through existing or new educational associations. Encouraging participation in administrative issues, discussion of fears and reservations about desegregation. Activities will also include programs designed to facilitate parential understanding of their children in this changing society. Organizers will work in the four areas with individuals

and small groups, teachers, students and other community people providing imaginative direction for concerns about quality public education.

5. We plan to share with community groups some of the tactics and strategies we have found to facilitate desegregation. For example, one YWCA provided cab fares for poor whites unable to attend their assigned schools across town. We plan to increase vastly the number of door-to-door discussions, home visits, coffee-klatches, and informal small gatherings in small neighborhoods. We plan to urge teachers, principals and other school officials to be sensitive to the problems of whites in schools with majority blacks. For example, one parent told us that her eleven year old daughter was the only white in her class, and her teacher presumably with good intentions, picked her to be class monitor to inforce class discipline. She caught unnecessary harassment from fellow students who never before had a white student in their class.

6. Unfortunately, media coverage of desegregation often develops an unnecessary hysteria among whites since only "problems" are news-worthy. For example, a fight in a newly desegregated school, is news, while similar "incidents" are dealt with as a matter of course in all black or white schools, rarely drawing a second look from the public. While desegregation "problems" are thoroughly covered by our local media, rarely is information disiminated covering communities which have sucessfully dealt

with desegregation. We plan to develop comprehensive media programs with a positive emphasis designed by the four organizers to fit their local areas. (pamphlets, news-paper articles, radio spots, etc.)

7. We plan to help poor whites link up with social services --- particularly federally funded programs such as Community Action Agencies and Headstart Centers. Several Multi-Purpose Centers have been opened in the state with embryonic programs designed to help poor whites. We also plan to encourage schools to develop their own social services and counseling. In Greenwood (Leflore County) a special program has managed to get 800 students back in school. The school has developed its own social work department. (Unique to the state). The school social work department not only deals with school attendance problems, but acts as a referral service for children and parents alike. We plan to work closely with school administrations encouraging the development of similar programs.

8. M.C.P.E. recognizes the changing role of students in America and their demands to be included in the decision-making institutions which affect their lives. In this connection, the M.C.P.E. staff will work with existing student groups concerned about issues such as the closure of the swimming pools and parks in target areas, environmental and poverty issues at Starkville, and draft - and civil liberties concerns in Hattiesburg and Oxford, City-wide coalitions of black and white students around these and strictly high school campus issues will be

encouraged in an effort to broaden students' understanding of the relationships between on and off campus issues. Frequently in the recent past, White student involvement in bi-racial concerns has surprised many Northerners who regard all Southern whites as Neanderthal racists. Often student organizations serve as the only vehicles for public discussion on important community questions. School desegregation has spurred this White involvement and we will attempt to encourage it.

In this connection GJAC has recently funded a group of young predominatly White youth to establish a community center/ coffee house. This group was spun off from GJAC and has attracted many diverse individual people from school drop-outs to theatre people. Segments of the historically conservative, White middle class we have learned, are prepared to support an institution for mutual exposure to a broad, bi-racial cross-section of the community.

CONCLUSION:

The White Citizens Councils, the Americans for the Preservation of the White Race, the Ku Klux Klan, and dozens of local segregationist groups are talking to Whites of all classes and urging them to boycott the public schools and enroll in the "instant" segregationist academies across Mississippi.

Somehow, we believe that with adequate resources we can also reach White people in our state. Faced with the dilemma of accomodation to public school desegregation as opposed to expensive but inferior private schools, White people will

choose to return to the public schools. Not because necessarily they love blacks, but because they want a decent education for their children.

To reach this objective, deliberate hard work, careful planning, and research must be undertaken immediately by private individuals, small groups of concerned people under the umbrella of Mississippians for Creative Education and organizations such as GJAC. To the extent that financial resources can be provided we are confident that not only can desegregation be facilitated but that a model can be adopted for use across the Deep South.

We hope that desegregation can bring in its wake quality education the likes of which have not before been available to the masses of people in the state. An education which can provide students with basic skills needed to determine what one wants to do with his life and the tools needed to be prepared to take the next step toward that goal. An education which expands his understanding of the world and his obligations to the people in it, can develop a sense of appreciation for one's fellow man. Out of this awareness, hopefully will come a better world for all men.

WORK PROGRAM

1. Recruitment and Training:

The recruitment and training of staff of community organizers will be geared towards the development and implementation of a program to strengthen public education through public participation.

The community organizers will be recruited in part from Mississippi college students and recent graduates, who have been participating in various community projects. Complementing the students will be young whites recruited from local residents who show potential for developing community organization.

Training sessions will aim towards developing perspectives on community organizing, offering technical information (on existing federal programs, school desegregation information, laws and administrative regulations) and providing research done on topical problems by the universities.

Workshop trainers will be drawn from community organizations and agencies such as ACT in Durham, N. C., the American Friends Service Committee and the Delta Ministry. Academic personnel at Millsaps, Tougaloo and Mississippi State University who have conducted studies on school desegregation will lead workshops on research topics related to the project. Finally, workshops on technical information will be conducted by law firms such as the Lawyers' Constitutional Defense Committee, the Lawyers' for Civil Rights Under Law, and the NAACP Legal Defense Fund,

and selected members of the Office of Education and the Mississippi State Department of Education.

2. Leadership Development:

One of the goals of the project will be to develop leadership potential among parents, students and young people. Therefore, regular training sessions will be conducted along with periodic evaluations of job performances. Resource people will supplement the training offered by the Program Director and Central Staff.

3. Community Organization:

The project will have as its goal the creative inte gration of the public schools through involvement of grass roots people in the affairs of the public schools. Programatically, these goals involve door-to-door campaigns, the preparation of leaflets to stimulate community discussions of public affairs and the coordination of efforts of social service agencies working in these areas; emergency transportation to schools, PTA and school board meetings in order to maximize the participation of the poor; monitoring of the school board and Title I meetings; providing speakers for meetings of grass roots people at churches, unions and neighborhood civic clubs.

The project will assist community groups to prepare informational materials for radio and television public service announcements on the school crisis. The project will stimulate the involvement of church and civic leaders and assist them in "Save the School" campaigns. It will provide a rumor-control center to head off the pernicious effects of half-truths,lies and distortions in a crisis.

The project will attempt to sensitize community leaders to the long-term economic, political and social effects of racist private schools and the importance of a creative public school system to the entire community.

The project will try to deal with the crisis in individual high schools by organizing integrated student groups that can grapple with their common problems both in school and in the community.

JOB DESCRIPTIONS AND EXPLANATION

The minimum staff needs of this profject will be 4 experienced community organizers and full-time secretary and numerous part-time personnel. Each Organizer will be allocated a working budget of $2000. This will allow him to hire part-time, Secretaries, students, parents surveyors, researchers and other assistants as they are needed. Students will be paid $1.75 per hour and Adults will be paid $2.00 - $2.25 per hour. This will give the Organizer approximately 1000 hours part-time assistance. The Organizer from Area I will be Director of the Project. This should take only 25% of his time since he or she will be provided with a full-time secretary-assistant. This will eleminate the necessity of a full-time Director and extra expenditures.

1. COMMUNITY ORGANIZERS:

AREA I: He or she must have a college degree or equivalent, experience in working with youths as well as adults, mass media and administration and a history of involvement of public concerns. He must have some means of transportation, an outgoing personality, and an ability to develop training and research components, resources, programs and handle necess-ry administrative duties. The Area I Organizer will be responsible for the hiring of the three other Organizers in consultation with the Advisory Committee of M.C.P.E.

AREAS II, III, IV: He or she must have a history of involvement in public concerns and a general knowledge of the area in which he will work. He will be expected to carry out the overall objectives of the program and maintain continual communication with the Area I Organizer and the secretary-assistant. They will design their programs for maximum use of their $2000 working budget. Final approval must be given by the two financial officers appointed quarterly by the Advisory Committee.

2. SECRETARY-ASSISTANT: Must have the abilities to run an office and perform all basic office secretarial functions, coordinate bookkeeping with secretarial and other functions of part-time personnel. This person must also assume some research and writing responsibilities.

3. PART-TIME PERSONNEL for Central Office:

Bookkeeper $18./1 day per week - Clerical/secretarial assistence as needed under supervision of Secretary/Assistant.

4. PART-TIME FIELD PERSONNEL: As needed and recommended by Organizers under supervision and monitored periodically by Area I Organizer.

ADVISORY COMMITTEE

The applying organization (MCPE) will serve as an Ad Hoc Advisory Committee for the first thirty days while the permanent committee is being organized. The Ad Hoc Committee will hire the Area I Organizer who will in turn coordinate all activities in organizing the Advisory Committee. The Advisory Committee will be composed of twelve members, three from each target area. Representatives from the federal agencies will meet and elect one member from each area. Individuals private and public agencies including federally funded organizations working on local desegregation issues will meet and elect one member from each area. Parents and student groups from each area will meet and elect one member from each area. Election of the board will be completed no later than one month after receipt of funds. Organization and coordination of this Committee will be carried out by the Area I Organizer, hired temporarily by the Ad Hoc Committee permanent status will be considered by the Advisory Committee. The Advisory Committee will actually serve as a board of directors and have the same powers. It will appoint two member financial committees. Operational policies of the Advisory Committee in general will adhere to guidelines established by HEW.

Suggested Budget

I. <u>Personel</u> , Central Office		
Area I Organizer/Director	$8,000	$8,000
Secretary/Assistant	$6,000	$6,000
Bookeeper (for central office) 1 day per/wk. @ $18 per/day	$ 936	$ 936
Part time personel (for central office) secretarial, clerical, etc.	$1,500	$1,500
<u>Personel</u> , Field		
Area II, III, IV Organizers	$7,000	$21,000
Part time workers for Area I, II, III, IV Organizers (secretarial, foot work, surveyors, etc.)	$2,000	$8,000
		$45,436
F.I.C.A., Insurance, etc.	$4,500	$4,500
<u>Personel Total</u>		$49,936
II. <u>Travel</u>		
Area I Organizer/Director $200 per/mo.	$2,400	$2,400
Area II, III, IV Organizers 150 per/mo.	$1,800	$5,100
		$7,600
III. Other Expenses		
Rent for central office*	$60 per/mo	$720
Rent for 3 field offices*	$50 per/mo	$1,800
Utilities for four offices	$15 per/mo	$ 720
Office equipment	$1,500	$1,500
Supplies and misc.	$3,000	$3,000
		$7,740
	Total Budget	$65,276

* Office space will be shared with other organizations.

SPECIAL REPORT

TITLE IV OF THE 1964 CIVIL RIGHTS ACT: A PROGRAM IN SEARCH OF A POLICY

Race Relations Information Center

Quality Desegregation - South
Ed
#6

PRESS RELEASE

Southern Regional Council, Inc.
5 Forsyth Street, N. W.
Atlanta, Georgia 30303
522-8764

FOR RELEASE TO
MORNING PAPERS:
SUNDAY, MAY 3, 1970

ATLANTA -- The new segregated private schools established in the South because of school integration are busing more of their students and busing them further than are public schools, a new study concludes.

A survey of 10 "segregation academies" chosen to be representative on the basis of size and location indicates that an average of 62 per cent of their students are transported daily by bus for an average of 17.7 miles each way. For the eight states represented by these academies, the comparable figures for public schools are 49.5 per cent and 10.1 miles each way.

The study appears in the current issue of SOUTH TODAY, a monthly digest published by the Southern Regional Council, a foundation-supported research and information agency in the field of human relations.

Further, the study suggested, some Southern states have been considering ways in which they might in effect subsidize private school busing. Bills to provide tax relief for private school transportation failed this year in the Georgia and North Carolina legislatures. But a bill allowing private schools to purchase bus tags at the same advantageous fees which public schools pay was approved by the Mississippi legislature.

"Busing, like law and order, has become an emotionally charged code word," the study says. "Yet the facts indicate that the mere act of busing is not the issue. Segregationists will continue to rail against the use of busing to achieve desegregation while quietly continuing, and oftentimes increasing, busing of students to maintain the racial status quo."

The report quotes Louisiana Gov. John McKeithen as saying: "I will not allow my children to be bused. . . to be treated like cattle." Sen. John Stennis in February deplored the "merciless mandate" under which a court "takes a little girl and sends her to the other side of town where she knows no one...." Some other Southern political leaders, the report notes, have made busing the focal point of their latest anti-integration comment.

Desegregation plans approved by the Department of Health, Education and Welfare have tended, however, to reduce rather than increase busing in the South. The establishment of "segregation academies," moreover, has tended to increase busing. "The academies which do not own buses sometimes encourage parents to join together to purchase and operate buses," the report says.

Among those contacted in the survey was Dr. T. E. Wannamaker, a leader of the South Carolina Independent School Association, which is affiliated with the white Citizens Councils. He is quoted as mentioning one South Carolina segregated academy which has some children who travel 120 miles round-trip each day.

Figures for the sample of 10 academies checked in the survey are:

Faith Christian School, Ramseur, N. C., 97 per cent of children bused, 17 miles average each way; Enfield Academy, Whitakers, N. C., 75 per cent bused, 35 miles average each way; Evangeline Academy, Villa Platte, La., 75 per cent and 11 miles; Kenston Forest Academy, Blackstone, Va., 70 per cent and 17 miles; Macon Academy, Tuskegee, Ala., 65 per cent and 22 miles; Autauga County Private School Foundation, Prattville, Ala., 63 per cent and 8 miles; Tallahassee Christian School, Tallahassee, Fla., 50 per cent and 15 miles; Flint River Academy, Woodbury, Ga., 45 per cent and 20 miles;

Indianola Academy, Indianola, Miss., 40 per cent and 17 miles; and Wade Hampton Academy, Orangeburg, S. C., 40 per cent and 15 miles.

Closely estimated figures on public school transportation were obtained from state school departments for the eight states in which these academies are located. The figures for public schools were Alabama, 11.5 miles each way; Florida, 12; Georgia, 10; Louisiana, 13; Mississippi, 9; North Carolina, 4; South Carolina, 10; and Virginia, 11.5. When the percentages of public school students bused in these states were averaged, the resultant eight-state average was 49.5 per cent.

In addition to its survey of 10 "segregation academies," the report provides other information bearing out its conclusions that desegregation has tended to reduce public school busing at the same time that the proliferation of segregated private education is increasing busing.

6-6-1970

Texas Unionists Win School Bias Lawsuit

Corpus Christi, Tex.—Backed by their union, 32 parents have won a major court case challenging segregation and discrimination against Mexican-American and Negro students in the Corpus Christi school system.

Federal District Judge Wooodrow Seals ordered the school system to break up its gerrymandered boundary lines which had shunted nearly all of the city's Spanish-speaking and Negro communities into one school district, leaving the adjoining district almost exclusively "Anglo."

The parents who brought the suit are all members of Steelworker locals at the American Smelting & Refining Co. and Reynolds Metals Co. plants.

To finance the court challenge, they turned to their union for help—and got it. USWA District Dir. James E. Ward went to bat for them, and Pres. I. W. Abel and the USWA executive board approved the assistance.

"We simply provided service on behalf of our members," Ward said. "It is good for the kids, good for the community and good for our union."

Judge Seals described the suit as

(Continued on Page 3)

(Continued from Page 1)

"a most important case" and he handed down a decision asserting that Mexican-Americans are "an identifiable minority group" and are entitled to the same protection against discrimination and illegal segregation as the Supreme Court has afforded to Negroes.

The local school superintendent had argued that the constitutional requirements of desegregating former dual school systems had been met by "integrating" black and Mexican-American students. The latter, he told the court, were "white" and that was enough to meet the desegregation requirements of the Supreme Court.

Attorneys for the parents contended that boundary lines were drawn on a discriminatory basis, that a new high school was located so as to promote, rather than minimize segregation, and that the school system hires, assigns and promotes teachers and staff on a discriminatory basis.

Among those testifying to the long-standing segregation patterns in the city's schools were Dr. Hector Garcia, local physician who has served on the U.S. Civil Rights Commission and the U.S. delegation to the United Nations; Steelworkers Rep. Paul Montemayor, who as a youngster walked long distances to segregated schools, and Jose Cisneros, father of five and a leader in the Mexican-American community.

In addition to ordering desegregation of the school system, the federal judge acted to establish a local Human Relations Commission to study and promote a unified school system. He asked for nominations of five Negro, five Anglo and five Mexican-American members of the community, from whom he will choose a 12-member commission.

In addition, Judge Seals said, the court will retain jurisdiction of the case until he is satisfied that the illegal dual system will not be reestablished.

IRS Says It Will Take Southern Schools' Word About Racial Policies

Des- South

Agency Indicates It Must Receive Protests Before Investigating Tax Freedom; Senator Vexed

8/13/70

By a WALL STREET JOURNAL *Staff Reporter*

WASHINGTON—The Internal Revenue Service will investigate the racial policies of private Southern academies only if it receives complaints that their tax-free status isn't warranted, Randolph W. Thrower, Commissioner, made clear in Senate testimony.

But to rely mainly on statements of nondiscrimination from the school administrators themselves is "palpably ridiculous," chairman Mondale (D., Minn.) charged at the crowded hearing at the Senate Select Committee on Equal Educational Opportunity. Mr. Thrower's defense of the Nixon Administration policy adopted July 10, Sen. Mondale said, made for a "very depressing warning."

The Administratin decision to issue favorable advance assurance of tax-deductibility of donations to private schools on the strength of their written declarations of nondiscrimination and their local announcements to that effect "will take us right back where we started," the Senator complained, to "a publicly supported segregated school system."

The IRS is requesting admissions policy information from all of about 17,000 tax-exempt private schools, Mr. Thrower said, and will follow a policy that will disregard both their past practices and original motivations. When a school declares itself to be nondiscriminatory, he said, the IRS will issue a new favorable ruling because it expects the school to be acting "in a good faith." He drew derisive chuckles from spectators when he added, "These are, after all, educators."

The previous favorable rulings on eight Mississippi schools are being suspended, Mr. Thrower reported, under a court order requiring the IRS to do this unless it "affirmatively" finds that 41 private schools that received favorable rulings since 1963 aren't part of a segregated system.

August 24, 1970

Dear Mr. President:

Desegregation under a federal court order will occur in Mobile beginning September 8, 1970. Although the amount of desegregation is more than we have had in the past, we feel that better plans are available and have appealed to the Supreme Court. However, white Mobilians have reacted with angry voices and unreasoning appeals to mass violation of the law this fall.

Throughout the summer groups of white parents have met in increasing numbers searching for ways of avoiding the court order. These meetings have been characterized by racial hate (see attached literature) and the thinly veiled threat of violence. Now it seems that this coalition of "law and order," whites has finally settled on a strategy - mass violation of the court order through "freedom of choice" school attendance.

White citizens have received open encouragement for this strategy from George Wallace, Congressman Edwards, Senator Allen, local white attorneys, civic, and religious leaders. White people have been lead to believe that this strategy will succeed largely because of the failure of the Justice Department to take action when whites successfully pursued this strategy last spring. We informed the Justice Department of these violations but no action was taken.

In the past citizens of the Black Community have suffered greatly because of the failure of the federal government (under both Republican and Democratic administrations) to act. Now with the future of public education at stake, and facing the threat of mass violations of the law, we respectfully suggest that the time has come for your administration to be judged by both its words and its actions. Strong federal action now could help to make desegregation an opportunity for progress instead of chaos and destruction. The rights of hundreds of thousands of students, black and white, are on the line, as is the workability of our system of government.

We urge you to issue a statement that those who violate or interfere with court orders or with the desegregation of schools will face immediate action by the Justice Department. Anything less encourages violation of the law and disorder.

White parents have made it known in their meetings that they plan to send their representatives into the schools in the fall to register those students enrolling under the "freedom of choice" plan. We urge that you make clear in your public statement that any parents engaged in such activities will face immediate Justice Department action.

We feel that such a statement is in order because of the fact that Mobilians by the thousands have made known their intention of violating the order.

Such a course of action would not exacerbate tensions, which are already at the boiling point, but might serve as a deterrent to those considering violation of the law.

We urge you to take these steps in Mobile, and in the entire South. We request that you take these steps forcefully and publicly so that the nation, and those bent on chaos, will know that the federal government will act quickly and efficiently to protect the constitutionally guaranteed rights of the children of the South.

For a new day of educational progress and equal opportunity.

PATRICK HENRY'S ADDRESS

THEY TELL US, SIR, THAT WE ARE WEAK-UNABLE TO COPE WITH SO FORMIDABLE AN ADVERSARY. BUT WHEN SHALL WE BE STRONGER? WILL IT BE THE NEXT WEEK, OR THE NEXT YEAR? WILL IT BE WHEN WE ARE TOTALLY DISARMED?...

SHALL WE GATHER STRENGTH BY IRRESOLUTION AND INACTION? SHALL WE ACQUIRE THE MEANS OF EFFECTUAL RESISTANCE BY LYING SUPINELY ON OUR BACKS, AND HUGGING THE DELUSIVE PHANTOM OF HOPE, UNTIL OUR ENEMIES SHALL HAVE BOUND US HAND AND FOOT?...

SIR, WE SHALL NOT FIGHT OUR BATTLE ALONE. THERE IS A JUST GOD WHO PRESIDES OVER THE DESTINIES OF NATIONS. ...THE BATTLE, SIR, IS NOT TO THE STONG ALONE, IT IS TO THE VIGILANT, THE ACTIVE, THE BRAVE .... THERE IS NO RETREAT BUT IN SUBMISSION AND SLAVERY! OUR CHAINS ARE FORGED!...

GENTLEMEN MAY CRY, PEACE, PEACE! ——BUT THERE IS NO PEACE. THE WAR IS ACTUALLY BEGUN! ... WHY STAND WE HERE IDLE? WHAT IS IT THAT GENTLEMEN WISH? WHAT WOULD THEY HAVE? IS LIFE SO DEAR, OR PEACE SO SWEET, AS TO BE PURCHASED AT THE PRICE OF CHAINS AND SLAVERY? FORBID IT, ALMIGHTY GOD! I KNOW NOT WHAT COURSE OTHERS MAY TAKE; BUT AS FOR ME, GIVE ME LIBERTY OR GIVE ME DEATH!

House of Burgesses, Virginia
March 1775

IF I MAY ADD .... GIVE MY WHITE CHILDREN LIBERTY AND FREEDOM OR GIVE THEIR WHITE DADDY DEATH.

1970

Though public officials know this literature is passed out, they refuse to condemn it. BR

Dear Dad,

You owe it to me, as did your father owe it to you; to tell me the truth. Dad, is it possible for these whining, hand-wringing, excusemaking specimen of men to be descendants of the proud brave men, who gave everything without hesitation or reservations; such as: George Washington, Thomas Jefferson, Patrick Henry, Nathan Hale, Jefferson Davis, Robert E. Lee, and the countless thousands of unsung heroes of our great Anglo-Saxon race? Is it possible that you will be the generation who has everything but cowardly refuses to make a stand to even save your white children from a jungle school system.

I know the war is not on you but on my back and the backs of my little friends. Dad, I don't want to believe that you are a coward but you send me out to wage this Holy War in which the end will be total mongrelization.

The reason my mother is white is because my Granddaddy was a man. Daddy, I cannot protect my white sister, without your help. The Communists will never stop until our great Anglo-Saxon race is destroyed. Daddy, you are the 3rd generation. Its your time to fight. Because if you don't fight, my white friends and I will be degenerated and destroyed. A niggered up savage school system is far worse than no school at all. Be a man, Daddy, and refuse to send us to school this Sept. The allseeing eyes of our ancestors are upon you, Daddy.

Ghost-writer.

Evasive Action

Schools in Deep South Slow Integration Tide With Subtler Tactics

Many Drop Confrontation, Turn to Indirect Methods To Keep Races Separate

Copying Northern Techniques

10/15/70

By TOM HERMAN
Staff Reporter of THE WALL STREET JOURNAL

FRANKLINTON, La.—Integration, at long last, has come to the schools of this drowsy little town. After decades of all-white enrollment, Franklinton Elementary School now houses 333 whites and 793 blacks in grades one through six.

That there are any whites around at all, however, might be news to more than 300 of the black children who attend the school. They are the ones who scored poorly on the ability and achievement tests administered by the school. As a consequence, they have been assigned to what many whites call "the dumb sections"—sections that turn out to be almost without exception free of whites.

Thus, more than 150 Negro children here attend all-black classes inside the walls of the "integrated" school, and another 150 or so attend classes with only a sprinkling of white pupils. The all-white school board cheerfully acknowledges this to be true. It also cheerfully insists it is segregating children not by race but only by ability.

Taking Evasive Action

Blacks here don't see it that way. They say their children did poorly on the ability tests because they have for years received inferior education at segregated schools. "The black children are being discriminated against today because of the effects of previous discrimination," says Oless Brumfield, a local black leader. Other Franklinton blacks who feel the same way have filed suit in Federal district court in New Orleans to bar the use of ability tests to create all-black or all-white classes.

Ability and achievement testing is, of course, a perfectly valid educational tool, as used in many public and private schools across the country. But this fall it has suddenly blossomed in the Deep South as one of several practices that have resulted in "desegregated" school buildings or districts in which few if any black children come into contact with whites.

The methods used by Southern school districts to soften or completely evade integration orders from Federal courts vary widely. Some are legal, some obviously are not, and others have yet to be tested in the courts. Some permit school districts to avoid even beginning integration and others are eroding past integration gains. Many are borrowed from the North. All, though, have at least one thing in common: They are inspiring a growing wave of vocal black resentment and even provoking some young blacks to yearn for what they view as the less degrading days of total segregation.

A Matter of Definition

To be sure, many school districts are undergoing meaningful integration for the first time this year, as a result of numerous court ultimatums. Even the gloomiest civil rights advocate doesn't deny there is more integration now than ever before in the South, or that such integration has taken place with relatively little overt resistance. But civil rights leaders also fear the Nixon Administration now considers the integration job done in Dixie and plans to ignore the rapidly growing numbers of abuses in officially "desegregated" districts.

They point to developments they say lend credence to their fears. A few days ago J. Stanley Pottinger, a top civil rights official of the Department of Health, Education and Welfare, announced that on-site reviews of 120 Southern school districts desegregated this fall had found "some form of racial isolation" in at least half the districts. Mr. Pottinger said the Government was drafting a prohibition against the use of ability grouping to deliberately segregate classes. The next day Administration officials said that Mr. Pottinger's statement had been "misunderstood" by some news media. Racial segregation resulting from legitimate ability tests, they said, is no cause for Federal action.

The Justice Department says 94% of the Deep South's public school districts are officially "desegregated" or are under court order to become so. But, its spokesmen admit, desegregation doesn't necessarily mean integration. Rather, it refers only to the elimination of the old dual school system, one white and one black. Thus, the Government has classified Washington Parish, which includes Franklinton Elementary, as "desegregated." And even when every white child in a school district has left to attend private school, that district is still classified "desegregated."

An Array of Tactics

Faced with a variety of stern court orders to integrate schools once and for all, but also faced with the Nixon Administration's relatively lenient definition of desegregation, Southern whites have by and large dropped the use of violence or economic pressures to block the mingling of whites and blacks in classrooms. The methods they have turned to are, like ability testing, designed more to circumvent integration than to battle it head-on.

For instance, the numbers of white parents pulling their children out of public schools and enrolling them in new all-white private academies has ballooned this fall. Further, many such acadamies are receiving substantial aid from state and county governments, even though such aid violates Federal court rulings. Here in Franklinton private school students are bused to school on parish public school buses, and they study textbooks granted free from the state. In Jackson, Miss., the segregationist Citizens Councils of America runs five all-white schools. Enrollment this year has soared to 5,250 from 500 a year ago and 3,200 last spring.

In Mississippi some white parents are simply pulling their children out of school and keeping them at home. That's been legal for Mississippians since the 1950s, when the state legislature made school attendance voluntary. But up until this year, with its numerous court orders imposing integration once and for all, few Mississippi parents felt a need to take advantage of the peculiar law. Many of

Education

Evasive Action: Southern Schools Slow Integration With New Subtlety

Oct 15, 1970

Continued From First Page

those keeping their children at home have enrolled them in correspondence courses. That tactic, plus the private school boom, has left some school districts virtually all-black. In the two public schools in Hollandale, Miss., officially deemed "desegregated" only six whites remain.

A few communities in Alabama, borrowing a technique from many a Northern suburb, have split off from heavily integrated school districts and formed their own districts in largely white areas, then applied to the state for free public schooling.

In some school districts school officials have simply ignored some portions of court orders. Here in Franklinton the school board concedes it has not obeyed a 1969 Federal court order to integrate school buses. That may change soon. A private civil rights group in New Orleans heard about the violation and has sued the board to force compliance.

Some school boards have effectively segregated classrooms by allowing whites and blacks to choose the classes they wish to attend. In Brandon, Miss., this has resulted in some all-white classes. Few whites choose classes with blacks, and most Negro children are afraid to join all-white classes.

Two Views of a County

Other school boards have persuaded Federal courts that total integration will result in all-black schools because whites will flee. Accordingly, some courts have approved plans that leave segregated schools intact. In Hancock County, Ga., a Federal district judge recently approved a plan that leaves two schools all-black and one almost all-white. The Federal Government classifies Hancock County as "desegregated." Hancock County blacks don't. They have staged sporadic demonstrations protesting the ruling and have appealed it. But even if they win, their troubles won't be over; local whites vow that if any court orders more integration they will boycott the schools.

In Greenwood, Miss., a Federal district court ruling that leaves four of the city's six elementary schools largely black or largely white is also being appealed. The school board says the segregated schools are the natural result of residential segregation; local blacks say they are the result of rigged zoning lines. As in Hancock County, whites say they'll boycott schools if a court orders further integration.

Such court rulings have startled and dismayed many integrationists who over the years have depended on the courts time and again to help breech segregation. In Birmingham a court approved a plan leaving nearly half the city's elementary schools either predominantly black or overwhelmingly white. The court said it accepted the Nixon Administration's thinking that school segregation caused by residential patterns is legal while segregation caused by law is not.

Segregation by Sex

Some integration advocates fear that the Supreme Court, which currently is reviewing lower court rulings that imposed integration by busing, may follow Mr. Nixon's line of reasoning. If so, the high court could overturn court-ordered busing in several large Southern cities.

A growing number of Dixie schools have resorted to integration by race but segregation by sex. Most school officials say that is done for "quality education," but when pressed they explain their real motive: To keep black boys from white girls; the fear of interracial dating has long haunted even moderate Southerners.

Negroes say sex segregation is just as insulting as the old dual school system. In Coffeeville, Miss., angry blacks are boycotting the schools over that issue. "Sex segregation is a damned clear way of telling our people that they are inferior to whites," fumes C. J. Duckworth, executive secretary of the Mississippi Teachers Association, a black group.

Where sex segregation has been challenged in court, it has usually been ruled illegal. Ruling on sex segregation in Concordia Parish, La., the Federal district court in New Orleans recently stated that "the separation of the sexes in the schools is racially motivated and once again stamps a 'badge of inferiority' on black people."

Win Some, Lose Some

The court concluded that black students were aware of the racial motivation for sex segregation and that such segregation therefore had "a positive detrimental affect on their willingness to learn and general education motivation." A similar segregation plan in Carroll County, Miss., was also thrown out earlier this fall by another Federal district court.

Nonetheless, some Southern school boards have succeeded in convincing Federal judges that sex segregation is necessary for "quality education." Roger Mills, a Jackson, Miss., civil rights worker, speculates that sex segregation cases "will keep popping up each year for many years, and we'll have to try to prove in each separate case that the plan is racially motivated. Sometimes we'll win, but sometimes I'm afraid we won't."

In those cases where whites have ceased active resistance and admitted Negroes to their classrooms, the going hasn't been easy for the black children. Despite complaints by blacks, one Louisiana school has maintained its nickname "the Rebels," and members of its marching band still wear Confederate uniforms. A favorite song at school assemblies is "Dixie."

Often blacks find the only way to erase such seemingly trivial slights is by going to court. After blacks sued the St. Tammany, La., parish school board, the Federal district court in New Orleans ordered the removal of a Confederate flag from a principal's office, noting wryly that "the retention of Confederate flags in a unitary school system is no way to eliminate racial discrimination 'root and branch' from the system."

Civil rights advocates are convinced such incidents are likely to grow in number; and they are gloomy even about such court victories. "As a practical matter, you just can't run into court each day and say, 'Your honor, look what happened at school today,' " says Debra Millensen, an attorney for the group that brought the Confederate flag suit. The only way to fight such incidents, she believes, is to "elect more blacks to school boards and other politically powerful positions."

A New Militancy

Increasingly, Southern blacks have reacted to integration dodges with a militancy that is new to the South. In Houma, La., racial clashes earlier this month prompted Gov. John McKeithen to declare a state of emergency and close the schools in the area down. In Bogalusa, La., hundreds of whites and blacks battled in two of the city's schools, and city police were forced to use tear gas to quell the trouble. In Mobile, Ala., a group of white students at Murphy High School went to the FBI to complain of harassment and intimidation by "militant and Black Panther types." In Earle, Ark., 200 blacks walked out of the newly integrated schools and marched through town stoning businesses.

Older blacks despair of such violence and fear it only hardens white resolve to stay separate. And it is true that officials of private white schools say each new outbreak of violence brings a wave of new applications. William Simmons, head of the Jackson-based Citizens Councils of America, the group that runs five private schools, says, "Every time there's a headline about school troubles, we know we're going to be bombarded with phone calls and applications."

Most blacks remain convinced their battle will be won in the courts. That's the case here in Franklinton, where local Negroes have filed suit to bar the use of ability testing to create all-black or all-white classes. Their chances of winning are considered excellent; the Federal district court in New Orleans recently outlawed the use of ability grouping to produce segregation in the schools in Jackson Parish, La. Their case is buttressed by a growing number of educational experts who believe ability grouping does more harm than good, North or South.

Typical is Warren Findley, an education professor at the University of Georgia. Mr. Findley believes students of differing abilities, social backgrounds and academic achievements should be mixed together so that they may "learn as much from each other as from their teachers and textbooks." Indeed, he believes ability tests should be administered specifically so a school district can achieve such a mix in its classes.

"I'd Rather Go Back"

Black parents here agree. They say children assigned to "dumb sections" simply give up. Ability grouping "has knocked the ambition out of the children," says Mrs. Minora Brock, black mother of four. "When I try to tell some of my own children to work, they won't, because they know they're in the lowest sections and the school expects them to do bad." Black students themselves say they find being assigned to low sections so degrading that they would prefer outright segregation. "I don't like my new school," says Tyronda Dyson, an 11-year-old black girl so assigned. "I'd rather go back to the old one."

School officials say they can't mix races at random because blacks are so far behind most whites. "How do you expect us to mix a colored fifth grader who can't count with a white fifth grader who is doing modern math?" asks school superintendent Earl Brown. "And how do you expect some of these colored kids to keep up with whites whose parents take them on trips, buy them books and do things for them?"

School officials also argue that they have used ability grouping since 1963, and that they separated half the school's blacks into black classes last year with no resultant complaints or suits. Civil rights leaders say that only shows how difficult it is to monitor the South's 2,400 school districts to check for abuses of court orders. The lawsuit filed by blacks here, for example, also seeks to enjoin the school board from segregating the school buses and from providing free transportation and textbooks to students who attend two all-white private schools—practices that the school board followed last year and that it got away with because civil rights legal groups were not alerted by local blacks.

Tougher Rules

Many blacks, says Mr. Brumfield, one of the local Negro leaders fighting ability grouping, "are afraid to speak out because they are afraid of the white man."

Blacks here are also distressed about

Wall St Journal
Oct 15, 1970

tighter school rules that are being enforced here and elsewhere in the South this fall. School officials say they have to institute stiffer rules to protect against racial fighting. "We have those kids under tight supervision from the moment they set foot in school until the moment they leave," Mr. Brown, the superintendent here, declares. Franklinton Elementary has also cut its recess time and class breaks "to minimize the chance of students milling around on campus," he says.

That bothers Preston Brumfield, Mr. Brumfield's 11-year-old son. "I'd rather be back at the old (all-black) school," says Preston. "We used to be able to play ball between classes, and there was more freedom to do things."

Tyronda Dyson also recalls her segregated school fondly. "In the old school, if we did something wrong, we'd just get a warning," she explains. "But in the new school, we get a paddling." After several painful paddlings last year (when Franklinton saw its first wave of integration), Tyronda told her mother she wouldn't return to school. Mrs. Dyson said she would have none of that, so Tyronda reluctantly went back.

But Tyronda's mother is not optimistic about the lessons her daughter is learning from her first taste of integration. "The kind of integration we're going through here may convince these children that integration is a hopeless cause and not worth fighting for," she says. "I hope that won't happen, but it sure looks like it is."

NAACP Legal Fund Files Suit to Compel HEW to Enforce Desegregation of Schools

10/20/70

By a WALL STREET JOURNAL Staff Reporter

WASHINGTON—The NAACP Legal Defense Fund filed suit to compel the Federal Government to enforce school desegregation by using its power to withdraw Federal funds.

The suit, filed in Federal district court here on behalf of 25 students from five Southern states and two taxpayers, is the first such broad action charging the Department of Health, Education and Welfare with failure to enforce Civil Rights Laws. Past complaints have been limited to the application of desegregation laws in specific school districts.

The complaint, over a year in formulation, was filed just one week after the U.S. Civil Rights Commission released a sweeping criticism of the Government's enforcement of existing civil rights laws. That report noted that "despite progress in Southern school desegregation occurring over the past five years, a substantial majority of black school children in the South still attend segregated schools."

The 1964 Civil Rights Act forbids racial discrimination in any program or activity receiving Federal money and gives Federal agencies, such as HEW, the authority to terminate aid where desegregation orders aren't followed.

A statement accompanying the suit charges that application of these powers had been inadequate during the Johnson Administration and that "even this low level of enforcement ground to a halt" under the Nixon Administration.

HEW Secretary Richardson issued a statement in response to the suit, emphasizing his commitment to "both the letter and the spirit" of the 1964 law. "It is ironic," he said, "that during the school year in which the nation has registered its greatest desegregation progress, a lawsuit has been filed charging the department with failure to carry out its responsibilities in this field."

He asserted that "greater effort and resources" than ever before had been committed to desegregation this fall and added, "We intend to continue this effort without abatement, and we are confident that an unbiased, nonpolitical look at the record will bear out both the moral and legal merit of what we are doing."

Text of Supreme Court Decision On Schools

WASHINGTON (AP) — Here is a partial text of the Charlotte-Mecklenburg Supreme Court decision Tuesday: **Supreme Court of The United States Syllabus**

Swann et al. v. Charlotte-Mecklenburg Board of Education et al.

Certiorari to the United States Court of Appeals For The Fourth Circuit.

The Charlotte-Mecklenburg school system, which includes the city of Charlotte, North Carolina, had more than 84,000 students in 107 schools in the 1968-1969 school year. Approximately 29 per cent (24,000) of the pupils were Negro, about 14,000 of whom attended 21 schools that were at least 99 per cent Negro. This resulted from a desegregation plan approved by the District Court in 1965, at the commencement of this litigation. In 1968 petitioner Swann moved for further relief based on Green v. County School Board, 391 U.S. 430, which required school boards to "come forward with a plan that promises realistically to work . . . now . . . until it is clear that state-imposed segregation has been completely removed." The District Court ordered the school board in April 1969 to provide a plan for faculty and student desegregation. Finding the board's submission unsatisfactory, the District Court appointed an expert to submit a desegregation plan. In February 1970, the expert and the board presented plans, and the court adopted the board's plan, as modified, for the junior and senior high schools, and the expert's proposed plan for the elementary schools. The Court of Appeals affirmed the District Court's order as to faculty desegregation and the secondary school plans, but vacated the order respecting elementary schools, fearing that the provisions for pairing and grouping of elementary schools would unreasonably burden the pupils and the board. The case was remanded to the District Court for reconsideration and submission of further plans. This court granted certiorari and directed reinstatement of the District Court's order pending further proceedings in that court. On remand the District Court received two new plans, and ordered the board to adopt a plan or the expert's plan would remain in effect. After the board "acquiesced" in the expert's plan, the District Court directed that it remain in effect. Held:

1. Today's objectives of state-imposed segregation that was held violative of equal protection guarantees by Brown v. Board of Education, 347 U.S. 483, in 1954. Pp. 10-11.

Broad Powers

2. In default by the school authorities of their affirmative

the District Court's very limited use of the racial ratio—not as an inflexible requirement, but as a starting point in shaping a remedy — was within its equitable discretion. Pp. 18-21.

(2) One-race schools. While the existence of a small number of one-race, or virtually one-race, schools does not in itself denote a system that still practices segregation by law, the court should scrutinize such schools and require the school authorities to satisfy the court that the racial composition does not result from present or past discriminatory action on their part. Pp. 21-22.

An optional majority-to-minority transfer provision has long been recognized as a useful part of a desegregation plan, and to be effective such arrangement must provide the transferring student free transportation and available space in the school to which he desires to move. P.22.

(3) Attendance zones. The remedial altering of attendance zones is not, as an interim corrective measure, beyond the remedial powers of a district court. A student assignment plan is not acceptable merely because it appears to be neutral, for such a plan may fail to counteract the continuing effects of past school segregation. The pairing and grouping of noncontiguous zones is a permissible tool; judicial steps going beyond contiguous zones should be examined in light of the objectives to be sought. No rigid rules can be laid down to government conditions in different localities. Pp. 23-25.

Travel Time Factors

(4) Transportation. The District Court's conclusion that assignment of children to the school nearest their home serving their grade would not effectively dismantle the dual school system is supported by the record, and the remedial technique of requiring bus transportation as a tool of school desegregation was within that court's power to provide equitable relief. An objection to transportation of students may have validity when the time or distance of travel is so great as to risk either the health of the children or significantly impinge on the educational process; limits on travel time will vary with many factors, but probably with one more than the age of the students. Pp. 25-27.

8. Neither school authorities nor district courts are constitutionally required to make year-by-year adjustments of the racial composition of student bodies once a unitary system has been achieved. Pp. 27—28.

431 F. 2d 138, affirmed as to those parts in which it af-

mulate guidelines must take into account their experience.

North Carolina Case

The Charlotte-Mecklenburg school system, the 43d largest in the Nation, encompasses the city of Charlotte and surrounding Mecklenburg County, North Carolina. The area is large—550 square miles—spanning roughly 22 miles east-west and 36 miles north-south. During the 1968-1969 school year the system served more than 84,000 pupils in 107 schools. Approximately 71 per cent of the pupils were found to be white and 29 per cent Negro. As of June 1969 there were approximately 24,000 Negro students in the system, of whom 21,000 attended schools within the city of Charlotte. Two-thirds of those 21,000—approximately 14,000 Negro students—attended 21 schools which were either totally Negro or more than 99 per cent Negro.

This situation came about under a desegregation plan approved by the District Court at the commencement of the present litigation in 1965, 243 F. Supp. 667 (WDNC), aff'd, 369 F. 2d 29 (CA4 1966), based upon geographic zoning with a free transfer provision. The present proceedings were initiated in September 1968 by Petitioner Swann's motion for further relief based on Green v. County School Board, 391 U.S. 430 (1968), and its companion cases. All parties now agree that in 1969 the system fell short of achieving the unitary school system that those cases require.

Numerous Hearings

The District Court held numerous hearings and received voluminous evidence. In addition to finding certain actions of the school board to be discriminatory, the court also found that resilential patterns in the city and county resulted in part from federal, state, and local government action other than school board decisions. School board action based on these patterns, for example, by locating schools in Negro residential areas and fixing the size of the schools to accommodate the needs of immediate neighborhoods resulted in segregated education. These findings were subsequently accepted by the Court of Appeals.

In April 1969 the District Court ordered the school board to come forward with a plan for both faculty and student desegregation. Proposed plans were accepted by the court in June and August 1969 on an interim basis only, and the board was ordered to file a third plan by November 1969. In November the board moved for an extension of time until February 1970, but when that was denied the board submitted a partially completed

of geographic zones. More than half of the Negro elementary pupils were left in nine schools that were 86 per cent to 100 per cent Negro; approximately half of the white elementary pupils were assigned to schools 86 per cent to 100 per cent white.

One Modification

The Finger Plan. The plan submitted by the court-appointed expert, Dr. Finger, adopted the school board zoning plan for senior high schools with one modification: it required that an additional 300 Negro students be transported from the Negro residential area of the city to the nearly all-white Independence High School.

The Finger plan for the junior high schools employed much of the rezoning plan of the board, combined with the creation of nine "satellite" zones. Under the satellite plan, inner-city Negro students were assigned by attendance zones to nine outlying predominately white junior high schools, thereby substantially desegregating every junior high school in the system. The Finger plan departed from the board plan chiefly in its handling of the system's 76 elementary schools. Rather than relying solely upon geographic zoning, Dr. Finger proposed use of zoning, pairing, and grouping techniques, with the result that student bodies throughout the system would range from 9 per cent to 38 per cent Negro.

The District Court described the plan thus:

"Like the Board plan, the Finger plan does as much by rezoning school attendance lines as can reasonably be accomplished. However, unlike the board plan, it does not stop there. It goes further and desegregates all the rest of the elementary schools by the techniques of grouping two or three outlying schools with one black inner city school; by transporting black students from grades one through four to the outlying white schools; and by transporting white students from the fifth and sixth grades from the outlying white schools to the inner city black school."

Under the Finger plan, nine inner-city Negro schools were grouped in this manner with 24 suburban white schools.

On February 5, 1970, the District Court adopted the board plan, as modified by Dr. Finger for the junior and senior high schools. The court rejected the board elementary school plan and adopted the Finger plan as presented. Implementation was partially stayed by the Court of Appeals for the Fourth Circuit on March 5, and this Court declined to disturb the Fourth

directed that the Finger plan remain in effect.

Nearly 17 years ago this Court held, in explicit terms, that state-imposed segregation by race in public schools denies equal protection of the laws. At no time has the Court deviated in the slightest degree from that holding or its constitutional underpinnings. None of the parties before us challenges the Court's decision of May 17, 1954, that:

"In the field of public education the doctrine of 'separate but equal' has no place. Separate educational facilities are inherently unequal. Therefore, we hold that the plaintiffs and others similarly situated . . . are, by reason of the segregation complained of, deprived of the equal protection of the laws guaranteed by the Fourteenth Amendment . . .

"Because these are class actions, because of the wide applicability of this decision, and because of the great variety of local conditions, the formulation of decrees in these cases presents problems of considerable complexity." Brown v. Board of Education, supra, at 495.

1955 Decision

None of the parties before us questions the Court's 1955 holding in Brown II, that:

"School authorities have the primary responsibility for elucidating, assessing, and solving these problems; courts will have to consider whether the action of school authorities constitutes good faith implementation of the governing constitutional principles. Because of their proximity to local conditions and the possible need for further hearings, the courts which originally heard these cases can best perform this judicial appraisal. Accordingly, we believe it appropriate to remand the case to those courts.

"In fashioning and effectuating the decrees, the courts will be guided by equitable principles. Traditionally, equity has been characterized by a practical flexibility in shaping its remedies and by a facility for adjusting and reconciling public and private needs. These cases call for the exercise of these traditional attributes of equity power. At stake is the personal interest of the plaintiffs in admission to public schools as soon as practicable on a nondiscriminatory basis. To effectuate this interest may call for elimination of a variety of obstacles in making the transition to school systems operated in accordance with the constitutional principles set forth in our May 17, 1954, decision. Courts of equity may properly take into account the public interest in the elimination of such obstacles in a systematic and effective manner. But it should go without saying that

stated the basic obligation asserted in Griffin V. School Board, 377 U.S. 218, 234 (1964), and Green, supra, that the remedy must be implemented forthwith.

Try to Amplify

The problems encountered by the district courts and courts of appeals make plain that we should now try to amplify guidelines, however, incomplete and imperfect, for the assistance of school authorities and courts. The failure of local authorities to meet their constitutional obligations aggravated the massive problem of converting from the state-enforced discrimination of racially separate school systems. This process has been rendered more difficult by changes since 1954 in the structure and patterns of communities, the growth of student population, movement of families, and other changes, some of which had marked impact on school planning, sometimes neutralizing or negating remedial action before it was fully implemented. Rural areas accustomed for half a century to the consolidated school systems implemented by bus transportation could make adjustments more readily than metropolitan areas with dense and shifting population, numerous schools, congested and complex traffic patterns.

The objective today remains to eliminate from the public schools all vestiges of state-imposed segregation. Segregation was the evil struck down by Brown I as contrary to the equal protection guarantees of the Constitution. That was the violation sought to be corrected by the remedial measures of Brown II. That was the basis for the holding in Green that school authorities are "clearly charged with the affirmative duty to take whatever steps might be necessary to convert to a unitary system in which racial discrimination would be eliminated root and branch." 391 U.S., at 437-438.

If school authorities fail in their affirmative obligations under these holdings, judicial authority may be invoked. Once a right and a violation have been shown, the scope of a district court's equitable powers to remedy past wrongs is broad, for breadth and flexibility are inherent in equitable remedies.

Qualities of Mercy

"The essence of equity jurisdiction has been the power of the Chancellor to do equity and to mould each decree to the necessities of the particular case. Flexibility rather than rigidity has distinguished it. The qualities of mercy and practicality have made equity the instrument for nice adjustment and reconciliation be-

mentation of the Brown I decision. It authorizes the Commissioner of Education to provide technical assistance to local boards in the preparation of desegregation plans, to arrange "training institutes" for school personnel involved in desegregation efforts, and to make grants directly to schools to ease the transition to unitary systems. It also authorizes the Attorney General, in specified circumstances, to initiate federal desegregation suits. Section 2000c (b) defines "desegregation" as it is used in Title IV:

" 'Desegregation' means the assignment of students to public schools and within such schools without regard to their race, color, religion, or national origin, but 'desegregation' shall not mean the assignment of students to public schools in order to overcome racial imbalance."

Section 2000c-6, authorizing the Attorney General to institute federal suits, contains the following proviso:

"Nothing herein shall empower any official or court of the United States to issue any order seeking to achieve a racial balance in any school by requiring the transportation of pupils or students from one school to another or one school dsitrict to another in order to achieve such racial balance, or otherwise enlarge the existing power of the court to insure compliance with constitutional standards."

On their face, the sections quoted purport only to insure that the provision of Title IV of the Civil Rights Act of 1964 will not be read as granting new powers. The provision in 2000c-6 is in terms designed to foreclose any interpretation of the Act as expanding the existing powers of federal courts to enforce the Equal Protection Clause. There is no suggestion of an intention to restrict those powers or withdraw from courts their historic equitable remedial powers. The legislative history of Title IV indicates that Congress was concerned that the Act might be read as creating a right of action under the Fourteenth Amendment in the situation of so-called "de facto segregation," where racial imbalance exists in the schools but with no showing that this was brought about by discriminatory action of state authorities. In short, there is nothing in the Act which provides us material assistance in answering the question of though the several related cases before us are primarily concerned with problems of student assignment, it may be helpful to begin with a brief discussion of other aspects of the process.

Faculty and Staff

In Green, we pointed out

throughout the system. This order was predicated on the District Court finding that "the evidence does not reflect any real administrative problems involved in immediately desegregating the substitute teachers, the student teachers, the night school faculties, and in the evolvement of a really legally adequate program for the substantial desegregation of the faculties of all schools in the system commencing with the school year 1968-69." Quoted at 395 U.S., at 232.

The District Court in Montgomery then proceeded to set an initial ratio for the whole system of at least two Negro teachers out of each 12 in any given school. The Court of Appeals modified the order by eliminating what it regarded as "fixed mathematical ratios" of faculty and substituted an initial requirement of "substantially or approximately" a five-to-one ratio. With respect to the future, the Court of Appeals held that the numerical ratio should be eliminated and that compliance should not be tested solely by the achievement of specified proportions. Id., at 234.

Restored the Order

We reversed the Court of Appeals and restored the District Court's order in its entirely, holding that the order of the District Judge "was adopted in the spirit of this Court's opinion in Green . . . in that his plan 'promises realistically to work, and promises realistically to work now.' The modifications ordered by the panel of the Court of Appeals, while of course not intended to do so, would, we think, take from the order some of its capacity to expedite, by means of specific commands, the day when a completely unified, unitary, nondiscriminatory school system becomes a reality instead of a hope . . . We also believe that under all the circumstances of this case we follow the original plan outlined in Brown II . . . by accepting the more specific and expeditious order of (District) Judge Johnson . . ." 395 U.S., at 235-236 (emphasis in original).

The principles of Montgomery have been properly followed by the District Court and the Court of Appeal in this case.

The construction of new schools and the closing of old ones is one of the most important functions of local school authorities and also one of the most complex. They must decide questions of location and capacity in light of population growth, finances, land values, site availability, through an almost endless list of factors to be considered. The result of this will be a decision which, when combined with one technique or another of student as-

student desegregation. Finding the board's submission unsatisfactory, the District Court appointed an expert to submit a desegregation plan. In February 1970, the expert and the board presented plans, and the court adopted the board's plan, as modified, for the junior and senior high schools, and the expert's proposed plan for the elementary schools. The Court of Appeals affirmed the District Court's order as to faculty desegregation and the secondary school plans, but vacated the order respecting elementary schools, fearing that the provisions for pairing and grouping of elementary schools would unreasonably burden the pupils and the board. The case was remanded to the District Court for reconsideration and submission of further plans. This court granted certiorari and directed reinstatement of the District Court's order pending further proceedings in that court. On remand the District Court received two new plans, and ordered the board to adopt a plan or the expert's plan would remain in effect. After the board "acquiesced" in the expert's plan, the District Court directed that it remain in effect. Held:

1. Today's objectives of state-imposed segregation that was held violative of equal protection guarantees by Brown v. Board of Education, 347 U.S. 483, in 1954. Pp. 10-11.

Broad Powers

2. In default by the school authorities of their affirmative obligation to proffer acceptable remedies, the district courts have broad power to fashion remedies that will assure unitary school systems. Pp. 11-12.

3. Title IV of the Civil Rights Act of 1964 does not restrict or withdraw from the federal courts their historic equitable remedial powers. The proviso is 42 U.S.C. 2000c-6 was designed simply to foreclose any interpretation of the Act as expanding the existing powers of the federal courts to enforce the Equal Protection Clause. Pp. 12-13.

4. Policy and practice with regard to faculty, staff, transportation, extracurricular activities, and facilities are among the most important indicia of a segregated system, and the first remedial responsibility of school authorities is to eliminate invidious racial distinctions in those respects. Normal administrative practice should then produce schools of like quality, facilities, and staffs. P. 14.

5. The Constitution does not prohibit district courts from using their equity power to order assignment of teachers to achieve a particular degree of faculty desegregation. United States v. Montgomery County Board of Education, 395 U.S. 225, was properly followed by the lower courts in this case. Pp. 14-16.

Must See to It

6. In devising remedies to eliminate legally imposed segregation, local authorities and district courts must see to it that future school construction and abandonment are not used and do not serve to perpetuate or re-establish a dual system. Pp. 16-17.

7. Four problem areas exist on the issue of student assignment:

(1) Racial quotas. The constitutional command to desegregate schools does not mean that every school in the community must always reflect the racial composition of the system as a whole: Here the continuing effects of past school segregation. The pairing and grouping of noncontiguous zones is a permissible tool; judicial steps going beyond contiguous zones should be examined in light of the objectives to be sought. No rigid rules can be laid down to government conditions in different localities. Pp. 23-25.

Travel Time Factors

(4) Transportation. The District Court's conclusion that assignment of children to the school nearest their home serving their grade would not effectively dismantle the dual school system is supported by the record, and the remedial technique of requiring bus transportation as a tool of school desegregation was within that court's power to provide equitable relief. An objection to transportation of students may have validity when the time or distance of travel is so great as to risk either the health of the children or significantly impinge on the educational process; limits on travel time will vary with many factors, but probably with one more than the age of the students. Pp. 25-27.

8. Neither school authorities nor district courts are constitutionally required to make year-by-year adjustments of the racial composition of student bodies once a unitary system has been achieved. Pp. 27—28.

431 F. 2d 138, affirmed as to those parts in which it affirmed the District Court's judgment. The District Court's order of August 7, 1970, is also affirmed.

Burger, C. J., delivered the opinion for a unanimous Court.

On Writs of Certiorari to the United States Court of Appeals for the Fourth Circuit.

Review Key Issues

Mr. Chief Justice Burger delivered the opinion of the Court. We granted certiorari in this case to review important issues as to the duties of school authorities and the scope of powers of federal courts under this Court's mandates to eliminate racially separate public schools established and maintained by state action. Brown v. Board of Education, 347, U.S. 483 (1954).

This case and those argued with it arose in states having a long history of maintaining two sets of schools in a single school system deliberately operated to carry out governmental policy to separate pupils in schools solely on the basis of race. That was what Brown v. Board of Education was all about. These cases present us with the problem of defining in more precise terms than heretofore the scope of the duty of school authorities and district courts in implementing Brown I and the mandate to eliminate dual systems and establish unitary systems at once. Meanwhile district courts and courts of appeals have struggled in hundreds of cases. Understandably, in an area of evolving remedies, those courts had to improvise and experiment without detailed or specific guidelines. This Court, in Brown I, appropriately dealt with the large constitutional principles; other federal courts had to grapple with the flinty, intractable realities of day-to-day implementation of those constitutional commands. Their efforts, of necessity, embraced a process of "trial and error," and our effort to for-

Petitioner Swann's motion for further relief based on Green v. County School Board, 391 U.S. 430 (1968), and its companion cases. All parties now agree that in 1969 the system fell short of achieving the unitary school system that those cases require.

Numerous Hearings

The District Court held numerous hearings and received voluminous evidence. In addition to finding certain actions of the school board to be discriminatory, the court also found that resilential patterns in the city and county resulted in part from federal, state, and local government action other than school board decisions. School board action based on these patterns, for example, by locating schools in Negro residential areas and fixing the size of the schools to accommodate the needs of immediate neighborhoods resulted in segregated education. These findings were subsequently accepted by the Court of Appeals.

In April 1969 the District Court ordered the school board to come forward with a plan for both faculty and student desegregation. Proposed plans were accepted by the court in June and August 1969 on an interim basis only, and the board was ordered to file a third plan by November 1969. In November the board moved for an extension of time until February 1970, but when that was denied the board submitted a partially completed plan. In December 1969 the District Court held that the board's submission was unacceptable and appointed an expert in education administration, Dr. John Finger, to prepare a desegregation plan. Thereafter in February 1970, the District Court was presented with two alternative pupil assignment plans—the finalized "board plan" and the "Finger plan."

Closed 7 Schools

The Board Plan. As finally submitted, the school board plan closed seven schools and reassigned their pupils. It restructured school attendance zones to achieve greater racial balance but maintained existing grade structures and rejected techniques such as pairing and clustering as part of a desegregation effort. The plan created a single athletic league, eliminated the previously racial basis of the school bus system, provided racially mixed faculties and administrative staffs, and modified its free transfer plan into an optional majority-to-minority transfer system.

The board plan proposed substantial assignment of Negroes to nine of the system's 10 high schools, producing 17 per cent to 36 per cent Negro population in each. The projected Negro attendance at the 10th school, Independence, was 2 per cent. The proposed attendance zones for the high schools were typically shaped like wedges of a pie, extending outward from the center of the city to the suburban and rural areas of the county in order to afford residents of the center city area access to outlying schools.

As for junior high schools, the board plan rezoned the 21 school areas so that in 20 the Negro attendance would range from 0 per cent to 38 per cent. The other school, located in the heart of the Negro residential area, was left with an enrollment of 90 per cent Negro.

The board plan with respect to elementary schools relied entirely upon gerrymandering schools. Rather than relying solely upon geographic zoning, Dr. Finger proposed use of zoning, pairing, and grouping techniques, with the result that student bodies throughout the system would range from 9 per cent to 38 per cent Negro.

The District Court described the plan thus:

"Like the Board plan, the Finger plan does as much by rezoning school attendance lines as can reasonably be accomplished. However, unlike the board plan, it does not stop there. It goes further and desegregates all the rest of the elementary schools by the techniques of grouping two or three outlying schools with one black inner city school; by transporting black students from grades one through four to the outlying white schools; and by transporting white students from the fifth and sixth grades from the outlying white schools to the inner city black school."

Under the Finger plan, nine inner-city Negro schools were grouped in this manner with 24 suburban white schools.

On February 5, 1970, the District Court adopted the board plan, as modified by Dr. Finger for the junior and senior high schools. The court rejected the board elementary school plan and adopted the Finger plan as presented. Implementation was partially stayed by the Court of Appeals for the Fourth Circuit on March 5, and this Court declined to disturb the Fourth Circuit's order 397 U.S. 978 (1970). On appeal the Court of Appeals affirmed the District Court's order as to faculty desegregation and the secondary school plans, but vacated the order respecting elementary schools. While agreeing that the District Court properly disapproved the board plan concerning these schools, the Court of Appeals feared that the pairing and grouping of elementary schools would place an unreasonable burden on the board and the system's pupils. The case was remanded to the District Court for reconsideration and submission of further plans. This Court granted certiorari, 393 U.S. 326, and directed reinstatement of the District Court's order pending further proceedings in that court.

Received 2 Plans

On remand the District Court received two new plans for the elementary schools: a plan prepared by the United States Department of Health, Education, and Welfare (the HEW plan) based on contiguous grouping and zoning of schools, and a plan prepared by four members of the nine-member school board (the minority plan) achieving substantially the same results as the Finger plan but apparently with slightly less transportation. A majority of the school board declined to amend its proposal. After a lengthy evidentiary hearing the District Court concluded that its own plan (the Finger plan), the minority plan, and an earlier draft of the Finger plan were all reasonable and acceptable. It directed the board to adopt one of the three or in the alternative to come forward with a new, equally effective plan of its own; the court ordered that the Finger plan would remain in effect in the event the school board declined to adopt a new plan. On August 7, the board indicated it would "acquiesce" in the Finger plan, reiterating its view that the plan was unreasonable. The District Court, by order dated August 7, 1970,

holding in Brown II, that:

"School authorities have the primary responsibility for elucidating, assessing, and solving these problems; courts will have to consider whether the action of school authorities constitutes good faith implementation of the governing constitutional principles. Because of their proximity to local conditions and the possible need for further hearings, the courts which originally heard these cases can best perform this judicial appraisal. Accordingly, we believe it appropriate to remand the case to those courts.

"In fashioning and effectuating the decrees, the courts will be guided by equitable principles. Traditionally, equity has been characterized by a practical flexibility in shaping its remedies and by a facility for adjusting and reconciling public and private needs. These cases call for the exercise of these traditional attributes of equity power. At stake is the personal interest of the plaintiffs in admission to public schools as soon as practicable on a nondiscriminatory basis. To effectuate this interest may call for elimination of a variety of obstacles in making the transition to school systems operated in accordance with the constitutional principles set forth in our May 17, 1954, decision. Courts of equity may properly take into account the public interest in the elimination of such obstacles in a systematic and effective manner. But it should go without saying that the vitality of these constitutional principles cannot be allowed to yield simply because of disagreement with them." Brown v. Board of Education, 349 U.S. 294, 299-300 (1955).

Over the 15 years since Brown II, many difficulties were encountered in implementation of the basic constitutional requirement that the state not discriminate between public school children on the basis of their race. Nothing in our national experience prior to 1955 prepared anyone for dealing with changes and adjustments of the magnitude and complexity encountered since then. Deliberate resistance of some of the Court's mandates has impeded the good-faith efforts of others to bring school systems into compliance. The detail and nature of these dilatory tactics have been noted frequently by this Court and other courts.

Little Progress

By the time the Court considered Green V. County School Board, 391 U.S. 430, in 1968, very little progress had been made in many areas where dual school systems had historically been maintained by operation of state laws. In Green, the Court was confronted with a record of a freedom-of-choice program that the District Court had found to operate in fact to preserve a dual system more than a decade after Brown II. While acknowledging that a freedom-of-choice concept could be a valid remedial measure in some circumstances, its failure to be effective in Green required that "The burden on a school board today is to come forward with a plan that promises realistically to work . . . now . . . until it is clear that state-imposed segregation has been completely removed." Green, at 439.

This was plain language, yet the 1969 Term of Court brought fresh evidence of the dilatory tactics of many school authorities. Alexander V. Holmes County Board of Education, 396 U.S. 19, re-

shifting population, numerous schools, congested and complex traffic patterns.

The objective today remains to eliminate from the public schools all vestiges of state-imposed segregation. Segregation was the evil struck down by Brown I as contrary to the equal protection guarantees of the Constitution. That was the violation sought to be corrected by the remedial measures of Brown II. That was the basis for the holding in Green that school authorities are "clearly charged with the affirmative duty to take whatever steps might be necessary to convert to a unitary system in which racial discrimination would be eliminated root and branch." 391 U.S., at 437-438.

If school authorities fail in their affirmative obligations under these holdings, judicial authority may be invoked. Once a right and a violation have been shown, the scope of a district court's equitable powers to remedy past wrongs is broad, for breadth and flexibility are inherent in equitable remedies.

Qualities of Mercy

"The essence of equity jurisdiction has been the power of the Chancellor to do equity and to mould each decree to the necessities of the particular case. Flexibility rather than rigidity has distinguished it. The qualities of mercy and practicality have made equity the instrument for nice adjustment and reconciliation between the public interest and private needs as well as between competing private claims." Hecht Co. v. Bowles, 321 U.S. 329-330 (1944) cited in Brown II, supra, at 300.

This allocation of responsibility once made, the Court attempted from time to time to provide some guidelines for the exercise of the district judge's discretion and for the reviewing function of the courts of appeals. However, a school desegregation case does not differ fundamentally from other cases involving the framing of equitable remedies to repair the denial of a constitutional right. The task is to correct, by a balancing of the individual and collective interest, the condition that offends

School authorities are traditionally charged with broad power to formulate and implement educational policy and might well conclude, for example, that in order to prepare students to live in a pluralistic society each school should have a prescribed ratio of Negro to white students reflecting the proportion for the district as a whole. To do this as an educational policy is within the broad discretionary powers of school authorities; absent a finding of a constitutional violation, however, that would not be within the authority of a federal court. As with any equity case, the nature of the violation determines the scope of the remedy. In default by the school authorities of their obligation to proffer acceptable remedies, a district court has broad power to fashion a remedy that will assure a unitary school system.

Powers Limited

The school authorities argue that the equity powers of federal district courts have been limited by Title IV of the Civil Rights Act of 1964, 42 U.S.C. 2000c. The language and the history of Title IV shows that it was not enacted to limit but to define the role of the Federal Government in the imple-

dsitrict to another in order to achieve such racial balance, or otherwise enlarge the existing power of the court to insure compliance with constitutional standards."

On their face, the sections quoted purport only to insure that the provision of Title IV of the Civil Rights Act of 1964 will not be read as granting new powers. The provision in 2000c-6 is in terms designed to foreclose any interpretation of the Act as expanding the existing powers of federal courts to enforce the Equal Protection Clause. There is no suggestion of an intention to restrict those powers or withdraw from courts their historic equitable remedial powers. The legislative history of Title IV indicates that Congress was concerned that the Act might be read as creating a right of action under the Fourteenth Amendment in the situation of so-called "de facto segregation," where racial imbalance exists in the schools but with no showing that this was brought about by discriminatory action of state authorities. In short, there is nothing in the Act which provides us material assistance in answering the question of though the several related cases before us are primarily concerned with problems of student assignment, it may be helpful to begin with a brief discussion of other aspects of the process.

Faculty and Staff

In Green, we pointed out that existing policy and practice with regard to faculty, staff, transportation, extracurricular activities, and facilities were among the most important indications of a segregated system. 391 U.S., at 435. Independent of student assignment, where it is possible to identify a "white school" or a "Negro school" simply by reference to the racial composition of teachers and staff, the quality of school buildings and equipment, or the organization of sports activities, a prima facie case of violation of substantive constitutional rights under the Equal Protection Clause is shown.

When a system has been dual in these respects, the first remedial responsibility of school authorities is to eliminate incidious racial distinctions. With respect to such matters as transportation, supporting personnel, and extracurricular activities, no more than this may be necessary. Similar corrective action must be taken with regard to the maintenance of buildings and the distribution of equipment. In these areas, normal administrative practice should produce schools of like quality, facilities, and staffs. Something more must be said, however, as to faculty assignment and new school construction.

In the companion Davis case, the Mobile school board has argued that the Constitution requires that teachers be assigned on a "color blind" basis. It also argues that the Constitution prohibits district courts from using their equity power to order assignment of teachers to achieve a particular degree of faculty desegregation. We reject that contention.

Montgomery Case

In United States v. Montgomery County Board of Education, 395 U.S. 225 (1969), the District Court set as a goal a plan of faculty assignment in each school with a ratio of white to Negro faculty members substantially the same

Appeals and restored the District Court's order in its entirely, holding that the order of the District Judge "was adopted in the spirit of this Court's opinion in Green . . . in that his plan 'promises realistically to work, and promises realistically to work now.' The modifications ordered by the panel of the Court of Appeals, while of course not intended to do so, would, we think, take from the order some of its capacity to expedite, by means of specific commands, the day when a completely unified, unitary, nondiscriminatory school system becomes a reality instead of a hope . . . We also believe that under all the circumstances of this case we follow the original plan outlined in Brown II . . . by accepting the more specific and expeditious order of (District) Judge Johnson . . ." 395 U.S., at 235-236 (emphasis in original).

The principles of Montgomery have been properly followed by the District Court and the Court of Appeal in this case.

The construction of new schools and the closing of old ones is one of the most important functions of local school authorities and also one of the most complex. They must decide questions of location and capacity in light of population growth, finances, land values, site availability, through an almost endless list of factors to be considered. The result of this will be a decision which, when combined with one technique or another of student assignment, will determine the racial composition of the student body in each school in the system. Over the long run, the consequences of the choices will be far reaching. People gravitate toward school facilities, just as schools are located in response to the needs of people. The location of schools may thus influence the patterns of residential development of a metropolitan area and have important impact on composition of inner city neighborhoods.

Potent Weapon

In the past, choices in this respect have been used as a potent weapon for creating or maintaining a state-segregated school system. In addition to the classic pattern of building schools specifically intended for Negro or white students, school authorities have sometimes, since Brown, closed schools which appeared likely to become racially mixed through changes in neighborhood residential patterns. This was sometimes accompanied by building new schools in the areas of white suburban expansion farthest from Negro population centers in order to maintain the separation of the races with a minimum departure from the formal principles of "neighborhood zoning." Such a policy does more than simply influence the short-run composition of the student body of a new school. It may well promote segregated residential patterns which, when combined with "neighborhood zoning," further lock the school system into the mold of separation of the races. Under a proper showing a district court may consider this in fashioning a remedy.

In ascertaining the existence of legally imposed school segregation, the existence of a pattern of school construction and abandonment is thus a factor of great weight. In devising remedies where legally imposed segregation has been established, it is the responsi-

Continued on Page 21-A

Anti-Busing Laws to Avoid Mixing Illegal

Continued from Page 10-A

bility of local authorities and district courts to see to it that future school construction and abandonment is not used and does not serve to perpetuate and re-establish the dual system. When necessary, district courts should retain jurisdiction to assure that these responsibilities are carried out. Cf. United States v. Board of Public Instruction, 395 F. 2d 66 (CA5 1968); Brewer v. School Board, 397 F. 2d 37 (CA4 1968).

The central issue in this case is that of student assignment, and there are essentially four problem areas:

(1) to what extent racial balance or racial quotas may be used as an implement in a remedial order to correct a previously segregated system;

(2) whether every all-Negro and all-white school must be eliminated as an indispensable part of a remedial process of desegregation;

Districts and Zones

(3) what are the limits, if any, on the rearrangement of school districts and attendance zones, as a remedial measure; and

(4) what are the limits, if any, on the use of transportation facilities to correct state-enforced racial school segregation.

(1) Racial Balances or Racial Quotas.

The constant theme and thrust of every holding from Brown I to date is that state-enforced separation of races in public schools is discrimination that violates the Equal Protection Clause. The remedy commanded was to dismantle dual school systems.

We are concerned in these cases with the elimination of the discrimination inherent in the dual school systems, not with myriad factors of human existence which can cause discrimination in a multitude of ways on racial religious, or ethnic grounds. The target of the cases from Brown I to the present was the dual school system. The elimination of racial discrimination in public schools is a large task and one that should not be retarded by efforts to achieve broader purposes lying beyond the jurisdiction of school authorities. One vehicle can carry only a limited amount of baggage. It would not serve the important objective of Brown I to seek to use school desegregation cases for purposes beyond their scope, although desegregation of schools ultimately will have impact on other forms of discrimination.

We do not reach in this case the question whether a showing that school segregation is a consequence of other types of state action, without any discriminatory action by the school authorities, is a constitutional violation requiring remedial action by a school desegregation decree. This is not the case. In the absence of state-imposed or state-enforced racial separation, as we have held, there is no constitutional right, any particular degree of racial balance or mixing, that approach would be disapproved and we would be obliged to reverse. The constitutional command to desegregate schools does not mean that every school in every community must always reflect the racial composition of the school system as a whole.

As the voluminous record in this case shoys, he predicate for the District Court's use of the 71 per cent-29 per cent ratio was twofold: first, its express finding, approved by the Court of Appeals and not challenged here, that a dual school system had been maintained by the school authorities at least until 1969; second, its finding, also approved by the Court of Appeals, that the school board had totally defaulted in its acknowledged duty to come forward with an acceptable plan of its own, notwithstanding the patient efforts of the District Judge who, on at least three occasions, urged the board to submit plans. As the statement of facts shows, these findings are abundantly supported by the record. It was because of this total failure of the school board that the District Court was obliged to turn to other qualified sources, and Dr. Finger was designated to assist the District Court to do what the board should have done.

We see therefore that the use made of mathematical ratios was no more than a starting point in the process of shaping a remedy, rather than an inflexible requirement. From that starting point the District Court proceeded to frame a decree that was within its discretionary powers, an equitable remedy for the particular circumstances. As we said in Green, a school authority's remedial plan or a district court's remedial decree is to be judged by its effectiveness. Awareness of the racial composition of the whole school system is likely to be a useful starting point in shaping a remedy to correct past constitutional violations. In sum, the very limited use made of mathematical ratios was within the equitable remedial discretion of the District Court.

(2) One-Race Schools.

The record in this case reveals the familiar phenomenon that in metropolitan areas minority groups are often found concentrated in one part of the city. In some circumstances certain schools may remain all or largely of one race until new schools can be provided or neighborhood patterns change. Schools all or predominantely of one race in a district of mixed population will require close scrutiny to determine that school assignments are not part of state-enforced segregation.

Greatest Degree

In light of the above, it [illegible] student free transportation and space must be made available in the school to which he desires to move.

The court orders in this and the companion Davis case now

Principal Tool

provide such an option.

(3) Remedial Altering of Attendance Zones.

The maps submitted in these cases graphically demonstrate that one of the principal tools employed by school planners and by courts to break up the dual school system has been a frank—and sometimes drastic — gerrymandering of school districts and attendance zones. An additional step was pairing, "clustering," or "grouping" of schools with attendance assignments made deliberately to accomplish the transfer of Negro students out of formerly segregated Negro schools and transfer of white students to formerly all-Negro schools. More often than not, these zones are neither compact nor contiguous; indeed they may be on opposite ends of the city. As an interim corrective measure, this cannot be said to be beyond the broad remedial powers of a court.

Absent a constitutional violation there would be no basis for judicially ordering assignment of students on a racial basis. All things being equal, with no history of discrimination, it might well be desirable to assign pupils to schools nearest their homes. But all things are not equal in a system that has been deliberately constructed and maintained to enforce racial segregation. The remedy for such segregation may be administratively awkward, inconvenient and even bizarre in some situations and may impose burdens on some; but all awkwardness and inconvenience cannot be avoided in the interim period when remedial adjustments are being made to eliminate the dual school systems.

No fixed or even substantially fixed guidelines can be established as to how far a court can go, but it must be recognized that there are limits. The objective is to dismantle the dual school system. "Racially neutral" assignment plans proposed by school authorities to a district court may be inadequate; such plans may fail to counteract the continuing effects of past school segregation resulting from discriminatory location of school sites or distortion of school size in order to achieve or maintain an artificial racial separation. When school authorities present a district court with a "loaded game board," affirmative action in the form of remedial altering of attendance zones is proper to achieve truly nondiscriminatory assignments. In short, an assignment plan is not ac[illegible]

CHIEF JUSTICE WARREN BURGER

school children, approximately 39 per cent, were transported to their schools by bus in 1969-1970 in all parts of the country.

The importance of bus transportation as a normal and accepted tool of educational policy is readily discernible in this and the companion case. The Charlotte school authorities did not purport to assign students on the basis of geographically drawn zones until 1965 and then they allowed almost unlimited transfer privileges. The District Court's conclusion that assignment of children to the school nearest their home serving their grade would not produce an effective dismantling of the dual system is supported by the record.

Equitable Relief

Thus the remedial techniques used in the District Court's order were within that court's power to provide equitable relief; implementation of the decree is well within the capacity of the school authority.

The decree provided that the buses used to implement the plan would operate on direct routes. Students would [illegible]

case, we are unable to conclude that the order of the District Court is not reasonable, feasible and workable. However, in seeking to define the scope of remedial power or the limits on remedial power of courts in an area as sensitive as we deal with here, words are poor instruments to convey the sense of basic fairness inherent in equity. Substance, not semantics, must govern, and we have sought to suggest the nature of limitations without frustrating the appropriate scope of equity.

Full Compliance

At some point, these school authorities and others like them should have achieved full compliance with this Court's decision in Brown I. The systems will then be 'unitary" in the sense required by our decisions in Green and Alexander.

It does not follow that the communities served by such systems will remain demographically stable, for in a growing, mobile society, few will do so. Neither school authorities nor district courts are constitutionally required to make year-by-year adjustments of the racial composi[illegible]

in the number of all-Negro schools was achieved for the 1970-1971 school year, nine elementary schools in the eastern section (attended by 64 per cent of all Negro elementary school pupils in the metropolitan area) were over 90 per cent Negro, and over half of the Negro junior and senior high school students went to all-Negro or nearly all-Negro schools. With regard to the faculty and staff ratio in each of Mobile County's schools, the Court of Appeals directed the District Court to require the school board to establish "substantially the same" ratio as that for the whole district. Held:

1. The Court of Appeals decision dealing with the faculty and staff ratio is affirmed.

2. The Court of Appeals erred in treating the eastern part of metropolitan Mobile in isolation from the rest of the school system, and in not adequately considering the possible use of all available techniques to achieve the maximum amount of practicable desegregation.

Burger, C. J., delivered the opinion for a unanimous Court. **Opinion**

On Writ of Certiorari to the United States Court of Appeals for the Fifth Circuit.

Petitioners in this case challenge as inadequate a school desegregation plan for Mobile County, Alabama. The county is large and populous, embracing 1,248 square miles and the City of Mobile. The school system had 73,500 pupils in 91 schools at the beginning of the 1969 academic year; approximately 58 per cent of the pupils were white and 42 per cent Negro. During the 1967-1968 school year, the system transported 22,000 pupils daily in over 200 school buses, both in the rural areas of the county and in the outlying areas of metropolitan Mobile.

The present desegregation plan evolved from one developed by the District Court in response to the decision of the Court of Appeals for the Fifth Circuit in Davis v. Board of School Commissioners, 414 F. 2d 609 (CA5 1969), that an earlier desegregation plan formulated by the District Court on the basis of unified geographic zones was "constitutionally insufficient and unacceptable, and such zones must be redrawn." The Court of Appeals held that that earlier plan had "ignored the unequivocal directive to make a conscious effort in locating attendance zones to desegregate and eliminate past segregation."

The District Court responded with a new zoning plan which left 18,623, or 60 per cent, of the system's 30,800 Negro children in 19 all-Negro or nearly all-Negro schools. On appeal, the Court of Appeals reviewed all aspects of desegregation in Mobile County. Addi[illegible]

District Court left 112 all-Negro or nearly all-Negro elementary schools, serving over 90 per cent of all the Negro elementary students in the metropolitan area.

The Court of Appeals rejected this solution in favor of a modified version of a plan submitted by the Department of Justice. As further modified after a second appeal, this plan reduced the number of all-Negro or nearly all-Negro elementary schools from 12 to six schools, projected to serve 5,310 students, or about 50 per cent of the Negro elementary students in the metroplitan area. Like the District Court's plan, the Court of Appeals' plan was based on treating the western section in isolation from the eastern. There were unified geographic zones, and no transportation of students for purposes of desegregation. The reduction in the number of all-Negro schools was achieved through pairing, rezoning, and adjusting grade structures within the eastern section. With yet further modifications not material here, this plan went into effect at the beginning of the 1970-1971 school year.

Held Inaccurate

The enrollment figures for the 1970-1971 school year show that the projections on which the Court of Appeals based its plan for metropolitan Mobile were inaccurate. Under the Court of Appeals' plan as actually implemented, nine elementary schools in the eastern section of metropolitan Mobile were over 90 per cent Negro as of September 21, 1970 (instead of six as projected), and they housed 7,651 students, or 64 per cent of all the Negro elementary school pupils in the metropolitan area. Moreover, the enrollment figures indicated that 6,746 Negro junior and senior high school students in metropolitan Mobile, or over half, were then attending all-Negro or nearly all-Negro schools, rather than none as projected by the Court of Appeals. These figures are derived from a report of the school board to the District Court; they were brought to our attention in a supplemental brief for petitioners filed on October 10, 1970, and have not been challenged.

As we have held, "neighborhood school zoning," whether based strictly on home-to-school distance or on "unified geographic zones" is not the only constitutionally permissible remedy; nor is it per se adequate to meet the remedial responsibilities of local boards. Having once found a violation, the district judge or school authoritities should make every effort to achieve the greatest possible degree of actual desegregation, taking into account the practicalities of the situation. A district court may and should consider the use of all available tech[illegible]

an injunction against its enforcement. The proceeding before the three judge court was an ancillary proceeding connected with the school desegregation case heretofore discussed, Swann v. Charlotte-Mecklenburg.

Instant Appeal

The instant appeal was taken by the North Carolina State Board of Education and four state officials. We granted the Charlotte-Mecklenburg School Board's motion to join in the appeal, 400 U.S. 804 (1970).

When the litigation in the Swann case recommenced in the spring of 1969, the District Court specifically directed that the school board consider altering attendance areas, pairing or consolidation of schools, bus transportation of students, and any other method which would effectuate a racially unitary system. That litigation was actively prosecuted. The board submitted a series of proposals, all rejected by the District Court as inadequate. In the midst of this litigation over the remedy to implement the District Court's order, the North Carolina Legislature enacted the anti-busing bill.

Following enactment of the anti-busing statute the plaintiffs in the Swann case obtained leave to file a supplemental complaint which sought injunctive and declaratory relief against the statute. They sought to convene a three-judge court, but no action was taken on the requests at that time because the school board thought that the anti-busing law did not interfere with the school board's proposed plan to transport about 4,000 Negro children to white suburban schools. Other parties were added as defendants by order of the District Court dazed February 25. In addition certain persons who had brought a suit in state court to enjoin or impede the order of the federal court, the attorneys for those litigants, and state judges who at various times entered injunctions against the school authorities and blocked compliance with orders of the District Court were also joined; a three-judge court was then convened.

Wide Discretion

We observed in Swann, that school authorities have wide discretion in formulating school policy, and that as a matter of education policy, school authorities may well conclude that some kind of racial balance in the schools is desirable quite apart from any constitutional requirements. However, if a state-imposed limitation on a school authority's discretion operates to inhibit or obstruct the operation of a unitary school system or impede the disestablishing of

thrust of every holding from Brown I to date is that state-enforced separation of races in public schools is discrimination that violates the Equal Protection Clause. The remedy commanded was to dismantle dual school systems.

We are concerned in these cases with the elimination of the discrimination inherent in the dual school systems, not with myriad factors of human existence which can cause discrimination in a multitude of ways on racial religious, or ethnic grounds. The target of the cases from Brown I to the present was the dual school system. The elimination of racial discrimination in public schools is a large task and one that should not be retarded by efforts to achieve broader purposes lying beyond the jurisdiction of school authorities. One vehicle can carry only a limited amount of baggage. It would not serve the important objective of Brown I to seek to use school desegregation cases for purposes beyond their scope, although desegregation of schools ultimately will have impact on other forms of discrimination.

We do not reach in this case the question whether a showing that school segregation is a consequence of other types of state action, without any discriminatory action by the school authorities, is a constitutional violation requiring remedial action by a school desegregation decree. This case does not present that question and we therefore do not decide it.

Exclude No Pupil

Our objective in dealing with the issues presented by these cases is to see that school authorities exclude no pupil of a racial minority from any school, directly or indirectly, on account of race; it does not and cannot embrace all the problems of racial prejudice, even when those problems contribute to disproportionate racial concentrations in some schools.

In this case it is urged that the District Court has imposed a racial balance requirement of 71 per cent—29 per cent on individual schools. The fact that no such objective was actually achieved—and would appear to be impossible—tends to blunt that claim, yet in the opinion and order of the District Court of December 1, 1969, we find that court directing:

"That the efforts should be made to reach a 71-29 ratio in the various schools so that there will be no basis for contending that one school is racially different from the others . . . that no school (should) be operated with an all-black or predominantly black student body, (and) that pupils of all grades (should) be assigned in such a way that as nearly as practicable the various schools at various grade levels have about the same proportion of black and white students."

Fixed Balance

The District Judge went on to acknowledge that variation "from that norm may be unavoidable." This contains intimations that the "norm" is a fixed mathematical racial balance reflecting the pupil constituency of the system. If we were to read the holding of the District Court to require, as a matter of substantive constitutios was no more than a starting point in the process of shaping a remedy, rather than an inflexible requirement. From that starting point the District Court proceeded to frame a decree that was within its discretionary powers, an equitable remedy for the particular circumstances. As we said in Green, a school authority's remedial plan or a district court's remedial decree is to be judged by its effectiveness. Awareness of the racial composition of the whole school system is likely to be a useful starting point in shaping a remedy to correct past constitutional violations. In sum, the very limited use made of mathematical ratios was within the equitable remedial discretion of the District Court.

(2) One-Race Schools.

The record in this case reveals the familiar phenomenon that in metropolitan areas minority groups are often found concentrated in one part of the city. In some circumstances certain schools may remain all or largely of one race until new schools can be provided or neighborhood patterns change. Schools all or predominantely of one race in a district of mixed population will require close scrutiny to determine that school assignments are not part of state-enforced segregation.

Greatest Degree

In light of the above, it should be clear that the existence of some small number of one-race, or virtually one-race, schools within a district is not in and of itself the mark of a system which still practices segregation by law. The district judge or school authorities should make every effort to achieve the greatest possible degree of actual desegregation and will thus necessarily be concerned with the elimination of one-race schools. No per se rule can adequately embrace all the difficulties of reconciling the competing interest involved; but in a system with a history of segregation the need for remedial criteria of sufficient specificity to assure a school authority's compliance with its constitutional duty warrants a presumption against schools that are substantially disproportionate in their racial composition. Where the school authority's proposed plan for conversion from a dual to a unitary system contemplates the continued existence of some schools that are all or predominately of one race, they have the burden of showing that such school assignments are genuinely nondiscriminatory. The court should scrutinize such schools, and the burden upon the school authorities will be to satisfy the court that their racial composition is not the result of present or past discriminatory action on their part.

An optional majority-to-minority transfer provision has long been recognized as a useful part of every desegregation plan. Provision for optional transfer of those in the majority racial group of a particular school to other schools where they will be in the minority is an indispensable remedy for those students willing to transfer to other schools in order to lessen the impact on them of the state imposed stigma of segregation. In order to be effective, such a transfer arrangement must grant the transferring tion, it might well be desirable to assign pupils to schools nearest their homes. But all things are not equal in a system that has been deliberately constructed and maintained to enforce racial segregation. The remedy for such segregation may be administratively awkward, inconvenient and even bizarre in some situations and may impose burdens on some; but all awkwardness and inconvenience cannot be avoided in the interim period when remedial adjustments are being made to eliminate the dual school systems.

No fixed or even substantially fixed guidelines can be established as to how far a court can go, but it must be recognized that there are limits. The objective is to dismantle the dual school system. "Racially neutral" assignment plans proposed by school authorities to a district court may be inadequate; such plans may fail to counteract the continuing effects of past school segregation resulting from discriminatory location of school sites or distortion of school size in order to achieve or maintain an artificial racial separation. When school authorities present a district court with a "loaded game board," affirmative action in the form of remedial altering of attendance zones is proper to achieve truly nondiscriminatory assignments. In short, an assignment plan is not acceptable simply because it appears to be neutral.

Rely on Judgment

In this area, we must of necessity rely to a large extent, as this Court has for more than 16 years, on the informed judgment of the district courts in the first instance and on courts of appeals.

We hold that the pairing and grouping of non-contiguous school zones is a permissible tool and such action is to be considered in light of the objectives sought. Judicial steps in shaping such zones going beyond combinations of contiguous areas should be examined in light of what is said in subdivisions (1), (2), and (3) of this opinion concerning the objectives to be sought. Maps do not tell the whole story since non-contiguous school zones may be more accessible to each other in terms of the critical travel time, because of traffic patterns and good highways, than schools geographically closer together. Conditions in different localities will vary so widely that no rigid rules can be laid down to govern all situations.

Not Defined

(4) Transportation of Students.

The scope of permissible transportation of students as an implement of a remedial decree has never been defined by this Court and by the very nature of the problem it cannot be defined with precision. No rigid guidelines as to student transportation can be given for application to the infinite variety of problems presented in thousands of situations. Bus transportation has been an integral part of the public education system for years, and was perhaps the single most important factor in the transition from the one-room schoolhouse to the consolidated school. Eighteen million of the nation's public

CHIEF JUSTICE WARREN BURGER

school children, approximately 39 per cent, were transported to their schools by bus in 1969-1970 in all parts of the country.

The importance of bus transportation as a normal and accepted tool of educational policy is readily discernible in this and the companion case. The Charlotte school authorities did not purport to assign students on the basis of geographically drawn zones until 1965 and then they allowed almost unlimited transfer privileges. The District Court's conclusion that assignment of children to the school nearest their home serving their grade would not produce an effective dismantling of the dual system is supported by the record.

Equitable Relief

Thus the remedial techniques used in the District Court's order were within that court's power to provide equitable relief; implementation of the decree is well within the capacity of the school authority.

The decree provided that the buses used to implement the plan would operate on direct routes. Students would be picked up at schools near their homes and transported to the schools they were to attend. The trips for elementary school pupils average about seven miles and the District Court found that they would take "not over 35 minutes at the most." This system compares favorably with the transportation plan previously operated in Charlotte under which each day 23,600 students on all grade levels were transported an average of 15 miles one way for an average trip requiring over an hour. In these circumstances, we find no basis for holding that the local school authorities may not be required to employ bus transportation as one tool of school desegregation. Desegregation plans cannot be limited to the walk-in school.

An objection to transportation of students may have validity when the time or distance of travel is so great as to risk either the health of the children or significantly impinge on the educational process? District courts must weigh the soundness of any transportation plan in light of what is said in subdivisions (1), (2), and (3) above. It hardly needs stating that the limits on time of travel will vary with many factors, but probably with none more than the age of the students. The reconciliation of competing values in a desegregation case is, of course, a difficult task with many sensitive facets but fundamentally no more so than remedial measures courts of equity have traditionaly employed.

The Court of Appeals, searching for a term to define the equitable remedial power of the district courts, used the term 'reasonableness." In Green, supra, this Court used the term 'feasible" and by implication, 'workable," 'effective," and realistic" in the mandate to develop 'a plan that promises realistically to work, and . . . to work now." On the facts of this case, we are unable to conclude that the order of the District Court is not reasonable, feasible and workable. However, in seeking to define the scope of remedial power or the limits on remedial power of courts in an area as sensitive as we deal with here, words are poor instruments to convey the sense of basic fairness inherent in equity. Substance, not semantics, must govern, and we have sought to suggest the nature of limitations without frustrating the appropriate scope of equity.

Full Compliance

At some point, these school authorities and others like them should have achieved full compliance with this Court's decision in Brown I. The systems will then be 'unitary" in the sense required by our decisions in Green and Alexander.

It does not follow that the communities served by such systems will remain demographically stable, for in a growing, mobile society, few will do so. Neither school authorities nor district courts are constitutionally required to make year-by-year adjustments of the racial composition of student bodies once the affirmative duty to desegregate has been accomplished and racial discrimination through official action is eliminated from the system. This does not mean that federal courts are without power to deal with future problems; but in the absence of a showing that either the school authorities or some other agency of the State has deliberately attempted to fix or alter demographic patterns to affect the racial composition of the schools, further intervention by a district court should not be necessary.

For the reasons herein set forth, the judgment of the Court of Appeals is affirmed as to those parts in which it affirmed the judgment of the District Court. The order of the District Court dated August 7, 1970, is also affirmed.

It is so ordered.

Here are the texts of the supporting cases in the Charlotte-Mecklenburg decision Tuesday of the Supreme Court:

Davis et al. v. Board of School Commissioners of Mobile County et al.

Syllabus

Certiorari to the United States Court of Appeals for the Fifth District

East of the major highway that divides the metropolitan area of Mobile, Ala., live 94 per cent of the area's Negro students, and the schools there are 65 per cent Negro and 35 per cent white. West of the highway the schools are 12 per cent Negro and 88 per cent white. The Court of Appeals approved a desegregation plan which, like the District Court's plan, insofar as those areas were concerned treated the western section as isolated from the eastern, with unified geographic zones and providing no transportation of students for desegregation purposes. Though some reduction is large and populous, embracing 1,248 square miles and the City of Mobile. The school system had 73,500 pupils in 91 schools at the beginning of the 1969 academic year; approximately 58 per cent of the pupils were white and 42 per cent Negro. During the 1967-1968 school year, the system transported 22,000 pupils daily in over 200 school buses, both in the rural areas of the county and in the outlying areas of metropolitan Mobile.

The present desegregation plan evolved from one developed by the District Court in response to the decision of the Court of Appeals for the Fifth Circuit in Davis v. Board of School Commissioners, 414 F. 2d 609 (CA5 1969), that an earlier desegregation plan formulated by the District Court on the basis of unified geographic zones was "constitutionally insufficient and unacceptable, and such zones must be redrawn." The Court of Appeals held that that earlier plan had "ignored the unequivocal directive to make a conscious effort in locating attendance zones to desegregate and eliminate past segregation."

The District Court responded with a new zoning plan which left 18,623, or 60 per cent, of the system's 30,800 Negro children in 19 all-Negro or nearly all-Negro schools. On appeal, the Court of Appeals reviewed all aspects of desegregation in Mobile County. Additional information was requested regarding earlier desegregation plans for the rural parts of the county, and those plans were approved. They are not before us now. The Court of Appeals concluded that with respect to faculty and staff desegregation the board had "almost totally failed to comply" with earlier orders, and directed the District Court to require the board to establish a faculty and staff ratio in each school "substantially the same" as that for the entire district. We affirm that part of the Court of Appeals' opinion for the reasons given in Swann v. Charlotte-Mecklenburg Board of Education, ante.

Regarding junior and senior high schools, the Court of Appeals reversed the District Court and directed implementation of a plan which was intended to eliminate the seven all-Negro schools remaining under the District Court's scheme. This was to be achieved through pairing and adjusting grale structures within metropolitan Mobile, without bus transportation or split zoning. The Court of Appeals then turned to the difficult problem of desegregating the elementary schools of metropolitan Mobile. The metropolitan area is divided by a major north-south highway. About 94 per cent of the Negro students in the metropolitan area live on the east side of the highway between it and the Mobile River. The schools on that side of the highway are 65 per cent Negro and 35 per cent white. On the west side of the highway, however, the schools are 12 per cent Negro and 88 per cent white. Under the District Court's elementary school plan for the metropolitan area, the eastern and western sections were treated as distinct, without either interlocking zones or transportation across the highway. Not surprisingly, it was easy to desegregate the western section, but in the east the tually implemented, nine elementary schools in the eastern section of metropolitan Mobile were over 90 per cent Negro as of September 21, 1970 (instead of six as projected), and they housed 7,651 students, or 64 per cent of all the Negro elementary school pupils in the metropolitan area. Moreover, the enrollment figures indicated that 6,746 Negro junior and senior high school students in metropolitan Mobile, or over half, were then attending all-Negro or nearly all-Negro schools, rather than none as projected by the Court of Appeals. These figures are derived from a report of the school board to the District Court; they were brought to our attention in a supplemental brief for petitioners filed on October 10, 1970, and have not been challenged.

As we have held, "neighborhood school zoning," whether based strictly on home-to-school distance or on "unified geographic zones" is not the only constitutionally permissible remedy; nor is it per se adequate to meet the remedial responsibilities of local boards. Having once found a violation, the district judge or school authoritities should make every effort to achieve the greatest possible degree of actual desegregation, taking into account the practicalities of the situation. A district court may and should consider the use of all available techniques including restructuring of attendance zones and both contiguous and noncontiguous attendance zones. See Swann, ante, at pp. 18-27. The measure of any desegregation plan is its effectiveness.

On the record before us, it is clear that the Court of Appeals feel constrained to treat the eastern part of metropolitan Mobile in isolation from the rest of the school system, ation was given to the possible use of bus transportation and split zoning. For these reasons, we reverse the judgment of the Court of Appeals as to the parts dealing with student assignment, and remand the case for the development of a decree "that promises realistically to work, and promises realistically to work now." Green v. County School Board (1968).

It is so ordered.

Syllabus

North Carolina State Board of Education et al. v. Swann et al.

Appeal from the United States District Court for the Western District of North Carolina

North Carolina's Anti-Busing Law, which flatly forbids assignment of any student on account of race or for the purpose of creating a racial balance or ratio in the schools and which prohibits busing for such purposes, held invalid as preventing implementation of desegregation plans required by the Fourteenth Amendment.

Burger, C. J., delivered the opinion for a unanimous Court. **Opinion.**

This case is here on direct appeal pursuant to 28 u.s.c. 1253 from the judgment of a three judge court in the United States District Court for the Western District of North Carolina. The District Court declared unconstitutional a portion of the North Carolina General Statutes known as the Anti-Busing Law, and granted sought injunctive and declaratory relief against the statute. They sought to convene a three-judge court, but no action was taken on the requests at that time because the school board thought that the anti-busing law did not interfere with the school board's proposed plan to transport about 4,000 Negro children to white suburban schools. Other parties were added as defendants by order of the District Court dazed February 25. In addition certain persons who had brought a suit in state court to enjoin or impede the order of the federal court, the attorneys for those litigants, and state judges who at various times entered injunctions against the school authorities and blocked compliance with orders of the District Court were also joined; a three-judge court was then convened.

Wide Discretion

We observed in Swann, that school authorities have wide discretion in formulating school policy, and that as a matter of education policy, school authorities may well conclude that some kind of racial balance in the schools is desirable quite apart from any constitutional requirements. However, if a state-imposed limitation on a school authority's discretion operates to inhibit or obstruct the operation of a unitary school system or impede the disestablishing of a dual school system, it must fail; state policy must give way when it operates to hinder vindication of federal constitutional guarantees.

The legislation before us flatly forbids assignment of any student on account of race or for the purpose of creating a racial balance or ratio in the schools. The prohibition is absolute, and it would inescapably operate to obstruct the remedies granted by the District Court in the Swann case. But more important the statute exploits an apparently neutral form to control school assignment plans by directing that they be "color blind"; that requirement, against the background of segregation, would render illusory the promise of Brown v. Board of Education, 347 U.S. 483 (1954). Just as the race of students must be considered in determining whether a constitutional violation has occurred, so also must race be considered in formulating a remedy. To forbid, at this stage, all assignments made on the basis of race would deprive school authorities of the one tool absolutely essential to fulfillment of their constitutional obligation to eliminate existing dual school systems.

Similarly the flat prohibition against assignment of students for the purpose of creating a racial balance must inevitably conflict with the duty of school authorities to disestablish dual school systems. As we have held in Swann, the Constitution does not compel any particular degree of racial balance or mixing, but when past and continuing constitutional violations are found, some ratios are likely to be useful starting points in shaping a remedy. An absolute prohibition against use of such a device—even as a starting point—contravenes the implicit command of Green v. County

Continued on Page 12-A

Text of Supreme Court's Decision on Schools

Continued from Page 11-A

School Board, (1968), that all reasonable methods be available to formulate an effective remedy.

Hamper Ability

We likewise conclude that an absolute prohibition against transportation of students assigned on the basis of race, "or for the purpose of creating a balance or ratio," will similarly hamper the ability of local authorities to effectively remedy constitutional violations. As noted in Swann, bus transportation has long been an integral part of all public educational systems, and it is unlikely that a truly effective remedy could be devised without continued reliance upon it.

The remainder of the order of the District Court is affirmed for the reasons stated in its opinion.

Affirmed ——

Syllabus

McDaniel, Superintendent of Schools, et al. v. Barresi et al.

Certiorari to the Supreme Court of Georgia

The board of Education of Clark County, Ga. (with a two-to-one white-Negro elementary school system ratio), devised a student assignment plan for desegregating elementary schools which establishes geographic zones drawn to promote desegregation and also provides that pupils in heavily concentrated Negro "pockets" walk or go by bus to schools in other attendance zones. The resulting Negro elementary enrollment ranges from 20 per cent to 40 per cent in all but two schools, where it is 50 per cent. Respondent parents sued to enjoin the plan's operation. The state trial court denied an injunction. The Georgia Supreme Court reversed, holding that the plan violated (1) equal protection because it "treated students differently because of their race," and (2) the Civil Rights Act of 1964, because Title IV prohibits a school board from requiring busing to achieve a racial balance. Held:

1. In compliance with its duty to convert to a unitary system, the school board properly took race into account in fixing the attendance lines.

2. Title IV, a direction to federal officials, does not restrict state officials in assigning students within their systems. P. 3. 226 Ga. 456, 175 S.E. 2d 649, reversed.

Burger, C. J., delivered the opinion for a unanimous Court.

We granted certiorari in this case to review a state court order enjoining the operation of a school desegregation plan. The action was brought in the Superior Court of Clarke County, Georgia, by parents of children attending public elementary schools in that county. Named as defendants were the Superintendent of Education and members of the Clarke County Board of Education. The trial court denied respondents' request for an injunction, but on appeal the Supreme Court of Georgia reversed. This Court then granted certiorari.

Voluntary Program

Beginning in 1963, the Clarke County Board of Education began a voluntary program to desegregate its public schools. The student-assignment plan presently at issue, involving only elementary schools, has been in effect since the start of the 1969 academic year. The plan, adopted by the Board of Education and approved by the Department of Health, Education and Welfare, relies primarily upon geographic attendance zones drawn to achieve greater racial balance. Additionally, the pupils in five heavily Negro "pockets" either walk or are transported by bus to schools located in other attendance zones. As a consequence the Negro enrollment of each elementary school in the system varies generally between 20 per cent and 40 per cent, although two schools have a 50 per cent Negro enrollment. The white-Negro ratio of elementary pupils in the system is approximately two to one.

Respondents contend in this action that the board's desegregation plan violates the Fourteenth Amendment of the Federal Constitution and Title IV of the Civil Rights Act of 1964. The Supreme Court of Georgia upheld both contentions, concluding first that the plan violated the Equal Protectios Clause "by treating students differently because of their race." The court concluded also that Title IV prohibited the board from "requiring the transportation of pupils or students from one school to another . . . in order to achieve such racial balance . . ." We reject these contentions.

Properly Considered

The Clarke County Board of Education, as part of its affirmative duty to disestablish the dual school system, properly took isto account the race of its elementary school children in drawing attendance lines. To have done otherwise would have severely hampered the board's ability to deal effectively with the task at hand. School boards that operated dual school systems are "clearly charged with the affirmative duty to take whatever steps might be necessary to convert to a unitary system in which racial discrimination would be eliminated root and branch." Green v. County School Board (1968).

In this remedial process, steps will almost invariably require that students be assigned "differently because of their race." See Swann v. Charlotte-Mecklenburg Board of Education, Youngblood v. Board of Public Instruction. Any other approach would freeze the status quo that is the very target of all desegregation processes.

Nor is the board's plan barred by Title IV of the Civil Rights Act of 1964. The sections relied upon by respondents (42 U. S. C. 2000c (b), 2000-6) are directed only at federal officials and are designed simply to foreclose any interpretation of the Act as expanding the powers of federal officials to enforce the Equal Protection Clause. Swann, ante, at 13. Title IV clearly does not restrict state school authorities in the exercise of their discretionary powers to assign students within their school systems.

Since both parties in this action challenging a school de-

Appeal from the United States District Court for the Western District of North Carolina

segregation plan seek the same result, viz., a holding that North Carolina's Anti-busing law is constitutional, there is no Art. III case or controversy. Additionally, on the facts of this case, no direct appeal to this Court lies under 28 U. S. C. 1253.

Dismissed for lack of jurisdiction.

PER CURIAM.

Review of Decision

Appellants seek review of the decision of the United States District Court for the Western District of North Carolina declaring a portion of the North Carolina antibusing statute unconstitutional, and enjoining its enforcement. It is a companion case to North Carolina State Bd. v. Swann. We postponed decision on the question of jurisdiction, and after hearing on the merits we now dismiss the appeal for lack of jurisdiction.

At the hearing both parties argued to the three-judge court that the order of the District Court adopting the Finger plan should be set aside. We are thus confronted with the anomaly that both litigants desire precisely the same result, namely a holding that the anti-busing statute is constitutional. There is, therefore, no case or controversy within the meaning of Article III of the Constitution. Muskrat v. United States (1911) Additionally, since neither party sought an injunction to restrain a state officer from enforcing a state statute alleged to be unconstitutional this is not an appeal from "any civil action, suit or proceeding required . . . to be heard . . . by a district court of three judges," and hence no direct appeal to this Court is available.

Dismissed. END) ——

Stanford Dean Heads Council

NEW YORK (AP) — Bayless Manning, dean of the Stanford University Law School, has been elected full-time president of the Council on Foreign Relations, Chairman David Rockefeller announced Tuesday.

Manning, 48, will succeed both Grayson Kirk as president and George Franklin as executive director. Kirk, president emeritus of Columbia University, was named to a new post of vice chairman of the board. The position of executive director will be discontinued when Manning takes office in September.

The council, founded in 1921, publishes the quarterly review, "Foreign Affairs," and books, and holds off-the-record meetings at its New York headquarters with statesmen, scholars and men of affairs.

Write your full name and address, then deposit your entry form in the entry box in one of the participating Chrysler-Plymouth dealerships. You need not purchase anything to enter. This contest begins April14,1971 and ends at midnight, May 22, 1971. There will be at least five winners of Dymo Cricket labelmakers in every dealership selected by random drawing from entries at that dealership. Winners of other prizes will be selected through random drawing of the entries remaining after the individual dealership drawing. This contest is not open to employees of the Chrysler Motors Corporation, or any of its agencies or employees of any participating Chrysler-Plymouth dealerships. All winners will be notified. Winners will be determined by random drawings by our independent judging organization. Decision of the judges is final. Contest is restricted to licensed drivers 18 years old or older, living in the U.S.A.

HEW, in Its Biggest School Antibias Step Taken in North, Will Warn Boston System

12-1-71

By a WALL STREET JOURNAL *Staff Reporter*

WASHINGTON – In its most substantial desegregation step involving Northern schools, the Department of Health, Education and Welfare today will warn the Boston school system that it's violating federal civil rights laws.

The HEW action could lead ultimately to the cut-off of an estimated $7 million a year in U.S. funds for Boston's 192 public schools. But federal officials are prepared for lengthy negotiations and won't set any deadlines.

Today's step will be the formal presentation to Boston officials of the results of months of HEW investigation into private complaints that the school system is discriminating against black students in its pupil assignment policies. Stanley Pottinger, director of HEW's Office for Civil Rights, will present the government's conclusions to Boston School Superintendent William Ohrenberger.

Until the Boston officials are notified, HEW is remaining silent on the details of its investigation, but the general conclusions are known. HEW will argue that Boston has violated Title VI of the 1964 Civil Rights Act, which requires schools to treat all pupils in nondiscriminatory fashion or face the loss of federal funds. The school system has 96,000 pupils and is the 28th largest in the nation.

HEW has taken similar actions against smaller Northern school districts in Wichita, Ka., and Ferndale, Mich. In both cases, the department prevailed and required desegregation steps by the local school authorities. The Boston case, however, is far larger and more complex, and its political ramifications could be greater.

For more than a year, HEW has been under pressure from Congress, particularly from Southern conservatives, to step up its desegregation activities in the North. The department has contended that Northern school segregation cases are far more difficult to prove than those in the South because residential patterns rather than school board policy is often the problem's source. The Boston action which is likely to be bitterly opposed by local officials, will provide a key test of HEW's effectiveness in Northern cities.

Atlanta Constitution 1-4-72 Edu-Fed-Ga

'Least Busing' Plan for City Is Introduced by NAACP

A new Atlanta school desegregation plan that would eliminate one-race schools by a combination of school pairing and student busing was presented in U.S. District Court Monday by NAACP attorneys.

NAACP attorney Elizabeth Rindskopf said the plan, drawn up by University of Miami (Fla.) education dean Michael J. Stolee, would achieve "the greatest possible degree of actual desegregation" by busing "the least possible number of students that we could get by with."

The plan, which was filed in response to an order by the U.S. Fifth Circuit Court of Appeals, calls for the busing of fewer than 10 per cent of the system's 97,229 students.

Pairing or a combination of contiguous attendance zones would affect 47 elementary schools with non-adjoining would be combined into 19 attendance zones with racial mixes ranging from 58.5 to 84.4 per cent black.

Sixty-four elementary schools with non-adjoining zones would be combined into 22 zones to create racial mixes ranging from 59.4 to 80.2 per cent black. It is here that elementary students would be bused.

At present, more than 42 per cent of Atlanta's elementary school pupils attend schools with 99 per cent of the student body belonging to one race, Mrs. Rindskopf said.

The plan would eliminate one-race high schools by relying on different sets of elementary feeder schools.

Mrs. Rindskopf asked the district court for an injunction ordering the Atlanta school board to implement the plan, as well as proposals for professional staff desegregation.

She said if the court disapproves the plan, it should require the system to implement a plan achieving an equal amount of desegregation.

Denial of Education To Abnormal Children Spurs Parent Protests

Many Lawsuits Say States Neglect the Handicapped; Rebuttal: Lack of Money

'Schools Aren't for Cripples'

3/22/72

By DAVID GUMPERT
Staff Reporter of THE WALL STREET JOURNAL

MEDFORD, Mass.—Every weekday morning at about 7:30 14-year-old Wayne Keel stations himself by the living-room window to watch the yellow school bus pick up the children from neighboring houses in this pleasant Boston suburb. As he watches the bus make its rounds, the thin boy turns to his mother and asks, "Go to school?"

Sometimes Mrs. Keel tells Wayne that school is closed. On other days, she tells the boy that he's too old to go to school. Wayne never presses the issue, but the mother knows her son isn't satisfied, because the question always comes up again. "I think he's really puzzled," Mrs. Keel says. "Every day he looks out and sees that bus, and he can't understand why he isn't going to school."

The morning ritual in the Keel household has been going on for almost two years now. The reason: Wayne Keel is afflicted with autism (a little-understood form of schizophrenia characterized by withdrawal) and also shows signs of mental retardation. His schooling stopped in April 1970, when the special private institution that he'd attended said the boy's behavior made further assistance impossible.

Now, Wayne Keel has nowhere to go for schooling. The Medford public school system says it doesn't have any regular classes for severely disturbed children. The few state and private schools that are equipped to handle children like Wayne are full. Since mid-1970, the boy's sole schooling has consisted of sporadic private tutelage, ranging from one-and-a-half to 10 hours weekly, provided by the Medford system. So Wayne, who has no friends or playmates, spends his days pasting together paper rockets and buildings, and babbling to himself.

A Common Plight

The plight of Wayne Keel, unfortunately, is far from uncommon in the U.S. According to Department of Health, Education and Welfare estimates, fewer than three million of the nation's approximately six million handicapped children of school age are receiving adequate special education. And of those who aren't receiving special attention, slightly more than two million are either in regular classes, where they're often failing and learning little, or else they're receiving a minimal amount of home instruction, like Wayne. About a million receive no instruction whatsoever.

"This means there are more than three million children for whom the American school system has said, 'We don't have the time or the resources to provide you with an appropriate education,' " says Fred Weintraub, assistant executive secretary of the Council for Exceptional Children, a nonprofit organization for the handicapped based in Arlington, Va.

Until recently, protests have been rarely voiced by parents whose handicapped children were excluded from special programs. In the vast majority of such cases, however, this lack of action hasn't been caused by apathy. Rather, many parents were reluctant to discuss their abnormal children because of the real or imagined social stigma involved in the siring of retarded or emotionally disturbed offspring.

Changing Attitudes

But attitudes have changed, largely because of increasing exposure in the media and in discussion groups of the many families (including prominent families) whose children are handicapped. Around the country, parent groups are going to court in an attempt to force school systems to provide special classes for abnor-

Unequal Rights: Many Parents Say Schools Neglect the Handicapped

Continued From First Page

elementary school classes for mentally retarded children, for children with mild emotional disturbances, and for those who are blind or visually handicapped; it has no classes for other types of handicapped children. (State residential schools, which usually do accept severely disabled children, are in most cases hopelessly overcrowded and understaffed —New York's highly publicized Willowbrook being a case in point.)

"The more serious the handicap, the more difficult it is to get services," Mr. Martin says. "It's kind of as if a doctor would treat you if you had a cold but not if you had pneumonia."

Certainly, the range of abnormalities afflicting handicapped children is wide. Such abnormalities, which often stem from birth defects, include emotional disorders, deafness, blindness, cerebral palsy and other types of brain damage, and mental retardation. It's estimated that 10% to 12% of all school-age children have one or more of these handicaps.

Despite the problems of educating all these children, Mr. Martin believes further state cooperation is possible. Furthermore, he says, it's "not an unreal possibility" that the government might consider withholding federal funds from a state that doesn't fully cooperate in the education of handicapped children.

On their side, public schools argue that they're not equipped to cope with the special problems of many handicapped children. Some physically handicapped children, the schools say, aren't toilet-trained. Emotionally disturbed children, they contend, often disrupt classes and are sometimes violent.

Special Classes? "Too Costly"

What about special classes for these children? "Too costly," school administrators say. They point to the fact that educating a handicapped child can cost up to three times that of educating a normal child—at a time when most school systems across the country are squeezed for cash. And some administrators say that even if funds were available their use would often be wasteful since, they argue, many handicapped children will never benefit from schooling.

Such arguments have little sway with many educators and parents of the handicapped. "If a new apartment house goes up, and there are more children, the schools find facilities," says Lewis Klebanoff, a professor of special education at Boston University and an editor of The Exceptional Parent magazine.

Others charge that public schools often don't care what happens to handicapped children. "Some principals simply tell parents, 'The schools aren't for crippled kids,' " says Larry Brown, director of the Task Force on Children Out of School, a Boston group that has studied the exclusion of handicapped children from public schools.

The contention that many handicapped children can't benefit from education is also dismissed by numerous educators. While these educators concede that some children are so severely disabled that they'll require lifetime institutionalization and that schooling would be of little help, they add that the vast majority—possibly 95%—of handicapped children could benefit from proper educational treatment. "There's no reason why, if we spend a few dollars, these kids can't fit smack into society," says Frances Connor, a professor of special education at Columbia Teacher's College in New York.

Cheaper for the Public

According to others who favor aiding the handicapped, the payment of these "few dollars" now will also be cheaper for the public in the long run. HEW's Mr. Martin, for example, says that more than 30% of the 2.5 million handicapped children expected to leave school during the next five years may need either partial or full public support in the form of institutionalization or welfare. Mr. Martin adds that it costs about $250,000 for lifetime institutionalization or welfare. But with proper education, he says, "at least 90% of the handicapped are potentially employable."

Money, however, will not provide the entire solution to the problem. Other than the absence

tion," Laura was placed in special classes for the remainder of her school career and today she is learning to be a teacher's aide in a special program at New York University for Handicapped People and Slow Learners.

Success With Severe Cases

Laura Bernard's brain damage is slight, but educators say even severely handicapped children can profit from special classes despite years of neglected treatment. For example, the Campus School, a state-supported school for the handicapped operated under the auspices of Boston College, Chestnut Hill, Mass., reports that it has had success in preparing many types of severely handicapped children for school programs from which they had previously been excluded.

According to Dan McCarthy, director of the Campus School, his institution last year moved four of its 30 students into regular school programs. Mr. McCarthy says one case involved a 14-year-old emotionally disturbed boy with cerebral palsy who had been sitting home for a year prior to enrollment in the Campus School. After one year of special treatment, the director says, the boy was admitted to a Boston private school for mildly handicapped children; prior to his treatment, the school had rejected the boy.

"There's no question even the most severely handicapped children can be helped with the proper program," Mr. McCarthy says. He adds, however, that the Campus School, which this year hopes to integrate about 20 of its 57 students into regular school programs, hasn't been able to enroll all the children it would like because of a shortage of state funds. The school currently has a waiting list of about 70, Mr. McCarthy says, and most of these applicants are sitting at home.

Such children may ultimately be helped by the courts—as has already occurred in Pennsylvania and Washington, D.C. Last year's successful suit in Pennsylvania, for example, claimed that denying an education to some mentally retarded children violated the equal protection provisions of the Constitution's 14th amendment. The suit, filed in federal district court by the state's Association for Retarded Children, resulted in a consent agreement that, in effect, obligates Pennsylvania to provide schooling for all retarded children in the state.

Success for Seven Children

The successful suit in Washington, D.C., was filed in federal district court by the National Law Office, a legal-aid organization, on behalf of all handicapped children in the city. Specifically listed were seven handicapped children, who had been excluded from public schools. The court subsequently ordered the Washington school system to immediately provide the seven children "with a publicly supported education suited to their needs" and to compile a list of all city children who are excluded from school. The court is expected to decide about the latter group in the near future.

Court action on handicapped children's education rights isn't always immediate or affirmative. In New York, for example, a federal appeals court recently received a case brought by parents of two brain-injured boys, who, the parents claimed, were being denied an education. The federal court, however, referred the case to state courts, where an outcome is pending. (Lawyers in such cases say they prefer to avoid state courts, which, they say, tend to be more protective of state school officials and less receptive to class-action suits than federal courts.)

Expeditious court action favoring the handicapped may pose its own problems. Some special education experts express concern that hasty court action will leave the public schools unable to cope with a flood of handicapped children. "I'm worried that all this is being dumped on one agency," says I. Ignacy Goldberg, a professor of special education at Columbia University's Teacher's College; he cites the fact that Pennsylvania public schools must enroll all mentally retarded children by next September.

Continued Suffering

prominent [illegible]

capped. Around the country, parent groups are going to court in an attempt to force school systems to provide special classes for abnormal children. For example, class-action suits on behalf of abnormal, out-of-school children have been filed in the District of Columbia and a number of states, including California, Pennsylvania, Michigan, New York and Massachusetts.

Such activity is beginning to have some effect. Federal courts in Pennsylvania and the District of Columbia have already cleared the way for at least some handicapped children to be enrolled in special public-school classes. And on both federal and state levels, legislation is being proposed to grant handicapped children have. (Among the states, Florida, Georgia, Massachusetts and South Carolina are in the process of overhauling their laws on education to benefit handicapped children.)

"The incredible number of . . . handicapped not receiving any educational services is one of the great tragedies in the American way of life," asserts Rep. Charles A. Vanik (D., Ohio), sponsor of a bill in the House that would amend the 1964 Civil Rights Act to prohibit discrimination against the handicapped in federally assisted programs, including education-aid plans. The House bill and an identical bill in the Senate are pending.

Federal agencies have also become increasingly active in protecting the educational rights of the handicapped. According to Edwin Martin, associate commissioner for the Health, Education and Welfare Department's Bureau of Education for the Handicapped, federal spending to spur the education of the handicapped has increased to an estimated $215 million this year from $45 million five years ago.

Optimism for 1980

Mr. Martin also cites the fact that the number of handicapped children being placed in special classes has been increasing at a rate of about 100,000 a year for the past five years—partly because of increased federal spending. He adds that this rate should accelerate to the point that by 1980 all handicapped children will be receiving an adequate education.

But such acceleration is dependent on state cooperation—and school systems in most states have traditionally done little for handicapped children. To be sure, some public schools have established special classes for the handicapped; but more often than not these classes aren't all-inclusive in their acceptance of pumildest disabilities. Medford, for example, has

Please Turn to Page 22, Column 1

it costs about $250,000 for lifetime institutionalization or welfare. But with proper education, he says, "at least 90% of the handicapped are potentially employable."

Money, however, will not provide the entire solution to the problem. Other than the absence of funds, a major obstacle exists: finding all handicapped children. Many state and local school officials say they don't know how many handicapped children are being denied a proper education. In Massachusetts, for example, Joseph Rice, associate commissioner of special education for the state, readily concedes that he doesn't know the number of handicapped children who aren't in school. "In theory, we ought to have records of this," Mr. Rice says. "In practice, we don't." (The location problem is compounded by the fact that some of the less severely handicapped children are enrolled in regular classes and are being simply dismissed as slow learners.)

The early discovery of handicapped children is particularly crucial, educators say, since intelligence and physical coordination develop to the greatest extent in the earliest years. For this reason, HEW's Mr. Martin says his bureau has been advising states to begin "preschool programs (for the handicapped) as a priority." Nevertheless, most educators concerned with the plight of the handicapped agree that even delayed discovery and treatment can be productive.

The history of 20-year-old Laura Bernard is illustrative. Laura has slight brain damage but went through the fourth grade before her condition was noticed, says her mother, Martha Bernard, president of the New York Association for Brain Injured Children. When the Bernards realized that their daughter wasn't learning to read or write, they had her examined by a neurologist. Following the neurologist's discovery of "minimal brain dysfunc-

lumbia University's Teacher's College; he cites the fact that Pennsylvania public schools must enroll all mentally retarded children by next September.

Continued Suffering

Nevertheless, as time goes by, uneducated handicapped children and their parents continue to suffer. Robert Dickinson of Spencer, Mass., for example, worries that his nine-year-old brain-damaged son, Tony, may never learn to speak or otherwise communicate since the youth has never had proper training.

Tony Dickinson is physiologically able to speak, and Mr. Dickinson says he has been told by speech therapists that the youth, with proper special training, might be helped to speak to some degree and that he also has the potential to learn sign language. Tony, however, has spent only slightly more than a year in school and now spends most of his days watching television. (He is also tutored an hour a day in academic subjects.)

"We must develop some communication before his neurological growth stops," Mr. Dickinson says. He adds that he has inquired about enrolling Tony at special schools as far away as Kansas and Georgia—all to no avail.

Here in Medford, Barbara Keel, mother of autistic Wayne, says that caring for her son "keeps me at home almost constantly." Mrs. Keel has one source of optimism, however. In early April, she says, Wayne will be enrolled in a four-week evaluation program at a state school to determine whether he has the potential to learn a vocation.

Meanwhile, Mrs. Keel says, Wayne's hyperactivity prevents her taking him on outside excursions. She also worries about the absence of playmates.

"I really think he needs someone besides me," she says.

World-Wide

SCHOOL DESEGREGATION by crossing political boundaries was ordered by a U.S. court.

In a landmark decision, U.S. District Court Judge Robert R. Merhige Jr. ordered consolidation of the 60%-black Richmond, Va., school system with the 90%-white school systems of surrounding Henrico and Chesterfield counties. The counties had argued that they were meeting constitutional requirements and were being asked to bail Richmond out of its urban difficulties. But Merhige said "the only remedy promising immediate success" in desegregating schools "is crossing (political) boundary lines." An appeal is expected.

A blue-ribbon panel has predicted that federal plans to house subsidized inner-city families in suburban neighborhoods probably would harden prejudice.

* * *

Senate liberals abandoned efforts to give the Equal Employment Opportunity Commission power to enforce its own findings against job discrimination. Sens. Javits (R., N.Y.) and Williams (D., N.J.) agreed to a compromise giving the job-bias agency a greater voice in gathering and certifying evidence of discrimination. While their compromise is closer to a proposal by Sen. Dominick (R., Colo.) for court enforcement of EEOC findings, Southern spokesmen vowed to continue a filibuster in an attempt to stifle any legislation strengthening the agency. W-S-J 2-9-72

* * *

Merger of Richmond schools with those of two suburban counties was stayed by a U.S. appeals court in the Virginia capital. A district court judge had ordered the merger effective in September. Conceivably, the appeals court's order could delay the consolidation for at least another year. But it said that to prevent any unnecessary delay if the lower court decision is affirmed, the state board of education might require the three school boards involved to proceed with tentative planning for the merger.

* * * W-S-J 2-9-72

Nixon proposed a "pollution tax," a levy on

began three years ago. Early resumption wasn't seen as likely. W-S-J 2/24/72

A desegregation case delay was sought by the Justice Department. The agency asked a district court judge to delay action in the Detroit schools case until Congress acts on Nixon's request for a temporary moratorium on court-ordered busing. Last September, the judge held the Detroit system was segregated. Several desegregation plans are now before him. HEW, meanwhile, said that while Nixon's proposals are pending, it won't cut off aid to school districts as a prod to desegregate.

* * *

Black parents sued a Catholic diocese in Alexandria, La., saying the church's school system was segregated and "served as a haven for white families fleeing public school desegregation orders. . ." The suit says the 35-school system has 25 schools that are 90% or more white, and eight schools that are 80% or more black. It asks that the diocese be ordered to integrate its school system this fall or lose tax-exempt status and federal aid. W-S-J 4/4/72

A USIA official resigned, saying he wanted to have time to express his feeling that Sen. Ful-

RACIST APPEALS by J. B. Stoner, just-defeated archsegregationist candidate for Georgia governor, bring strong protest from TV viewers. In ads run on several stations, he talked against whites going to "jungle schools with niggers." One station received bomb threats. FCC rules forced the broadcasters to carry Stoner's ads. South Politics

LADIES WELCOME. Americans assigned to the U.S. embassy in Phnom Penh are urged to bring their wives along; some other nations' diplomats send families away from the war zone. The State Department figures the ladies' presence can lift morale, help reassure the Lon Nol government.

SCHOOL INTEGRATION still threatens serious political problems for Nixon.

This month's peaceful desegregation in the South is far from the road's end. The courts still have much to say. The Supreme Court faces crucial cases involving extensive busing in Charlotte, limited busing in Mobile. The Justices, despite the apparent conservatism of Burger and Blackmun, could demand fuller integration in Dixie.

Civil rights groups are pressing to establish two principles the Administration opposes: Broad busing requirements; a firm standard for elimination of all-black schools in the South. The Justice Department is likely to ask the courts to keep busing to a minimum, letting some schools stay black.

Even the limited busing now required in several Southern cities is turning some whites against the Nixon regime.

5-23-72

Georgia Cities Hit on Rights

5-23-72

By DAVID NORDAN
Journal Washington Bureau

WASHINGTON — A coalition of seven civil rights organizatrions Tuesday declared that desegregation is far from complete in the urban South and "equal protection of the law remains an unfulfilled promise for the majority of Southern urban black students."

The conclusion was contained in a report entitled "It's Not Over in the South" based on extensive monitoring of 43 big-city school systems in 11 Southern states.

No firm conclusions were drawn about Atlanta, one of the systems monitored, but the civil rights researchers said evidence indicated that leaders in the city have failed to do as much as they should have to encourage desegregation.

Emory Via of the Southern Regional Council (SRS) in Atlanta said during the press conference that contrary to popular belief "there really has been substantial footdragging in Atlanta, both by the city administration and the board of education."

THE QUESTION was raised but left unanswered that the National Association for the Advancement of Colored People (NAACP) Legal Defense Fund, another of the seven civil rights group participating in the study, might move into the federal courts in Atlanta to try to force the creation of a metro-wide school system similar to the one created in Richmond, Va.

A Defense Fund official present at the press conference said no decision along that line had been made concerning Atlanta and that the direction taken would depend on the outcome of the Richmond case, which is now under appeal.

Specifically, the 130-page report criticized Atlanta for its failure to set up a public school transportation system. The Georgia capital was included with several other Southern cities which were charged with using lack of a transportation system as an excuse for not achieving more desegregation in the schools.

OTHER Georgia school systems mentioned in the report were Macon, Rome and Savannah.

Macon was criticized for indiscriminantly referring black students to vocational education facilities, unfair dismissal and suspension of black students and failure to provide extra-curricular activities in which blacks could participate.

Rome was cited for poor student assignments, unfair demotions and dismissals of black educators and having a bad desegregation plan in general.

Savannah was mentioned as a bad example of incidences of student disruptions and poor community support for desegregation efforts.

VIA, speaking after the press conference about the findings in Atlanta, said there had been much action, official and private, in the city to thwart and circumvent meaningful desegregation efforts. He said these included zoning actions, gerrymandering, and, privately, massive flight to the suburbs by whites.

Judge Orders Richmond, Va., Nearby Areas To Consolidate Schools for Desegregation

1/11/72

By a WALL STREET JOURNAL *Staff Reporter*

RICHMOND, Va.—In a landmark case that may affect school desegregation across the country, U.S. District Court Judge Robert R. Merhige Jr. ruled in favor of consolidation of Richmond's predominantly black city school system with the 90%-white school systems of the two surrounding suburban counties.

The decision is one of the first in which a federal judge has ordered the crossing of political subdivisions to achieve desegregation, and is believed to be the first of its type that will probably reach the U.S. Supreme Court. In other cities, notably Detroit, federal judges are considering similar actions calling for so-called "metropolitan" school systems.

Judge Merhige ordered that the Richmond consolidation be implemented by next fall. However, sources close to the case indicated that an appeal is probable. The judge didn't rule on the city school board's proposed consolidation plan, under which about 35% of the 104,000 students in metropolitan Richmond would be bused across the city line.

Judge Merhige's ruling is the latest in a 10-year court battle initiated by city blacks against the Richmond school board and argued by the Legal Defense Fund of the National Association for the Advancement of Colored People. Richmond has undergone several court-ordered desegregation plans, the most recent of which involves citywide busing of students.

Several months ago, Judge Merhige ordered the city school board to come up with a better plan, and the board proposed consolidation. The state and county boards of education bitterly opposed that plan on the ground that the school boundary lines weren't drawn originally with intent to discriminate, and thus they shouldn't be altered to achieve desegregation.

But Judge Merhige said that this doesn't make any difference. In his opinion he said, "The only remedy promising immediate success is crossing boundary lines." The opinion added, "The boundary lines of Richmond are less than eternal to a city planner's vision."

SDC Consulting Services in the Area of
School Integration

Every city that wishes to integrate its school system faces unique problems of school district organization, community politics, geography, demography, school plant, transportation, and finances. Each city must find a "best" mix of methods, from a broad range of possibilities, for solving its particular school integration problem.

There are many examples of policies designed to curb or eliminate school segregation:

- o Pairing, sometimes called the Princeton Plan, combines two or more schools in adjacent attendance areas into a single attendance zone. All children in the new zone attend school on the basis of grade assignments, and a variety of integrated grade combinations becomes possible.
- o Central schools convert one or more schools into central facilities (for one or more grades) to serve all or part of a city (pairing may achieve this result in very small communities).
- o Educational complexes are networks of public schools which broaden attendance areas by grouping existing schools and consolidating their attendance zones. Complexes contain fairly proximate schools, and although students are assigned to "home schools" according to old neighborhood boundaries, they also travel to other schools within the complex. The complex pools teachers and services, and emphasizes desegregation.

REPRESENTATIVE ESD STAFF MEMBERS

Dr. Harry Silberman, Manager of SDC's Education Systems Department, has been active in education and educational-systems technology for more than 15 years. He now directs a broad program of research and development in instructional technology, educational data processing, and experimental design.

Dr. John Coulson, Assistant Manager of the Department, has conducted educational research and development projects for more than a decade. Most recently he has been involved in the development of a computer-aided instructional management system.

Mr. Fred Bennik, Senior Human Factors Analyst, has worked on the research, development and use of CAI systems. He formerly directed projects using simulation for team training.

Dr. Jack Bratten, Senior Human Factors Scientist, specializes in educational administration. With SDC since 1956, he performed human factors analysis studies for computer-based systems prior to joining the education staff.

Mr. Alec R. Bumsted, Computer Systems Specialist, has over 12 years experience in programming, systems analysis, and information systems design.

Mr. Alfred Butler, Human Factors Scientist, developed specifications for a CAI system for the Air Force and is currently preparing a language reference document for the ICU project.

Mr. Stephen Frankel, Systems Analyst Senior, serves as a consultant dealing with problems involving the design of educational management systems, multi-media distribution systems, and vocational training programs.

Mr. Charles Frye, Human Factors Scientist, has done extensive work in the application of computer technology to education. He conceived and implemented a computer-based statistics laboratory and is co-developer of the PLANIT CAI system.

Mr. Francis P. Graham, Senior Systems Analyst, is responsible for the establishment of guidelines for EDP products and services for the Education Systems Department.

Mr. William Kent, head of the Education Systems Department's Falls Church Office has directed numerous projects, including a ten-year planning study for Gallaudet College, Washington, D.C., and the design of a cost-effectiveness instructional system for the Coast Guard.

Mr. Beverly Kooi, Marketing Representative for the Department also assists in designing and developing instructional materials and in evaluating and revising training materials.

Atlanta, Ga.

Dear Emory:

I think it will be helpful for me, and maybe useful in some way for you, if I try to assess and summarize our Wednesday conversations. Instead of sending copies to each of you, I'll just send this one and if you think it's worth sharing you can pass it on to George and Jim and others.

You have the makings of a major project, necessary and urgent, maybe even overdue. The possible pitfalls are everywhere, not the least of which is the danger that all commission reports face, whether issued piecemeal or in one volume. The timing may be affected by the political picture, by the anti-busing hysteria, and the like. Still, you are convincing when you talk of the need to produce authoritative data to counter the hysteria, and I think you are correct in preferring to begin as soon as possible and to issue periodic statements and reports rather than saving up for one big blast.

There is so much work to be done: the selection of the commission, the determination of budget, the hiring of staff, the definition of issues, the setting of priorities. In spite of what you say, I believe you need someone with administrative ability to direct these activities--some of them can be handled by different people, but if there isn't one person to coordinate and direct the effort, there will be confusion and wasted effort. When you think of the telephoning, the letter writing, the meetings, the organization of contact people in the states, the fund raising, the press relations, the compilation of data, the arrangements for commission meetings and all the rest, there is more than enough for one person to do (probably more than one person) before you even get to the writing and editing.

Most of that doesn't appeal to me, particularly since the only way I could do it would be to commute down there every week. Administration just isn't my forte. What does interest me very much is the writing. I would like to do a lot of that. I could, for example, work on an assignment basis, for a set fee or on a per diem or whatever, producing specific reports and papers. If you should decide you want an initial statement of purpose or philosophy, a paper on why we need integrated schools, on what quality education is, etc., I could write it, argue it out within the staff, debate it if necessary before the commission, revise it if necessary, and it would be yours--and theirs--to issue as you see fit. The same could be done on busing, or on school districts that seem to be doing a pretty good job, or on any other topic.

In other words, I am suggesting that if we can agree on a given subject to be researched and written, agree on style and emphasis, agree on a timetable, you could then turn over to me whatever raw material you have on the subject and I could supplement it with my own materials and produce the working document. I could do that working here, come to Atlanta whenever necessary, and follow it through to its conclusion as a report of the commission--their report, I should emphasize, not mine.

The three subjects I mentioned--a paper on philosophy and purpose, a paper on busing, and a paper on positive aspects of school desegregation--could perhaps be done in May and June. If that's not quick enough, we might be able to do them quicker by using other writers. And of course there are other subjects that need early attention, as we agreed. In any event, I see a role I'd like to play, and I think it's flexible enough to fit in with your overall objectives.

As I told you, I have commitments that will keep me pretty busy through April, but I could probably get away for a day or two here and there during that time. I hope you'll want to pursue my possible role further, and I'll look forward to hearing from you soon. Thanks again for asking me down.

Best regards,

John

John Egerton

P. S. My expenses are enclosed.

MAY 10 1972

4014 Copeland Dr.
Nashville, Tn. 37215
May 9, 1972

Mr. Emory Via
Southern Regional Council
52 Fairlie St.
Atlanta, Ga.

Dear Emory:

I am winding up all of my other writing assignments this week and will start on the busing handbook next Monday and move on to a long article on that subject as quickly as possible. It will be satisfactory with me, as you suggested, for us to make a mutual agreement for six months of my time. I don't anticipate any problem negotiating such things as the total salary and how it will be paid, fringe benefits, expenses and the like. Since I'll be starting May 15, I assume we're talking about the period extending to November 15. Let me know when you want to talk about the particulars. Meanwhile, I'll get to work.

On the broad question of public school governance, I hardly know where to plunge in, but here are some thoughts that seem to relate to the question. I think you could make a convincing argument that in this area, as in so many others, what we face in the South now resembles what has already happened in the North. Many Northern cities have been getting blacker by the year for a long time, and their school populations have outpaced their total populations in that trend. They've had de facto segregation, and some of them have made a half-hearted pass (usually beginning too late) at desegregation. It hasn't worked. Whites with money have opted for private schools, but whites have retained control of public education, from the classroom to the board room. Blacks have seen that no real effort at equity was going to be made, that it wasn't going to work, and so you've had the movement toward community control. Now all that is happening to us, and if the trend continues, Atlanta and New Orleans and some other cities will come to the same mess New York and Detroit are in.

The community control movement can be seen as blacks fighting for what affluent whites have always had: neighborhood schools, freedom of choice, self-determination, or whatever the popular phrase happens to be. That is pretty much what Scarsdale and Grosse Pointe have always had. Now the picture is further complicated by local battles over elected vs. appointed school boards, equalization of taxation, alternative schools, and a few other current issues. Where the parent and taxpayer fits into all this, I can't begin to say. But it seems clear that the masses of people--the non-affluent, most blacks and other minorities, some liberal-minded whites who can't buy the private school philosophy, a few others--have no real option, no choice, except to stay with the public schools, and their mounting frustration with what is happening to their children

and with their powerlessness to do anything constructive about it is a basic cause of so many problems the schools now face. To oversimplify it, public school systems are run by educational bureaucrats acting in behalf of politicians, and the kind and quality of schooling that combination is providing is unsatisfactory to a very large number of people--blacks and whites, liberals and conservatives, rural and urban, poor and middle-class, in every part of the country. How to manage and govern the schools in such a way that those people, with all their diversity, can gain a sense of participation and involvement and satisfaction in the schools is a very central question.

All this is very cosmic stuff, and I don't have the kind of wisdom to understand it or know what to do about it, but if this is anything like what you have in mind when you say governance (and I haven't even mentioned such things as accountability and curriculum reform and student rights), then we're biting off a big hunk or work. You wanted something to begin chewing over, though, and for what it's worth, here it is.

Let me know if any of it is worth pursuing.

Best regards,

John

Atlanta, Ga.

JUN 7 1972

Dear Emory:

Having had a few days to reflect on the discussion you and George and I had last Friday, I want to see if I can get down on paper a summary of it, along with some further thoughts I have had, and get it to you for consideration after your return from the retreat.

Let me begin with some recapitulation. When we first started discussing this assignment, the objective was to try to do something about the immediate crisis--the busing hysteria. I have prepared a draft manuscript on that. But in the meantime, several things have happened. There is the pending legislation in Congress, the President's uncertain strategy, the possibility of further court rulings, and there is the summer and fall political campaign season. Further, there are now several booklets in circulation which deal with busing, and which possibly preclude our doing anything further. We are not enthusiastic about what I have put into the collection, and with so much uncertainty about who the audience should be and what the rapidly changing political scene will bring, we don't know how to proceed. That is the immediate situation in a nutshell.

The long-range situation, very briefly, has to do with SRC's hopes of developing a capability to deal with school integration and quality education in the South. We have talked about that a little, and I have some ideas I'd like to contribute to further discussions, but as I see it, that isn't what we're concerned about right now.

That leaves what we can call the middle range--namely, what I'm going to do between now and Nov. 15. Harold Fleming suggested an investigation of school governance--who runs the schools, who makes the important policy decisions, who controls them, who holds the power. Those are, of course, the ultimate questions, and the implication--a correct one, in my opinion--is that power is in a few hands, in the wrong hands, and that fundamental changes must be made before quality integrated education can become a reality.

We can start there, and perhaps we should. We can find out what role state boards of education play, how local school boards are selected, how much real control they have, how influential political office-holders are in school governance, what role ordinary citizens are permitted to play, and so forth.

I have suggested instead a different approach: that we look at the racial and economic makeup of student bodies, at the makeup of faculties and administrations in the schools, at what the schools teach and how well they teach, at how the schools are financed. All this, I believe, will reveal serious and fundamental problems in public education, problems

that go far beyond busing. We would, in effect, be building a case for far-reaching changes in the schools, and in so doing would arrive at Harold's point of departure: governance. The kinds of problems our investigations would bring to the surface would require basic alterations in the patterns of governance, basic redistribution of power.

I proposed five papers to get us there. The first would deal with the issue of desegregation of both race and class: in simplest terms, who are the students, the recipients of public education? The second is, who staffs the schools? The third is, what do the schools teach? The fourth is, how are the schools financed? And the fifth--getting close to Harold's question--is community involvement: How much input do ordinary citizens have into what schools do?

These questions--who populates the schools (the desegregation question), who staffs them (the teacher education and professional advancement question), what do they teach (the curriculum question), how are they financed (the economics question), and who runs them (the citizen involvement question)--seem to me prerequisite to Harold's suggested approach. If we had all that information, we'd be in a position to speak with authority about the inadequate and inequitable ways in which our schools are governed, and how quality integrated education is prevented because of it.

That brings us to where we are: I suggested the five papers, you and George agreed, we left the busing issue unresolved, and I told you I would send you a letter outlining the project so you could draft the proposal for John Griffin. By implication we have agreed that my assignment is now outlined and I can get to work.

Since leaving you I have spent a lot of time thinking about it, and I feel compelled to raise some questions. Can one investigator, even with some research help, hope to contribute anything new and useful to the literature on these five questions? Have we given enough consideration to what we're trying to accomplish, and to the magnitude of the task? Have I, in short, bit off more than I can chew? Would it be better to take one or two of the issues and concentrate on them, or to focus on a few states or a few school systems instead of the entire South?

Whatever I do, I want to do well. I would be mortified if I couldn't deliver all that I promised. Would it not make good sense for us to sit down with a few people--Harold, John, Jean Fairfax, Ruby Martin, perhaps some others--and see if we can develop some priorities?

I don't want to delay things any further, Emory. I'm anxious to get to work. But I'm concerned that I have oversold my own skills as a journalist by suggesting such an ambitious undertaking, and prudence warns me to admit my reservations before I start. If you and George want me to get into the issue of teacher education and professionalism right away, I'm ready to go. If you want to back up and reconsider

Harold's original suggestion, I'm ready to do that. But I don't want to take off on the route I suggested to you Friday without further discussion.

My personal preference would be an early meeting with you and George and whoever else, in and out of SRC, you'd like to bring into the discussion. But I'm very conscious that time is of the essence. If you don't think we can afford to delay, or if you simply don't like the idea of another meeting, I'm ready to proceed as we decided, beginning with the teacher education issue and taking them one at a time.

I still haven't given you enough elaboration on the five issues to help you in the drafting of a proposal for John. I'll call you on Thursday before proceeding with that. I think the hesitation I have, and the frustration I feel, is traceable to one central fact: We have been involved for a long time with the fight for school desegregation, with trying to end racial isolation and discrimination. Now (unless Nixon succeeds in rolling the whole thing back) there is a new stage--the post-desegregation era. The dual school systems are fading, and a new set of problems are surfacing. Some of them are directly related to racial issues, some have more to do with class than race, and some--like teacher quality and curriculum and citizen participation and financing--are long-neglected problems that have been there all the while. The other day, George spoke of them as the issues that will face Southern education in the next five or ten years. What can we contribute to the solution of those problems and to the consequent achievement of high quality integrated education? That is a very large question, larger and more complex than the one posed by the existence of segregation. I am frank to admit that I don't know where to begin attacking it, and that is the reason for this very unsatisfactory letter.

I'll call you Thursday.

Best regards,

John

Dear Emory,

I sent the enclosed to Saturday Review, but it was returned with a note saying they "couldn't quite figure out what to do with it," since it was "a damn nice piece, but certainly not the regular SR story." Rather than try it elsewhere, I thought I'd send it to you and Rat, to see if you want it for South Today.

Things are beginning to happen on the teacher education piece. Most of my work has been on the phone so far, but I'm going over to see Herb Wey next week and to Washington the following week for contact with NEA, USOE and the National Committee for the Advancement of Teacher Education. I should have a good progress report for you by the end of the month.

Yours,

John

Dear John:

Sorry not to have been in touch with you sooner. The July 17 date for a visit here looks good at this point.

Enclosed is a list of three publications from HEW related to teacher training. I will send some other bibliographic lists later. In both cases they are taken from materials which Kathy Wood gathered on a recent trip to Washington.

Also enclosed is a list of people in Washington with whom Kathy talked. You know some of them but I pass her notes on to you for whatever help they may be. I am sending, too, her notes to me regarding some of the areas in which we are interested including one on teacher training.

I look forward to seeing you. Yell if anything special comes up.

Sincerely,

Emory F. Via, Director
Resources Development Center

EFV/gms

PS: Although it is a tremendously big field, I trust that a good bit of what you write will reflect on the quality, problems, and opportunities in teacher education that go beyond matters of race alone. I thought the piece in the recent Saturday Review which commented on several of the more innovative teacher training programs (for example, North Dakota; the University of Massachusetts) was suggestive.

Mr. John Egerton
4014 Copeland Drive
Nashville, Tennessee 37215

Dear John:

Did you get a copy of the enclosed "Teacher Education and Functional Humanity"?

Also I had earlier told you of the School Management Study Group which has been described to me as s small splinter group within the American Association of School Administrators. SMSG is said to be liberal, action oriented, and prepared to take positions on "moral questions." I have two names (I am sure there is a minimum of organization and funds):

Ted Grenda
Division of General Education
State Education Department
Albany, New York 12224
(Grenda seems to be in charge of memberships)

Don Thomas
SMSG
4674 Richmond Avenue
Fremont, California 94536

And in connection with the narrower issue of human rights education in teacher training you may wish to consider

Ira Eyster and/or Glenn Snyder in the School of Education, University of Oklahoma. They have worked closely with a project that Phi Delta Kappa has participated in. In this particular program they have been related to 22 teacher education institutions.

Sincerely,

Emory F. Via, Director
Resources Development Center

EFV/gms
Encl.

Finally reached Hasking Pounds in the Regents Office, though he called me back and I had been careful to say SRC; he thought I was SREB. They have figures for faculty and students for 14 state schools. They can give aggregate (and may be by institution) racial figures but not by whether in Education or not. Also faculty may be less than full time and would not have way to separate by amount of time in Ed. except going to each school — ~~they~~ he can give us contact people; might be worth doing a sample. I'm to call next week to go by and see what they have. EFV

August 14 [1972]

AUG 15 1972

Dear Emory,

Aside from a few more phone calls, I have now finished gathering information for the teacher education paper and am organizing it now for the writing task, which I am determined to have finished by the end of this month.

Here is my latest expense account. I made no effort to calculate what the reduction in motel cost would have been if Ann had not been with me, but I presume she boosted the total by about $4 or $5 a night, so if you want to slice about $15 off the total, that's fine with me. Her meals and other expenses aren't included here, of course.

We moved to the south side for the last night, so I could get to the school system's instructional services center for an early morning appointment without spending an hour in traffic. Every time I come down there, it seems a little worse.

If you have any luck at all with the statistics, give me a call.

By the way, I included my long distance calls on my last expense account, but they weren't reimbursed. I presume there will be a separate check coming to cover them.

Regards,

South Central Bell

SEP 12 1972

September 8, 1972

Dear Emory,

Here is a draft of the letter I'd like to have sent out, and the 21 names and addresses. Actually, there are two letters: one for the Southern states (see check mark) and one for the rest (see circle). In four cases, the name of the director is marked through, because of recent changes in personnel. For those, simply address to "Director" and say "Dear Sir." Feel free to change the letter if you'd like.

I'm also enclosing the following expenses:

Telephone, July 17-August 11 (bill enclosed)	$28.25
Xerox and postage	6.00
	$34.25

More later. I hope to be able to move on to the next paper in early October, which means I'll have to be through with the textbook thing by then.

Regards,

John

Please pay Egerton this amount from Ford

Dear _____

✓ The Southern Regional Council is preparing a series of reports on the operation, administration, and governance of public school systems in the region. One of these reports will examine the ways in which textbooks are selected, financed, and distributed in each of the several states. It would be of great assistance to us if you could send us a copy of the laws, rules and regulations concerning textbooks in your state, as well as a list of approved textbooks and any explanation or elaboration you think would be helpful to us in gaining an understanding of the entire procedure of textbook supply.

The writer of this report for the Council will be John Egerton, 4104 Copeland Drive, Nashville, Tenn. 37215. Could you please send the requested materials directly to him at your earliest convenience? We will, of course, send you a copy of his report when it is completed. Your help, meanwhile, will be much appreciated.

Sincerely yours,

Emory Via

File

NOV 1 1972

Oct. 29, 1972

Dear Emory,

A brief report on my trip; I'll call you this week to discuss it further.

After talks with Hayes and others in Columbia, a productive visit in Greenville and a stopover in Asheville, I'm convinced that a thorough review of one state's second-generation school deseg problems would be well worth doing. South Carolina would be ideal for such a study--it is small and compact geographically, yet it seems to have almost every conceivable kind and form of school deseg activity, from progressive to reactionary. I got quite a bit of information on Greenville, and it would make a good study by itself.

In spite of all that, though, I am ready to recommend that the one-state study not be done now. Instead of having me try to cover it all before January, I suggest that such a study be a high priority with the new task force after the first of the year, and that sufficient time, staff and resources be put into it to make a major project of it. We can discuss this further, of course, but for the moment I would like to see this one put aside in favor of something else.

The something else, I suppose, would be a paper on governance. My reluctance to tackle it arises from the difficulty of the job--I don't know just where to start, but the more I think about it, the more I come to the belief that it would be the most logical follow-up to the teacher education and textbook studies. The three are among the most basic questions you can ask about education--Who are the Teachers? What are their Tools? and Who decides what tools and which teachers will be used? That's oversimplifying it a bit, but I

do think the three subjects are more fundamental to the issue of quality integrated education than most others.

So, I'm suggesting that I undertake a paper on governance to be completed before Christmas, and that the three papers either be used by the education task force as background and introduction to larger involvements later on, or be printed together in one booklet for circulation to a relatively small audience. Maybe when we talk on the phone this week we can make a decision about that.

I need to know what date you decided on for the steering committee meeting, and I need to know your plans for the NCCJ conference. Will take to you later.

John

P.S.
I sent my voucher directly to Ruth.

AFL-CIO News 11/25/72

Newer School Texts Note Role of Negroes

The role of black Americans in the nation's history for the first time is being given recognition in most junior and senior high school textbooks, according to a study sponsored by the American Federation of Teachers.

But there's a flaw in the development, reports Irving Sloan, a social studies teacher at Scarsdale Junior High in Scarsdale, N.Y. "In my travels, I've found that most schools still use seven-year-old textbooks because they don't have the money to buy new ones," he said.

If that is the situation generally, it means that schools are using the textbooks first studied by Sloan back in 1966—a study which led him to conclude that "the fourth R in our school system—along with reading, 'riting and 'rithmetic—was racism."

Sloan appeared at a press conference here to discuss the fourth edition of a study, "The Negro in Modern American History Textbooks," he has conducted for the AFT.

He said his latest examination of 19 textbooks convinced him there has been "great improvement" in the treatment of black Americans in comparison to what he found in his 1966 study and several later updatings of it.

The earlier studies, he recalled, sustained the charges of civil rights leaders and educators that Negro contributions to history were ignored in most textbooks, while others provided nothing more than a "racist version" of the country's history and culture.

Sloan did not suggest there wasn't room for improvement. He severely criticized some of the newer books studied for their handling of Negro leaders and personalities, and for other shortcomings. But on the whole, he decided most "do a first-rate job" in covering Negroes' achievements.

Now that textbooks are much improved, Sloan said, it is increasingly important that schools have the money to buy them.

The 1972 study, "The Negro in Modern American History Textbooks," 88 pages, may be obtained for $1 a copy from AFT Order Dept., 1012 14th Street, N.W., Washington, D.C. 20005.

SUBJECT:

I Did receive the John Egerton memo about 1973 in your memo of December 18. It seems appropriate to me that we should talk with John about his role with us prior to any decisions about continuing his current arrangement with us. As I understood his memo, he would expect us to make a hard decision based on our need and his availability rather than continue the current arrangement in some rather vague fashion unrelated to specific work arrangements.

Emory:

Here is the Greenville paper, prefaced by a little essay on second-generation problems. We can talk about it all after the holidays.

My plans are to get into Atlanta at 10:20 a.m. on Jan. 5 and to catch a plane for Savannah at 4-something that afternoon. Hope that doesn't clash with schedules there, and that we'll have enough time to work some things out.

Meanwhile, enjoy the holidays.

John

P. S. I didn't make a carbon of this, and the copy center was closed. Could you send me a Xerox of it by return mail, or hold it for me til I come down? Thanks.

Carle: I didn't seek spotlight

By Robert Schumacher
Journal Herald Staff Writer

What does Wayne M. Carle think now?

Carle wasn't always a political and social symbol.

He came to Dayton almost five years ago with an emerging reputation as an innovative, imaginative educator.

He will leave the superintendency of the Dayton school district this summer as more than that: To many, a hero in the fight for social justice and equality. To others, an opportunist who furthered his own career by experimenting with Dayton's children.

Carle thinks, as he said in a recent interview, that his five years here have deepened his awareness of what schools should be doing and what they aren't doing and his conviction that racial injustice is America's number 1 problem.

Racial issues dominated the lengthy interview, which took place after the school board voted not to renew his contract and before the court order that the board prepare a desegregation plan by early April.

To Carle, educational and social goals go hand in hand. He sees a need for fundamental change in the educational

'I have never solicited . . . personal popularity'

system, change that will provide the kind of schooling he thinks is needed in the 20th century and at the same time produce the integration he thinks is necessary if society is to survive.

Desegregation is an issue which Carle has made his own and around which the community has divided into passionately committed, almost warring camps.

Through it all — the haranguing, the verbal abuse, the long working hours, the anguish — Carle has remained an enigma.

Given to emotional oratory, which often seems to bare his soul, he still manages to conduct himself and react to the storm around him with a polished cool that has caused admirers and foes alike to refer to him as a "plastic man."

The "plastic man" part of Carle is reflected in that he seldom will talk about his popularity or lack of it:

"I have never solicited and I suppose I find somewhat repugnant, the notion of trying to determine personal popularity or personal support," he said. "I feel issues — that is, the WHAT, not the WHO — are far more important . . ."

And the issue is the fundamental change Carle thinks is needed for desegregation to be effective and for schools to start functioning as he feels they should.

After the U.S. Supreme Court's 1954 decision that separate schools for blacks and whites are inherently unequal, "the matter of pupil desegregation was greatly mishandled and misunderstood," Carle said.

He said schools failed to take a leadership role, relying on the courts, and "thus failed to examine the educational implications of segregation and desegregation."

Schools and other institutions need to examine themselves from within, he said:

"Unless the persons who are within the institutions of our

2/23/73 Dayton Journal Herald

Wayne Carle: 'Solution not s

society truly start understanding them, truly do their own biopsies on the living organism of the institution and then work to change it, there may not be the kind of confrontation that could save us all. Because no one from the outside ever knows enough about our basic institutions to really manipulate them . . . The real institution . . . is not subject to change just from assault from outside."

Those within the institutions, he said, have spent most of their time "trying to defend the institution as an institution for its very survival, rather than studying how it could change to carry out the ideals for which we say it was developed."

Without that fundamental change, he said, "We'll continue the myth that schools turn out Horatio Algers. And schools don't do that. If there's anything that's predictable

'ou CAN

Staff Photo by James Rutledge

difficult if we will do it'

about education in America, it is that a child will make relatively little change in his economic and social background as a result of having gone to school . . ."

Carle said he felt the need to speak out on the race question and to take stronger positions because the public debate on the issue " . . . more and more threatened to obscure the problem by glossing over with emotion or by dealing with means rather than with ends . . ."

Also, he said, his public positions reflected his own deepening awareness.

"The black-white issue in America is simply the most complex and the most important issue we confront as Americans, but the solution of it is really not very difficult if we but have the will to do it," he said. "In the first place, all it involves is putting into practice what we say we believe in the Constitution and in our Judeo-Christian heritage.

"So it's not alien. It's what we would demand if we happened to be the victims ourselves. We'd expect that tomorrow that's the way things should be. But in addition to that, there is such a reservoir in this country of black persons . . . who are literally living for the day when they can help that happen.

"It's fantastic that a tenth of the population of this whole country — and of course a third of the population of the cities like Dayton across the country — could have lived in the depression, the discrimination, the hopelessness of the last two or three hundred years and still have the reservoir of love, of compassion for others, including whites, that exists among blacks in this country.

"And if whites could ever shed their guilt long enough, and their fears, to start discovering this . . . The kind of revival that would be in this country would be absolutely

'Fear syndrome imposed on us by white racism'

fantastic. Because many of us, in our urban and anonymous living, have almost forgot what it's like to be within touching distance of other human beings, to feel warmly about others, to have goals that are common . . . Those are the kinds of experiences that are available to those who really learn how to break down those barriers which are erected by whites in this country . . ."

And schools, he said, "which ought to be the laboratory of democracy, could have such a whale of an impact if we could but free children to have that kind of relationship with each other."

Carle doesn't like to talk about it, but he recognizes that many people view desegregation with fear, expecting that it will create schools where blacks and whites compete for power, where violence is the order of the day, where lunch money gets stolen, and where students risk injury if they walk to or from school alone.

". . . That perception does exist," Carle said. "It's part of the total fear syndrome that white racism has imposed upon us, the notion that association with a person of an opposite race inevitably means conflict or violence. It's largely unfounded . . . But it nevertheless persists as a perception. That's why a commitment to a goal is so important. If we agree upon the goal, then a staff and a community can be freed to deal with those perceptions and with the real problems of organizing schools and curricula, and moving students and the administrative problems which may result.

(Continued on Page 26)

Issues, not popularity, concerned school chief

(Continued from Page 25)

And it is that freedom which has been very hard to come by.

"We also have to recognize that schools operate within the white racism that abounds in the community at large . . . But I would also point out that whatever incidents that have occurred in Dayton schools have been relatively minor in terms of either their scope or the seriousness of their outcomes when one looks at the situation in other cities . . . I think from any objective viewpoint, the miracle is that any mixing of any kind can take place in a community that has so systematically avoided it up to this point. . ."

Carle also expects that any negative emotional upheaval resulting from desegregation won't be crippling and won't last long.

". . . I think the schools always have negative attitudes with which to work," he said, "and I think experience throughout the country is that that kind of attitude melts away rather quickly. I think the important thing . . . is what attitudes are now possible for children . . ."

He says children who associate daily with intelligent, able people of the opposite race are not likely to grow up accepting discriminatory attitudes.

He cites other advantages of the "common school," where children of varying abilities, interests and socio-economic status are enrolled.

In that situation, he said, true accountability would be possible because all schools would have similar student bodies. Schools wouldn't be able to claim they weren't teaching reading effectively because their student body was composed largely of slow learners.

"No longer need we excuse some schools as being unable to perform because there simply isn't the base of ability or motivation or cultural support to make learning possible," Carle said. "We would at least approach the concept that every man's child has an opportunity similar to every other man's child."

And Carle doesn't think that common school should be restricted to drawing its students from the center city.

In the Dayton metropolitan area, he said, "what we're talking about is a collection of half a million human beings, all of whom are closely interdependent upon each other; economically certainly, politically to an increasing extent, and to say that an educational problem or an employment problem or a safety problem can't be resolved simply because of arbitrary boundaries is becoming increasingly

'The high school an inhospitable place for many'

archaic, and we simply can't survive as a collection of separate units. That isn't the way services can best be delivered . . . It's clear that our thinking, our survival thinking, has to go beyond just what we found when we got here."

Schools aren't what they ought to be, Carle said, either in Dayton or throughout the country.

"The major deficiency in schools — indeed in education — is that we tend to do things as we were taught rather than as they should be," he said.

He sees a need for year-round employment of teachers and other professionals, not necessarily to provide year-round instruction, but to create time that "could be available for teaching about teaching . . ."

He also advocates reform of the secondary school.

". . . The high school has been an inhospitable place for many students because they simply don't fit into the pattern that high schools have traditionally operated," he said. "So there ought to be emerging more alternatives to high schools."

Like different and better use of time, more flexibility in the kinds of course organization, more short courses, and opportunities to engage in projects, work and other experiences "that don't fit the typical classroom mode.'"

Carle also favors more flexibility in terms of when a person gets his secondary education. Some students, he said, might go to high school part-time over a period of six or seven years to permit them to join the work force earlier.

New techniques and new approaches are needed, Carle said, because "We're in a world in which information is [illegible] upon us so [illegible] that the school is going to be

more and more impacted with knowledge, and we simply must find many more ways to help young people have access to it. I see more electronic means to do that . . . We can't continue to pretend with students that all there is available is a slide rule or a figuring tablet . . ."

In Dayton, Wayne Carle the educator has been obscured, as Wayne Carle the sociologist became inextricably bound up — at least in the collective mind of the city — with the volatile issues of desegregation and forced busing.

Carle has endured much — petition drives to have him fired, verbal attacks and once even a barrage of marshmallows — from those who saw his positions as threatening, dangerous and possibly evil.

But he won't admit that part of it has bothered him.

'It's no secret' I want to see desegregation'

He does say, though, that he would have liked to stay in Dayton long enough to see the schools fully desegregated.

"It's certainly no secret that I want to see desegregation through as far as possible," he said. "I also feel that probably I could serve a purpose in absorbing as much of the heat of that as possible, so that the future could be easier . . . and I'm willing to do so. . ."

Carle says he didn't intend to become a symbol around which the community debate on desegregation could be waged.

"The fact of the matter is that some chose to target upon me and I couldn't dissuade them from that," he said. "There are those who believe that the way to survive is to remain out of controversy — that becomes a major career goal — and there are also those who believe it's best to leave people guessing about anything that smacks of controversy.

"I believe that this issue (desegregation) is so fundamental to the survival of society that it is dishonest today to pretend that it is viable to continue the past pattern of segregation. And it's also ridiculous to assume that by leaving it alone, it's going to go away, that it will take something less than systemic change to correct it.

"Those who, for example, say they're for integration, but opposed to busing, are saying something that never was and won't be . . . It means nothing to say one is for integration unless one supports that with the means to bring it about."

SPECIAL ISSUE—THE NEW LEARNERS

31 **The New Learners** — *K. Patricia Cross*
It is no longer enough for education to certify, says the author, but it must maximize each person's potential, whatever one's station or geography. America's new learners are rapidly forcing a drastically new approach to the purposes of higher learning.

35 **Education in the World of Work** — *Peter H. Binzen*
In New York's Long Island City, the blue-collar community has embraced CUNY's La Guardia Community College.

38 **Reaching Rural America** — *Larry A. Van Dyne*
The University of Wisconsin's Project RFD brought much needed educational resources to a widely dispersed rural population.

42 **Harlem's Higher Education Volunteers** — *John Egerton*
Harlem's own home-grown Malcolm-King College has brought higher education to the ghetto. A remarkable volunteer effort.

45 **Their Own Place in the Sun** — *Peter Janssen*
A unique new higher learning enterprise, DQU is being molded by American Indians and Chicanos.

49 **A "Second-Chance" Program for Women** — *Elisabeth Hansot*
The New School's Human Relations Center has produced some highly imaginative educational services for urban and suburban women.

52 **A College That Believes in "Community"** — *Larry A. Van Dyne*
In a remote northwest corner of Montana, Flathead Valley Community College is the town's major new industry.

Mr. Emory F. Via
Southern Regional Council, Inc.
52 Fairlie Street, N. W.
Atlanta, Georgia 30303

Dear Emory:

Thank you very much for the Egerton paper on teacher education. I have mailed it to Mrs. Betty Carter (Hodding's mother) to use as personal information for a conference that will be held in Greenville in July. I explained to her on the telephone and in a covering letter that this was a draft copy and no part of it could be used or duplicated, that it was purely for her. I gave her your phone number so that she might ask if she did want to make some attribution at any point, when the publication date and if that was possible but I'm sure she'll be very scrupulous about it.

On page 4 of the draft he mentions the third essential which is the matter of purpose. If he's going to do a fourth one and you don't have a topic I would certainly like to see some material on that. I think it is the most neglected aspect of education revolution. Everyone seems to be concerned with techniques and methods with very little thought given to the reason for being.

Thanks again.

Sincerely,

Pat

April 17, 1973

Memo to Emory Via

From John Egerton

By now you will have gotten Jim's report on the Lamar meeting. There is a slim chance that Pat and Bob might want to make a South Today piece out of what went on there, but I rather suspect SRC would find it a bit indelicate to publish anything critical of the L.Q.C. at this point, and it would be hard to write about the meeting without revealing how shaky the society appears to be. Anyway, here is my account for internal consumption; if you want to pursue it further, we can talk about it.

There could not have been more than 100 registrants, and my guess is that at least a fourth of them were non-members from Jackson who came to listen or to participate in the discussions of the Jackson schools. Further, you could have counted the blacks on the fingers of your left hand. Mel Levinthal, the LDF attorney in Jackson, made pointed reference to that fact, and no one seemed to want to talk about it after that; it was plainly an embarrassment to some, and a matter of no apparent relevance to others, and that should give you an idea of the audience makeup. Let me describe the group another way: At least 90 per cent of all the people there were people I had never seen or heard of. Naylor and Ayres and Eddie Elson were there, but few others whose names have been associated with the society showed up; in fact, I can't think of any, though I may have missed a few.

The big news was that Frank Rose has been hired as the society's executive director, and I was told privately that he will stay in Washington and continue his educational consulting enterprise--which one will be the main show and which will be the sidelight wasn't made clear. The private intelligence also had it that Ayres has $85,000 (in pledges, not cash) to operate on, and that additional funding will be sought from foundations. All in all, the impression I was left with was that the society is groping for an identity and failing in the effort.

The Jackson papers carried an advertisement headlined "The Scalawags Are Coming to Town," which consisted of a reprint of an article from the Citizens Council magazine saying the society is really a subversive organization devoted to miscegenation and that it "typifies the most insidious factor now corroding the South." After Senator Mondale's speech, a group of white young people were in the lobby passing out mimeographed sheets headed "L. Q. C. Lamar -- Portrait of a Racist," describing Lamar as "a personification of the career of Southern white supremacy" and criticizing the society for choosing him as "the man whom the forward-looking, ambitious leaders of the so-called 'New South' offer as their founding father and model." Between the ad and the leaflet, the society seems to dangle like a limp rag doll; probably neither camp of critics realizes what a weak state it is in.

The meeting itself featured speeches by Senator Mondale, Sidney Marland of HEW, and Nathan Glazer of Harvard, plus some panel discussions. There was also to be a Southern governors' panel, but I left before it took place. As far as I was able to discern, no governor was there. Lt. Gov. William Winter of Mississippi substituted for Gov. Waller, his boss, and I believe the others all had subs too. I also missed Marland's speech. Mondale was well received, but his talk was disappointing to me--it wasn't that he didn't say the "right" things, it was just that he seemed to lack inspiration and force and charisma.

Glazer was interesting. Among other things, he said this:

* That since 1969 we have seen a convergence of court interpretations of Northern and Southern school segregation problems, and a growing similarity between racial distributions of the population in Northern and Southern cities.
* That the Supreme Court "is probably ready to call a halt to the process" of school integration, and that a "very serious moral problem--and political problem--to my mind has been, how can the court fail to decree for Northern cities what it has decreed for Southern cities when the social facts are now so similar?"
* That the court will probably find its answer to that dilemma in Swann: "once a dual school system is dismantled, no further tampering with racial proportions solely for purposes of achieving racial balance will be required."
* That the South will "continue to live with desegregated schools," and the North, for the most part, "will not have to reach the standard of the South," and that the South "should not rise up in moral superiority to condemn the North--it should be recalled that in fact these concentrations of black children in the North are not for the most part the result of dual school systems, and are only in uncertain measure the result of gerrymandering and similar efforts to separate the races."
* That the doctrines of social scientists [Coleman, Jencks, et al] challenge both the South's hopes for integration and its hopes for improving education, and that these doctrines, "as they spread in crude and somewhat distorted form . . . will not do the South any good."
* That "all the things the South tried in its fight to avoid full integration--parent-selected and dominated schools, education vouchers, learning centers--are being advocated [by social scientists in the North] in order to overcome the failures of education in the North."
* That integration matters in education when it is a means of overcoming "radical human depreciation," but it "matters less--or not at all--when it seems irrelevant, mechanical, imposed, as so much integration has appeared, both in the North as well as the South. It matters if what is being overcome is a deep public wrong in society; it matters less when what is being overcome is racial separation imposed by a complex mix of income, taste, culture, and of course prejudice. Thus there is good reason for the Supreme Court to stop now."

It was, needless to say, a strange presentation. Glazer seemed to be asking himself how the courts could refuse to require integration in the North, and then answering his own question by saying the line has to be drawn somewhere, and going on to construct a contrast between Northern and Southern segregation that he had first said was no longer valid. During the question-and-answer period afterward, he said he was committed to integration "all the way, regardless of its academic results," and he spoke in praise of what he saw happening in the Jackson schools, but he added, "I'm trying to find a moral justification for a line that cannot be neatly drawn by the courts," and though he said he is against an anti-busing amendment to the Constitution, he said the line had to be drawn nonetheless, "for practical reasons."

Alan Steelman, a young Republican congressman from Dallas, presided at a panel discussion of the Jackson schools. Steelman mentioned four issues currently being debated in Congress: special revenue sharing vs. categorical aid, federal aid to private and parochial schools, anti-busing legislation and constitutional amendments, and overall increases in federal aid to education. Steelman said he is for revenue sharing, a constitutional amendment, and increased federal aid; he is against aid to private schools. Someone asked him if he might change his mind about the amendment, in light of what he had seen and praised in the Jackson schools. He stammered a minute, and then said, well, yes, maybe he might reconsider his support of the amendment effort. Some of the Jackson people noted that President Nixon is advocating revenue sharing, the amendment, and aid to private schools, and opposing increased federal aid to education; if he prevails, they said, the consequences for Jackson would be like a four-barrel shotgun blast in the heart.

A succession of speakers from Jackson--board members, attorneys, school officials, students, parents--described what they have been doing to make desegregation work, and the results are mixed: White flight has been massive, but has peaked, and there is a slight reverse trend; a court-appointed biracial committee seems to have had good influence; federal Title I and ESAP funds have been essential, and the threat of their being curtailed worries everybody; the motivation for compliance--fear of the economic consequences--offers less hope for equity and stability than a devotion to law and moral principals would have offered; individualized instruction is being given a thorough try in the schools; school parks and increased busing are in the cards, unless federal policy gets in the way.

The overall impression is that white officials in Jackson seem to be saying pragmatically that segregated education is no longer a viable alternative for them, and blacks in the city seem to be cooperating and participating actively in the integration effort. Two comments by Jacksonians illustrate. One person said that school desegregation has proceeded as well as it has there primarily because "the people turned out to have more grace and decency and common sense than anyone else." By implication, he seemed to be saying that whites who desire

school integration and those who can't afford a segregated alternative will eventually equal in numbers the blacks who have accepted integration, and that among them they will build a good school system if the federal government will give them a little help. They stand together--or aspire to--against the whites who have created private schools, and against the Nixon Administration's anti-integration policies, as well as against the Northern forces who, in Glazer's words, want to call a halt.

The other comment of note was made by a young white Jacksonian who has been working for integration. "I was brought up believing we were wrong in the South to practice segregation, and the North was somehow more enlightened, morally superior. Now we've changed--never mind why we changed, we did it, and we're trying to make it work. And just when we finally did it, the North is showing us how hypocritical it is, and once again they seem to be looking down on us. It's as if they were laughing at us and saying, 'You suckers, you stupid jerks, you bought that integration line, and now you've got to live with it.'"

With that little note of bitter irony, I'll close. The Lamar people hit me up for $20 just to listen to it all. If you want to reimburse me for that expense, and for one night at the Holiday Inn (about ~~$20~~ $25) of the enclosed bill of $36.18), that would seem a fair exchange. The rest of my expenses I'll write off to the holiday my family and I got out of our stay there and later in the weekend in New Orleans. If you want to discuss any of this further, let me know.

SUBJECT: ETS's Action in South Carolina

Conservative NEA estimates of desegregation's costs to blacks are upwards of $250 million annually. Public school desegregation has meant black teacher and administrative displacement.

However, in addition to these very direct costs which have come boldly and dramatically in the past 5 years, there are the far more subtle and inestimable costs that have resulted from test misuse over the past three decades. South Carolina's test misuse is an example of the point.

In addition to displacement, black teachers in South Carolina have been forced to accept a wage which is determined by their scores on the "standardized" National Teachers Examination (NTE) prepared by ETS: Low score, low pay--and in the segregated South Carolina system, a lower pay than low scoring whites. For the past three (3) years ETS has tried to get South Carolina State Board of Education to stopthis misuse of the NTW to no avail.

Last week the ETS warned the South Carolina State Board by mail that unless the above misuse of the NTE is corrected by May 1, 1974, no test scores will be reported

by ETS to the Board. Without those scores the salaries for new teachers will have to be determined in some other ways. Thus, the Board is facing an issue which may require the involvement of the legislature.

In addition to refusing to report out applicant's test scores, ETS stated in the same letter that teacher training institutions will be notified. Thus, prospective teachers will be warned away from the South Carolina system. Here is an issue which could affect accreditation should such a stigma become attached.

The SRC has committeed itself to desegregated public education, and further, to develop support for public education which is currently threatened by white flight, shifting tax base, etc. As the testing issues unfold in South Carolina, it could represent the basis for a demonstration project in which we test our own, the South Carolina educational community's and the broader South Carolina community's capacity to correct longstanding, systemic inequities.

The timing seems right for such a move, and the state seems right for such an attempt. South Carolina has the most stable Human Relations Council through which we could work. The Education Coalition has been actively involved there, principally through Hayes Mizell. The Governor has implied a willingness to reduce social and economic inequity. There are competent assessment of South Carolina's educational strengths and weaknesses which could guide the efforts toward change.

By way of recapping, my feeling is that the ETS move could well serve as a moblization point in our efforts to encourage the correction of educational inequities, and for promoting popular support for public education. And this, not only in South Carolina, but across the region. ETS's move suggests the feasibility of wide and direct intervention, amd more importantly perhaps, intervention at the state level--an important factor when considered against federal revenue sharing in education.

Our approach to these issues might well include the following:

1. Encourage the broadest publicity of the ETS policy move in South Carolina.
2. Contact and arrange a meeting with the Task Force on Education Steering Committee, SCEA, NEA, ACLU, ETS, blact legislators, black teachers' organizations, Hayes Mizell, SCHR, SEF and the Education Coalition.
3. The TF on Education would plan a conference around these representatives; inviting their counterparts from other states in the region. The point of the conference would be four-fold:
   a) To broaden the appreciation for the specifics of ETS's move in South Carolina and its implications for comparable inequities inother Southern states or school districts.
   b) To engage conference participants around SRC's objectives in public education.
   c) To use the South Carolina experience as a model for teaching others the specific mechanism through which

these and other inequities have been maintained, thereby identifying specifically where changes must take place.

To assess the significance of the extensive use of the NTE in Southern states. (The NTE has extremely lmited use in non-Southern states.)

4. Encourage non-South Carolina based organizations to support and publicize the initiatives of groups based in South Carolina, particularly those initiatives designed to inform the state legislature, teacher training institutions, and the accrediting body.

Subject: Use of NTE in South Carolina

On June 19, the attached statement was sent to Dr. Cyril Busbee, Superintendent, South Carolina State Department of Education. I thought you'd be interested in our decision.

We're sharing the statement with our Teacher Programs Advisory Board and a few people and organizations especially interested in test use/misuse. We hope to avoid publicity of the kind that might arouse antagonism and encourage intransigence. There is some indication that, if our position isn't used to belabor State officials, it may speed the enactment of the needed State Board resolution and legislative funding.

Should the Board and Legislature act to change the use of NTE with experienced teachers, South Carolina's use of the tests would be essentially in conformity with the Guidelines. If such action is taken before May 1, 1974, ETS would, of course, continue to make the NTE available to assist the State's certification process.

ETS Policy on Reporting NTE Scores to the South Carolina State Department of Education

As of May 1, 1974, Educational Testing Service (ETS) will no longer report scores achieved on the National Teacher Examinations (NTE) to the South Carolina State Department of Education. The May 1 date was chosen so that adequate notice could be provided to students planning to take the examinations during the 1974-75 academic year. ETS has taken this step because extensive correspondence and meetings with South Carolina officials over the past three years indicate that South Carolina's use of NTE scores to classify and compensate experienced teachers directly violates the Guidelines for Using the National Teacher Examinations.

The Guidelines, published by ETS in 1971, set forth the appropriate and inappropriate uses of the testing program and describes the steps that ETS will take where a misuse occurs:

> ETS will inquire into any allegation of misuses of the National Teacher Examinations. An ETS representative will discuss test usage with officials of schools or school systems and when an inappropriate use of the NTE exists, will endeavor to obtain appropriate changes.
>
> Should school officials decline to reconsider an NTE misuse, ETS will inform the appropriate professional organizations of the situation. This communication will detail the problems and measures that have been taken; ETS will offer to cooperate with the organization in seeking a remedy for the situation.
>
> If these steps fail to bring about change within a reasonable period, ETS will notify school officials in the system in question, and, as appropriate, teacher training institutions in the region, that NTE scores will not be reported to the system. The reasons for such an action will be explained, and colleges will be asked to notify their students that their scores will not be sent to that system.

The National Teacher Examinations* are used in many states for certification of teachers, by large numbers of school systems as a part of their process of evaluating prospective teachers, and by teacher training institutions to assess the preparation of their students. Standardized tests such as the NTE, when used in conjunction with college records and other credentials, assist state departments of education in judging the qualifications of prospective teachers. However, as stated in the Guidelines, the NTE scores

---

* See note at close of statement.

should not be used "in decisions affecting the retention or rehiring of experienced teachers. The best indication that a teacher can teach well is that he has taught well. When an adequate and reliable record of the teacher's performance is available ... any use of the NTE for rehiring or retention is improper."

The NTE has been used in South Carolina since 1942 when the State adopted it as a certification measure. At that time, the State used a system of graded certificates for salary levels, and the grade was determined by the NTE Common Examinations score. In 1969, the State Board modified the system, and teachers with an NTE Common score of 950+ were ranked as professional teachers; those scoring between 875-949, as "Warrant" teachers. If those in the latter category do not raise their score to 950 within 5 years, they may continue to teach but cannot advance on the salary scale.

The 1969 revision did not affect the status of teachers certified before that date. Thus, a substantial number of experienced teachers -- those for whom "an adequate and reliable record of performance" should be available -- are being paid at lower levels than their colleagues who achieved the requisite scores. It is this misuse that ETS has sought unsuccessfully to correct.

Beginning in 1971 with the publication of the Guidelines, ETS has corresponded and met with South Carolina officials to discuss ways in which South Carolina's use of the test could be made consistent with the Guidelines. It is clear that many South Carolina educators and Board members have been working extensively for such resolution. The Committee to Study Teacher Education and Certification Requirements, established by the South Carolina State Board of Education, has recently recommended that "the current provisions for Warrants and graded certificates be completely eliminated, and the subsequent effect on salaries be eliminated also."

However, there is not at present a system for implementing the recommendations, and the future course of action in South Carolina remains uncertain.

Educational Testing Service
Princeton, New Jersey
June 21, 1973

*The NTE consists of:

The Common Examinations

professional education (psychological foundations of education, societal foundations of education, teaching principles and practices)

general education (written English expression, social studies, literature and fine arts, science and mathematics)

Area Examinations

27 separate examinations in specific subjects (biology, mathematics, and others), or other professional specializations (reading specialist, guidance counselor, and others)

The Common Examinations take 3 hours 15 minutes, each Area Examination, 2 hours. Scores on each examination may range from 300 to 900; composite scores (Common Examinations plus an Area Examination) may range from 600 to 1800.

Busbee Hits Withholding Of Scores

By LEVONA PAGE

Governmental Affairs Staff

State Superintendent of Education Cyril B. Busbee accused the Educational Testing Service (ETS) of New Jersy of "sword flashing" Monday because of its notice to stop reporting to South Carolina the scores teachers make on the National Teachers Exam (NTE).

ETS, which authors the exam, wrote Busbee June 20 that it would stop reporting the scores May 1, 1974, because the State Department of Education has not reformed its use of the NTE.

South Carolina is reportedly the only state which still uses the exam score to partially determine teacher salary and that use has been criticized in recent months as being racially discriminatory.

The ETS letter to Busbee was publicized Monday in the July issue of "Your Schools," a newsletter published by the S.C. Community Relations Program of the American Friends Service Committee. Director of the program is M. Hayes Mizell, a member of the Richland District One (Columbia) school board.

Busbee was frankly irritated by the ETS letter and its publication. He said the communication by ETS was premature because the State Board of Education has not yet had a chance to act on a recommendation by a special study committee on teacher certification, including the use of the NTE.

The committee recommended to the board June 8 that the exam continue to be administered to prospective teachers, but that the scores not be used to make differentials in salary.

Busbee said the board referred the committee's recommendations to its standing committee on teacher certification and it has already held a meeting. The recommendation of that committee will be reported to the board at its next regular meeting, July 13, Busbee said.

"For the ETS to indicate that the State Board of Education has not been responsive on this is a little far-fetched," Busbee commented. He added that the service has been supplying the exam to South Carolina since 1945 or 46 and "they have been a party to anything and everything we have done."

He continued, "They have been selling us that exam for 27 or 28 years and this is a poor way to treat a good customer. It bothers me that they should threaten us when we have been moving objectively" to do something about the use of the NTE.

Busbee said an ETS representative was present when the State Department of Education met to consider forming the study committee on teacher ccertification.

The state superintendent said he is uncertain about how the ETS position will affect the use of the NTE in South Carolina. He said he does not know whether the service will continue to supply the test but refrain only from giving the score after it is administered to teachers.

Concerning the publication of the ETS position, Busbee said, "They stated in their first letter to us that it was definitely not written for publicity, but apparently they gave it to the American Friends Service Committee."

He said a subsequent letter was sent June 22, stating that The first letter had contained errors, but it did not change the ETS position.

Busbee said he has not yet replied to the letters.

Under present use, a South Carolina teacher is given a "professional" certificate after achieving a score of 975 or better on the NTE. Those scoring between 850 and 974 are classified as "warrant" teachers. If teachers in the warrant category do not raise their score to 975 within five years, they may continue to teach but cannot advance on the salary scale.

In recent years, some veteran teachers have reportedly not been re-hired because of their low scores on the NTE, taken years earlier.

In the American Friends Service Committee news release about the letter to Busbee, it stated that the use of the NTE in South Carolina has been studied and questioned for years by Busbee and other state officials and changes have been recommended. "However," it stated, "there is not at present a system for implementing the recommendations and this inaction apparently prompted the ETS sanction."

SCORES MISUSED?

Teacher-Test Firm Says S.C. Cheats

By HENRY EICHEL
Observer Sports Writer

The prestigious Educational Testing Service (ETS) of Princeton, N. J., which gives the National Teachers Examination to prospective South Carolina teachers, says it will stop reporting test results to the state because officials are making improper use of the scores.

That means that unless ETS reverses itself, South Carolina education officials will not be able to use the exams to certify new teachers.

State Supt. Cyril B. Busbee, irritated by the ETS decision, said in an interview Tuesday, "There are plenty of other testing services we can use."

The ETS objects to South Carolina's use of the tests to partially determine teachers' salaries — sometimes for years after the teacher took the test.

The decision by the ETS, which also administers the college board and graduate record examinations, became public this week when a letter from ETS to Busbee was printed in "Your Schools," a newsletter of the American Friends Service Committee in Columbia.

Hayes Mizell, the Friends' program director in South Carolina and a member of the Columbia School Board, said in an interview that the letter was "leaked" to him.

Busbee said: "I don't understand their (ETS) position, when they're been a party to this use of the test since 1946."

As the test is used now, a score of 975 out of a possible 1800 is required for a professional certificate. A prospective teacher scoring below that, but above the flunk-out mark of 849, can be hired as a "warrant" teacher.

Warrant teachers have five years to retake the exam in order to raise their scores to 975. If they fail to raise their scores, they can continue to teach — but they cannot advance on the state teacher salary scale.

Until 1968, when it dropped the practice, the South Carolina Board of Education used National Teachers Examination scores to place teachers in one of four separate salary scales.

The ETS says that it is unfair to use test scores — intended to screen teachers for their first jobs — to judge a teacher's qualifications after the teacher has had classroom experience.

When a school board in Chesterfield County fired several black teachers in 1971, claiming they had failed to raise their teacher exam scores as required, the teachers filed suit and accused the school board of racial discrimination.

In that case, ETS official James Deneen testified that he did not think the board was making proper use of the exam.

"That situation was very similar to what we have now," Deneen said in an interview Tuesday. "A teacher who has measurable classroom experience should be judged on that experience."

Presently, the state Board of Education is considering a recommendation from one of its committees that it drop exam scores altogether as a factor in determining teacher salaries. Such a move would meet ETS's objection.

Busbee said Tuesday that ETS "is coming up with their position at this time, when we are objectively trying to remedy the situation."

The News and Courier, Wed., July 4, 1973 9-A
CHARLESTON, S. C.

Dept. Of Education Won't Get Individual NTE Scores

COLUMBIA (UPI)—Effective May 1, 1974, the State Dept. of Education will no longer receive individual test scores achieved on the National Teacher Examination (NTE).

The educational Testing Service of Princeton, N. J., which administers the test, has taken the action due to violations by the South Carolina Education Dept. on use of the NTE.

South Carolina is reportedly the only state which still uses the exam score to partially determine teacher salary.

The testing service wrote State Supt. of Education Cyril Busbee earlier this year advising him of its action. That letter was published this week in the July issue of "Your Schools," a newsletter published by the South Carolina Community Relations Program of the American Friends Service Committee.

Busbee said Monday that the action was premature because the State Board of Education has not had a chance to act on a recommendation by a special study committee on teacher certification.

The committee recommended that the exam continue to be used but not to make differentials in salary.

Busbee said further action on the recommendatons is expected at the July 13 meeting of the State Board of Education.

Under present use of the NTE, a South Carolina teacher is given a "professional" certificate after achieving a score of 975 or better. Those scoring below 974 are classified as "warrant" teachers.

If teachers in the warrant category do not raise their score to 975 within five years, they may continue to teach but cannot advance on the salary scale.

The Greenville News—Greenville Piedmont—Page C-1—Wednesday, July 4, 1973

S.C. To Discontinue Teacher Examination

COLUMBIA (UPI) — Effective May 1, 1974 the State Department of Education will no longer receive individual test scores achieved on the National Teacher Examination.

The educational testing service of Princeton, N.J., which administers the test, has taken the action because of violations by the South Carolina Education Department on use of the NTE.

South Carolina is reportedly the only state which still uses the exam score to partially determine teacher salary.

The testing service wrote State Supt. of Education Cyril Busbee earlier this year advising him of its action. That letter was published this week in the July issue of "Your Schools," a newsletter published by the South Carolina Community Relations Program of the American Friends Service Committee.

Busbee said Monday that the action was premature because the State Board of Education has not had a chance to act on a recommendation by a special study committee on teacher certification.

The committee recommended that the exam continue to be used but not to make differentials in salary.

Busbee said further action on the recommendations is expected at the July 13 meeting of the State Board of Education.

Under present use of the NTE, a South Carolina teacher is given a "professional" certificate after achieving a score of 975 or better. Those scoring between 850 and 974 are classified as "warrant" teachers.

If teachers in the warrant category do not raise their score to 975 within five years, they may continue to teach but cannot advance on the salary scale.

NTE Announces Plan To Refuse Scores

By United Press International

The Educational Testing Service has advised the State Department of Education that it will not furnish individual test scores achieved on the National Teacher Examination after May 1, 1974.

The Princeton, N. J. testing service said the action was taken because the state violated guidelines for use of the NTE.

South Carolina is reportedly the only state that continues to use the exam score to partially determine teacher salary.

The letter from the testing service advising State Supt. of Education Cyril Busbee of the sanction was published this week in the July issue of "Your Schools," a newsletter published by the South Carolina Community Relations Program of the American Friends Service Committee.

Busbee said the action was premature because the State Board of Education has not had a chance to act on a recommendation by a special study committee on teacher certification.

The committee suggested that the exam be used but not as a basis for differentials in salary.

Busbee said further action on the recommendations is expected at the July 13 meeting of the State Board of Education.

July 6, 1973

Mr. John Egerton
4014 Copeland Drive
Nashville, Tennessee 37215

Dear John:

Enclosed are the materials for the Educational Testing Service related to the use of the NTE* in South Carolina and an internal Council memorandum regarding possible SRC involvement in this development.

I have talked with Hayes, who has had one press release about this subject in South Carolina although he feels the press has not sensed the significance of this development. He is uncertain as to what Busbee's feelings are regarding use of the NTE but Busbee has expressed public irritation at ETS because the matter has reached the media.

On July 13 a special committee is to report to the State Board about the NTE and the ETS Guidelines. Hayes does not feel that the "education fraternity" in S.C. really wanted to tackle the NTE and perhaps the better people welcomed the ETS move.

We feel that it is impossible to make a decision about next steps until after July 13, but a memo from you prior to that time with a supplementary note following the 13th would be welcome.

Certainly you should raise the question of the validity and usefulness of the test even when used within the Guidelines.

[* National Teacher Examination]

We would like to have a somewhat better rough-hand assessment of the impact of ETS's move on South Carolina. Hayes, of course, is a good place to start and he will expect a call from you.

We need more accurate leads that we now have regarding the use of NTE in other southern states and where possible abuses maybe occurring.

In general Hayes feel that publicity will be useful and that a seminar discussion involving the kinds of groups mentioned in the SRC memo on page 2, part 2 would be useful.

I think if you could get from Hayes and others some judgment as to what further steps would be useful in South Carolina as well as determine what might be useful ~~later~~ elsewhere for follow-up information or programs, it would help us. If an investigative report seems in order, a judgment would need to be made about the most appropriate timing (whether you are the reporter or not).

Many thanks. Call me if you have questions.

Sincerely,

Emory F. Via

Memo to SRC

From John Egerton

Re: ETS, the NTE, and SC

Here is the background on the Educational Testing Service change in policy regarding the use of the National Teacher Examination in South Carolina. At a meeting in Columbia tomorrow, the State Board of Education will be asked by a special study committee to adopt a new position on the use of the test; I will report on that meeting in a footnote to this memo. I will also be receiving some background information from Hayes Mizell, Richard Fields of the Legal Defense Fund, and two people at ETS, and I will keep it for future use if you decide after reviewing the situation that you want me to pursue it further. I will be leaving here in a week and be gone for a month, so this memo will be as much as I can do until September. From what I know about the subject so far, I believe it may warrant further investigation by SRC.

South Carolina is one of 13 states now using the NTE for any purpose at all (the list of 13 is being forwarded to me), but it is apparently the only state which as a matter of policy permits--requires--its use as one means of determining teacher classification, pay, and promotion.

Before 1969, South Carolina teachers were certified, graded and ranked at the time they were hired. The primary means of making these judgments was a test devised by the state in the 1940s. That test was later replaced by the NTE common exam, and after a cheating scandal, administration of the test was tightened by South Carolina education officials. During all this time--a period of about 20 years--the basic program stayed essentially the same: Every teacher seeking certification by the state prior to employment took the exam; those who scored 500 or above (out of a possible 900) were classified as "A" teachers, and were placed in the highest pay-scale "track"; those who scored between 425 and 500 were classified as "B" teachers; those who scored between 375 and 425 were "C" teachers; and those who scored between 332 and 425 were "D" teachers. Those who scored between 300 (the minimum possible score) and 332 were not hired.

Once in these four categories, the teachers were virtually doomed to stay there. They could take the test over in hopes of raising their letter grade, but few did, and ETS officials say the likelihood of getting a higher score by retaking the test is very remote. So no matter how effectively a teacher performed on the job, he or she was paid according to performance on a written test taken before beginning his or her teaching career. To give you an idea how much difference this made (and makes) in a teacher's paycheck, here is the 1973-74 salary schedule (i.e., the state portion, to which local districts add about 20 per cent) for a teacher with a bachelor's degree and 10 years' experience:

"A" Teacher	"B" Teacher	"C" Teacher	"D" Teacher
$7,500	$6,400	$4,600	$4,000

Since the local district's supplement to these salaries is based on percentages (i.e., 20 per cent of $7,500, of $6,400, etc.), the net effect is to create an even greater dollar gap between the A, B, C and D teachers.

In 1968, State Superintendent Cyril B. Busbee formed a study commission to review the whole certification process. That commission recommended to the State Board of Education, and the board adopted, a new credentialing system based on four things: (1) a bachelor's degree in a chosen area of specialty, and periodic in-service or advanced study; (2) a recommendation from the college awarding the degree; (3) a certificate of good health; and (4) a certain NTE score combining the common exam and a "specialty" exam. Instead of A-B-C-D categories, two new categories were created: Professional and Warrant. The Professional certificate was awarded to teachers who met the first three qualifications and had a composite NTE score of 950 or higher and who scored at least 450 on both parts of the exam. (Both exams had the same 300 minimum - 900 maximum grade scale.) The Warrant certificate was awarded to teachers who had composite scores ~~of at least 875, and who made at least 400 on each of the two tests.~~ of between 875 + 950, and who made between 400 + 450 on each of the two test. That began in 1969. All teachers hired since then--both Professional and Warrant--have been on the same pay scale. Warrant teachers are given five years to meet the qualifications of Professional status--which in effect means that they have five years to keep taking the NTE in hopes of raising their scores to at least 450 on each exam and 950 overall. After five years, if they have not done that, they will be frozen into a lower pay scale than the Professional teachers. Presumably, then, if the present policy is not changed, some teachers hired in 1969 will begin in 1974 to receive lower pay than their contemporaries.

For the moment, though, existing pay differentials affect only those teachers hired before 1969 and who are classified as B, C, or D teachers. A grandfather clause binds them to that status; the only way they can be reclassified as Professional or Warrant teachers is to take the NTE over and raise their scores. The inequity is compounded in several ways; for example, a teacher hired in 1968 who scored 475 on the NTE common exam is classified as a "B" teacher, and the state will pay him or her $6,400 in 1973-74. Another teacher, hired in 1969, may have scored only 450 on the NTE common exam, but he or she can be classified as a Professional teacher and be paid $7,500 by the state next year. The "B" teacher, in order to attain Professional ranking, would have to take the NTE exam in his or her area of specialty and score at least 475.

All this can get very complicated, but the essence of it is this: An undetermined number of teachers in the B-C-D categories are being penalized throughout their entire careers because of scores they made on a standardized test they were required to take before they first began teaching in South Carolina. In conversations with Jesse Coles and Joe Davis, two high-ranking officials in the State Department of Education, and in further talks with officials of the South Carolina Education Association, a member of the State Board of Education, and two representatives of ETS, I learned the following:

* Nobody professes to know exactly how many teachers are adversely affected by the policy in South Carolina, but the consensus of estimates is that about 6,000 active teachers (not counting others who have B, C or D classification but are not currently employed as teachers) are now being paid less than the going rate for the top classifications.

* Nobody professes to know how many of the adversely affected teachers are black and how many are white. Almost everybody I talked to, however, agreed that more than half are black, and one of the state department officials said he was sure "an overwhelming preponderance" are black.

* Nobody professes to know exactly how much money it would take to raise all teachers to the same pay level, but the estimates range from about $6 million to more than $10 million a year, in state funds, and a proportionate amount in local funds. It could be even more: If you had 6,000 people making an average of $2,500 a year less than top scale, it would take $15 million to bring them up to par.

This issue has been festering in South Carolina for a long time, and particularly since the beginning of school desegregation on a large scale. In a court case in Chesterfield County last year, half a dozen black teachers with "C" ratings did not get renewed certificates from the local board of education. The board said they were not qualified. They went to federal court for relief, and the Department of Justice was on their side, but the judge ruled that the board had a right not to rehire them. Justice Department lawyers waited until the last possible moment to notify the court that they would appeal the ruling, but that was several months ago and no appeal has yet been filed. Furthermore, efforts to find out who in the Justice Department is on the case have been fruitless. James R. Deneen, the director of teacher programs and services for ETS, gave a deposition in that case opposing use of the NTE as a device for determining pay, promotion, tenure or re-employment.

The National Education Association, when it sent an investigating committee into South Carolina awhile back, also raised the NTE issue, and urged that the state cease using the test for anything other than initial certification purposes. ETS itself has tried for some time to get South Carolina to change its policy regarding use of the NTE, and last month, ETS notified Superintendent Busbee that as of May 1, 1974, ETS will no longer report scores achieved on the NTE to the South Carolina State Department of Education, unless the state ceases to use the test "in decisions affecting the retention or rehiring of experienced teachers." (The ETS policy on reporting NTE scores is included in the file I am assembling on this subject.)

Busbee and others in the state department have known for some time that this problem would eventually have to be faced. A new study commission formed by Busbee has been studying the matter, and that commission has already made known its recommendation that a single professional classification be created for all teachers. The commission presumably will make that formal recommendation to the State Board of Education at the meeting scheduled for tomorrow. The distinct impression I am left with is that the decision-makers in South Carolina education don't want to fight ETS on this issue; they recognize that a change in policy is needed, and that it has to come, and most of them can be said to favor a change. (Whether or not they always have is another matter; my hunch is that that they have been stalling deliberately for years, waiting for death and

retirement and, in some cases, outright racial bias, to decimate the ranks of B, C and D rated teachers.) The issue they face now--the essential problem--is primarily economic, secondarily political, and last and least educational. In all probability, the State Board of Education is going to agree with its study commission that a single classification of teachers for pay and promotion purposes must be established. But the problem is going to be in getting the State Legislature to appropriate the funds needed to implement such a new policy. The state reportedly had a $90 million surplus last fiscal year; it can afford to make the change. But the legislature will not be in session again until next January, and apparently nothing can be done until then. Nobody I talked to seemed to feel any serious concern that the legislature might refuse to fund a single pay scale for teachers. I tried without success to locate Representative Harold Breazeale of Pickens, chairman of the House Education Committee and by all accounts the key man in the legislature on this and other education matters. He is considered a good man, and one who could be expected to be understanding of this problem and supportive of a change.

So the consensus seems to be that a change to a single classification for certified teachers in South Carolina is going to come about, and the ETS decision to stop supplying scores may prove to be the catalyst that will make the change possible. Even if that happens, though, some questions will remain:

* Will more black teachers be weeded out before a single classification is established (presumably 1974-75, at the earliest)? The court decision in Chesterfield County could well encourage other school districts to do the same thing, unless that decision is reversed on appeal.

* If the B, C and D rated teachers are brought up to the A pay scale (which is the same, incidentally as Professional and Warrant teachers are on), will they simply move up to the top level on a given date, or will there be a phase-in--or, conversely, will they be eligible for retroactive reimbursement? The state almost certainly will not offer retroactive reimbursement. Should it be sought in court?

* If a single Professional classification is adopted and funded, what will it be based on? Will the NTE be used as one means of determining who will be hired in the future? If so, will certain minimum scores be required? What will be the minimum? Should the NTE be used at all? Here is where ETS and SRC, as well as other interested parties, might part company. The South Carolina Education Association's Representative Assembly has passed a resolution urging the State Department of Education to stop using the NTE for salary, promotion and contract renewal purposes; they are in favor of having a single Professional category for all teachers. But Richard Fowler, the new SCEA president, told me emphatically that his organization does not want the NTE to be discontinued altogether. SCEA, NEA and ETS can be expected to be in full accord on this point; many others, including many black teachers, hold the opposite view, contending that the exam should not be used at all. (The SCEA, with an assist from the Professional Rights and Responsibilities division of NEA, has gathered information for a suit against the state to force a change in its policies regarding the NTE, but the suit has not been filed, and Fowler said he doubted it would be unless the state refuses to change its policy.)

A larger issue in all this has to do with the difficulty of evaluating teacher performance. Most educators acknowledge that there is no effective and equitable system of evaluation now in widespread use. South Carolina has avoided the problem by simply using a test to make an evaluation prior to the beginning of a teacher's career, and letting that evaluation stand regardless of how well or poorly the teacher subsequently performs. Clearly, that is discriminatory; but what alternatives are better? Given the certainty that South Carolina and all states now employ many teachers, black and white, who are not competent to meet the diverse needs of children, how can school systems remove them and hire better teachers to replace them? That question--or at least the first part of it (removal)--is not, or should not be, a matter that concerns ETS in any way. But it is a problem for all school systems, and none that I know of has solved it. It is really the tenure question, and I won't pursue it further here.

I hope to have (from LDF, ETS and Mizell) more information soon on court cases involving discriminatory use of the NTE, as well as more information on what states and school systems in the South (and what teacher training institutions) use the NTE for any purposes at all. And on Monday, I will append to this memo a report on the meeting in Columbia tomorrow.

July 16

The Columbia Record's account of the July 13 meeting indicated that the State Board of Education took no action on the ETS memorandum. One board member (unidentified) was quoted as saying the ETS notification to Busbee that it would stop providing NTE scores was a display of "extreme arrogance." An "education spokesman," also unidentified, commented that "if someone sells me a bar of soap, he isn't going to tell me how to use it." The state study commission's report recommending that NTE scores no longer be used to determine salaries has apparently been referred to committee for study. From the tone of the Record story, it is clearly not going to be a simple matter to get the board to change its policy; there was even some discussion of terminating the ETS contract and buying another similar test from some other firm or organization. James Blake, a black member of the board and also a member of the study commission, told me last week that "there is no question the State Board of Education feels this matter has to be resolved. We have to do away with the rated scale of paying teachers." But he didn't say that for public consumption at the meeting on Friday, and he wouldn't give Mizell a copy of the study commission's report. The board is meeting again in two days (Wednesday the 18th) to discuss the matter further. Mizell will probably attend. You might want to pursue it with him.

Dr. George H. Esser, Jr.
Executive Director
Southern Regional Council, Inc.
52 Fairlie Street, N. W.
Atlanta, Georgia 30303

Dear Dr. Esser:

The publication Promise of Progress is excellent. We thank the Council staff and Mr. John Egerton for your efforts in behalf of the City of Memphis and our school system. We are planning to make wide distribution of the publication and based on demands for it at this time, I would put it at the top of the list of "best sellers."

Thank all of the staff for us, especially Leon Hall who was so much help to us during our critical days in January, for your excellent support and help.

Sincerely yours,

Shelby Counce

STATE DEPARTMENT OF EDUCATION POSITION STATEMENTS

JUL 19 1973

Morris College Teacher Education Program

The matter of the evaluation of the teacher education program at Morris College obviously can be resolved by a categorical "approval" or "disapproval," but we believe that another viable approach would be to place the teacher education program at Morris College on one year's probation with the following stipulations:

1. That the teacher education program be subject to re-evaluation by a visiting committee during the spring of 1974.

2. That the State Department of Education conduct monthly visits to Morris College for the purpose of providing assistance where possible and for maintaining a record of efforts by Morris College to meet the standards for the approval of teacher education programs.

3. That the college will at monthly intervals provide evidence to the State Department of Education that it is making substantial progress toward meeting the standards, with particular attention being given to the following points--

   a. Financial stability of the institution as evidenced by an unqualified financial audit.

   b. Evidence of the competence of faculty members offering instruction in subject matter areas in which teacher education graduates seek certification by showing that these faculty members have earned a graduate degree in the subject area in which instruction is offered.

   c. Evidence that faculty members teaching courses in professional education have had experience in professional situations similar to those for which the students enrolled in such courses are being prepared.

   d. Evidence of a substantial increase in the library holdings--books, periodicals, and other appropriate materials.

   e. Evidence of significant improvement in the condition of physical facilities--including both student dormitories and instructional facilities.

Moved to accept this recommendation
Seconded
Unanimously accepted

Programs for the Handicapped -- Supplementary Guidelines

The guidelines as presented have been extensively reviewed by personnel in the Department of Education. We have concluded that they are consistent with the provisions and mandates of law; and that they will assist local school districts in the development and maintenance of improved educational programs for the handicapped. We encourage their adoption, along with the additional guideline as attached.

Moved, Second, adopted

Teacher Recruitment, Training and Compensation Committee Report

This committee's report has been reviewed in the Department of Education, and we support its recommendations. We believe that their adoption would be appropriate and a viable next step toward the improvement of the examination and certification of teachers.

Considerable discussion

REPORT TO THE STATE BOARD OF EDUCATION
BY
THE COMMITTEE ON TEACHER RECRUITMENT, TRAINING, AND COMPENSATION

July 13, 1973

On June 8, 1973, Mr. Laurens Floyd, speaking for the Committee to Study Teacher Education and Certification Requirements, presented certain recommendations to the State Board of Education. His committee's recommendations were referred to the Committee on Teacher Recruitment, Training, and Compensation for study.

Following is a presentation of each of Mr. Floyd's recommendations (printed in italics) followed by a reaction or recommendation from the Committee on Teacher Recruitment, Training, and Compensation.

or some other measuring instrument

A. 1. *The Committee recommends that the State Board of Education maintain the use of the National Teacher Examinations (as a measure of cognitive knowledge of prospective teachers until a better measure of basic cognitive knowledge can be developed.*

~~or some~~ other

This particular statement reaffirms current State Board policy. No additional action or recommendations are necessary.

A. 2. *The Committee recommends that a minimum composite score of 950 on the National Teacher Examinations (Commons and Teaching Area) be established for receiving a credential to teach in South Carolina; and that within a period of five years the State Board of Education should appoint a new committee to reassess the minimum required score on the basis of supply and demand and performance by teachers in the interim.*

or its equivalent on another measuring instrument

The Committee on Teacher Recruitment, Training, and Compensation recommends that the State Department of Education develop proposed regulations and administrative procedures which would have the effect of eliminating the issuing of Warrants effective May 1, 1974.

We further recommend that effective May 1, 1974, a minimum composite score of 950 on the National Teacher Examinations (Commons and Teaching Area) be established for receiving a credential to teach in the public schools of South Carolina.

We further recommend that within a period of five years the State Board of Education should appoint a new committee to reassess the minimum required score as affected by supply and demand as well as the performance of teachers.

A. 3. *The Committee further recommends that the current provisions for Warrants and graded certificates be completely eliminated and the subsequent effect on salaries be eliminated also.*

The Committee on Teacher Recruitment, Training, and Compensation recommends that the State Department of Education be directed to prepare sample state aid teaching salary schedules in which the National Teacher Examinations will not be a factor. These new salary schedules will therefore have eliminated from them any reference to "B, C, or D" salaries. The salary schedules should be prepared in time to be recommended to the State Legislature for implementation by the beginning of the 1974-75 school year.

A. 4. *The Committee recommends that a special committee should be appointed to develop recommendations for issuing temporary credentials.*

The Committee on Teacher Recruitment, Training, and Compensation recommends that the State Department of Education coordinate the appointment of a committee, conduct appropriate meetings, and prepare recommendations for consideration by the State Board of Education for the issuing of temporary teaching credentials.

A. 5. *The Committee recommends that the State Board of Education should continue its study of various measurement approaches to insure potential competence as a professional teacher.*

This particular recommendation seems to reaffirm a commitment which the State Board of Education already has. Since the State Board of Education obviously will continue to study various measurement approaches to insure the competence of public school teachers, no further action or recommendations are necessary.

B. *The Committee recognizes that there is a general trend toward using approved programs of teacher education in various states. The Committee supports the action of the State Board in the adoption of "Standards for State Approval of Teacher Education," (National Association of State Directors of Teacher Education and Certification, 1971, Revised) as the criteria for evaluating programs of teacher education in South Carolina institutions of higher education.*

The Committee on Teacher Recruitment, Training, and Compensation recognizes that this statement again is supportive of State Board of Education policy. The Committee on Teacher Recruitment, Training, and Compensation believes that the evaluation of teacher education programs is a significant venture and it should be fully supported by the State Board.

C. *In the implementation of the "Standards for State Approval of Teacher Education" and the approved program components, special study should be given to the following items:*

1. *That credential titles be more descriptive.*

The Committee on Teacher Recruitment, Training, and Compensation recommends that the State Department of Education should study the problems addressed by this particular recommendation and submit a report with appropriate corrective recommendations, if necessary, as soon as possible.

C. 2. *That graduate degrees from specialized schools which do not have teacher education programs should not be recognized for certification purposes (theology, engineering, law, pharmacy, etc.).*

The Committee on Teacher Recruitment, Training, and Compensation recommends that the State Department of Education develop proposed regulations for consideration by the State Board which would have the effect of implementing this recommendation.

C. 3. *That only approved programs at the sixth-year level be acceptable for earning the sixth-year credential.*

The Committee on Teacher Recruitment, Training, and Compensation recommends that the State Department of Education investigate the matter of approved programs at the sixth-year level with appropriate collegiate and other educational personnel. This study will be followed by a report and any necessary and appropriate proposals to the State Board of Education.

Respectfully submitted,

James A. Blake, Chairman

Hughes - How will this affect teachers who are now in the system with less than 950?

Buske - I am assuming no teacher who has been certified in the past will have certification revoked.

Charlie Williams - State Dept. will draw up reg. with those qualifications - also salary schedule that reflects no B, C, D.

By using 950 you eliminate the bottom 2% (2 of 100)

Buske - Gov. people in such rural areas are bound to maintain certain titled vation which keep you in this situation.

State law says you have to have valid credentials before entering contract

State appropriations act includes salary schedule based on B, C, D.

New board member (Hughes) from Jasper:

Can't get people with 950+ to come to rural areas

many teachers we hire are from outside state, don't have NTE, pressure to make the minimum score

Hughes - We have competent teachers who haven't made 950

Greenville lady Mrs. Taylor - We're reducing it from 975 to 950. We need to upgrade schools in Jasper County

Connor - ~~If you take into consideration their past NTE score then you~~ You have to give all benefits

Rushel, Williams –
NTE doesn't predict classroom perform.
merely assures basic literacy,
handle number system, familiarity
with social science system

Charlie Williams – in light of ETS veiled threat
do we need to consider
additional ~~reqs~~
language in case
we can't reconcil
some diff.
with ETS

Williams
presses
again

NTE or other recog. test
950 or some other equivalent

Hughes - 950 in sole determinant

Land and Natural Resources

Although the Interstate Committee on Land and Natural Resources has been created to provide interstate policy recommendations to the Southern Growth Policies Board, the first year's activities should be directed toward the provision of recommendations to the Commission on the Future of the South. The topics which the Interstate Land and Natural Resources Committee should address during 1974 include, but do not have to be limited to, the following:

- for the period 1975-1980 -

1) definition of land and natural resources problems or opportunities which are of critical concern to the region during the period 1975-1980.

2) explanation of each problem through factual information and appropriate analyses.

3) relation of the land and natural resource areas to energy resources and their optimum utilization or conservation.

4) commentary upon the state and local governmental frameworks for managing land and natural resources.

5) production of broad but critical policy recommendations for the consideration of the Commission on the Future of the South.

6) definition of the interagency-interstate coordinative role of "functional" statewide plans for managing land and natural resources.

7) specification of areas and issues where further research is needed in order to recommend policies at the interstate level.

Growth Management Policies

Educ. Jon. Hous Ralph Widener Tech Consultat (Academy of Contemporary Problem)

Although the Interstate Committee on Growth Management Policies has been created to provide interstate policy recommendations to the Southern Growth Policies Board, the first year's activities should be directed toward the provision of recommendations to the Commission on the Future of the South. The topics which the Interstate Committee on Growth Management Policies should address during 1974 include, but do not have to be limited to, the following:

- for the period 1975-1980 -

1) federal/state/local administrative and legal structure for managing area growth.

2) definition of legal and economic incentives or impediments to growth management policies.

3) relationships between optimum energy distribution and use and growth patterns.

4) planning techniques and systems for shaping growth at the intrastate as well as interstate level.

5) growth management policies or technical systems to be used at the interstate level.

6) role of the citizen in the growth management process.

7) specification of areas and issues where further research is needed in order to recommend policies at the interstate level.

John Egerton

Deseg 1-1-1

This is the post-segregation era in American public education, and from Florida to New York to California, communities everywhere are experiencing the traumatic shock of a series of second-generation school desegregation problems.

The first generation began with the Supreme Court's famous Brown decision in 1954 and lasted 15 years. It was, for the most part, a Southern phenomenon, and its protagonists were segregationists fighting to maintain white supremacy and abolitionists whose aim was to eradicate segregation.

By about 1969, the abolitionists had achieved victory on paper. Segregation as a philosophical article of faith had been deflowered, dual school systems were falling all across the South, and biracial schools had become commonplace.

But the first generation was only a prelude. It was a head-to-head confrontation between one set of powers pledged to maintain and preserve a segregationist past and another set determined to introduce an integrationist future. The second generation, still just dawning, is infinitely more complex. It has to do not with abolition, but with creation--the creation of an equitable and integrated educational system of high quality for all children--and because it is always easier to destroy than to create, this generation of racial issues and problems in the schools promises to be long and difficult.

The first period of the post-segregation era had to do, quite simply, with moving warm bodies. Against a succession of defenses--interposition, nullification, states' rights, freedom of choice--an allied force of civil rights groups, government agencies and the federal courts pushed for school closings, rezoning, majority-to-minority transfers and finally busing to get

more

black and white children out of racially isolated schools and into classrooms together. And because it was only the Southern and border states which had laws requiring segregation, it was in those states that the major fighting over schools took place.

What has been happening in the past few years is of a different character altogether, and the full dimensions of it are not clear even yet. For one thing, the distinction between de jure and de facto segregation--between the South and the rest of the country--has become so blurred as to be meaningless. Segregation has come under attack in almost every state, and segregation in some Northern cities--Chicago and Detroit, to name just two--is now far worse than anything the South still has. There are even emotional and sometimes violent confrontations between white adults and black children, and theatrical stands in schoolhouse doors, all reminiscent of Little Rock and Tuscaloosa--but happening this time around in Pontiac and San Francisco and Brooklyn.

But the most significant and disturbing difference in the changed nature of school desegregation problems is not to be found in the logistical rearrangement of school children, or even in the super-charged dispute over busing. The real problems now--the second-generation problems--are in Phase II, after abolition. They can be reduced to a single question: How do you create stable, equitable, racially and socio-economically integrated schools that deliver high-quality education to all children? If there is a school system anywhere in the country that represents a functional answer to that question, it has escaped the attention of legions of searchers.

The manifold problems of school desegregation in Phase II are not susceptible to model solutions. Conditions and circumstances differ so greatly from state to state, city to city, school system to school system, that the very notion of a

national formula for equal educational opportunity seems ludicrous and naive. There used to be one basic problem: racial isolation, one-race schools, and the inherent inequality in that arrangement. Significant numbers of one-race schools still exist--more outside the South than in it--but for all the furor over busing in the urban communities of the nation, neither the racial isolation nor the busing are the really critical issues now. The most difficult and the most seemingly insoluble problems revolve around what happens after the isolation has been ended.

What can be done about white flight and resegregation, about the long legacy of isolation and social insest, about the class struggle and the clash of cultures? What can be done about the inexperience and unpreparedness of adults, and the impetuous hostility of children under pressure? How can democracy be made understandable or believable or workable in an institution that is basically authoritarian? What can be done about the cumulative effects of discrimination and inequality? What can be done about a curriculum that was designed to prepare white children for life in a white society--and didn't even do that well enough? What can be done for children for whom violence is almost a way of life, for whom discipline and order and delayed gratification and material comfort are not part of their experience? And what can be done for children who have known nothing but comfort and affluence, sheltered and isolated from anyone of a different race or class or culture? What can be done about ingrained, bone-deep white racism--the worse when it is unconscious and unintentional--and about seething black animosity toward whites? What can be done about teachers who teach subjects instead of children, and parents whose expectations are built around test scores and grades rather than knowledge and understanding? These are the kinds of issues that permeate second-generation school desegregation. They are apt to plague public education for a long time to come.

more

Busing, an object of so much abuse in recent years, is a sort of symbol of transition between the first and second generations, a vehicle that connects the past with the present and future. Busing, it has now been said a thousand times, has been a welcome and fully accepted fixture on the American school scene for over 50 years, and it was never seriously opposed until desegregation entered the picture. But it is not only a mechanical means of shifting school children out of racial isolation and into desegregated schools; it is also the last in a long line of techniques that have been used to reduce racial isolation, and it is clearly an essential tool in that process. The anti-busing movement has galvanized the basic interests of a wide variety of people, from avowed white racists to black separatists to elitist intellectuals to class-conscious suburbanites to people who simply don't want to be inconvenienced. And as newly desegregated schools have been jarred and shaken by a disruptive introduction to the complex problems of Phase II, the impulse has been to attack busing, to cut off the lifeline of desegregation, to send the children back into racial isolation--and to defer until later the facing of the consequences of that action.

Nothing but idle speculation can be brought to any consideration of what President Nixon or the Congress or the Supreme Court might say or do about busing. For the present, it is being widely used as the basic mode of school transportation and as a vehicle of desegregation. It need not be discussed further here, for the subject under consideration is not the shift from segregation to desegregation, but the conversion from desegregation to integration--this is, in other words, a paper about making desegregation work, rather than about simply making it possible.

Not only laymen but educators as well have been slow to grasp the significance of the changing nature of school desegregation problems and issues. One reality not often recognized is this: More than a century of bitter experience has taught all but the most unreconstructed segregationist that racial isolation has been a

more

monumental failure in education; it has created many problems and solved practically none. And one of the problems it has created is the general unpreparedness of many--perhaps most--Americans to function effectively in a multiracial setting. Desegregation thus has not been a magic solution to the problems of segregation; on the contrary, it has often opened up a whole new bag of problems. People in the schools have felt trapped between an unworkable precedent and a threatening antecedent, and they have had nowhere to take shelter. In the ensuing clash, the casualty rate has been high.

As difficult as the transition has been, however, it appears that the only viable option open to most American school systems is to press on to the achievement of integration and equity. There is nothing in the record of our history to justify a return to segregation, or to suggest that the nation's white majority would ever seriously attempt to make "separate but equal" work to the benefit of the nonwhite minority. Unless some new and as yet undiscovered alternative is found--some third choice that manages to neither segregate nor integrate the society--integration will be the only way out. Even though no school system has yet established a model for integration, some are clearly headed in the right direction. What must be recognized is that the process will be halting, glacial, fraught with peril, erratic, deceptive. Segregation in public education was enforced and entrenched over many long decades. Weeding it out root and branch and replacing it with an equitable and effective integrated system of education will take some changed attitudes, some new ideas, some funerals, and some time--not months but years.

One major difference between school desegregation issues now and a few years ago can be seen in the lineup of decision-makers. In the early stages of desegregation, when segregationists were fighting integrationists for control, the key decision-makers were found in the federal courts, in the Justice Department

and HEW, in civil rights organizations, and in community power structures. Today, it is school boards, administrative staffs, specialists and technicians and experts who make most decisions. As the issues have become more complex and more fragmented, there has been a marked shift not only of school populations, but also of reform constituencies, of pressure groups, and of influence and control. The locus of power has shifted from legal and political technocrats to educational technocrats--and that change cannot always be viewed as a completely unmixed blessing.

From the standpoint of students, parents and interested citizens outside the educational establishment, the change in decision-making, control, and informal governance in public education means very little: They have seldom been consulted or involved, no matter who was in control. To a lesser extent, the same can be said of teachers. Yet it is these very people--students, teachers, parents--who carry the major burden of responsibility for finding workable solutions to the second-generation desegregation problems in the schools. Whether or not they possess the power to make decisions, they are the ones most directly affected, and they will determine the success or failure of whatever decisions are made.

The civil rights groups and other organizations that brought pressure to bear on school systems in the first phase of desegregation are not much in evidence now; most of them have turned to other issues, or disappeared altogether. Whether national, regional or local, whether left or right of center, these organizations drew their strength from constituencies committed to the defense or the destruction of segregation, and when segregation ceased to be the overriding issue, the constituencies began to splinter and dissolve. Today, it is rare to find an organization with a long history of involvement in the school desegregation issue still active on that front. The NAACP Legal Defense and Educational Fund, the American Friends Service Committee and the Southern Regional Council are

exceptions, and even they have found it difficult to adjust to the changing issues and audiences. On the right, the once-feared Citizens Council is no longer a potent force, and even the anti-busing groups that have sprung up have tended to be transient, one-issue phenomena. Local citizens groups supporting desegregation and busing have been no less temporary.

It is true that George Wallace rose to national prominence on a platform anchored by a rigid anti-busing plank. But Wallace still symbolizes the resistance to first-generation desegregation--his freedom of choice-neighborhood school-no busing stance has little if anything to do with the reality of biracial schools, and everything to do with preventing them. Still, Wallace probably has the biggest following of any politician in the country, not excepting Richard Nixon and Edward Kennedy, and he has built that constituency around racial, social and cultural issues that are manifest in the public schools.

The "average man" Wallace has championed so effectively is the white working man whose children constitute a national majority in the public schools. He feels threatened not alone by desegregation and rising black enrollments but by the rising cost of education, the lack of Bible-reading and prayer in the schools, the advent of sex education, the decline of indoctrination and rote learning, the loss of rigid discipline, the changes in hair styles and modes of dress, the flight of the affluent to suburban and private schools, the demise of patriotism, the increase in drug traffic--in short, by all the manifest changes in the national culture. The schools are a reflection of the society, and Wallace has articulated the malaise of a large segment of the population that sees the society slipping rapidly from its grasp.

After the white working-class group represented by Wallace, the next largest group in the public schools is the burgeoning black minority, and on educational

issues it has no such visible spokesman. But blacks feel just as threatened and beleaguered by what is happening to them in the schools as the white middle Americans do--and usually for different reasons. For many blacks, desegregation has been more of a curse than a blessing. It has meant the demotion of principals and administrators, the dismissal of teachers, the closing of schools, the loss of student leadership roles, and a pervasive loss of black identity. And, it has meant painful exposure to a wide gap in academic achievement, to a white-oriented curriculum, to a white-dominated environment, and to a discriminatory system of discipline.

It is risky business to deal in generalities about large groups of people. Blacks and working-class whites do not constitute the entire American public school population by any means. Furthermore, not all blacks have been affected in a negative way by desegregation, not all whites are threatened by desegregation and other changes in schools, and not all schools are foundering in the debree of colliding cultures. But at the very least, the dissatisfactions of many black Americans and middle-American whites with the state of public education are symbolic and representative of what ails the schools. How the schools manage to serve these two groups, and how the groups manage to adjust to each other and to the swiftly changing society about them, are matters that reach to the heart of the educational system in Phase II of the post-segregation era.

INTRODUCTION

Your child comes home from school with an armload of textbooks. They are the basic tools of learning, the implements which connect the student and the teacher in a formal educational experience. You invest a lot of time and money and hope in that experience. But if you are a typical parent, you also assume without much question that your child's textbooks are the right tools; you take it for granted that they have been created, produced, selected and distributed in such a way that their appropriateness and their effectiveness are guaranteed. Textbooks are like prescription drugs: taken as directed, and taken on faith.

The purpose of this handbook is to give you something more than faith as a basis for understanding school textbooks. It is an introduction to many of the questions--and some of the answers--that go together to provide a description of the textbook process. Reading this booklet won't make you an expert on textbooks, but it may help you begin to see how and why your child's books were conceived and chosen, and it may help you to make some informed judgments about their value and their utility.

The process by which a textbook moves from conception to classroom use is intricate and complex, and it differs greatly from state to state, and even from school district to school district. The Southern Regional Council has prepared a background report which examines that process in some detail. This handbook, as a supplement to the research report, is designed to help you

determine who to ask and what to ask in order to become informed about textbooks in the schools of your state and your community.

THE PROCESS

A junior high school student enrolled in a course in American history is issued a textbook, and that book becomes the principal resource in an exchange of information and ideas and experiences between the classroom teacher and the students. The teacher may make use of other resources--newspapers, magazines, television, films, visiting speakers, field trips, library materials, other books--and it is proper to ask what is chosen, and why. But for now, consider just the textbook: Who wrote it? Who published it? How new is it? Why was it chosen from among the numerous textbooks on American history that are available to junior high schools? Who chose it? How was it chosen? Have there been any informed evaluations of its content, its style, its overall approach to the subject or its effectiveness as a tool of instruction? How much did the book cost? How long will it remain in use? What is the procedure for replacing it with a revised edition, or with an entirely different book on the subject?

These are some of the questions that can be raised about textbook content and selection, and they are pertinent to every book, regardless of its grade level or subject. As a means of getting at some of the answers, here are a few observations and some suggested points of inquiry:

<u>Money</u>: The Educational Products Information Exchange Institute in New York estimates that only 1 per cent of the public school budget in the United States is spent on textbooks and other instructional materials--yet about 75 per cent of a child's time in school is spent with those tools. Even so, the schools buy

almost one billion dollars worth of teaching equipment every year (about half the money goes for textbooks, and the rest is for a variety of instructional materials). To put it another way, an average of $10 is spent on textbooks for every American school child, and another $10 per child is spent on such things as library books, audio-visual equipment and the like. Most of the money comes from state governments, but local and federal government expenditures are also included, and some sales are made directly to individuals--parents of private school children, for example, and parents of public school children in the few states which do not provide textbooks free of charge.

What can be bought with one billion dollars? The EPIE Institute estimates that there are 17,000 elementary and secondary school textbooks on the market--and 200,000 different instructional materials of all kinds.

Narrow the economic focus to your own area of interest: How much does your state (and your local school system) spend on textbooks? What percentage is that amount of the total educational budget? How much does it figure out to per child? How much of the money comes from the state, and how much from local taxes, and how much from federal aid programs? And how do the figures compare with those of neighboring communities and states? Your state department of education and your local school board staff have specialists who can answer these questions.

Hardly anyone disputes the often-repeated assertion that the amount and percentage of expenditures for textbooks and teaching materials is insufficient to equip schools and school children with the tools they need to maximize learning. With the average cost of new textbooks now standing somewhere between $5 and $10 each, the amount of money available is hardly enough to buy an average of two new books a year for each child--and of course the maximum and minimum expenditures which combine to produce the average reveal vast inequities. When you compare your state and your local school district with the national averages cited above, you will be able to get an idea of the relative adequacy and equity of the expenditures.

Laws: Every state in the nation has its own laws governing textbook content, selection, distribution and regulation, and the differences in those laws are

so vast as to defy comparison. About half the states (including all eleven Southern states) have commissions which are responsible for administration of textbook programs; the rest--so-called "open adoption" states--leave all matters of choice and purchase up to the individual school districts. In varying degrees, state laws regulate such things as the number of books available for adoption, the number of years adoptions remain in force, the procedures for selecting books from the approved list, and the procedures publishers must follow in offering their products for consideration.

Some students of textbook law believe the states which have no textbook commission suffer from the total absence of regulation; in such laissez-faire situations, faulty products may find their way into the classroom more easily, and some school systems--particularly the smaller ones--have neither the time, the resources nor the expertise to make the wisest choices from the array of books and materials offered to them. On the other hand, excessive regulation appears to be a fault of many textbook commissions; some of them leave very little latitude of choice to the local school systems and individual schools.

Surprisingly, few states seem to have found a satisfactory middle ground between too much regulation and not enough, and no state in the nation can fairly be said to have evolved a body of textbook law that can be called ideal or held up as a model for other states to follow.

The Southern Regional Council background paper on textbooks provides some thumbnail comparisons of most of the states which have commissions. You can add to your own understanding of textbook law in your state by visiting your commission office in the state department of education and asking for a copy of the relevant law and the printed policies and regulations of the commission. Your local school board may also have written policies and procedures governing its own textbook program. The National Association of State Textbook Administrators is made up of

the state department of education officials in 22 states who serve as staff directors of textbook commissions. The names, addresses and phone numbers of those officials are listed under SOURCES AND RESOURCES in the back of this handbook.

Publishers: There are dozens of commercial enterprises producing textbooks and other educational materials for the school market, and they range from small outfits with a limited range of specialized offerings to giant firms which are themselves only a part of even larger business conglomerates. Most textbook companies competing for business in your state have resident representatives who handle their sales campaigns, and in many states, the publishers' representatives have an organization of their own. By reviewing the textbook laws and talking to the state textbook administrators and the representatives of the publishers, you can learn much about how the process of selection works in your state. Here are some questions you might want to pursue: How do publishers decide what books to publish? How do they choose authors and consultants? Do they have their own research and development programs? Once their new books are published, how do they go about selling them to state textbook commissions, and to local school systems?

When the state buys textbooks for the schools, the transaction necessitates a close connection between three separate institutional segments of society: politics and government, free enterprise capitalism, and the educational system. Inevitably, the different motivations and objectives of those three institutions sometimes come into conflict; what the schools attempt to teach is not always consonant with what the politicians want to be taught, or with what the publishers have to sell. One need only consider such issues as the "new" math, the theory of evolution or the portrayal of minority groups to see that decisions about what is taught and how it is taught are not made in a vacuum. Learning who the

decision-makers are, and what influences those decisions, should give you some insight into how textbook content is determined--and why certain books are chosen and others are not. Rarely are those decisions exclusively political, or commercial, or educational; behind every completed textbook there is a sizeable cast of actual or possible participants. Consider again that junior high school history book as an example: In one way or another, the contributors to it may include historians, writers, researchers, learned societies, government agencies, foundations, teachers, administrators, consultants, textbook commissions, publishers, legislators, professional associations, reviewers, evaluators, parents and students. (Ironically, the least likely of all those to be involved is the ultimate consumer--the student.)

In one sense, the publishers of textbooks respond to the expressed needs and wishes of their customers--they produce what there is a demand for. But the publishers are also competing with one another for business, and their own research and development activities are sometimes more attuned to future trends and styles than are those of the various academic disciplines. It may be more important, therefore, to inquire about what publishers and educators are planning to produce than to review what is already in use.

Selection: With so many textbooks and instructional materials on the market, the process of choosing is of critical importance. You may want to ask: What is the makeup of the state textbook commission? How are its members selected? How do they go about reviewing all the materials available? In making up approved lists from which school officials can choose, whose advice do they seek? How many different books in a given subject and grade level do they approve? At the local level, how do school administrators and teachers go about choosing from the approved list? Do parents and students have any opportunity to participate

in those choices? Do publishers have an opportunity to present their products to the commission and to local educators? How is the contact between publishers' representatives and state and local school officials regulated? Do small publishers as well as large ones have a chance to get their products on the market? Is there enough variety in the materials on the market to give local educators a realistic opportunity to make choices that closely suit their particular needs?

Textbook selection is often complicated by state laws or local ordinances that limit what can be taught, and also by attitudes and beliefs and customs that are unofficial but nonetheless dominant. Some states require the teaching of certain courses--state history, for example, or Americanism; other subjects such as sex education, may be prohibited. There was a time--and not so many years ago--when publishers of American history textbooks often provided a different version in the South than they sold elsewhere in the country, because whites who controlled the educational and political systems demanded it. There have been some changes in the presentation of racial and ethnic minorities in social studies textbooks in recent years, but there is still a considerable amount of unresolved controversy on that subject. A number of national organizations, including the National Education Association, the American Federation of Teachers, the National Council for the Social Studies, the Anti-Defimation League of B'nai B'rith and the Council on Interracial Books for Children, have made studies of textbook content as it relates to racial and ethnic diversity, and their findings should be useful to you in evaluating textbooks in your state and community.

Conflicting interests make the selection of textbooks a difficult task. Nevertheless, it is of paramount importance that the people who make the selections be representative of the people who must use what is chosen, and it is also essential that the selectors have the widest possible range of materials to choose from. What is chosen depends in large measure on what is available from the

publishers--and what is subsequently made available to local school systems by the textbook commissions.

Evaluation: Choice implies judgment. The people who make textbook decisions must be concerned about such things as cost and durability and appearance, but none of these is as important as content. Is the material consistent with the objectives of the school system? Is it presented in such a way that it can reasonably be expected to attract student interest? Is it organized clearly and effectively? Does it provide supplementary aids to the teacher? Has the material been adequately pretested with students to determine how they respond to it and what they derive from it? Does it promote critical thinking, or simply convey a set of facts? Is the material fair and representative and equitable insofar as it relates to various racial and ethnic and socio-economic groups?

And once again, it is necessary to ask who is in a position to answer these questions. The publishers should be able to provide partial answers. The commissions, with the aid of advisers and consultants and readers, should also be able to draw some conclusions of their own. And people in the local school systems--administrators, teachers and students--should have an opportunity to formulate their own answers. There is admittedly some risk in permitting individuals and groups from outside the educational system to have an input in the evaluation process, but within reasonable limits, it seems a risk worth taking. For good and ill, what the schools teach is a reflection of what the society values. That fact partially explains the perennial controversies that crop up here and there over such things as sex education and library books and reading lists for literature courses; it also helps to explain why the exclusion of minority groups from social studies textbooks is a less serious problem than

has had a long-standing interest in education issues, and the same may also be true of other organizations in your community. As for where you might find interest and expertise outside your area, here are some suggestions:

SOURCES AND RESOURCES

* The National Education Association has several divisions involved in matters that relate, directly or indirectly, to textbooks. The Teacher Rights Division, for example, has recently published a checklist for selecting and evaluating U. S. history textbooks. Write the NEA (1201 16th St., N. W., Washington, D. C. 20036) and ask for information on what they are doing, and what you can do to gain a better understanding of the textbook selection process.

* The Educational Products Information Exchange Institute (386 Park Avenue South, New York, N. Y. 10016) evaluates textbooks and other educational materials and reports its findings in a newsletter, a more detailed product report, and other publications. Write them for information and subscription costs.

* The Council on Interracial Books for Children (29 West 15th St., New York, N. Y.) is engaged in a wide range of activities related to the portrayal of minority groups and women in textbooks. The council is currently sponsoring a series of seminars and workshops in those areas, and it is also preparing a detailed guide for evaluating books.

check address + zip code

* The Association of American Publishers publishes annual statistics on textbook sales in the United States, and also publishes, alone or in collaboration with others, some valuable reports on textbooks selection. It has a standing committee working jointly with the NEA, and it has similar ties with the National Association

of State Textbook Administrators. The offices of the AAP are at One Park Avenue, New York, N. Y. 10016.

* In 1969, the Institute for Educational Development in New York, with funds from two foundations and the U. S. Office of Education, published a massive study entitled "Selection of Educational Materials in U. S. Public Schools." It is a bit out of date now, but still contains some valuable information. Unfortunately, the study is no longer available in printed form, but it is included in the ERIC microfiche information system of USOE, and many college libraries have it in that form.

* A number of magazines and periodicals have published informative articles on textbook content and selection from time to time. Among them are Learning, Phi Delta Kappan, American Education, Saturday Review, Integrated Education, Today's Education (NEA), the journal of the American Federation of Teachers, Scholastic Teacher, and Phylon. (?)

* The National Association of State Textbook Administrators is made up of the state department of education officials who handle textbook matters in those states which have textbook commissions. Here is a list of the members of the association:

list to come

#

According to a press release from the National Education Association, Americans spend twice as much money on food for their dogs and cats as they do on textbooks for their children--in round figures, one billion dollars a year on pet food and half a billion on textbooks.

The NEA used those arresting statistics to call attention to its issuance, with the Association of American Publishers, of a set of guidelines on the selection of instructional materials. "If Johnny and Jane can't read it may be because they don't have the books, or if they have the books, they may not be the right kind," the press release said.

There is little doubt that many Johnnies and Janes can't read, or that some of them don't have books, or that others have the wrong books. And, there is apparently not much doubt that the nation's pet lovers take good care of their own--perhaps even better than the nation's kid lovers.

Nevertheless, American book publishers sold 150,000,000 textbooks in 1971--an average of three for every child in school--and the half-billion dollars in sales figures out to $10 per child. However well the dogs and cats are doing, it is obvious that the textbook industry is booming--sales are up almost 100 per cent in 10 years, and these figures are just for elementary and high schools. The college market has tripled in the past 10 years, and in 1971 it amounted to $379,000,000 in sales.

How the $10 per elementary and secondary school child is spent, what it buys, and how well it serves the educational needs of the children are the principal concerns of this report. The inquiry is focused in 11 Southern states, with the textbook administration practices of Tennessee receiving detailed

attention. While the report is far from a comprehensive examination of the delivery and utilization of educational materials, it does raise some basic questions about the process, and in a few instances it suggests some possible answers to those questions. The operations of publishing firms, local school systems, and state and federal education agencies with respect to materials of instruction are so complicated and multifarious that it is difficult to place them in any sort of comprehensible perspective. These are some of the factors that cloud the picture:

* Textbooks, traditionally the basic and exclusive tools of classroom instruction, are now only one of many such tools. Instructional materials now include television, audio-visual and multi-media devices, standardized tests, softbound printed matter for such uses as individualized instruction and programmed learning, library books, reference materials, maps and charts, records and video tapes, academic games and other resources. The pell mell growth of educational technology is opening up exciting new options for teachers and learners, but it is also bringing serious confusion to the processes of previewing, selecting, utilizing and accounting for educational materials.

* About half of the states have commissions or committees which screen and evaluate textbooks and publish approved lists from which local school systems must choose. The rest of the states leave these matters entirely to the local districts. Practices in the so-called "open" or local option states vary widely, and in the "adoption" states (those regulated by commissions), there is an equally diverse range of activities and procedures. Some commissions are made up entirely of professional educators; membership on others is partially or exclusively reserved for non-educators. The size of commissions, methods of determining membership, length of terms, and provisions for serving more than one term differ greatly from state to state. There is no pattern to what the commissions concern themselves with:

Some concentrate exclusively on hardbound, non-consumable textbooks for classroom use, while others consider the entire range of instructional materials to be within their purview, and still others draw the line somewhere between those poles. Some commissions are granted by law the sole authority for approving or disapproving textbooks; others are merely advisory bodies for the state department of education. Some commissions have open meetings and public display of materials under consideration, and others operate without any public scrutiny at all. In some states, textbooks are adopted annually, while in others the adoption period may be as long as six years, and some commissions approve only a few books for each subject and grade, while others place no limit on the number. And finally, some commissions make special provisions for annual additions to the approved list and for experimental programs using materials not on the list; others are far less flexible.

* There is a marked trend in the publishing industry toward absorption of book companies by multi-purpose conglomerates, and an accompanying trend toward diversification of products. Industrial giants such as the Xerox Corporation, General Electric and Litton Industries have been acquiring independent publishing houses and, with the aid of new technology, expanding their products and services.

* The delivery of textbooks and other teaching materials is becoming more complex. Some states maintain their own depositories; in others, that is a function handled by the publishers or by other private firms. In some states, the purchasing of textbooks is centralized; in others, local school systems do their own purchasing. Most states provide free textbooks, but a few sell or rent them to students, necessitating the involvement of private vendors or book exchange facilities operated by the schools. And some states provide textbooks to both public school and private school students. That practice is being challenged in the courts.

* The economic dimension of the educational materials enterprise is larger, more complicated and more difficult to interpret than ever before. The doubling

of textbook sales in the past 10 years is only one part of the picture; in addition to the half-billion dollars spent on textbooks last year, the schools spent an undetermined amount--perhaps as much as another half-billion--on library books and the whole range of supplementary instructional materials. The money used for all these purchases came from a combination of local, state and federal sources, and there is no uniform means of accounting for the funds. Where textbooks are concerned, most states make allocations based on enrollment or average daily attendance. But many local school systems supplement those funds with allocations of their own, and there are several federal aid programs which permit funds to be used for textbooks. All of these sources require a separate accounting. Furthermore, many states have more than one budget line under which teaching materials may be purchased; for example, there may be one category for textbooks, another for supplementary instructional materials, another for teaching supplies, and still another for library and audio-visual materials. As a consequence, it is sometimes almost impossible to determine with finality how much a state's public schools have spent for all the books and other teaching tools that are an integral part of the instructional program. Almost invariably, state figures on textbook purchases differ markedly from industry figures on textbook sales--and for teaching materials other than books, there simply aren't any comprehensive figures available, either from the states or from the industry.

All of these complications--the shift from single textbooks to a multiplicity of teaching tools, the wide variety of regulatory practices, the effects of merger and of technology in the publishing industry, the problems of distribution, the lack of uniform and reliable accounting practices--add to the difficulty of any attempt to examine the American textbook and educational materials enterprise. But even the most cursory inquiry leads to some tentative observations and conclusions, half a dozen of which are noted here and will be elaborated upon

later in this report:

* In spite of the large and growing national expenditure for textbooks and other teaching materials--and in spite of the obvious fact that some of the money is spent unwisely--many school systems do not have sufficient funds to supply all of their students with the basic textbooks required by the curriculum, let alone with the supplementary materials needed to enrich their education.

* There is a gross inequity in the amounts the various states spend on textbooks--some spend more than twice as much per child per year as others--and the disparity is even greater between affluent school districts and poor ones.

* Some states are too restrictive in their regulation of textbooks, giving local school districts too little to choose from and requiring adopted books to remain in use for too many years; other states are too lax, giving local districts far more latitude than they have the time, the money, or the sophistication to use wisely.

* There is hardly any regulation at all of the educational hardware being produced with such rapidity--the electronic, computerized systems and gadgetry of the technological age. Most of it finds its way into the classroom without having been sufficiently field tested, and in any event, far too few teachers are prepared to use the materials effectively.

* Neither students nor parents have any involvement to speak of in the process of selecting textbooks and other educational materials for use in local schools, primarily because teachers and administrators are reluctant to share the responsibility.

* The movement of publishers toward a more balanced and equitable portrayal of racial and ethnic minorities in literature and social studies textbooks has been slow and cautious. Only in the past three or four years have significant

changes become evident, and further efforts will be necessary before an accurate and honest presentation is achieved.

One reason for the difficulty in examining textbook and educational materials practices of producers and consumers is that there is so little communication and coordination among the states, the local school systems, the publishers, the federal government, and the various independent agencies and associations having an interest in the subject. Twenty-two states are represented in the National Association of State Textbook Administrators, but most of the ones which do not have a state textbook commission are not included because they have no administrators primarily responsible for textbooks. The Association of American Publishers has a joint committee with the state textbook administrators' association and the Book Manufacturers Institute, but it meets infrequently. The AAP also cooperates through committees with the National Education Association, and that relationship has produced some useful reports on procedural guidelines for selecting educational materials, minority representation in textbooks, and state restrictions impeding the selection of educational materials. Two foundations and the U. S. Office of Education had a hand in the 1969 production of a major study of selection practices undertaken by the Institute for Educational Development, a New York research agency. (IED at that time was headed by Sidney Marland, now U. S. Commissioner of Education.) Other organizations, such as the Anti-Defamation League of B'nai B'rith, the American Federation of Teachers and a number of civil rights groups, have paid particular attention to the treatment of minorities in texts. And another New York organization, the Educational Products Information Exchange Institute, has emerged as a sort of consumer protection agency to evaluate and preview new books and materials coming on the market.

But there is remarkably little intercourse among those groups. The AAP's

Hunt Report, an annual statistical summary of textbook sales compiled by the publishers, is an invaluable resource, but some state textbook administrators have never seen it. The IED study of selection practices can be found on microfiche in the U. S. Office of Education's ERIC information storage system, but copies of the report itself cannot be obtained from IED, and again, there are state textbook administrators and others interested in the subject of the report who have never heard of it. The Educational Products Information Exchange is the only independent evaluator of educational materials in existence, but most of the nation's schools and school systems do not profit from its services because they don't receive the institute's reports and newsletters. EPIE has been trying to get state departments of education to support its work, but only two--New Jersey and Pennsylvania--have agreed to do so. The NEA has done some excellent research work on the subject of textbooks, but it has no connection with such groups as the National Association of State Textbook Administrators. Millions of dollars in federal funds are used each year to purchase textbooks, library books, audio-visual equipment and a variety of other teaching materials, yet USOE does not evaluate the quality of those purchases or their effectiveness in the teaching process.

And so the transactions in the educational marketplace proceed apace, without any unifying sense of purpose or direction. The principals in this enterprise--the producers, the regulators, the evaluators, the distributors, the purchasers and the consumers--understand their own roles well enough, but they know too little about the contributions of the other parties.

For a closer look at how some of the component parts of the system work, the following summaries and sketches may be helpful.

Among the member states in the National Association of State Textbook Administrators are the 11 Southern states and 11 others. First, a summary of regulatory practices in some of the non-Southern states:

New Mexico: The State Board of Education vests executive control and management over the purchase and distribution of free textbooks and accompanying materials in the office of the State Textbook Director. Evaluating committees for the various grade levels and subjects are appointed by the Board of Education, and the board adopts a multiple list of books for each grade and subject, based on the recommendations of the committees. Adoptions are for a six-year period. Local school systems choose basal textbooks from the state's approved list. Purchases are then made by the State Textbook Division for the local systems.

Utah: The State Textbook Commission and Course of Study Committee is made up of the State Superintendent of Public Instruction, the deans of two state colleges of education, three local school system superintendents, and five lay citizens. With responsibility for determining courses of study and approving the textbooks to be used in them, the commission/committee combines curriculum develop with the process of selecting materials of instruction. Advisory committees of educators are used to evaluate textbooks and other kinds of teaching materials deemed to be "integrated instructional packages," or multimedia systems in a comprehensive set. Adoption is for a four-year period, but new books in all areas are considered for adoption each year, so that additions can be made annually. Local systems make their selections from the approved list. Provision is also made for pilot use of new texts prior to their adoption.

Kentucky: The State Board of Education appoints the Superintendent of Public Instruction, five classroom teachers, two school administrators and one professor of teacher education to the State Textbook Commission. The commission selects 10 books in each subject and grade, with no more than two in each list of 10 being from the same publisher. If less than 10 are offered for adoption, no more than one may be from the same publisher. Adoptions are for four years.

Local school systems then select one basal text from the state list for each subject and grade, and if no selection has been made by a designated deadline, the commission makes the selection for the school systems. Textbooks other than those on the state list may be used, under certain conditions, for instructional experimentation. Before a local school system can make multiple adoptions for a given subject or grade, it must have special permission from the State Board of Education. Up to 20 per cent of a school district's textbook funds received from the state may be used to purchase audiovisual materials, a variety of classroom resources, and other books not on the state's multiple list. The supplementary materials are purchased at the discretion of local officials, and unlike the basal texts, they are not subject to preview by the State Textbook Commission or any other body.

Oklahoma: The Governor appoints two educators from each of the state's six Congressional districts to serve on the State Textbook Committee. The four-year terms are staggered, and no member can be reappointed after his term expires. State law specifies that textbook adoptions shall be for not more than four years, and that no more than seven books or book series may be chosen for any subject or grade. The word "textbook" is defined in the law as including "all printed materials intended for use in teaching." Additions to the approved list are permitted only if seven books have not already been listed. Adoptions from the state's multiple list by local school systems are made by committees made up of three to nine teachers, one administrator, and one lay member.

New York: Local boards of education have the primary responsibility for textbook selection. Each superintendent appoints committees of teachers and administrators to select teaching materials for each grade and subject. The state makes a per-pupil appropriation for textbook purchases in each district, but there is

no state commission which lists approved materials.

Idaho: The State Textbook and Improvement of Instruction Committee screens, evaluates and recommends textbooks for adoption to the State Board of Education. Four teachers, three school administrators, three State Department of Education officials and three college educators comprise the committee. There is no limit on the number of books the committee may approve. Adoptions are for a five-year period, but new books or book series published within two years after an adoption may be approved by the committee and added to the list. Local school systems must choose their basal textbooks from the approved list. The committee also publishes annually a list of approved supplementary book materials. With permission from the State Department of Education, local school systems may carry out experimental programs using materials not on the approved list.

California: Unlike all the other states, California leases printing plates from textbook publishers and publishes its own books, rather than buying them directly from the publishers. In July of this year, the state legislature passed a comprehensive instructional materials law. Under the new law, local boards of education are authorized to adopt, purchase and distribute textbooks free of charge to all high school students (grades 9-12). For elementary school students (through grade 8), the State Board of Education will adopt no less than five and no more than 15 basic instructional materials and supplementary instructional materials for each grade or subject. Adoptions will be made every two years. A state commission will study and evaluate all instructional materials submitted for adoption and recommend to the State Board of Education the materials it approves for adoption. Prior to adoption, the board will put proposed new textbooks on public display for 30 days in designated centers around the state. The California law also deals with disposal of obsolete instructional materials,

state funding of all instructional materials, in-service training of teachers in the use of instructional materials provided by publishers and manufacturers, and selection by local school district governing boards of instructional materials on the state-approved list for elementary schools. The law also states that all public schools must choose "only instructional materials which accurately portray the cultural and racial diversity of our society," and it specifically refers to the role and contributions of both men and women in all professions and vocations, as well as those of "American Indians, American Negroes, Mexican-Americans, Asian Americans and other ethnic and cultural groups."

Oregon: All five members of the State Textbook Commission are school administrators. They are appointed to four-year terms by the State Board of Education, and they meet every two years to adopt, for a period of six years, textbooks and other educational materials in certain specified subject areas. Subsequent to any adoption, they may approve the request of a publisher to substitute a more recent edition of any officially adopted materials. There is no stated limit to the number of textbooks and instructional materials the commission may approve in any grade or subject. Local school districts select their textbooks from the state-approved multiple listing, but with the approval of the State Board of Education they may also use books not on the list. Any school district having an enrollment of 20,000 or more (and in Oregon, that means only the Portland district) may make its own adoptions, without regard to the state-approved list. All students in grades one through eight must be provided with all necessary textbooks free of charge; high school student may get their books free, or they may be charged for them. State law specifies that "No textbook shall be used in the schools which speaks slightingly of the founders of the republic or of the men who preserved the union or which belittles or undervalues their work."

Textbooks 12-12-12

All of the 11 Southern states are members of the National Association of State Textbook Administrators, and all of them have a system of state adoptions. Here is a summary of the procedures followed in some of those states:

Alabama: The State Textbook Committee has 16 members. Eight are classroom teachers, four others are either teachers or administrators, and two are college professors--all appointed by the State Board of Education. The other two members are appointed by the governor from outside the field of education. All members serve one-year terms. The state committee recommends at least six textbooks for each subject and grade (unless fewer than six acceptable books are available), and the State Board of Education, after allowing "a reasonable amount of time" for the general public "to be heard concerning any book recommended for adoption," then adopts at least four books for each subject and grade (unless fewer than four have been recommended), and the adoptions remain in force for six years. No changes are permitted within the six-year period unless recommended to the State Board of Education by the State Textbook Committee. State law expressly forbids "the use of textbooks in the public schools of the state by authors who are members of the Communist Party or members of Communist front organizations." Purchases are made through the State Department of Education. The law also guards against conflicts of interest, specifying that no person involved in the selection process, from the State Superintendent of Education to the local adoption committees, can have any financial interest in book contracts made by the state.

Arkansas: In grades 9-12, textbook adoption is left to local school systems. For the first eight grades, there are State Selecting Committees for each subject. The committees, composed of five teachers or supervisors appointed by the State Board of Education, serve for only one adoption. They recommend a minimum of

more

four books or book series, and a maximum of six books or series, for each grade, and the state board then executes six-year contracts with all publishers recommended by the selecting committees. Local schools must adopt basal texts from those approved lists. Exhibits are held in 31 centers around the state to give local selection committees an opportunity to examine all the books from which they must choose their basal texts. In the State Department of Education's published information on textbook adoption, purchase and distribution, no reference is made to supplementary texts and other instructional materials, or to the possibility of adding to the approved list at any time during the six-year adoption period.

Georgia: The State Board of Education appoints a Professional Textbook Selection Committee [redacted] each year, and the state board then makes five-year adoptions based on the committee recommendations. There is no stated limit to the number of books the committee may recommend or the board may adopt. All of the 12 selection committee members are educators. Local school systems receive their textbook appropriations from the state, and are responsible for making their own purchases from the state-approved list.

Florida: Twelve textbook councils representing the major fields and levels of instruction are appointed by the State Board of Education. The councils are made up of educators and laymen, their numbers specified by law, and they serve for one adoption period only. They recommend to the State Board of Education not more than five textbooks for each grade and subject in which adoptions are to be made. The law states it to be "legislative intent that material in textbooks used in elementary and secondary schools of this state shall not editorialize or propagandize communistic philosophy or other principles inimical to our form of constitutional government." The state board's adoptions generally follow

more

closely the recommendations of the advisory councils, and are also limited by law to no more than five textbooks for each grade and subject. Adoptions are for a five-year period, and local school systems must choose from the state list; it is unlawful to use any book not on the adopted list, "to the exclusion of a book adopted for the same subject." Textbooks are provided free to students at all grade levels, and local school systems make their purchases through the State Department of Education. Each local district may use up to 10 per cent of its textbook allocation for instructional materials not included on the adopted list. When new textbooks are adopted, the schools are required by law to continue using old books "until they are in such physical condition as to make them unsuitable for further use or until the content is obsolete."

Mississippi: The governor, the state superintendent and three educators appointed by the governor make up the State Textbook Purchasing Board. The three appointed members must be at least 30 years old. Three members of the five-member board constitute a quorum. The board hires its own executive secretary, who serves as the state's chief textbook administrator. The board has wide discretion. It adopts textbooks for periods of four to six years, and it may extend contracts with publishers for up to two additional years. To evaluate the books offered for adoption, there are rating committees for each field of study. The committees are made up of three educators appointed by the state superintendent and four persons, not necessarily educators, appointed by the governor. These committees recommend to the purchasing board three books in each grade and subject, and the board cannot adopt any book not recommended by the rating committees. (Another section of the state law apoears to be in conflict with this three-book limitation. It specifies that the purchasing board "may adopt five textbooks from those recommended by professional committees.") Local school systems, in choosing from

more

the state-approved list, can make multiple adoptions in certain specified subjects, thus making use of more than one book on the list in that grade or field of study. The board may require schools to continue using textbooks displaced by new adoptions for up to four years, or until stock owned by the state is exhausted. State law specifies that free textbooks "shall be distributed and loaned free of cost to the children of the free public schools of the State, and all other schools located in the State which maintain educational standards equivalent to the standards established by the State Department of Education for the State schools." Private schools--including racially segregated ones--are furnished books by the State Textbook Purchasing Board. The U. S. Supreme Court has agreed to hear a challenge to this practice.

North Carolina: State law provides for the appointment of a textbook commission and for the adoption of basic textbooks, but it does not say anything about length of adoption or number of books to be approved in each grade and subject. The governor appoints 12 educators to the State Textbook Commission for four-year terms--six elementary teachers or principals, five high school teachers or principals, and one superintendent. Each commission member, with the help of readers or advisers chosen by them, evaluates the books offered for adoption by the publishers and makes a written report to the State Board of Education. After a joint meeting of the commission and the board, the board calls for sealed bids on the books it has selected. Again, the law does not specify any minimum or maximum number of books the board may select in a given grade or subject, but a description of the adoption process from the State Department of Education states that "Bids are customarily received on five to eight books." The law states that the board may refuse to adopt any of the books on which it has taken bids, but it says nothing about how many contracts may be awarded or about the length of contracts. It

does permit the board, with the publisher's approval, to continue its contracts for from one to five years. The board may call for new adoptions at any time it sees fit, giving publishers 90 days notice that new books in specified subjects will be selected. Only basic textbooks are considered for adoption; the state plays no part in the selection, purchase or distribution of supplementary texts, library books or other instructional materials, except that it does allot funds to local school systems for such materials. The state maintains its own depository for basic textbooks. The effect of state laws and State Department of Education regulations is that basic textbooks are selected at the state level, and local school systems have a narrow list from which to choose. For example, fifth grade teachers around the state must choose their basic texts from a list that contains seven books in reading and English, three books each in mathematics, music and science, and one book each in social studies, spelling and health. For the eighth grade, there are seven books in language arts, five in math, three each in social studies, science and music, and one each in spelling and health.

Texas: Fifteen educators, a majority of them classroom teachers, constitute the State Textbook Committee. They are appointed to one-year terms by the State Board of Education. With the assistance of advisers, the textbook committee examines all books submitted for adoption, prepares and publishes a list of the ones it recommends, and the State Board of Education subsequently makes its adoptions from the committee's recommendations. The board adopts a multiple list containing at least three but no more than five textbooks for each subject and grade through the eighth, and a list of the same length for each high school subject. State law specifies that "the Confederacy shall be fairly represented" in United States history books used in the elementary grades. It also specifies that "no public school in the state shall use any textbook unless it has previously

more

been approved and adopted by the State Board of Education." Adoptions are made for a six-year period, and the adoption may be extended or renewed for up to six additional years.

South Carolina: Basal textbooks are provided free to pupils in grades one through eight and sold or rented to pupils in the upper grades. To assist it in the adoption of textbooks, the State Board of Education appoints the Textbook and Curriculum Advisory Committee, which is made up of eight administrators and supervisors from the public schools, five state department officials who are specialists in curriculum and materials, and one lay citizen. They serve staggered four-year terms. The board of education also appoints evaluating and rating committees for each subject in which adoptions are to be made. With respect to the number of books to be adopted in a given field, the length and sequence of adoption periods, the addition of new books to the state list, and the use of books not on the list, the regulations of the state department tend to be flexible and nonspecific. Customarily, the board of education puts three to five books on the list in each subject and grade, and contracts with the publishers are usually four years in duration. Selections from the state-approved list are made at the local level.

It is clear from these brief summaries that there are vast differences in textbook policies from state to state. The bewildering array of state laws and regulations makes understanding of the process difficult even for educators and publishers, not to mention the general population of parents and citizens who need to be informed about it.

Book publishers doing business in the several states are especially handicapped by the multiplicity of laws and regulations governing them. Almost every state has different requirements regarding bids, bonds, contracts, deposits, hearings, prices, copyrights, returns, samples, conflicts of interest, depositories, and sales representatives.

Educators--both those who make and administer policy and those who teach--may often be handicapped themselves by the complications of state law. The motives of the state--economy and efficiency, quality and equality, censorship, patriotism, indoctrination or whatever--do not always guarantee that the teachers and children in the schools will have the widest and best possible choice of instructional materials.

For all these reasons, about half of the states have not involved themselves with the adoption, selection and delivery of textbooks, and organizations such as the National Education Association and the American Federation of Teachers seem to favor "open" systems under which states stay out of the textbook field and leave selection entirely to local school systems. But there is nothing in the record to indicate that the "open" states have, in fact, a superior method of textbook selection and delivery. On the contrary, the absence of any state regulation at all often means that school systems are unduly influenced by persuasive book salesmen; that large school districts get far more attention, hence more choice, than small ones; and that more untested and shoddy books and materials get into the classrooms.

Textbooks 19-19-19

There is no correlation between the amount of money a state spends for textbooks and the amount of state-level regulation it imposes on the selection process. The only available figures on expenditures by state are those contained in the Association of American Publishers' Hunt Report, and they are an interesting study in themselves.

In the calendar year 1971, the nation's book publishers sold over $903 million worth of textbooks and standardized tests to schools and colleges in the United States and abroad. Included in that amount was $472,367,000 in "domestic textbook sales" to elementary and secondary schools-- "domestic" meaning the 50 states and the District of Columbia, and "textbook" apparently meaning hardbound and softbound texts, teachers' editions, workbooks, standardized tests, manuals and other forms of printed textual material. Only library books and "hardware" (audio-visuals, teaching machines and the like) were excluded. Breaking the figures down further, the publishers sold 99 million hardbound textbooks for use by pupils in the nation's public and private elementary and secondary schools in 1971, and those sales amounted to over $310 million.

When the total domestic sales for elementary and secondary schools--the $472 million--is laid out in state-by-state totals, the figures are revealing. Leaving aside the District of Columbia, where sales amounted to $14.62 per pupil, and California, where they totaled $5.40 per pupil, the next highest expenditures per pupil were in South Carolina, North Carolina and Mississippi, and the next lowest were in Alabama, Ohio and Maryland. (California's statistics are unrealistic because they do not include textbooks printed and distributed by the state.) The five states with the highest expenditures per enrolled student, and the five with the lowest, are shown in the following chart:

more

STATE	PUBLISHERS' NET SALES 1971	PCT. INCREASE OVER 1960-63	ENROLLMENT	SALES PER ENROLLED STUDENT
Five With Highest Sales Per Student:				
South Carolina	$ 8,839,000	166%	663,000	$13.33
North Carolina	14,539,000	140	1,216,000	11.96
Mississippi	6,672,000	152	559,000	11.94
North Dakota	1,882,000	55	162,000	11.62
Arizona	5,351,000	80	466,000	11.48
Five With Lowest Sales Per Student:				
Alabama	$ 5,969,000	51%	839,000	$ 7.11
Ohio	20,844,000	66	2,799,000	7.45
Maryland	7,894,000	99	1,052,000	7.50
Tennessee	7,152,000	70	939,000	7.62
West Virginia	3,305,000	38	417,000	7.93

Among the top five, only North Dakota is an "open," or non-adoption, state. Among the bottom five, Ohio and Maryland are non-adoption states.

It bears repeating that these figures are based on publishers' sales, and thus reflect purchases with local, state and federal funds. No breakdown is available on what amounts came from each source of funds.

The Institute for Educational Development's 1969 study, "Selection of Educational Materials in United States Public Schools," dealt in considerable detail with the statutes in the 50 states, with materials selection procedures in 10 states, and with the views of a wide range of educators, government officials and materials producers. The study, sponsored by the Carnegie Corporation and the Ford Foundation, was one of two major research projects stemming from a conference on educational technology convened by Carnegie in New York in 1967. (The other project resulted in a study entitled "Research and Development in the Educational Materials Industry.")

Throughout the IED report on materials selection, comparisons are made between adoption and non-adoption states, and the adoption states are shown to impose more limitations, impediments and constraints on the selection of teaching

more

materials. The study also makes some ratings of the states: Among adoption states, five are classified as having rigid adoption practices (North Carolina, South Carolina, Virginia, Texas and Louisiana); seven are classified as moderately restrictive (Alabama, Florida, Indiana, Mississippi, Tennessee, Oklahoma, West Virginia); and eight are rated as flexible (Kentucky, Oregon, Georgia, Kansas, Utah, Nevada, Wyoming and Alaska). Among non-adoption states, eight are said to have "laissez-faire" adoption practices (Idaho, Massachusetts, Colorado, Connecticut, Nebraska, Vermont, New Hampshire and Hawaii). The report seems to imply, perhaps unintentionally, that centralized regulation of materials selection is undesirable, while laissez-faire selection is generally the best approach. In its conclusion, however, the report says that with the exception of a few of the most rigid adoption states, "patterns of selection did not differ greatly between adoption and non-adoption states."

In February 1971, the National Education Association's executive committee established a committee to "look into the possibility of opening the textbook market in states with restrictive laws." Dr. Sidney Dorros, an NEA research consultant, brought the IED study of materials selection to the attention of the committee. He pointed out that some states, including Indiana, North Carolina and Kentucky, have liberalized adoption procedures since the 1969 IED study, and noted that even in the states with rigid or moderately restrictive procedures, "the restrictions are not quite as bad as they seem on the surface" because of loopholes that permit evasions. But he also suggested that "The writers of the IED report gloss over the seriousness of restrictive legislation."

The NEA has a resolution which "urges its affiliates to seek removal of laws and regulations which restrict the selection of a diversity of instructional materials or which limit educators in the selection of such materials." Of the 12 states the IED report classified as rigid or moderately restrictive in

their selection practices, nine are in the South.

Through committees, resolutions and research reports, the NEA has made clear its opposition to laws and regulations which limit educators in the choice of teaching materials. But in the opinion of one well-informed NEA official, the association has not been as diligent in attacking abuses in the non-adoption states. The official, who asked that his name not be used, expressed agreement with the NEA's criticism of restrictive laws, but added this: "We've ignored abuses in the open states. We haven't paid enough attention to the junk that passes for educational materials, and the states with good textbook commissions do a pretty good job of keeping it out. Some fly-by-night companies, and even some major ones, are producing shoddy, untested materials; others are selling out-of-date books and materials to the schools. There is a need for a national consumers union to test and evaluate all kinds of educational materials. The Educational Products Information Exchange is doing that on a small scale, and the educators want more of it, but the publishers and corporations resist it. Just as doctors have books listing all drugs and their good and bad effects, teachers need independent evaulations of teaching materials. We're a long way from that."

Since the financing of public education, including the purchase of textbooks and other educational materials, is primarily a responsibility of the states, it would seem from the evidence that they need neither a rigidly centralized selection procedure nor a process that permits the producers of books and materials to operate without any restraints. None of the states appears to have a model set of statutes relating to this subject. A national system of materials selection does not seem either necessary or desirable, nor does a high degree of uniformity among the states, but there is clearly room for improvement in all the states, and some state or regional efforts to draft

new legislation governing evaluation, selection and delivery of textbooks and all other materials of instruction would be timely and useful. The South, which has a history of interstate cooperation in education--as well as a history of moderate to extensive regulation through state textbook commissions--would be an especially appropriate setting for such a legislative and educational venture. Some new models of legislation, together with more independent pre-testing and evaluation of books and materials, could bring about a measurable improvement in the entire instructional process.

Independent evaluation is the primary function of the Educational Products Information Exchange Institute in New York, but its five-year struggle for survival indicates that educators and producers of educational material are not exactly clamoring for such a service. EPIE is a nonprofit corporation chartered in 1967 by the Regents of the University of the State of New York. In the beginning it operated with a planning grant from the U. S. Office of Education, but it has not been supported by any federal money since then. Several foundations have contributed to the work of the corporation, and EPIE now gets its basic operating funds from about 3,200 paying "members"--schools, school systems and other kinds of educational organizations. For a fee of $50, a member school or other agency receives nine issues a year of EPIE Report, a detailed evaluation of new books, products and other instructional tools on the market, and for an additional $15, members are sent a twice-monthly newsletter called EPIEgram. After the fashion of Consumer Reports, a highly respected and widely circulated magazine of product evaluations, EPIE is trying to establish itself in the field of education. It maintains a headquarters in New York staffed by five persons and has smaller offices in Chicago, Champaign-Urbana, Ill., Berkeley, Calif., and Princeton, N. J. With the help of about 100 consultants and 15 to 20 school systems around the country where products are tested and evaluated, EPIE is building its capacity

to serve its members. (None of the school systems that test products for EPIE is located in the South. One of the agency's consultants is John Shaver, an official in the North Carolina State Department of Education, and one member of its board of trustees is Jack D. Gordon, a Miami bank president.)

In testimony to a committee of Congress last year, P. Kenneth Komoski, the executive director of EPIE, said that in 1951 there were about 10,000 different school-focused instructional materials in use in the United States--for the most part, textbooks and films. Twenty years later, he said, well over 200,000 materials of all types made up the inventory. Komoski then estimated that "99 per cent of the materials school children are now required to use have not been put through even the initial phases of the learner-verification and revision cycle"--his words for pre-testing, evaluation, and modification--and he added that EPIE's investigation of textbooks indicated "that under one per cent of the approximately 14,000 textbooks being sold to schools has been systematically shaped through the learner tryout and revision process."

Komoski said the lack of learner-verification of materials is not entirely the fault of the producers--schools, by and large, are not interested in such information. Selection committees in the schools devote their time to product content and pedagogical approach, he said, but rarely do they ask for evidence that a given product (textbook, audio-visual device or whatever) has been tested in the classroom and proved to be effective.

To his charge that producers usually fail to conduct sufficient pre-testing of materials to verify their effectiveness, and his assertion that the selecters of materials are not sufficiently interested in their learning effectiveness, Komoski adds a third criticism: that teachers are generally unprepared to use the tools at their disposal because their training has been inadequate. In an interview, he said the colleges that produce teachers "are doing a lousy

job of preparing them even to be aware of the available tools, let alone how to use them." Teachers, he said, should be taught to be discriminating selectors and users of teaching tools, leaving most of the development and production of new tools to industry, the regional education laboratories and other groups.

Another dimension of the materials selection process having to do with the quality of teaching materials is the introduction of new or revised courses dealing with contemporary social issues. Black studies, sex education, ecology and drug abuse education are prominent examples. The portrayal of minority groups, particularly in social studies and literature textbooks, has drawn heavy criticism in recent years, and as a result there have been changes in the books, in other instructional materials, in courses, and in some laws governing what the schools teach. There has also been a flood of new "socially relevant" materials on the market, and it ranges, according to some critics, from the sublime to the ridiculous. There is, in fact, very little agreement even now on how well the new textbooks handle minority issues, or on how minority groups in American life should be portrayed.

In 1971 the National Education Association's 1.1-million-member representative assembly called on the NEA to "institute the development of a complete series of textbooks and other instructional materials planned and written cooperatively with scholars from all minority groups, in which the history of all minorities is integrated accurately." The following spring, a panel of about 25 educators, book publishers and civil rights leaders convened in Washington to discuss the treatment of minorities and women in textbooks and other teaching materials, and that group subsequently recommended to the NEA executive committee that NEA should publish, or cause to be published, a history series in which all minorities and women are represented accurately.

The panel also called for guidelines in the selection of books and materials, involvement of parents and students in the evaluation of materials, and the inclusion of materials selection as an item for negotiation in contract settlements between NEA affiliates and local school boards. And in all of these particulars, the panel stressed the need for specific attention to multi-ethnic representation in the materials.

One member of the panel--Robert J. R. Follett, president of Follett Publishing Co.--conceded that "inequitable treatment of minorities appears to be so common as to be almost the universal human condition," and he blamed the consumer--school administrators and teachers who select and purchase textbooks--for this prevalence of textbook discrimination. A 1970 study of minorities in textbooks done by Michael Kane for the Anti-Defamation League of B'nai B'rith was discussed by the panel, and there was concurrence with the conclusion of that study, which asserted that "no textbook, regardless of how inspired its treatment of any single subject may be, has been found which by itself presents a reasonably complete and undistorted picture of the many minority groups in America."

But what constitutes "a reasonably complete and undistorted picture" often depends on who you ask. In October 1972, just seven months after the NEA panel report was issued, a study commissioned by the rival American Federation of Teachers was released in Washington, and it asserted that the role of Negroes in American history is now being fairly and adequately treated in textbooks.

Irving Sloan, a Scarsdale, N. Y. junior high school teacher, wrote the report, which is called "The Negro in Modern American History Textbooks." It is the fourth edition of a study originally prepared by Sloan in 1966. In the three earlier versions, he had criticized most texts for either distorting or ignoring altogether the role of blacks in American history. But in the latest report, he said "The time has come . . . to praise what the American history

textbooks have at this point of time achieved in their treatment of black Americans." Sloan added: "Much, if not most, and in some instances all, that we critics, black and white, have been calling for through the years has come to pass."

An official of the National Association for the Advancement of Colored People, John Morsell, responded to the Sloan conclusion by saying, "It is an extravagant statement, indeed, to say that the problem has been solved." That opinion apparently is shared at the NEA, where a spokesman said the association is working now to set up guidelines for accurate and equitable presentation of minorities in textbooks, and that it will be seven or eight years before the guidelines are fully reflected in new textbooks on the market.

The question of minority portrayal, like all other aspects of the textbook and educational materials enterprise, is more easily perceived than resolved. So many different groups and entities, with so many varying and often conflicting interests, have an investment in the subject of educational materials, and all of them can be expected to try to protect that investment. The commercial producers, the research and development groups, the government officials who administer funds for instructional materials, the teachers and administrators in the schools, and the parents and taxpayers all have something to say about the tools used to teach children. Only the ultimate consumers--the children themselves--are without any effective voice at all. With so many cooks to stir the pot, it is not surprising that the educational menu being served up in American schools should be as assorted, as unplanned, or as uneven in quality as it is.

For a closer look at how the process of selecting educational materials is handled in one state, this report now focuses on Tennessee.

Textbooks 28-28-28

The Tennessee State Textbook Commission publishes each year a list of textbooks approved for use in the public schools, and adoptions are made from that list by each local school system. Adoptions are staggered (social studies one year, mathematics the next, science the next, etc.); it takes five years to cover the entire curriculum, so contracts with the publishers are for five years, and all books, once chosen, remain in use for that period of time.

The state-approved list gives the local school systems a wide selection from which to choose. State law says the list must include at least four books in each subject and grade, and the commission customarily lists many more than that. The 1972 official list for all subjects and grades contains about 1,500 different titles, and 50 publishers have books on the list.

Further flexibility is afforded the local systems through the adoption of basal and supplementary texts. Commission policy requires that each system adopt one basal and no more than three supplementary books for each subject, but it does not require that every child in every class must use a basal text. Thus, selection in a particular subject may encompass four different texts, and they may be used in a variety of ways. For example, the 1972 approved list, in its section on high school American history, has 17 books by 14 different publishers. A local school system may choose one of those as the basal text and three others as supplementary, and then purchase equal numbers of all four and use them cooperatively and interchangably.

Since the textbook commission is concerned only with books purchased with state funds under a per capita allocation formula, the school systems may use other funds from a number of local, state and federal sources to supplement their instructional materials supply even further. Using the American history example once again: A school system, to the extent that it has certain local, state and federal funds, might use some of them for library books, films, paperback books,

more

magazines and newspapers, maps and charts, audio-visual materials or any other tools to supplement its instructional resources in American history.

It is difficult to pin down reliable figures on the purchase of all kinds of educational materials with funds from all sources, but some reasonably close approximations can be made, and from them it is possible to see the state textbook program in proper perspective.

Tennessee allocates for its basic program of free textbooks a total of $5.50 a year for each pupil in average daily attendance, and an additional $5.00 per pupil for the increase in attendance from the previous year. In 1971-72, these funds amounted to $4,725,000, based on $5.50 each for about 850,000 students (the previous year's total) and $10.50 each for about 10,000 students (the net increase in enrollment). In addition, the state allocates $2.00 per pupil for library books and a variety of permanent, or non-consumable, teaching materials (about $1,725,000 in 1971-72), and it provides some other funds which may be used to purchase instructional materials. It seems safe to conclude, then, that the state of Tennessee allocated close to $6.5 million to the public schools for textbooks, library books and other teaching materials last year.

The federal government spent about $80 million on elementary and secondary education in Tennessee in 1971-72, and while no breakdown is available on how much of that amount was used for all kinds of instructional materials, an estimate of 5 per cent ($4 million) does not seem unreasonable; Title I of the Elementary and Secondary Education Act, which accounted for almost half of the federal total, is known to have spent about 10 per cent of its budget on all sorts of teaching materials and supplies, and about half of that amount on books alone.

The third major source of revenue for the public schools is local taxes, and in Tennessee that source produces more than $200 million a year. Without

making a district-by-district survey, there is no way to determine how much of that amount was spent for books and other teaching materials, but an arbitrary estimate of 1 per cent, or $2 million, seems conservative enough.

To recapitulate, the Tennessee public schools probably received about $12.5 million for textbooks, library books and all kinds of instructional materials in 1971-72--$6.5 million from the state, $4 million from the federal government, and $2 million from local sources. Since the total [redacted] revenue for the schools amounted to more than $500 million, the $12.5 million for teaching materials represented a share of less than 2.5 per cent.

As a sort of crude cross-check of these figures, some data on expenditures for instruction in the schools is helpful. There are three budget categories covering expenditures for textbooks, library and audio-visual materials, and instructional supplies. In those three categories, Tennessee's public school systems spent between $12.5 million and $13 million last year. Two other categories,-covering miscellaneous expenditures and contracted services for instruction, add more than $5 million to the total.

The point of all this is to show that the state of Tennessee spent at least $12.5 million for instructional materials of all kinds in 1971-72--and that only $4,725,000 of that amount (slightly over one-third of the total) was directly tied to the screening, evaluation and adoption procedures of the State Textbook Commission. Textbook sales for the calendar year 1971 in Tennessee totaled $7,152,000, according to the Hunt Report of the Association of American Publishers--and that figure, too, is considerably higher than the amount spent for state-approved texts.

Not enough is known about how the school systems spend funds for educational materials other than state-approved textbooks to elaborate on those expenditures in this report. Without a doubt, the money makes it possible to expand and enrich

the instructional program. It may also be true that wasteful, duplicative, unnecessary and unwise purchases are much more likely when they can be made without a shopping list from the State Textbook Commission or some other agency.

The State Textbook Commission has six members appointed to four-year terms by the governor. The commissioner of education is ex officio secretary of the commission and is its seventh voting member, but he rarely attends meetings, and his secretarial duties are delegated to the director of school textbook services, a member of the State Department of Education staff.

By law, the six appointed members include a county superintendent, a city superintendent, a principal, and three teachers or supervisors, one each from the elementary, middle and upper grades. It has become customary for governors to reappoint members as long as they remain in their public school jobs, and two of the current members have served since the commission was formed 21 years ago. One of them--G. Hugh Waters, an area superintendent in the Metropolitan Nashville school system--has been elected chairman by the commission membership in each of those years. One of the commission members is black, and three are women.

Here is how the commission works: Each July, all book publishers are notified that bids will be opened in October on books in the subjects up for adoption, and that hearings will be conducted at that time. The publishers are required to send samples of each book they wish to offer for adoption, together with a brief of each book and biographical sketches of the authors, to each member of the commission. The sealed bids of the publishers specify the lowest wholesale and retail prices at which the books will be made available, and guarantee their availability at those prices for five years. A bond of $500 to $2,000, based on the number of books being bid, is also required.

At the bid openings and hearings in October, representatives of the publishers are allotted time to make a presentation to the commission, and

more

after the hearings are over, the commission takes about two months to review the books and the bids and make its selection. Each member of the commission calls on educators in the school system to assist in the review and evaluation process. The number of books involved in the bidding in any given year may range from about 200 to as many as 1,500, and several hundred educators take part in the review.

The commission then meets in December to vote on the books to be placed on the approved list. In general, the commission seeks to eliminate only the most obviously unsuitable material--books that don't meet the physical standards and specifications of the Book Manufacturers Institute, or that have an old copyright and out-of-date contents, or books that are clearly not directed to the grade or subject for which they have been bid. The commission may also screen out materials that some or all of its members believe to be subversive, off-color, sensational or in poor taste, but the members prefer to characterize their [redacted] judgments as being balanced, moderate, objective--and for the most part, unanimous. "We wish to maintain the highest degree of integrity in the process, to be independent of political cross-currents, and to avoid advocacy," says Hugh Waters, the commission chairman, "and I think we have achieved that."

Certainly the commission could not be described as aggressive. It conducts its business quietly, out of the public's mind if not out of its sight. It has neither sought nor avoided books with socially relevant or controversial contents--sex education, for example, or civil rights--and its choices rarely are challenged, either by educators, publishers or groups of citizens. In its essence, the commission is a neutral body. "We are a screening committee," says Waters. "We don't adopt textbooks--committees in the local school systems do that. We believe in local decision-making, and our job is simply to eliminate only the obviously

more

unsuitable books." When Tennessee had an anti-evolution law (it was repealed just a few years ago), the commission, according to Waters, "generally listed all biology texts, including those that dealt with the evolution theory, unless they advocated one side or the other." And as for the portrayal of minority groups, the literature and social studies texts on the current list of approved books are clearly more multi-racial than they were a few years ago--not because the commission has sought out different materials, but because the publishers now offer it. Last year, when mathematics texts were adopted, the commission received bids on 234 books, and 194 of them ended up on the approved list. This year, with reading, industrial arts, fine arts and business education under consideration, about 1,500 books have been bid, and as many as 1,000 of them are expected to be approved.

After the approved list is published, the commission's major task is finished, and the scene shifts to the local school systems. Publishers are asked to send one to three sample copies of each book on the list to each of the state's 147 school systems, and local adoption committees are set up there to make final selections from the state list. Meanwhile, the publishers must sign contracts with the state--in effect, licenses to sell the books that have been approved--and they must post performance bonds of up to $5,000, the exact amount dependi[illegible] on the number of books they have on the list.

The local selection process takes about three months. Committees for the various grades and subjects--the number depending primarily on the size of the school system and the number of books to be considered--are named by administrators of the system, and in some cases are given release from their regular duties. Typically, each committee is made up of three to five teachers, and other teachers in the subject are invited to review the books and make suggestions. If they choose, school systems may invite publishers' representatives for hearings on the books, and close to half of the state's systems do that. The rest have little

contact with the representatives. Publishers are permitted to have no more than four representatives working in the state during the adoption period.

The state's allocation for texts is seldom if ever enough for a school system to purchase a complete supply of all the new books it adopts in any one year, and as a consequence, old texts frequently are kept in use for several years--often for as long as copies in satisfactory physical condition exist. In fact, that is one major reason for the five-year adoption cycle; even with five years to resupply the system with basic texts in all subjects, the available money is not sufficient to do the job. Many of the systems cannot afford to supplement the state allotment with local funds, and while they do buy other kinds of educational materials with federal funds, little if any of that money goes for basic texts. Tennessee's per capita expenditure from all sources for textbooks is only $7.62--only four states spend less--and that amount is clearly inadequate. The Tennessee Education Association is asking the legislature to add $2 per student to the $5.50 now appropriated for basic textbooks and the $2 allotted for library books and other educational materials, but the TEA wants it left to local discretion whether the additional $2 would be spent on textbooks or other things. "We don't want to get into the textbook vs. hardward debate," the TEA's research director said.

During the adoption period, the publishers having books on the approved list are working against time to make sales before the school systems make their choices and report them to the state. It is like the Christmas rush, and the competition is heavy. Since the books being adopted will remain in use for five years, most of a publisher's sales in that particular field must be made in the one adoption period. The temptation to be overzealous is great, but surprisingly, evidence of cheating is hard to find. Said one publisher's representative: "With so much competition, we have to keep our eyes on one another."

more

Once the school systems have made their choices, the publishers ship stocks to the Tennessee Book Company in Nashville, a private firm and the only textbook depository in the state. The school systems then order their books from the company, which handles virtually all of the transactions involving state-approved textbooks, and does a substantial business in supplementary books and supplies as well. The state does not have its own book depository because, officials say, they could not provide the necessary services as efficiently or as economically. The Tennessee Book Company warehouses and distributes the products of the publishers for 8 per cent of their sales through the company.

In large school systems such as the one in Metropolitan Nashville-Davidson County, the adoption process is especially complex. One of the system's area superintendents, William Wright, coordinates the work, and 10 or more committees of teachers are appointed each year to review the books up for adoption. In keeping with local policy, the committees must be biracial, and the teachers who serve--volunteers, for the most part--must come from different schools in the system. Most committees have five voting members, but other teachers are free to participate in the discussions, and opinions are solicited. The committee members are relieved of their teaching responsibilities for three days during the review process. There is a hearing at which the publishers' representatives make presentations to the selection committees, and except for that meeting the committee members and the representatives are not supposed to be in contact with each other. The rule apparently is observed fairly diligently by both sides.

When the committees have made their choices, the books are adopted--one basal text and from one to three supplementary ones for each category. Metro spends over half a million dollars a year on textbooks, including some local funds, and through its selection procedures is able to make multiple adoptions from the state list. Talks with some committee members bring out a consensus on

several points: teachers like the high degree of involvement they have in the selection of books, administrators don't interfere with the choices, students and parents are excluded from the selection process, the committees usually have an adequate list to choose from, and publishers have lagged in bringing out new materials with multi-racial and socially relevant content.

On that latter point, a case could be made either way. One of the developmental reading primers on the state-approved list and in some Metro classrooms is "Jack and Janet," which is reminiscent of the "Ben and Alice" of 30 years ago. The only noticeable difference is that on page 83, and intermittently thereafter, a little black kid named Bill enters the picture , raising the number of stereotypes in the book by one.

But "Jack and Janet" is one the way out; the slick new replacements are reading systems, sets and series geared to individualized instruction and illustrated with people who look and act and sound as if they might be made of flesh instead of cardboard. And the blacks and other minorities who are a natural part of these new materials do not appear as blackface whites.

In another subject--American history--the basal book for Metro eighth graders is "The Land of the Free," and its presentation of blacks in the context of the nation's history is balanced and equitable. Two supplementary texts for that grade, however, seem to include black Americans almost as an afterthought, tacked on rather than made an integral part of the narrative.

Book publishers make a lot of money in Tennessee, as they do in all other states--the volume of business for textbooks is high, and the overhead is low, with small staffs and practically no advertising. But the development and production of new books and teaching materials is costly and time-consuming, the business is closely regulated, the restrictions differ widely from state to state,

more

and the competition is intense. In order to get a share of the business in Tennessee, a publisher must make a bid, post a bond, distribute eight sets of samples, and persuade the textbook commission that his product should be on the approved list. If his books make the list, he must post another bond, send 150 to 450 more sample copies of each one to the schools, and put his representatives in the state on an around-the-clock drive to beat 25 or 30 other companies in a three-month sweepstakes. If he loses, he can try again in another state or another subject, or he can put his writers and researchers back to work on a better product. The winners may make a lot of money, but it's not always easy money.

With the trends toward multiple adoptions, individualized instruction, multi-media teaching systems and accellerated technology in general, the representatives of the publishers find their jobs becoming more complex. Not so many years ago, they sold hardbound books for old and respected family publishing firms; now, many of them represent subsidiary companies owned by giant conglomerates that also make refrigerators and missile systems, and the book salesmen are handling teaching machines, films and video equipment, records, programmed instruction materials and electronic devices as well as the traditional hardbound texts. Their companies have consultants who are more adept at in-service training of teachers than many college professors are--in fact, the consultants and some of the salesmen are often former professors themselves. Yet in some ways, the representatives operate in an outer circle that belongs neither to education nor to industry, and even the best of them may not be sufficiently respected or appreciated in either camp.

At the textbook commission's hearings in October, a representative of one of the nation's oldest textbook publishing firms--now a small appendage of a corporate giant--gave an informed and impressive presentation of his company's

new line of reading materials. He had been before the commission each of the 21 years since its inception, and he was cordially and attentively received. There was a little hyperbole sprinkled through his presentation ("unlike anything you've ever seen," "competence no other company can emulate," "only one on the market,"), but with all that there was also much useful description and detail. He said his materials were aimed at stimulating motivation, creating the desire to read, as well as at building reading skills. The morning paper had carried a story saying the state's human resources commission was urging the State Department of Education to adopt more multi-racial textbooks, and the veteran representative dwelled on that aspect of his company's materials. "We're proud of the manner in which we have achieved integration in our materials," he said. "This new program we are presenting today is multi-ethnic and multi-cultural, and there are no stereotypes in the characterization or in the content."

Later, the representative talked privately about his changing role in a changing business. Here are parts of what he said:

"There was a time, 15 years or more ago, when corruption was widespread in this business, but that day is past. There is a lot more self-regulation now, by the companies and by the educators. And tougher competition helps. There's still some fudging, I'm sure, but it's not a serious problem anymore.

"The purchase of the old-line companies has its good and bad sides. It may be tough on us, but it's good news for kids and teachers. Selling textbooks is not like selling toothpaste, and it took the industry people awhile to understand that, but things are improving now, and we're certainly benefitting from their technological capacity. The smaller companies are being absorbed by the major ones, and there's no reversing that trend. We're in an age of computerization, whether we like it or not. The management of the big companies is more efficient, but it's also more impersonal. If you perform well, there's great reward; if not, you're out in the cold. Change is the only constant.

more

I'm ambivalent about that, as I am about the times we live in."

"There was a time, about 20 years ago, when the publishers of history books had one edition for the South and another for the rest of the country. They catered to the majority views and prejudices. They were two-faced--like the historians who wrote the books. I think some remarkable strides have been made since then. The portrayal of racial and ethnic minorities in our textbooks should be visible, inclusive and integrated, and it should encourage pride in racial heritage and ethnic identity. I think we're getting away at last from the stereotypes and the constancy of characterization."

"The textbook commission in Tennessee is the best one in the South. It could be improved by changing some little things, but the basic structure shouldn't be tampered with. I like the adoption system. An open-door policy would be unmanagable--all the action would be at the local level, and the little school systems would either be ignored or preyed upon. Somebody needs to get rid of the unsuitable stuff, and then a local school system can choose from a fairly long list in the confidence that there will be good quality in whatever they choose. An open system would impair the process of quality education statewide. And with limited funds, staggered adoptions are essential. Otherwise, some units in the curriculum would end up with too large a share, and others would never be adequately funded. It might help if the time span were shorter than five years, though."

"Under the law, the commission has the authority to determine when books may be added to the approved list. Their policy has been to permit only the addition of new and virtually unchanged editions of books already on the list, and nothing else. I think they should allow new titles in an adopted series, new material which enlarges or augments a packaged series of materials which they have already approved."

"Publishers' representatives often have a better glimpse of the future than educators do, but in the eyes of many of them we're all just commercial hucksters, third-class citizens. But ironically, the educators are more threatened than we are. They are in danger of having industry take over the education of teachers. A lot of teachers now resent the poor quality of preparation they've received. Teacher education had better come of age and start getting people ready for the future, or outfits like Litton and Xerox are going to be doing their job."

It is possible to find opinions that conflict with the ones expressed by this publisher's representative, but his views on corruption in the business, on the pros and cons of corporate merger, on minorities in textbooks, on the status of salesmen and on the stature of the Tennessee commission seem to be shared more often than not.

One feature of the commission--the continual reappointment of its members--resembles the much-criticized seniority system in Congress, yet not one person interviewed complained about it. Mrs. Mildred Bosworth, who as the state's director of textbook services is the commission's secretary, points out that both Democrat and Republican governors have honored the tradition of reappointing members. "That keeps politics out of it," she says. "Members seldom leave the commission unless they change jobs, retire, or die, and what that gives us is well-informed and dedicated educators who do a lot of hard work without pay." Mrs. Bosworth is serving this year as president of the National Association of State Textbook Administrators. Among publishers' representatives and local adoption committees--the two groups most familiar with the commission's work--there is generally approval of its organization and performance.

A persuasive case could be made for instituting some changes in the textbook and educational materials selection process in Tennessee. The textbook commission could be more flexible in its treatment of new materials on the market,

more

allowing additions to the approved list frequently enough to keep the curriculum and materials of instruction from becoming obsolete. The commission could expand the scope of its scrutiny to include all kinds of printed and non-printed materials of instruction, on the theory that unless the worst junk is weeded out, some schools will buy it. The school systems and universities of the state could loan specialists in the various fields and subjects to the commission for short-term, full-time examination of all the materials subject to adoption. The commission and its cooperating educators, both paid specialists and volunteer evaluators, could include in their investigation a search for proof of the effectiveness of new materials being considered for adoption. The commission could make provisions for students and interested parents to have some input to the selection process. The commission could give attention to a problem that has been ignored by the schools and by the book industry: disposal of obsolete printed materials. Destruction of old books seems wasteful, and so is stockpiling, yet one or the other usually happens. Books are seldom given away, or cut up for further educational uses, and apparently they are never recycled. That possibility should be thoroughly explored by the industry and the schools, in cooperation with state commissions. Finally, the commission could enter into discussions with other state commissions, and it might reach some cooperative agreements that would result in better communication, better scrutiny of educational materials, and better laws to govern the process.

Suggestions such as these, together with the obvious one that the state of Tennessee should make a greater investment in the tools used to educate children, have been heard before, and no doubt they will be heard again. Over time, some of them may come to pass. Meanwhile, the process of selection continues, and if it is not all it should be, it is probably better than the procedures in most states--and better than it might be expected to be in Tennessee, considering how relatively little the state invests in textbooks.

#

John Egerton - Second Generation School Desegregation: Two Case Studies

It is convenient, if not altogether accurate, to look back on movements in history and classify them according to definition, duration and significance. World War II, for example, has a name, a beginning and an end, and a ranking in the wars of history. Other events and periods are similarly categorized--Prohibition, Reconstruction, the Renaissance--and history books are full of the dates and labels that identify them.

In that same style--and with the same risk of oversimplification--it is possible to describe the first generation of public school desegregation in the United States. It began in 1954 with the Supreme Court's famous Brown decision. It was in the main a Southern phenomenon, pitting abolitionists fighting to eradicate segregation against segregationists struggling to maintain white supremacy. It lasted about 15 years. By 1969, the abolitionists had achieved victory on paper: Segregation as a philosophical article of faith had been deflowered, dual school systems were falling all across the South, and biracial schools were becoming commonplace. At the beginning, the basic point of contention had been segregation itself--racial isolation, one-race schools, separate and unequal education. Against a succession of segregationist defenses--interposition, nullification, states rights, "freedom of choice"--an allied force of civil rights groups, government agencies and the federal courts finally began to prevail in their efforts to get black and white children and teachers out of racially divided schools and into classrooms together.

All of that is beginning now to find its way into the new textbooks on American history. It can be called the beginning of the post-segregation era, or the first generation of school desegregation, or phase one of the movement for equal educational opportunity. Whatever the label, that period has ended.

For the past four or five years, the shape and substance of the school desegregation issue has been changing. To be sure, many public schools are still entirely populated (or virtually so) by one race or another, and arguments still persist about whether such segregation is de facto or de jure, and whether it can or should be corrected by such techniques as busing. But in the schools where children of different races and socio-economic classes are enrolled together, segregation itself is no longer the dominant issue. For those schools

there is a larger question: How can stable, equitable, integrated institutions which deliver high-quality education to all children be created and maintained? If a school system anywhere in the country represents a functional answer to that question, it has escaped the attention of legions of researchers.

In the South, where desegregation is now more pervasive than in any other section of the country, no school system can be said to have completely eliminated all the vestiges of segregation and discrimination. Some big-city school systems have taken on the appearance of their Northern counterparts. Many school districts have been decimated by the exodus of whites to private schools. Hundreds of formerly all-black schools have been closed and thousands of black educators have been displaced by segregation plans weighted to the advantage of the white majority. White opposition to busing and to other aspects of desegregation has often been massive and tumultuous. And more and more blacks have become opponents of desegregation as the failure to achieve complete integration has persisted.

Yet for all that, many school systems in the South have made measurable progress toward full integration. This report examines two such systems in some detail: Hope, Arkansas, a small district with about 3,000 pupils, and Greenville, South Carolina, a consolidated city-county district with an enrollment of almost 60,000. The intent is not to present these two communities as in any way typical of the South--or, for that matter, as exceptions to whatever might be called typical. They are not necessarily models for other communities to emulate. They were chosen for review in part because they appeared on the surface to have made good progress in eliminating racial isolation in the schools, and thus might offer glimpses of educational operations fully launched in the second generation of school desegregation. They were also chosen for some arbitrary reasons: One is small, the other large; one is rural, the other urban; one is an Eastern Seaboard state, the other is in the interior of the Mid-South; one is in a county where one-sixth of the population is black, the other is in a county where blacks make up one-third of the population; and both are districts in which the plan of desegregation was devised locally.

Hope and Greenville are not integrated school systems, in the most comprehensive sense of that much-misunderstood word, but they have eliminated the appearances of segregation and racial isolation that

characterize school systems all over the country in the second generation of desegregation. The problems have been--and still are--serious and at times almost overwhelming. The possibilities are cause for some encouragement. Hope and Greenville, like a good many Southern school systems, have made progress, and they have the potential to make more. Their promise is tempered by the persistence of race and class discrimination in and out of the educational system, but they at least seem to be moving in the direction of greater quality and equality.

Hope, Arkansas is a community of 9,000 people in rural southwest Arkansas, 110 miles from Little Rock and 75 miles or less from the borders of Oklahoma, Texas and Louisiana. Its school district serves about two-thirds of the 19,000 residents of Hempstead County (the others are patrons of four predominantly rural school systems), and in recent years the county has begun to show signs of growth, reversing a long pattern of population decline. The arrival of some new industries, however, has not appreciably altered the agricultural character of the community, and in the estimate of some of its leading citizens, Hope remains essentially a conservative town--quiet, law-abiding, white-dominated and slow to change.

In the fall of 1969, after five years of piecemeal desegregation under a "freedom of choice" enrollment plan, the public schools of Hope became a fully desegregated unitary system for the first time in history. Hope never went to court to try to preserve segregation. Its freedom of choice plan and its final desegregation plan both resulted from negotiations with federal education and civil rights officials, and the final plan was drafted and approved by the local school board and its staff.

A year of planning preceded the change, and the preparation clearly paid dividends. No organized opposition to desegregation ever materialized in the community. There were no boycotts, no picketers, no protesters. No private schools were formed. Hope High School, formerly all white, became the high school for all children in the district. Yerger High School, a junior-senior high named for its black founder, Henry C. Yerger, became Yerger Junior High, serving all seventh and eighth graders. Hopewell School, once an elementary school for blacks only, became the sixth grade center for the entire district. Four

formerly all-white elementary schools in Hope were fully desegregated, as was a fifth, a two-room school serving grades one through four in a rural section of the district outside the town. Teachers and administrators were reassigned to achieve a racial balance approximating one black for every four whites on the faculty of each school, and the district's enrollment of more than 2,800 pupils, 38 per cent of them black, was distributed in such a way that each school had a proportionately equal ratio of blacks and whites.

The planning for the movement to a unitary system took small details into account as well as large ones. A rerouting of buses resulted in only a slight increase in the number of buses used, the number of pupils transported, and the total number of miles driven. Because the black schools were kept open, busing was a two-way process, not a change affecting blacks alone. Extracurricular programs were desegregated, with blacks guaranteed proportional representation. Efforts were made to change the curriculum to include a more balanced and realistic portrayal of blacks.

"We saw to it that every organization, every club, every part of the school system had black and white representation," Superintendent Jones later recalled. "We had some disagreements on the board, but when it came down to voting, they were never divided, and there was no hard-core opposition in the community. I don't guess we'd have made the changes if we hadn't felt like we'd be forced to, but in the end we accepted the challenge, and we had a smooth transition."

Compared to most Southern communities, it was exceedingly smooth. In the absence of any extreme reaction, the community acceded to the counsel of its school officials, and in so doing began a reversal of a social pattern as old as the town itself.

This is the sixth year Hope's unitary school system has been in operation. A visitor in the schools can find evidence to show that the promising beginning in 1969 has been followed by a comparatively favorable performance in the second generation of school desegregation. And at the same time, there are indications that the second generation has not yet run its course, that inequities still persist in the schools, that changed attitudes still lag far behind changed actions, and that desegregation of the schools apparently has had little effect at all on the larger community.

The smallness and stability of the town have helped to establish desegregation in the schools. Hope is not subject to great increases or decreases in the population or massive shifts in housing patterns, the way big cities are, and once it achieved racial balance in its schools--and no private school movement ensued--that alignment became the new status quo. What was done in 1969 remains in force now: Leaving aside Guernsey School, the rural facility where two white teachers have 13 black students and 37 whites in grades one through four, the other seven schools in the system have black teacher percentages of 20 to 30 per cent (the faculty for all schools combined is just over 23 per cent black) and black student percentages of 34 to 43 per cent (overall, 37 per cent of the enrollment is black).

The Hope schools have benefitted from the start of two new programs funded by the state--kindergartens and free secondary school textbooks (previously, only elementary children could avoid having to buy their own books). Furthermore, Hope voters approved a property tax increase of eight mills (to 48) in 1973, after two previous attempts to raise the tax for school improvements had failed. The system now operates on a $2-million-a-year budget--half from the state, one-third from the local property tax, and 17 per cent from the federal government.

Taking all these indicators together--the promising start of desegregation, the stability of racial balance, the financial improvements--Hope shows up as a successful unitary school system. It even got the added boost of a championship football team in the bargain, and that helped immeasurably.

But on closer examination, the day-to-day operations of the schools in the community reveal continuing problems of race and class, and desegregation shows itself to be a process, not an end result. For example, the problem of high school dropouts has suddenly become a serious concern, and the students who leave school are usually black and almost always poor. Performance in the classroom and on standardized tests shows blacks as a group to be trailing whites, and the gap does not appear to be closing. Except for a black social worker in the central office and a black counselor in the high school, the top administrators and all of the principals are white. Some principals and teachers say most problems and absenteeism involve black students, and some black students assert

that their teachers are insensitive and, at best, unconsciously racist. Many blacks also complain that they surrendered spirit and identity with the loss of their high school, and they say they do not feel completely at home in Hope High.

Listening to the comments and observations of several students, teachers and administrators brings these and other concerns into sharper focus, and also shows how complex the process of desegregation is.

In one elementary school, the principal searched her thoughts for good things to say about the changes that have taken place, but her remarks turned out to be mostly negative. The black children "want to do, they want to learn," she said, and their parents "are very nice to me." "But," she went on, "discipline is not as good as it used to be, and many of the black children are troublesome and unruly, and they fight a lot--more with each other than with whites. Academically," she said, "I feel they've pulled our educational program down--I can honestly say that. The Negro children don't read or write or comprehend or listen as well as the whites. The teachers have to spend more time with them, at the expense of the other children. I feel sorry for the black children--it's not their fault. Many of them have a bad home situation." And finally, "There's still a question in my mind whether desegregation is worth it. With some, yes; with others, no. We have a responsibility to do the best we can, and our teachers are trying harder, and on the whole, I think they're doing better--I hope. But I don't know, I really don't. I don't know what's going to be the result."

Those attitudes and feelings don't sit well with some black adults in the community. "We've got quite a few principals and teachers like that," said one. "They still seem to think all Negroes are alike--and all inferior to whites. They say 'Colored children are dirty, and they fight all the time, and they're dumb,' and they think they're doing us a favor by trying to help. But those people can't really help unless they begin to see that they're part of the problem. We've still got a lot of discrimination in this town, and in the schools, and we'll keep on having it as long as whites keep putting all the blame on us."

At Yerger Junior High, Principal Harold Dickerson thinks his

second year in that job is going much better than the first, and he offers a personal observation about what desegregation has meant: "I think it's eliminated my own prejudice. I used to think a good black student was the exception; now I know better. With my colleagues and with the kids, I've learned that we're all basically the same. The black parents want their kids in school--they're cooperative, sometimes more than white parents are. The black students as a group haven't caught up yet--more of them are in remedial and special education classes, and they present more discipline problems. But it's mostly an economic thing--many of them don't have a good home environment. The contact between black and white students is getting closer all the time, though, and things are just a lot better all around this year. There's still a tremendous amount of racial prejudice in this community--a lot of whites still have an untouchable attitude toward blacks--but over the years, I can't help but believe that will fade away."

At his home across the street from Yerger, Will Rutherford, the man Dickerson replaced, talked about his experiences in the schools, and about desegregation:

"When we unitized, we did it all, and it went pretty well. There was some resentment and dissatisfaction at first, but there was no racial friction, no major problems. They wanted to move me to the central office, or to Hope High as assistant principal, but I told them I wanted to stay at Yerger as principal, and I did. It was my choice--I had been there for 38 years, and I wanted to finish there.

"Some of the black students were reluctant to change--a lot of leaders had to take second, and our coach was made assistant coach, and it hurt in other ways. But at a convocation the first day, I said I felt different than I had ever felt on any morning I ever opened school--we had equal opportunity at last, and we didn't have to lie about it anymore. There was no more taking second hand--opportunity was equal.

"Educationally, it has been worth it, especially for the better students--they've had a chance to get into honors classes, and take courses we didn't offer. Socially, I think maybe it's not worth it. We've lost a lot. There's less pride, less identity with the high school. We used to have our own drama groups and clubs and sports. Now the school is larger, and the masses have less chance to participate, to stand out. It hurt the community, too--Yerger was like

a black community center. It doesn't serve that purpose now.

"On an individual basis, some black and white students are very close, but you still see a lot of separation. In the long run, I believe the change will prove beneficial to everybody. I believe my son and yours, if they've gone all through school together, played ball together and all, they'll be friends, and it'll make a big difference in the community. Things are opening up a little bit now--the stores and the banks have some token desegregation, and there's a Negro on the city commission, and one on the police force, and one on the school board, and a couple in the Kiwanis Club. The overall economic picture is improving--the new factories seem fair about employment, and the old ones have opened up some. The churches are still pretty separate, though, and there's a white and a black ministerial alliance. Housing is still segregated--Negroes all live pretty much in two sections of town--and we've got a lot of unpaved streets. And Negro business and professional people--beside teachers--are practically nil. What difference school desegregation is going to make in the long run, I don't know. We still lose our best young people, black and white, and I see no change in that. The potential leaders go off to college and never come back. They do well--but they do it someplace else."

At Hope High School, what statistical evidence there is of the academic consequences of desegregation indicates that white students as a group continue to improve at about the same pace they maintained before, while black student progress is less rapid than whites'. Standardized tests given to last year's senior class when they were sophomores and juniors showed a composite score for whites of 490 the first year and 540 the second (on a scale of zero to 850); the comparable scores for blacks were 380 and 400. In mathematics particularly, the relative position of the black students deteriorated; in the other areas covered by the Science Research Associates examinations--reading, language arts, social studies and use of sources--blacks also trailed, but the gap between them and the whites did not widen. Other indicators--enrollment in advanced courses, honor graduates, continuation in post-secondary education--also favor whites, both numerically and in proportion to their percentage in the student population.

Robert Whitmarsh, the high school principal and a member of its staff for 13 years, acknowledges that the immediate impact of desegregation was felt more by blacks than whites. "They were the ones who

were displaced," he said. "They had to fit in here. And keep in mind that this is only the first year of free textbooks in the high schools. I bet we had 10 times the textbook budget Yerger had before desegregation, because white parents could afford it. All that just made it more difficult for the black students to come over here."

Offsetting that disadvantage somewhat, Whitmarsh said, was the strength of the faculty: "We inherited a very capable staff from Yerger, and the black teachers made an easier adjustment than the whites. The good black teachers moved into a situation where they had better resources to work with and more well-prepared students. The white teachers, on the other hand, were less experienced in dealing with socio-economic and cultural differences."

Whitmarsh estimates that about 20 per cent of his white students can be classified as poor, while half of the black students are in that category. "The problems we have--discipline, absenteeism, poor academic performance, dropouts--are essentially socio-economic problems. Take absenteeism: We have a lot of kids who work, many of them at night, some of them in full-time jobs. They're often the ones who don't make it to school. And with the ready availability of jobs in the community, we're losing a lot of youngsters who go to work because their families need the money."

This year's senior class at Hope High numbered 156; in previous years, 200 or more students were graduating. When the present class was in the ninth grade in 1970-71, it had 203 members, and the subsequent fallout of almost 25 per cent is causing school officials some concern. An effort to locate the dropouts has thus far turned up 35 of them--23 black, 12 white, and virtually all from low-income homes. "The basic cause is need," says Whitmarsh. "It's not our teachers, or our curriculum--it's just that they can find work, and they need the money, and we can't hold them."

Whitmarsh estimates that 90 per cent of the students who cause discipline problems come from homes where one or both parents are missing, and his two counselors--one white, one black, both males--say 90 per cent of their time is spent dealing with the personal problems of 10 per cent of the students. "It's all tied together," the principal says. . . . ."discipline, absenteeism, poverty, unstable homes, lack of interest in school, poor grades."

Over the years, about 60 per cent of the white graduates of Hope

High have gone on to college. Whitmarsh says that ratio of college-bound whites has at least been maintained, if not increased, and it is his guess that more blacks go now than they did under segregation.

Looking ahead, the principal is optimistic about the long-term consequences of desegregation--but with some qualification. "You're going to find this generation of blacks and whites working shoulder to shoulder in the community when they're grown," he says--but he also notes that many of the best students don't come back to Hope to live, and when he talks about equality in terms of knowledge, money, power, influence and prestige, he concludes that "it may take a hundred years for this transition to be completed in every segment of our society." He adds: "People here accept desegregation, but I don't think most of them, especially the whites, think of it as an asset, a real opportunity. There's tolerance, but there hasn't been a completely positive change of attitudes. We desegregated successfully because we did a lot of planning, and becuase there was political support for obeying the law, and because there was a lot of student involvement in the process--and because of people like Jones and Rutherford and Barentine. I think we've made a lot of progress, but the job isn't finished."

Around the high school campus, there is evidently a good bit of one-to-one contact between blacks and whites, but wherever groups congregate, they tend to be racially separate. Even the faculty is that way: At lunch the white males usually sit at one table, the white females at another, and the blacks, male and female, at a third. There is limited after-school social contact between black and white students, and the rare sight of an interracial couple on anything resembling a date apparently is frowned upon by peers and parents of both races. White and black cheerleaders are together frequently, the same is true of athletes, and last year the football team, with a majority of white members, elected a black homecoming queen. But random conversations with students show most of them to be wary of the ~~opposite~~ other race--except for those individuals they know personally and consider their friends--and generally uninformed and unconcerned about how the other half lives. Said one white student: "We hang out at the Dairy Queen--I don't know where they go." And a black student asserted "I could speak up over there (at Yerger). Over here, I don't." To be

sure, not all students share those views--but even the ones who think blacks and whites have good rapport with one another also tend to feel that the school is ahead of the town, and that off-campus pressures keep contact at a minimum.

In Hope High's advanced math classes, in chemistry and physics and the foreign languages, black enrollment is sparse; in special education and remedial reading courses, blacks usually make up half or more of the enrollment. In athletics, black students more than hold their own. In dress and fashions, they are often the pacesetters, wearing stylish, colorful, attention-getting outfits that many whites seem to envy but don't dare to emulate. A prevalent counterstyle among whites is the "poor" look: faded jeans, work shirts, ragged tennis shoes.

The desegregation of Hope's school system can be measured and evaluated in countless ways, from batteries of statistics to the attitudes and feelings of the hundreds of students, parents and school employees who are involved in the process. Quite naturally, each evaluation differs somewhat from the rest, and taken together, they encompass the widest possible diversity of conclusions. But a consensus of sorts seems to emerge. Some of it is expressed by James Jones, the retired superintendent, when he talks about the 1969 changeover as a challenge the schools met successfully--but also the beginning of a much larger alteration, the outcome of which is still far from certain. And part of it is expressed by George Frazier, a local insurance man and former president of the school board, who credits strong black and white leadership, community stability and respect for law with making peaceful change come about--but goes on to note that the community has been slow to absorb blacks into the economic system, that the town's churches have been derelict in their leadership, and that it is "the kids"--the present generation--who will have to do what their elders seem unwilling to do: make equality a reality.

There are other dimensions of the consensus that seems to prevail about school desegregation in Hope--or perhaps they are simply conclusions a visitor reaches after spending some time in the schools and in the town. One of them is this: The public school system is the only institution in the community yet to attempt a complete conversion from the segregation and white supremacy of the past to a condition of

inclusiveness and racial parity. In some ways, that conversion has been rapid and genuine; in other ways, it has been gradual, ineffective and flawed, held back by white and black remembrance of things past. The day has not come--may not even be near--when the schools no longer hold out advantages to whites simply because they are white. Those advantages still exist primarily because the community at large still guarantees them, and the schools, however much they may be leading social change in Hope, are still influenced by--and inseparably bound to--the unwritten social constitution that governs life in the community. It has not yet been accepted by the white people of Hope that the black citizens who make up one-third of the population are essential to the future prosperity and wellbeing of the town, and that their full participation in its affairs is necessary before the community can realize its fullest potential. Blacks in Hope are tolerated by whites, at best; in the eyes of many, they are untouchables, to use Harold Dickerson's word. As long as that attitude is prevalent, the second generation of school desegregation in Hope will be incomplete.

* * * * * * * * * * * * * * * * * * * *

School desegregation came to Greenville, S. C. in February of 1970 with the suddenness of a winter snowstorm. After decades of segregation and years of litigation, a federal appeals court gave the school system one month to abandon its ineffective "freedom of choice" policies and to implement a plan of total desegregation.

That was about four years ago. Greenville still has one of the most thoroughly desegregated school systems in the South (comparatively speaking, at least) but what its most optimistic citizens thought had been accomplished in 1970 is still far from complete. Desegregation--the moving of warm bodies--turned out to be only the beginning. The search for fairness, equity and good results goes on, yielding by turns hope and discouragement, achievement and failure.

When Greenville took its first hesitant steps away from school segregation in the mid-1960's, it differed little, if at all, from scores of Southern communities facing federal court orders. Under the fair-sounding but discriminatory rubric of "freedom of choice," it acceded to a little bit of change and clung to the hope that it would be gradual and minimal. From the beginning of freedom of choice until the sudden changes in 1970, the city's schools were in what

could be called the first generation of desegregation, and that period differed in no significant way with what had gone on before. Since 1970, however, the changes have been substantial. Greenville has entered the second generation of school desegregation, a period characterized by efforts to achieve complete and equitable integration, and the nature of its problems has changed. The story of Greenville's odyssey out of segregation should be instructive to those communities which still face such changes. But it is the city's second generation school desegregation achievements and problems that need to be studied by most school systems, for they are what mark the path between segregation and integration. The question now is not whether racially separate schools can be maintained, but whether blacks and whites can get the full benefit of quality education in a unitary school system.

To lay the setting for an examination of the Greenville schools today, a brief look at some recent history and a few statistics should be helpful:

Greenville and surrounding Greenville County, with a population of almost 250,000 and an area of 789 square miles, have maintained a single public school system for about 20 years. In 1960, the schools enrolled almost 50,000 pupils, and grew at an average rate of 1,000 students a year through that decade, reaching 59,000 in 1969. Enrollment fell off slightly after that, but has remained at about 58,000. Blacks make up about 16 per cent of the county population, and 23 per cent of the public school enrollment.

Segregation prevailed in most of the district's schools in the fall of 1969, but the following January a long period of litigation came to an end when the Fourth U.S. Circuit Court of Appeals ordered immediate implementation of a plan calling for an approximate ratio of 80 whites to 20 blacks in the student body and faculty of every school. Specialists from the U.S. Office of Education helped the school system prepare for the changeover, but most of the features in the plan that was adopted were contributed by the district's own school board and staff. Superintendent M.T. Anderson said the court's action was "drastic, disruptive and disappointing," but he pledged that the schools would make "every effort to comply."

In retrospect, the immediacy and the unavoidability of complete

desegregation seem to have worked in Greenville's favor. Lacking any viable options, the city proceeded to face the inevitable. The school board appointed a citizens advisory committee to encourage peaceful compliance, the city's human relations committee and the chamber of commerce pitched in, the mayor and other public officials said their children would remain in the public schools, Governor Robert McNair promised compliance with the court ruling, the local newspapers spoke of the "solemn duty of citizens to make the best of a horrible situation," and before there was time for strong organized opposition to develop, the deed was done.

Numerous reasons have been given for the peaceful transition that took place, including the lack of organized resistance, the restraint of politicians and other public officials, the community's tradition of law-abiding moderation, and the weariness of the entire population with unsettled confusion and interminable controversy. To those reasons could be added the lack of militant hostility in the black community, the realization of many whites that racial balance guaranteed them perpetual majority status, and perhaps most important of all, strong leadership in some key positions.

The citizens advisory committee is one example of the difference good leadership made. The 32-member biracial group was chaired by Ernest Harrill, a Furman University professor, and in spite of internal differences it joined ranks to push for community support and acceptance of the impending change. Harrill recalled the crucial month:

"Our basic job was to try to inform the people and to assist the school system. We had volunteers manning a bank of telephones every day, taking down questions and then getting them answered by school officials. We got the newspapers to publish a special section of the most-asked questions and answers, and then we distributed 50,000 extra copies through the schools. We had a committee that worked with the student governments in the schools, and another group of volunteers that helped move books, meet buses and escort kids in their new surroundings. All in all, we had about 2,000 volunteers working. There was some opposition--a motorcade to the state capitol in Columbia, a delegation to Washington, a few pickets in front of some schools--but for the most part, the community pitched in and tried to make it work. People were going around wearing lapel buttons that said 'The Important Thing is Education!'--

75,000 of them were distributed free--and most of the churches were supportive. Our committee tried to stay out of the way of the teachers and administrators and do the things they didn't have the time to do. It was a tremendous effort."

One more reason for the success of the changeover had to do with the logistics of it. Before desegregation, students living inside the Greenville city limits were not permitted to ride school buses. Under the desegregation plan, bus transportation was provided to all students living more than a mile and a half from their assigned schools, yet even with those additions, the total number of bussed pupils only increased from 19,000 to 24,000. The 80-20 ratios thus were achieved in almost every school without a massive increase in the total amount of busing. The school district now operates a few more buses, and the fleet travels more miles each day, but every school opens at 8:30 in the morning and is out by 3:00 in the afternoon, and nobody gets on a bus before 7:15 a.m., and for those reasons the anti-busing movement has never gotten off the ground in Greenville.

If the plan satisfied most whites--or at least undercut their opposition to busing--it was far less welcome to most blacks. Of the 12,000 pupils who had to change schools, 7,000 were black--or to put it another way, 62 per cent of the black students and only 10 per cent of the whites were transferred. Most of the previously all-black schools were either closed or reduced in the grades they served, and with them went most of the black principals, coaches and other administrators. Said William N. Page, a board member prior to and after the changeover, "The way we did it involved the least amount of transportation and the maximum use of the best buildings in the system. It was correct mathematically, but it bothered me emotionally." It bothered a good many blacks even more. But when students from all-black Sterling High School showed up at Wade Hampton High, previously an overwhelmingly white school, they were given a warm welcome by the students there, and when they were pictured in the paper exchanging handshakes and compliments, it was clear that the decades of segregation and the years of token desegregation were over.

There was a collective and almost audible sigh in the community--

relief for some, resignation for others--and the remainder of the school year slipped by. The next fall, trouble erupted in several schools, and some of it was serious: walkouts, property destruction, police intervention, teargas and arrests. Second-generation school desegregation in Greenville had begun.

Since then, the Greenville school district--its superintendent and administrators, its board, its teachers, its students--has put together a collective response to the challenge of desegregation that is, on the whole, impressive, if it is viewed as the beginning of a long-term coming to grips with second-generation desegregation problems. Here are some examples of the system's forward movement since the 1970 changeover.

* In the fall of 1971, the school system undertook a major reorganization designed to enhance both desegregation and decentralization. Four areas, or subdistricts, were created, with each having about 13,000 pupils, about 20 schools, and a student and faculty racial ratio of about 80 whites to 20 blacks. (The Piedmont Project is an additional, though smaller, subdistrict, and it also has the same racial ratio.) Individual schools were reorganized along an elementary (K-5), middle school (6-8), high school (9-12) pattern, and substantial rezoning took place, with three outside consultants helping to design the new arrangement. The five areas, including Piedmont, are administered by area assistant superintendents, one of whom is black.

* The citizens advisory committee concept has been continued and refined. The first committee resigned after a year to give the school board an opportunity to review the concept, and the board then appointed a new 32-member group. In 1972, after the school system was reorganized, the advisory committee was restructured into five committees, with each school in the system having a representative. Five representatives from each subdistrict make up a system-wide committee which meets regularly with the superintendent and members of the school board, and the subdistrict committees also have regular meetings with various administrators and teachers. An effort has been made to maintain a good cross-section of races, ages, sexes and occupations, and the committees have involved themselves in a wide range of school issues and enhanced the concept of citizen participation in the operation of the schools.

* The small army of volunteers which helped in the initial

transition to a unitary school system has been maintained, and about 1,500 people still work without pay in a variety of jobs in the schools. Well organized and supervised, the volunteer program is now a formal part of the district's structure.

* With a grant from the federal Experimental Schools Program, the district has reorganized schools in the Greer community, on the eastern edge of the county, into a semi-autonomous subdistrict with a high school, a middle school and six feeder elementary schools. Called the Piedmont Schools Project, it is a concerted effort at across-the-board restructuring of the total educational process. One of only five such projects originally funded by the Experimental Schools Program, Piedmont has about 4,800 students, approximately $1.5 million a year in federal funds, and five years to demonstrate that such resources will make a measurable difference in the education of children. Piedmont seems to be trying just about every new wrinkle on the education scene, from individualized instruction, multi-aged grouping and differentiated staffing to out-of-school learning, year-round school, curriculum reconstruction, and alternatives to letter-grades and report cards. The point of it all is to establish the efficacy of a variety of educational reforms and to speed their introduction into the entire school system.

* A half-day kindergarten program has been started for the community's five-year-olds, and three new vocational centers have been built, and high school students who want to pursue vocational subjects are transported daily from the schools to which they are assigned. This dual-enrollment setup obviates the necessity of duplicating expensive equipment in every high school plant.

* Five secondary school extension centers have been opened, offering late afternoon and evening instruction in grades 7-12. Their purpose is to lure dropouts and working students back to the classroom. The schools are staffed by regular faculty members and by counselors, social workers and a psychologist.

* Greenville has gone in heavy for human relations training, offering workshops for students, faculty, administrators and community volunteers. Student human relations committees with access to faculty-administration-community participation, have been organized in every secondary school "to promote acceptance, understanding and communication between students, faculty and administration of different cultural ethnic backgrounds." The administrator of the district's

human relations programs, feels that significant strides in improving interracial understanding in the schools have been made. "We want to make the schools good places to be--racially, socially, educationally and personally," she says. "It's a constant challenge, and there's a lot yet to be done with all groups, but we have made measurable progress in the past two years."

* Two young men, one a black former social worker and the other a white ex-salesman, have been made ombudsmen for the school district. The ombudsmen, Jackie Williams and Nick Strange, are responsible directly to the superintendent, and they operate as free-floating advocates of good human relations. Their self-designed job description stresses one-to-one and small-group contact, with the emphasis on prevention of misunderstanding rather than on troubleshooting. They spend most of their time in the schools or in the community, staying in contact with their office by means of a radio "beeper." In a sensitive role vulnerable to misinterpretation, Williams and Strange have managed to gain acceptance in most quarters.

* The school district has made a concerted effort to equalize curricular offerings in the schools, and substantial changes have been made in the curriculum to correct and enlarge the racial and ethnic aspects of instruction. In addition, individualization of instruction and accountability for its results have become prominent ideas in the planning process, several special programs have been added to stimulate improvement in the teaching of reading.

* The relatively small loss of white children to private schools and the 1971 reorganization of the district have resulted in stable enrollments at most schools and maintenance of the overall 80-20 ratio. That approximate ratio has also been maintained at the faculty level.

* The school system budget is up to $41 million dollars, _____ per cent more than in 1969-70, with federal allocations to the system vastly increased and local expenditures up almost ____ per cent.

Taken together, these accomplishments represent the response of a majority-white, middle class, up-and-coming urban community in the South to the court-ordered imperative of school desegregation. Compared to most Southern communities, the Greenville record is impressive, and it is becoming more and more apparent that the South's adjustments to racial change in education exceed those in most non-

Southern cities. Furthermore, conversations with students, teachers, administrators and parents in Greenville indicate that each year since the implementation of the unitary school system has been better than the year before. Students in particular seem to be adapting to desegregation, and there is good reason to believe that if the attainment of genuine equality of opportunity were solely in their hands, they would be able to establish it in short order.

Having said all that, it is necessary to take a hard look at the shortcomings of the desegregation process.

Two indices--economic realities and housing--underscore the problem. The most recent available statistics on income in Greenville County show a wide gap separating blacks and whites. The averages for per capita income and family income among blacks are only one-half or two-thirds as high as for the county population as a whole, and while only 11.7 per cent of all families in the county have incomes below the poverty level, 31.9 per cent of the black families are below that level. Furthermore, the small black middle class is not growing very fast, and while the influx of new industries in recent years has added substantially to the number of whites in managerial and professional positions, there has been only a token addition of blacks in those categories. In short, the rising prosperity of the county has mainly benefitted whites, and the economic gap between whites and blacks appears to be widening.

Housing patterns reflect that gap. The black population is not concentrated in one or two impacted areas, but it is confined in scattered pockets, and it is kept more or less segregated by prejudice, price or preference. Discrimination does limit blacks in their choice of housing; so does the high cost of housing, and so too does the natural preference of many people to live among friends in familiar surroundings, rather than risk rejection and hostility elsewhere. Consequently, residential growth in Greenville County resembles development in most other places: it is suburban, and it is segregated by race and class.

The school system in moving toward integration, is thus ahead of the larger community, and can be said in some respect to be moving against the tide. It is attempting to do, and its job is made infinitely more difficult by that fact. Greenville has a desegregation plan that is inequitable as it pertains to blacks, and many of them

are dissatisfied with it. But the plan, for all its inequities, is fairly comprehensive, and it has immersed whites in the desegregation process, and many of them still resist it, or at least resent it. The school is the institution where these attitudes and feelings meet--and clash. It should not be surprising, then, that what Greenville did in 1970 was not the end but the beginning.

The outburst of disorders in Greenville's high schools in the fall of 1970 was a direct result of the black loss of identity brought about by the desegregation plan. The grievances of black students centered around a variety of symbols--colors, nicknames, mascots, songs--and around positions of recognition and prestige--class officers, cheerleaders, popularity contest winners. They also had to do with curriculum content, and with the observance of such things as Black History Week. With the passage of time, there have been numerous adjustments in these areas, and by most accounts they no longer present a serious problem. A black counselor in one of the high schools recalls that the first year was "very tense," and that symbolism was the focal point of the tension. "We're past that stage now," she said, "and we're anticipating problems instead of putting out fires. I can see a lot to be encouraged about. All of us had to bury some hatchets, but the kids are very open, and we're making strides. We haven't cured all the ills, but we're headed in the right direction."

A logical point to get in looking at desegregation is with the 1970 plan and its immediate consequences, as seen from the perspective of many black Greenvillians. In 1969, there were between 15 and 20 virtually all-black schools in the system, including five black high schools. Even the most dedicated segregationist would no longer contend that they were ever as equal as they were separate, but they at least had black adults in positions of authority--principals, counselors, coaches--and they had their own symbols of identity and respect: class officers, cheerleaders, school colors, nicknames and the like. When desegregation came, most of those schools and all that went with them were swallowed up. The high schools were converted to junior highs, or closed altogether; the plan made black students six times more likely to be transferred than whites; all that went together to identify the black schools was submerged beneath the identifying characteristics of the white schools.

Dr. William F. Gibson, a dentist and co-chairman of a community organization known as the Black Council for Progress, was extremely active in preparations for desegregation, and he discussed his own perception of school desegregation in Greenville with candor and directness:

"The black community here lent support to the creation of a unitary system. I personally feel it has erased funding inequities and it has led to improvement in the area of human relations. It is realistic, because it helps to destroy two myths: that blacks are stupid, and that whites are superior. There has been quite a bit of black resistance to being made a permanent minority in every school, but I say we're living in a society where we are a minority, and we have to face that fact. You can be captain of the football team or president of the student body in an all-black high school, and that's fine, but if you don't have a chemistry lab and there's only one microscope in biology, you haven't gained much. The problem is that blacks are not getting a fair shake. Our responsibility is to not let this thing come around to the point where there are no blacks in positions of authority. It's hard to pin down the black job loss under desegregation, because people are being pacified by simplified retirement plans and demotions with pay raises, but we're losing people, and we're losing schools. The rationale for closing formerly all-black schools is that they are in poor condition, but the whites built them to be inferior from the start, and we shouldn't have to pay the penalty for that. We expected a lot from the new administration. We assumed they were going to do what was right, and we went along in good faith. Maybe we were too optimistic. At this point, I feel like we've been had."

The evidence confirms Gibson's fears. The steady white movement to the suburbs since 1971 has substantially altered the relative burdens imposed on blacks and whites by the desegregation process. As the suburbs become more densely settled, schools are built to meet the needs of the expanding communities . . . and the schools blacks attend become further and further from where they live. Approximately 32 per cent of all blacks in the county live within the city limits of Greenville, yet new schools are not being built within the city limits. In fact, formerly black schools are being either closed or converted to other purposes. According to a local

attorney, only one black school in the city is continuing to operate at pre-1971 capacity. And a spokesman for the superintendent's office confirms that six black schools have been closed in recent years and that four more were considered for closing this year. Jackie Williams sums it up this way: "What has happened here is desegregation, not integration, and the problems with doing more than that increase with each school built in a white neighborhood."

The problems Williams is referring to are obvious ones. As schools are located further and further from the black communities, black children must travel further and further to get to school. Nobody seems quite sure how much, but there is general agreement that cross-town busing of black children has increased since the first year of desegregation. In addition, the shift in housing patterns has made maintenance of the 80-20 quota without massive busing increasingly difficult. Last year, the school board asked the court to determine how much variance from the 80-20 ratio was allowable and determined that no more than 30 per cent of each school could be black, but several schools are operating at that level now and it can only be maintained by more or less regular reassignment of pupils.

The problem of black job loss since 1971 is fairly hard to pin down. According to HEW records, there were 19 black principals in Greenville before desegregation and there were 14 in 1973-74. Another problem is that for the most part blacks in prestige positions tend to be relatively few. Twenty per cent of the elementary school principals in Greenville are black, but only two high school principals are black, only one head coach, and only one area superintendent is black. In Gibson's eyes, the problem is primarily one of submerged black administrators. He says, "There are still eight or nine of the old black principals around, but they are gradually getting moved into 'flaky' positions like 'assistant superintendent in charge of custodial services'. We need more obvious black leadership in the schools."

From inside the school administration, some of these allegations are denied. In general, however, no serious disclaimer is offered to the basic assertion that desegregation has resulted in the closing of many black schools, the busing of a disproportionately large percentage of black children, a reduction in the number of black principals, coaches and other figures of authority, and an overall

loss of black identity without a compensating loss by whites. And with all that, it is almost certainly true that white Greenvillians still tend to be more negative about the ideals and purposes of integration than blacks in the county, even though Greenville's approach to it has required far less of the white population.

The persistence of white dislike for biracial public education is by no means confined to Greenville, of course--but Greenville, on the other hand, may be no less burdened by that attitude than other communities where desegregation is not as advanced. The point is that negativism among whites is a serious second-generation desegregation problem no matter how well or how poorly the initial stages of change have gone.

There are whites in Greenville, as elsewhere, who express their dissatisfaction with changes in the schools directly. There is, for example, Bob Jones University, a thriving institution of 5,000 students where white supremacy is a badge of pride. There is a white property owners association which resists school tax increases and constantly attacks expenditures aimed at improving equal educational opportunity, and the group recently supported a successful candidate for the school board. There is a community group which has been trying for months to force removal of certain books from school libraries and classrooms--a tactic that many people in and out of the school system see as connected to the anti-desegregation movement.

Ernest Harrill, the Furman University professor who headed the school system's first citizens advisory committee, characterizes white attitudes in the community this way: "People have changed some, in spite of themselves. The sky didn't fall in when we desegregated. But I blow hot and cold on where it's taking us. It's no longer respectable to say 'nigger,' to make jokes in polite company, to demean blacks--that's just not stylish anymore. But underground, the resistance is still there. It gets expressed as law and order, or anti-busing, or anti-welfare, or it's stated in terms of declining discipline and morals, or pornography and vulgarity in books, but it's all tied together. What progress we have made has been because of the force of law. Sad to say, we've been moved only by the law, and not by our own spirit."

That difference--between what has been compelled by the law and

what has been "moved by the spirit"--is both subtle and crucial. The one sees desegregation as an onerous obligation, an unwelcome but unavoidable necessity for law-abiding citizens. The other sees it as an opportunity to increase stability and productivity in the entire citizenry of a community, a chance to turn the unfair advantages that have accrued to whites into advantages that fall equally to all those who pursue them, whatever their race or economic class. If random conversations with a variety of whites in Greenville can be considered as any sort of crude barometer of attitudes, the majority is clearly on the side of reluctant obediance of the law, and if the law as it has been applied there should be changed, the movement toward integration and equality of opportunity in the schools could be seriously jeopardized.

Black dismay over disparities in the desegregation plan, white unwillingness to see it as an opportunity instead of a sacrifice, the continuation of segregation and discrimination in the community, and the danger of a national abandonment of desegregation are all contributing factors to the troubles of the Greenville school system in the second generation of desegregation. They are among the shortcomings in the desegregation process, the obstacles that hinder the achievement of stable and equitable integration. And they are also external threats, originating outside the classrooms and corridors of the schools. There are internal problems as well, and some of them need to be briefly described and analyzed here.

If the problems of symbolism and recognition have diminished, however, they have left intact an array of issues that is far more subtle and complex. Many of them are not just racial but economic and social and cultural issues as well, and the school system can make no substantial claims of success in resolving them. For example:

* Standardized aptitude and achievement tests administered by the school system at selected grade levels show all students to be, on the average, a half a year below national norms in the elementary grades and a year below the norms in the secondary grades. School officials say they have made no attempt to correlate test performance with race or socio-economic class, but principals, teachers and counselors in the schools acknowledge that black children as a group score lower than those from more affluent homes. To the extent that standardized tests can measure the effectiveness of teaching and

learning--and their efficacy is a matter of strenuous dispute--their application in Greenville appears to indicate not only overall weaknesses in the educational process, but acute and particular inadequacies for the black and the poor.

* Beginning in 1970-71, the school system inaugurated what it called "the most intensive, comprehensive attack ever made on the problem of reading in the school district's history." Supplementary expenditures of more than half a million dollars a year have been applied to more than half a dozen special programs in reading, and the school administration has pledged itself to be accountable for the results. About 8,500 students have been affected by the programs, and "satisfying gains" have been reported. But hard evidence of those "satisfying gains" is not available. Several of the special programs have been found to be unproductive, and some of them, including one involving performance contracting, have been discontinued. Some teachers say privately that an alarmingly high number of their students cannot read at all, let alone at grade level, and one middle school principal estimates that at least one-third of his 1,200 pupils are two or more years below grade level in reading. The school system apparently keeps no records to indicate whether black children or poor children of either race are benefitting from the special reading programs or from any other changes which have been made since desegregation.

The school system's failure to assimilate black students effectively into the educational mainstream is underlined by the level of black participation in special education classes. Though black students comprise only 22 per cent of the total school population, during the 1973-74 school year 64 per cent of students in classes for the trainable mentally retarded, 56 per cent of children in classes for the educable mentally retarded, and 57 per cent of children in classes for the emotionally disturbed were black. Such figures give credence to black attorney Theo W. Mitchell's comment that "there is a lack of tolerance on the part of many white teachers--an inability to understand black children. Many teachers and administrators just haven't been able to adjust to the cultural differences."

* Statistics on the approximately 2,400 classroom teachers in the school system show impressive improvements over faculties in earlier years. More of them are men (17 per cent) than every before.

Their average age is 37.8 years--five years younger than in 1964. Virtually all of them have bachelor's degrees, one-fourth of them have at least 18 hours of graduate work, and almost nine of every 10 have an "A" rating on the National Teacher Exam. They average over 11 years of experience, and their rate of turnover in 1971-72--16.8 per cent--was the lowest in seven years. There is no question that the Greenville school faculties are better than they used to be, and there are some outstanding individual teachers of both races who handle difficult assignments with skill and sensitivity. Nevertheless, the inability of many teachers to cope effectively with students of diverse academic, racial, cultural and socio-economic backgrounds remains a serious problem. The shortcomings of teachers are cited as a problem by parents, students and school officals of both races, and even by teachers themselves. Considering the fact that older teachers, white and black, have known only segregation in their early careers, it is not surprising that many of them should be incapable of making a satisfactory adjustment to desegregation. More disturbing is the fact that many younger teachers have similar problems, primarily because teacher training in college has lagged behind the reality of desegregation in the schools. And in any event, the lack of an effective means of evaluating teacher performance and the negative aspects of the tenure system make it difficult to assemble and maintain strong faculties. Greenville is probably no more burdened by incompetent teachers than other school systems, and there is enough in the record to indicate that it is better off than many, but such comparisons do not diminish the fact that there are teachers in the schools who are unable to meet the basic needs of children, and there is no good way to remove them.

* In the spring of 1970, the Greenville school board adopted a code of discipline giving principals the authority to suspend students and establishing procedures for student expulsion by board action. According to school officials, about 4,800 suspensions were recorded in the 1971-72 school year (involving a lesser number of students, because some were suspended more than once), and 10 students were expelled. During the first month of the 1972-73 school term, there were 376 suspensions and no expulsions. No records were kept on disciplinary action prior to 1971-72. In the school district's administrative offices, the consensus is that the number of disciplinary

actions has not changed much since the schools were desegregated, and the school system's ombudsmen, Jackie Williams and Nick Strange, speculate that more blacks than whites are suspended. "Some principals feel it's the only lever that they have," says Strange, "and they tend to overuse it." Though Berea High is a notable "hot spot" in Greenville--it was one of the schools briefly closed during the 1971-72 school year--a comparison of suspensions at Berea before and after desegregation points up the extent to which suspension has become a major tool since desegregation. In 1969-1970, only 98 students--all white--were suspended from Berea. At least twice that number of students has been suspended every school year since. In 1970-71, 666 students were suspended, 435 blacks and 231 whites. Throughout the school system, blacks are suspended in disproportionate numbers. Of Greenville's 90 schools across the county, only 6 reported less than 29 per cent of their suspensions were black students. The per cent of suspended students who were black ranged from 9 per cent to 100 per cent, with a majority of schools reporting that 50 per cent of their suspensions were black students. Jackie Williams does not feel that the figures on suspensions and expulsions necessarily indicate overt racism on the part of the administration, but they do underline a critically serious second generation desegregation problem. Williams analyzes the situation this way: "A white kid called into the office is attending school in his neighborhood. He's in the majority in the school. He's usually talking to a white principal. He doesn't get so upset. But a black kid is outnumbered. He's talking to a white principal. He's sensitive to his position. He's a lot more likely to defend himself. And what the principal sees is insubordination." Discipline is a sensitive issue under the best of circumstances, and when race is involved, the potential for abuse of the practice is increased.

In his third year as superintendent, Dr. Floyd Hall expressed an optimism tinged with concern in discussing desegregation and other changes in the Greenville schools. He is personally convinced that a unitary school system with complete integration is in the best interest of the total community, and he is confident that the movement is in that direction and the goal is within reach. At the same time, he seems distracted and troubled by pressures from blacks who complain of inequities in the desegregation process, and from

whites looking for ways to turn back the desegregation tide. Hall thinks of both groups as militants and radicals who don't want integration to work, and his inclination is to ignore them and work with the people of both races whom he perceives to be at least resigned to the inevitability of integration, if not enthusiastic about it.

"White students are certainly no worse off, and blacks are much better off, in terms of academic progress since desegregation," he said. "There are whites who would have you believe that quality has deteriorated, but it's not so. I've said all along that it would take us one high school generation--four years--to work through all the necessary adjustments in attitudes and feelings inside the schools. We're on schedule, and I'm pleased with the progress we're making. We've been weak in terms of getting blacks into some administrative and coaching spots--not much had been done to prepare black administrators--but we've got a number of good people coming along, including several blacks who are going to be named principals and coaches. Within the next three or four years we're going to be in good shape. We're also looking at our building program, trying to avoid building away from the black community. The right actions on our part will gain the confidence of the community quicker than talk will."

Hall served for seven years during the 1960s as assistant superintendent of schools in Evanston, Illinois, a community which has received national attention for its approach to desegregation. Comparing Evanston and Greenville, he said Greenville is "farther ahead," and he added: "People here are more willing to work together. In fact, I think the South now enjoys a position it has never had before. Its potential is so great: It's not trying to hold on, like so many other areas, but is moving forward into a leadership position in education. There's a new visibility, a recognition. I just hope we can keep it. I feel very good about the South. There's not the hatred and bitterness so common in the North. There's less hopelessness, and an element of respect, and feelings are less violent. If we were to be forced by the powers that be--the President and the Congress--to move backward, the pressure on our school board would be great. I frankly think there would be a lot of bloodshed, and we'd never be able to put things back together again. I think the great majority of our people just want to be left alone, because this is a situation we can live with. The blacks--many of them--just

wouldn't go back, and many whites wouldn't either. The students, especially, wouldn't accept a return to segregation."

As the Greenville school district moves toward integration, the lingering consequences of segregation can be found sprinkled through the system. The pace is too slow for some, too fast for others. Shifting residential patterns cause enrollments in some schools to shift, and adjustments have to be made. The unpreparedness of teachers and administrators causes problems, and often nothing immediate can be done about them. Broader, richer, more balanced instructional programs can be found in all schools, but differences in reputation if not in fact, "better" than others. Even-handed discipline is an elusive ideal, complicated by emotion and misunderstanding. Attitudes of prejudice persist. The difficult job of equalizing opportunity without destroying diversity is far from finished. And there remains the threat of a federal intervention that could damage irreparably the unitary school system Greenville is laboring to build.

But when all that has been said, an overall impression of progress remains. The ultimate test of integration is inside the schools, among students and teachers and administrators. They are the ones who finally decide whether the best the school system can offer is good enough, whether formal education in Greenville is accessible, effective and productiv e. What appears to be happening in the schools now is that blacks and whites alike are getting a better education than their predecessors got, not only in terms of formal instruction but also in social and cultural terms.

At Greenville High School, once the pearl of the white system, a dozen students of both races talked about what it's like now. A black student said he doesn't feel that it's a white school anymore. Several other blacks disagreed--"This place hasn't got any soul," one of them said. A white student sided with them. "It's still a white school," he said. "We've kinda got it made." What would happen if the school system had to adopt a neighborhood school plan, and Greenville High (in a "changing" neighborhood) became predominately black? "Most of the whites would be glad to get out," a black girl said, but another, joined by several whites, disagreed. "If we had black schools again, I'd like it," said one of the blacks, but he added, "I probably wouldn't go there, though. There's a lot here.

I feel like I'm getting a good education." "People are getting to know each other better here," another black student said, "but it's slow." Do they have close friends of the opposite race? All but one said yes. "I;m just shy," she said with a faint smile.

With 2,000 students, Wade Hampton High School is the largest school in the system, and it has been in the news both as a place where initial desegregation went smoothly and as a setting for later disruption and racial conflict. Said Dewey Huggins, the principal: "This year, for the first time, we have some stability. Most of our upperclassmen were here last year, whereas two years ago, and the year before that most of them were transfers who couldn't identify with the school. And with stability and familiarity, we've found a big reduction in interracial and interpersonal conflict. There is wider participation in student government, in athletics, in extra-curricular activities of all kinds. Academically, 60 to 70 per cent of our students have always gone to college. The percentages have dropped some, but our standards haven't changed. White kids are doing as well as ever, and while blacks as a group don't do as well overall, there really isn't a great difference, and I'm confident of improvement as we move on. Their parents are just as ambitious for their children as white parents. All in all, I feel good about what we've done. The unitary school system is very definitely an asset for the community."

A group of Hampton's students, reflecting on their experiences there, sounded very much like the students at Greenville High. "Most blacks think this is still a white school," a black said. "They just don't feel a part. Being so outnumbered, we feel like we have less of a chance to make it." A white spoke up: "Some whites don't feel like it's their school either. There's a lot of apathy here. There's not much to feel a part of. But it was worse last year." Another black: "Yeah, things are better this year. Blacks are liking it better, and I think we'll all come to feel like it's ours. Some kids want the black schools back, but I can't see it. And it'll be better for the kids who come after us." "The blacks were just taken from their schools and plopped down here," said a white girl. "They lost everything. No wonder they were frustrated." A white boy said,

"The older integration gets, the better it gets. The ninth graders get along better than the seniors. Going back would be even worse than before." All of the students believed they're ahead of their parents in attitudes about race, and all said teachers are slower than students in adjusting to the changes ("They could help a lot, but they haven't."), and all said they're getting a better education, and all said that integration, if put to a vote, would win easily at Hampton. "The generation after ours is really gonna have it all together," one of the students said. "They may have a lot of other problems, but they're not gonna have any hangups on this race thing."

If there is a message in what the students say and think, it is that they are less and less inclined to be influenced by the racial attitudes of their elders. For all the imperfections of desegregation in Greenville, and for all the external threats to its ultimate success, it has brought whites and blacks together in the schools.

Egptar

Memphis 1-1-1

In the courts, there had been litigation for more years that most people could remember--hearings, orders, appeals, charges, answers, counter-suits, modifications, delays. In the schools, there had been segregation, desegregation, resegregation, annexation, white flight, teacher reassignments, black boycotts, white boycotts. In the city, there had been organized resistance and organized support, threats of disruption and rumors of violence, feverish strategy sessions, intensive planning, meticulous preparation.

And finally, the end and the beginning came to Memphis, Tennessee: On January 24, 1973, that city's public school system began implementing the initial phase of a court-ordered desegregation plan, and 65 buses--the first ever used in Memphis--rolled through the city streets.

The dominant atmosphere was one of subdued anticlimax. Absenteeism was high, but nobody bothered the buses, or the kids, or the teachers. "Quiet Day As Busing Is Started," read a one-column headline in the afternoon Memphis Press-Scimitar;"Absences, Calm Mark Busing," said the next morning's Commercial Appeal. The New York Times and the Washington Post had reporters in town for a couple of days, and the television networks noted the event briefly on their evening news programs, and that was it. School desegregation without disruption and violence is no longer a hot news item. To say it happened "without incident" is to say it will not be reported on any more.

Memphis has the 10th largest public school system in the United States, and a majority of its students are black. What is the significance of the events of January 24 there? What are the implications for urban school systems elsewhere in the country? How did Memphis do what it did, and why did it do it? What has

happened since then, and what is likely to happen next? A visitor to the city early in March, five weeks after the start of busing, could find a multiplicity of conflicting and corroborating answers to those questions. From piles of newspaper clippings, from reams of reports and memos and documents and statistics and studies, and from the minds of dozens of participants and observers, the complex story of a city's halting search for equity and stability comes tumbling out. And among the dominant impressions and tentative conclusions to be drawn from it all are these: Memphis has started to bus children to school in the face of strong opposition, and has done it in a manner that is, on the whole, impressive. The city is deeply and seriously divided within itself on the issue of school integration. The hardest phase of desegregation by busing still remains to be faced. The job of making integration a success for individual students and teachers is just now beginning. And the city's search for equity and stability is still a long way from being finished.

Understanding the way things are now necessitates a perception of the way they used to be--years ago, months ago, and in the days before and after January 24. When the NAACP Legal Defense and Educational Fund, Inc. (LDF) first filed a desegregation suit against the Memphis school system in March 1960, there were just over 100,000 students in the schools--about 55 per cent of them white--and segregation was complete. In September 1962, a handful of black first graders enrolled for the first time in previously all-white schools, and by 1967 there was some desegregation in all grades, though it was generally only token. In September 1968, LDF sought further relief from the federal district court, pointing out that segregation was still the predominant pattern in the vast majority of schools.

District Judge Robert M. McRae Jr. ordered desegregation of the faculties in May 1969, but he held that de jure segregation of students had been ended, and

the Sixth Circuit Court of Appeals in Cincinnati subsequently agreed with him. In March 1970, the U. S. Supreme Court reversed the district and appeals judges and sent the case back to Judge McRae for further resolution. After some adjustments in the desegregation proposals, the case went up again to Cincinnati, and in May 1971 the appeals court ruled that in light of the Supreme Court decision in Charlotte, North Carolina, Memphis would have to do more. A team of experts from the U. S. Department of Health, Education and Welfare was ordered in to draw up a plan, but the team was later removed from involvement on orders from President Nixon, and the school board's staff had to finish the job.

In April 1972, Judge McRae had before him several alternative plans that varied widely in the amount of desegregation and busing they called for. McRae chose the one that required the least amount of busing--some 13,000 students--and ordered it implemented in September. That proposal was known as Plan A. A series of appeals and stay orders resulted in postponement of the implementation until January 1973, but Plan A was eventually upheld by the Supreme Court, and in the months before it was put into effect, the people of Memphis came to their crucible with deeply divided minds.

As the Memphis school system has grown in the past decade, so has its percentage of black students. As the black enrollment grew, the city annexed portions of surrounding Shelby County and managed to retain a white majority in the schools, but by the fall of 1970 the enrollment of more than 148,000 was slightly over 50 per cent black. In 1971, a black boycott of the schools resulted in a realignment of the school board from an all-white body of five to a nine-member group that includes three blacks. And in 1972, after Judge McRae's busing order was issued, an organization of whites known as Citizens Against Busing (CAB) conducted a two-day boycott that removed more than 56,000 students--40 per cent of the total--from the schools. In September 1972, enrollment fell to 138,000--

fully 10,000 below the total two years earlier--and on February 5, about two weeks after Plan A was implemented, enrollment was down to 130,000, and blacks made up 60 per cent of the total.

This kaleidoscope of legal maneuvers, pressure-group strategies and statistical changes provides only the barest outline of what has happened in Memphis in the long history of the school desegregation case. A more complex and more illuminating story lies in the actions of powerful and influential Memphians in the final weeks and days leading up to January 24, when the city was finally faced with a court order that could no longer be avoided. The story tells little, if anything, about the educational side of school desegregation, about what has happened and is happening inside the classrooms; that chronicle has barely begun, and its telling will remain for another time. But what the adults of Memphis have said and done publicly and privately to accept the beginning of desegregation or to resist it seems more important now, for it is the actions of adults that will ultimately determine what options their children have.

* * *

On the first of March, spring was making an early bow in Memphis. The little clutch of ducks that live on the roof of the Sheraton-Peabody Hotel exited from an elevator promptly at 7 a.m., right on schedule, and waddled over to the fountain in the lobby for their daily swim beneath the overhanging fronds of a giant plastic bird of paradise. Out on the streets, buses taking children to school had become a familiar sight, and there was not much in the papers or on television about the subject that had preoccupied the city for six months. Somehow, Memphis seemed to be returning to normal.

Memphis 5-5-5

In the offices of the Memphis Chamber of Commerce, just off the lobby of the Sheraton-Peabody, David Cooley was cleaning out his desk. After four and a half years as the chamber's executive director he was leaving to head the chamber in Dallas, and he was in a reflective mood. "We've been working hard to help the leadership of this community address problems before they reach crisis proportions," he said. "When I came here in July of 1968, this town was on its ass--Martin Luther King had been murdered, people were scared, guilt-ridden, blacks and whites were estranged. This chamber of commerce has done something about that. I'm not taking any credit--the business community did it: They've acted for the good of the town, even though it was often against their personal feelings. The race situation here is better now. Things are not going to be back like they were, ever again. The atmosphere here is more conducive to good work than ever before."

When Judge McRae first told Memphis school officials in April 1972 that they would have to bus students to achieve desegregation, Cooley and the leaders of the chamber started getting ready. Through the spring and summer they met with school officials and community organizations, and by fall they were prepared to support peaceful implementation of Plan A. J. Mac Holladay, a young Navy veteran and Memphis native just back from Vietnam, was hired by Cooley and assigned to work full-time on the school crisis, and Herald Latham, a public relations man whose firm had been retained by the chamber to "sell Memphis," was given a similar assignment. With the school board split into anti-busing, pro-busing and middle-of-the-road factions and with the board's staff unable to break the logjam, the chamber found itself at odds with the community's political leadership and with the masses of white citizens--and closer than it had ever been to the city's blacks.

In October, chamber officials led in the formation of IMPACT--Involved Memphis Parents Assisting Children and Teachers--and with help from the school board staff they got a $90,000 grant from the federal Emergency School Assistance Program

to work in earnest on community acceptance of desegregation.

"This project, and the peaceful events of January 24, were a maturing victory for the clear-thinking people of this town," Cooley said. "It had to be done. We don't want this town to go down the drain. I'm damn proud of what we accomplished--and I say that knowing that the job is far from over. We didn't defend busing, or the quality of education--hell, we couldn't, it's not there, and it's probably not going to be there in my lifetime or yours. What we defended was abiding by the law, and preserving public education in this city, this country. Public education has to be salvaged--it's vital, essential. Without it, all of our major institutions are threatened. So we have to do this. We have to change."

IMPACT was launched early in November. "This program," said the Rev. James H. Holmes, the chairman, "has been developed over the past several weeks out of a groundswell of interest from parents, students, teachers, citizens generally, and a number of organizations." At that point, it did indeed have the support of a diverse group of people, but the idea for the organization was seven months old by then. Cooley, chamber president Frank M. Norfleet, Latham, Holladay, a task force of establishment leaders--most of them chamber members--and representatives of the school system, the Urban League and several other community organizations had had a hand in the early planning. By the time IMPACT was announced, its plan of action was already mapped out: newspaper and television advertisements, fact sheets, a telephone rumor control system, neighborhood meetings, a speakers bureau, church and organizational support, research and troubleshooting were all included in the strategy.

The Southern Regional Council in Atlanta was invited by leaders of the chamber, the black community and the school system to assist IMPACT in its program, and three representatives of the Council were in Memphis during December and January as participant-observers.

The anti-busing forces, meanwhile, were also busy. At a rally early in

September, the chairman of Citizens Against Busing, Ken Keele, brandished a two-by-four in his right hand and told the crowd, "The very first day, the very first moment that any bus rolls in front of any school, we want a phone call, and we'll meet those buses and they won't run." Also at the rally were two members of the school board, William Ray Ingram and Neal Small, and Memphis Mayor Wyeth Chandler. CAB could claim the backing of virtually every white politician in the city, and the support--in principle, at least--of state legislators, congressmen, Tennessee's two U. S. senators and the President of the United States.

Against such formidable opposition, IMPACT stuck to a simple line of defense: maintenance of public education as a viable institution, and maintenance of law and order. Its most effective advertisement was a picture of one of the city's biggest high schools with a "For Sale" sign in front of it. The ad said in part: "This is what can happen to our entire public school system if we don't get together and work things out." The message on television ended with a catchy identification: "IMPACT--not the pros, not the cons, just the facts."

James Holmes, the IMPACT chairman and an official of the United Methodist Church, described the organization as "a force, a front group, a flak-catcher--a little of all three. The chamber didn't inject itself--they made commitments and then left us alone. We were a meld of the chamber, school officials, organization representatives and just plain citizens. The IMPACT task force, made up real establishment people, was never out front, but they kept pressure on the chamber to stay the course, and they got the wealthiest men in the city to sign a newspaper ad urging obedience to the law. As for the IMPACT committee--the people who were on the firing line--some tremendous growth took place in that group. We found resources we didn't even know we had."

One member of that group was Bob Knott, a young insurance company representative. "I had some misgivings," he recalled, "but race didn't enter into it. I think integration is our highest necessity, we've got to have it. I used to be a teacher, and I have an abiding concern for education. As for busing, it's the only way now, but it's not the best way." Knott is a Republican and a native of Memphis. "I belong to a church that has lost two-thirds of its members since Dr. King was killed," he said. "I thought those of us who were left were pretty much together, but most of them have given me the cold shoulder since I became involved in IMPACT. The same thing has happened in a lot of churches: There's no real community. The people fighting busing define community as that area served by their branch bank. The only real community in this city is among blacks--and not all of them are together."

Knott described the 75 to 100 people most directly involved in the IMPACT program as "the same bunch, unfortunately, who always work on every cause: white middle- and upper-class women, mostly--liberals, the League of Women Voters, the Panel of American Women, the Urban League, and so forth. You always pick up a few new ones, including some conservatives and some poor people. Blacks generally lack the wealth or the time or the experience to do a lot of this kind of work--there were no more than 10 in IMPACT--but of course, the NAACP and the Urban League have had their own programs going. We had a 14-member steering committee of eight whites and six blacks that worked like hell, and we caught a lot of flak, but when the crisis was on us we mobilized 2,000 people. Holladay pulled us together, and we were a community in the truest sense."

The city's two newspapers, by all accounts, did a superlative job of covering the school crisis. One Commercial Appeal reporter in particular--Jimmie Covington--was meticulously factual in his coverage of the conflicting activities on all sides. Both papers took editorial positions that closely paralleled the chamber's stance.

But neither paper reported--perhaps was not aware of--the behind-the-scenes activities of IMPACT's blue-ribbon task force, nor did they investigate in any detail or the involvement of the Southern Regional Council, CAB's ties with anti-busing groups in other parts of the country. And, the papers did not report that the chamber, on at least one occasion, brought together representatives of the school board and staff, the NAACP and the Legal Defense Fund in an attempt to work out a compromise settlement of the case.

When the crunch came and all the options were reduced to two, the opposing sides lined up about as follows: Those who stood for implementing the court order included IMPACT, the chamber, six members of the school board, all but two or three members of the board's staff, the city's black leadership and most blacks generally, the newspapers, a goodly number of community organizations, the city's recently-appointed director of police, and a substantial percentage of students and teachers of both races. Those who still opposed implementation included CAB members and sympathizers, a number of churches, many politicians, and a large number of students and some teachers. three members of the school board, The city's colleges and universities were not particularly active one way or the other, and most religious and political leaders who did not openly support CAB tended to be neutral and therefore ineffectual. One notable exception was Bishop Carroll Dozier of the Catholic Church's Memphis diocese, who issued a pastoral letter in which he strongly supported desegregation by busing.

A week before busing was to begin, police arrested a 25-year-old white man and accused him of attempting to hire himself out to damage the buses and incapacitate them "for a sum of money." Ken Keele, the CAB leader, had notified police after the man, Robert Lawrence Payne, had approached him with the offer. Keele worked closely with the police in apprehending the man. "We have not advocated violence or even scheduled demonstrations or picketing," Keele said later. "The only way to stop busing is not to have children on the buses."

When all efforts to stop the buses by legal means had failed, Keele and CAB called for a total boycott of the schools and began setting up private schools throughout the white neighborhoods of the city, with churches providing most of the facilities. Several politicians, including Mayor Chandler and State Senator Curtis Person, joined in the boycott call, and in Washington, Tennessee Senator William E. Brock vowed that busing would be outlawed eventually and urged the anti-busing forces not to lose faith.

In the frantic maneuvering of the final days, the role of the city's police force was crucial. The year 1972 had been devastating to the reputation of the police; crime in the city was at an all-time high, several policemen and sheriff's deputies were indicted on murder charges in the beating death of a black youth, bribery and extortion charges were lodged against several people in the police department, and internal dissension in the department was rampant. In December, a former Marine general named Jay W. Hubbard was brought in as director of the department, and the tense situation surrounding the busing controversy became his first test.

Hubbard passed with flying colors. "I can't imagine how Chandler could have hired a man like that," a prominent Memphis attorney remarked. "He must have thought getting a hard-nosed military man would be a safe bet. He must regret it now."

Hubbard is a crew-cut, square-jawed man with a quiet manner and a disarming directness about him. Handsome and youthful looking after 32 years in the Marines, he exudes confidence and goes about his job with military precision. "The police here have been understaffed, underpaid, underequipped and underqualified," he said in his office. "I was persuaded by the challenge here. I see it as a kind of military assignment. The tasks that need doing in this country can't be done without sound law enforcement."

The busing crisis offered Hubbard an opportunity to demonstrate his philosophy of law enforcement. "When the date for busing arrived," he said, "we wanted it done in a normal environment--no force, no strong-arm tactics, no sea of uniforms. We were totally mobilized and ready, but we were in the background, not in the schools or on the buses. Our main contribution was in advance planning--the routes, deployment, rumor control and so forth. It went on for weeks, and we were candid about what we would do, but we didn't want anybody but school people involved in the actual movement of children.

"I know we've got some men with deep racial bias, but a real professional has to subordinate his personal feelings to his duty. We had a job to do, and we did it. Our precept is, 'If you can't be nice, be neutral. Don't mix personal hangups with your badge.' I think we've got a fairly enlightened and progressive department, but it's going to be better. Out of 1,140 officers, less than 10 per cent are black, and that's going to change. We're also increasing and broadening the training of officers."

Hubbard, speaking of his own early education in a predominantly Mexican-American school in the Southwest, expressed the belief that "kids and school people in Memphis can work things out" if adults will leave them alone. "Either we mean equal opportunity or we don't--and I mean it. I'm not for giving favors to blacks, even though there's clearly been a history of discrimination against them--I think it would be insulting to them to suggest that they should simply be handed things. But equal opportunity is essential. We need breakthroughs, we need to be making yards, and we've only been making inches. Attitudes have to change."

What Memphis did January 24 made Hubbard proud, and he thinks it will pay dividends in the future. "The restraint of this community was an hour of greatness," he said, "and it's still alive--it may even spill over into other

things. I personally don't approve of busing--it's phony, probably one of the most arrogant forms of government intrusion into the realm of individual rights. But it's not worth blowing up the city about. There must be better ways to get equal opportunity. I don't see that busing gives young blacks all that much more opportunity. The challenge is to bring better education to the poor communities, to attract good teachers. But the contrasts are so great--there is television, pounding into the consciousness of the poor: buy, buy, buy. Yet there is no way for them to earn enough to buy all that stuff."

On January 18, when a serious dispute arose between school authorities and the drivers who had been hired for the buses, three black leaders and four chamber representatives went to Hubbard for some assurances. The blacks wanted the police to maintain a low profile, to work in biracial teams, to enforce the state ordinance requiring vehicles to stop for buses, and to try to contact black community leaders if potentially violent confrontations arose in the black community. Hubbard quickly agreed to the suggestions.

Finally, after all the tumult, the buses rolled. Plan A dealt principally with elementary schools (a few junior highs were also included). In all, 45 of the city's 160 schools were affected by the plan, and about 25,000 students were reassigned, including 13,000 (7,000 of them black) who were eligible for bus transportation. Most of the 6,000 whites to be bused were absent the first day, and so were some blacks, and although estimates on total absenteeism varied widely, it is generally agreed that close to 40,000 children stayed away and about 98,000 were in school. The next day, about 28,000 were absent, and by Friday, the third day, the figure fell to 25,000 and about 9,000 students rode the buses. Within a week, absenteeism had fallen to about 10,000--about 3,000 above what school officials consider normal.

CAB officials estimated that about 75 per cent of the white enrollment--

some 43,000 students--participated in the boycott. If that is true--and the figure conflicts sharply with data from school officials--then the boycott at its height was less effective than the one CAB staged in the spring of 1972, after the court's busing order was first handed down. In any event, Memphis began desegregation and busing peacefully--there were no serious incidents, and no arrests--and within a week, tensions had eased and opposing forces were quietly regrouping for the next stage.

But more than 7,000 of the students who walked out didn't come back. Virtually all of them were white, and most of them turned either to existing private schools in the city or to the new CAB schools. By the middle of February, CAB claimed to have 28 schools opened and almost 8,000 students enrolled. CAB hired a young graduate student, Blythe Robinson, as superintendent of its schools, but Robinson resigned in less than a month. Keele said Robinson left to finish work on a degree, but Robinson said Keele should "tell the whole story," and he added, "For my own sake and because of the innocent people concerned, I hesitate at this time to go into all the reasons involved in my decision." Said Keele in response: "I am not going to get in a word battle with him. He had misrepresented some things."

Later, at his home, Robinson said he could not talk for the record about his involvement with CAB because "I was put in a difficult position. In order to get paid, I had to sign a legal agreement that I wouldn't tell anything about CAB."

Some ministers in the city said in February that they had been "pressured" to support the CAB schools, and a resolution expressing resentment against such tactics was introduced at a pastor's conference of the Shelby Baptist Association, but the resolution was not voted on.

National press coverage of the changeover in Memphis was short-lived. Walter Cronkite devoted about 10 seconds to the subject on the CBS evening news

the day busing began, saying that in excess of 40,000 students were absent and implying that all of them were white. ABC television also made a brief report, and NBC reported a week later on registration in the CAB schools. That was the extent of television coverage by the networks. The Washington Post and the New York Times had running stories for a couple of days, and Jon Nordheimer of the Times wrote an interpretive piece that drew mixed reactions from Memphians. "Change has never been a welcome word for most of the 625,000 residents of Memphis," Nordheimer wrote, "yet change pierces the city like a riverboat's whistle." He went on to describe some recent and current events in the city that both encourage and restrict change. "It was just some more of that Northern crap we've come to expect from the New York Times," said one incensed Memphian, and another said, "He was right on target. We are still living in the shadow of old Boss Crump."

Perhaps the most damaging outside publicity--at least in the eyes of school and chamber officials--was a February 19 story by Gregory Jaynes in the Atlanta Constitution. The headline said "20,000 Students Drop Out In Memphis Busing Furor," while the story itself said enrollment had dropped 7,532 between January 5 and February 5, and that "In all, close to 20,000 students have pulled out since the busing fight began a little more than two years ago." The story dealt mostly with the white response to busing and to the efforts of CAB, and it generally painted a picture of Memphis as a city in utter chaos. At one point Jaynes, a former Memphis resident, wrote: "And the hate talk, open conflict, and public meetings that end in bitter shouting matches are at a higher pitch than they were during the riots of 1968 in the bloody aftermath of Dr. Martin Luther King's assassination."
